After the conclusion of its reorganization on 27 December 1941, LIV Army Corps renewed its attack on Sevastopol; the army was hoping to reach the bay within three days. But the situation in the eastern part of the Crimea had been changed completely by a successful enemy landing near Feodosiya carried out under cover of fog. Contrary to instructions from the army, the commander of XXXXII Army Corps, Lieutenant-General Hans Graf von Sponeck, ordered the withdrawal of 46th Infantry Division³⁵⁰ in order to attack the enemy beachhead and to prevent the division from being cut off at the narrow base of the Kerch peninsula at Parpach. As telephone communications were lacking, the situation on the peninsula remained unclear, but as early as 29 December it became obvious that one division would have to be sent to Feodosiya from the Sevastopol front. This decision meant that the attack on the fortress would have to be abandoned at the very moment when LIV Army Corps believed that 'in the event of a collapse of the enemy counter-attacks' it would be able to break through to the bay of Sevastopol. Hitler, however, ordered the attack to be continued irrespective of the situation on the Kerch peninsula. Sodenstern informed Heusinger, who had passed Hitler's order on,

³⁴⁸ Ibid., 17 Dec. 1941.

³⁵⁰ Einbeck, *Sponeck*, 22 ff.; H.Gr. Süd/Ia, KTB, 29 Dec. 1941, BA-MA RH 19 I/88; Manstein, *Last Victories*, 225-6.

that it would of course be carried out, but the Crimea and Eleventh Army would then be lost unless the enemy was stopped at the narrow base of the peninsula. The army group could not send any additional forces. In fact, however, parts of a Romanian division were sent, missions by Air Fleet 4 were ordered against Feodosiya and Kerch, and personnel replacements were ordered to be flown in for Eleventh Army. As expected, the Romanians offered only weak resistance against the enemy units landed near Feodosiya. That Eleventh Army's lines of communication were not immediately cut, thus seriously threatening the army, was due only to the extreme caution of the Soviet commanders.

The orders concerning the critical situation in the Crimea were typical of the divergence between the demands made on the troops at this time and the means available to carry them out. Hitler demanded a continuation of the attack on Sevastopol, as he urgently needed a military victory to improve the depressed morale in the army and at home. Manstein's staff was well aware that the attack had to be broken off, but expressed this conclusion as follows: 'The prospects of freeing forces to eliminate the enemy in the eastern part of the Crimea by a quick, decisive victory at Sevastopol have . . . diminished.'³⁵¹ Again all necessary steps to reinforce the German units defending the narrow base of the Kerch peninsula were promised, and again the army group commander-in-chief, Reichenau, had to decide between alternatives that were in fact no longer available. For neither could the attack on Sevastopol be continued with any prospect of success, nor could anything be achieved by ordering General Franz Mattenklott, commanding XXXXII Army Corps, to 'attack the enemy group around Feodosiya with available forces and subsequently clear the Kerch peninsula', as Mattenklott's only division, 46th Infantry, had lost all its heavy weapons and equipment at Kerch and was completely exhausted.³⁵²

As in the evacuation of Rostov, every command could point to memorandums and reports which had explained the futility of the operation from the very beginning unless certain conditions were fulfilled—conditions which everyone involved knew could not be met. 'To remove any doubt, the commander-in-chief of the army group repeated in a teletype order that the task of Eleventh Army was still to take Sevastopol as soon as possible, dislodge the newly landed enemy forces, and hold the Crimea.'³⁵³ On the afternoon of 30 December the operations department explained that it could not send any additional forces. Sodenstern stressed the seriousness of the situation in the Crimea and expressed the opinion that, in view of the strong enemy landing near Feodosiya, Sponeck's decision to withdraw 46th Infantry Division could

³⁵¹ H.Gr. Süd/Ia, KTB, 29, 30 Dec. 1941, BA-MA RH 19 I/88.

³⁵² H.Gr. Süd/Ia, KTB, 30 Dec. 1941. By then an operational danger to the entire Eleventh Army was considered possible.

³⁵³ The exact wording of the order in KTB of Army Group South, 30 Dec. 1941, BA-MA RH 19 I/88.

possibly be justified, as without that division the situation could not be saved. That evening Manstein expressed his doubts to Reichenau as to whether the forces of XXXXII Army Corps would be sufficient to hold their positions if the enemy were able to land several divisions. Reichenau's answer, that the Red Army too was facing serious supply problems, is quite incomprehensible in view of Manstein's frequent reports to the effect that Sevastopol could easily be supplied by sea. In the end a report was sent to Hitler indicating that the attack on Sevastopol would be continued and the enemy forces in the eastern Crimea would be dislodged by XXXXII Army Corps. The head of the operations department accepted this report and remarked that it 'agrees with the view of the Führer'.³⁵⁴ At any rate Reichenau pointed out that issuing the order did not guarantee success. The army group took the harsh reality into account by appointing the commandant of Poltava, Lieutenant-General Karl Spang, 'commander of the Isthmuses of Perekop and Genichesk' and envisaging 'special help for securing and fortifying the isthmuses of the Crimea'.³⁵⁵

These measures apparently satisfied the requirements of the ritual described in such detail above. On 31 December the attack on Sevastopol was halted in order to defeat the enemy forces near Feodosiya.

Thus, at the end of 1941 the troops of Army Group South were well over 1,200 kilometres from their starting-point (the air distance from Lvov to Rostov is about 1,300 kilometres), deep in the Soviet Union. Their performance had far exceeded all expectations, but the operational idea that required such efforts had not been realized. The 'vital strength' of the enemy had by no means been 'destroyed'.

(d) *The Attack on Leningrad*

(See the *Amex* Volume, No. 15)

The strategic-operational thinking of the German commanders and the course of the fighting previously described repeatedly reflected the basic problem confronting the Wehrmacht in the east: providing the necessary fighting forces in an expanding theatre of operations from an unchanging and limited number of available soldiers. Examination of the differences of opinion in the German high command reveals different phases in the setting of priorities and the resulting distribution of forces.³⁵⁶ That these differences were not resolved in Army Group North at a time when success was still possible is the central problem with which this section is concerned. In general it can be said that in spite of all parallels that can be shown in the switching of forces from Army Group Centre to the wings of the eastern front, substantial differences re-

³⁵⁴ Ibid.

³⁵⁵ Ibid. Manstein expected three or four additional enemy divisions to be landed on the Kerch peninsula and near Feodosiya. This was the reason for his urgent request for additional troops and his reaction to the withdrawal order issued by Lt.-Gen. Graf von Sponeck on his own responsibility.

³⁵⁶ Cf. sect. II.1.1(b).

maintained. Army Group South needed considerably more reserves to reach its first main operational objective, the Dnieper line, as well as the help of the neighbouring Second Army and Armoured Group 2. But the engagement of these units in support of Army Group South undermined the entire strategic plan of the second stage of the campaign. Moreover, the objectives of this army group were so ambitious that they were liable to require a large part of the German army unless conditions were exceptionally favourable. But such conditions could not be expected with objectives which required nothing less than the encirclement of the Caucasus, blocking the Volga at Stalingrad, and securing the flanks as well as the occupied territory. The 'retrieval' of these formations to their original fronts was inevitably bound to cause incalculable difficulties.

Army Group North, on the other hand, had advanced far beyond its first operational objectives by the end of July 1941 and thus had a claim, approved at the very beginning, to an effective mobile unit so as to be able to reach its preliminary final objective, Leningrad.³⁵⁷ In contrast to the situation in the south, the time and forces required to reach this objective were predictable, and success would release a considerable number of units for other purposes. Moreover, this would decisively improve the strategic situation in the entire northern area, as control of the Baltic and the supply-routes from the Arctic Ocean would make it possible to terminate the fighting in that area. This expectation had been one reason for the use of Finnish forces there.

Hitler had argued from this position ever since the beginning of his operational planning against the Soviet Union, though without drawing the necessary conclusions energetically and in time. Only after it became evident during his visit to Army Group North on 21 July that that army group, because of its over-extended front sector and the tying down of its southern wing, did not have sufficient forces to capture Leningrad rapidly did Hitler agree to send it strong units of Armoured Group 3, while Halder wanted to solve the problem through a new start of the operation and by transferring the task of providing cover for the southern flank to Ninth Army of Army Group Centre.³⁵⁸ After receiving the suggestions of the army group, the commander-in-chief of the army issued a directive on 23 July³⁵⁹ in which he pointed out that, with the order to destroy enemy forces in and around Leningrad, the army group had been given a new task.

Halder now called upon Army Group North to sever the railway line between Moscow and Leningrad speedily and for good so as to prevent an enemy withdrawal to the south and south-east. The most important measure he demanded in this regard was concentration of the main effort along both sides of Lake Ilmen in the direction of Lake Ladoga. There the strongest

³⁵⁷ Hitler wished to complete the operation against Leningrad, for which forces of Army Group Centre were to be transferred, before advancing against Moscow. Cf. sect. II.1.1(b) at nn. 356ff.

³⁵⁸ Halder, *Diaries*, 1066-7, 1069, 1071 (21, 22, 23 July 1941).

³⁵⁹ OKH/GenStdH/Op. Abt. (I) No. 1390/41, 23 July 1941, BA-MA RH 2/v. 1326.

possible armoured forces were to be used, which ran counter to the entire combat experience of Armoured Group 4. For this new effort Halder envisaged bringing up XXXXI Armoured Corps, i.e. the main combat strength of Armoured Group 4. The army group was to move up sufficiently strong forces to cover this attack on the Valday hills. This greatly limited the use of Armoured Group 3, which had initially also been ordered to participate. On the left wing of the army group, on both sides of Luga, approximately one infantry corps was to be used to cut off Leningrad. The forces to be used for the conquest of Estonia were to be limited to five divisions.

The views of the commander of Armoured Group 4, Colonel-General Hoepner, were decisive in the objections of the army group command to this plan of attack.³⁶⁰ Hoepner developed a new plan which avoided sending mobile troops into the difficult terrain between Novgorod and Chudovo, which had only recently proved an insurmountable obstacle for Manstein's armoured corps. The exclusive use of infantry forces (six divisions) at the point of main effort, as well as the plan to use Armoured Group 3 together with still unspecified divisions for the attack in a northerly direction east of the chain of lakes (north of Ostashkov), totally conflicted with the plans formulated by Halder, who wanted to spare the last-named unit at all events. Moreover, the attack of the entire Armoured Group 4 and the additional eight infantry divisions from the area between Lake Ilmen and Lake Peipus towards the north would result in a concentration of forces south-west of Leningrad which Halder wanted to avoid. Halder sent his deputy chief of staff (operations), Lieutenant-General Paulus, himself an expert in armoured warfare, to persuade the armoured group and Leeb to change their plans. He also referred to the 'wish of the higher leadership' to have the armoured units advance in the 'operationally correct direction'.³⁶¹ After receiving an oral report on the results of Paulus's visits to the army group on 24 and 26 July, in which all four armour commanders insisted that the terrain Halder envisaged for the attack was totally unsuited for armour, Halder accepted a compromise proposed by Leeb. The main effort of the attack was still to be made in the area of Novgorod and Lake Ladoga, but primarily by infantry units. 8th Armoured Division and the SS Totenkopf Division were to be assembled in such a way that, depending on the situation, they could be quickly sent into action.

This meant that an armoured corps (LVI) was, on paper, deployed in the 'operationally correct direction', while Leeb at the same time took into ac-

Paulus's discussion with Army Group North and Armd. Group 4: *ibid.*, H.Gr. Nord/1a, KTB copy, appendix E11; Halder, *Diaries*, 1077 (26 July 1941); for Hoepner's doubts on 24 July and talk with Paulus at Leeb's headquarters, see Leeb, *Tagebuchaufzeichnungen*, 306-10 (27 July 1941); Manstein, *Lost Victories*, 197-8.

count Hoepner's doubts by reserving the right, 'under certain conditions', to move 8th Armoured Division (the only such division of this corps) up behind XXXXI Armoured Corps once the attack was well under way. The corresponding army group order was written on 27 July.³⁶² In his directive of 28 July³⁶³ Halder himself took Leeb's arguments into account. What had he achieved in terms of keeping together the attack force to be used against Moscow? He had the views of highly skilled armour generals and an army group commander-in-chief highly valued by Hitler that the terrain in the area of Ninth Army and Armoured Group 3 was totally unsuited for motorized and armoured warfare. From the very beginning Halder had no intention of discussing the use of these units suggested by Hoepner. As early as 25 July the army group command was told that Armoured Group 3 could not be made available before 9 August.³⁶⁴ A further delay, until 15 August, was announced on 29 July, which ruled out any serious consideration of including the armoured group in the army group's plans.

On 30 July Hitler sent Keitel to Leeb³⁶⁵ to emphasize again the importance of the attack on Leningrad—even VIII Air Corps was to be transferred to the Leningrad front—but that was only by way of consolation for the delay announced on the same day in the transfer of Armoured Group 3. Moreover, the army group was informed that, instead of receiving additional forces, it had to expect that a second corps would be tied down on its southern wing (Ninth Army).

The order to the army group was reduced. Its task remained the isolation of Leningrad, but it was no longer required to prevent the withdrawal of enemy forces to the east, i.e. to continue the offensive on the long eastern front.

Army Group North was able and obliged to accept the non-availability of Armoured Group 3. But the complete over-extension of the right flank in the direction of Leningrad meant that a withdrawal of units had to be expected from that direction at any time if the enemy attacked on that flank to relieve pressure on the Leningrad front. A covering front of 350 kilometres could not be held with the remaining divisions of Sixteenth Army.³⁶⁶ Leeb demonstrated to the commander-in-chief of the army that he needed thirty-five divisions for all his tasks, but he had only twenty-six. He had already had to transfer two corps commands with four divisions to Army Group Centre and was expecting a further request for one corps. A case of 'Please return promptly.'

Brauchitsch at least left the decision regarding the use of Armoured Group

4 to Leeb. The consequences of a new extension of the army group's front and the inevitable halting of the eastern flank were foreseeable if there was only one division to be used along the 150-kilometre line between Toropets and Staraya Russa, and that division also had to reach the area east of Kholm.

The necessary regrouping and supply problems led to the attack by Armoured Group 4 being set for 8 August.³⁶⁷ In the meantime the defenders around the bridgeheads on the lower Luga had constructed such strong field fortifications, behind which additional troops and material for an attack planned on the same day were assembled, that the attack by XXXXI Armoured Corps was very costly and made little, progress, if any. The fact that LVI Armoured Corps was not able to attack because of the weather enabled the enemy to concentrate his defences in this sector.

The general attack began on 10 August, effectively supported by the formations of VIII Air Corps. From 13 August the attack by XXXXI Armoured Corps penetrated the enemy's defences and broke his resistance. But to sustain the attack the only reserve unit, the SS Totenkopf Division, would have had to be brought up—something which because of the enemy attack on the south-east flank near Dno, Leeb refused to permit.

After 13 August enemy attacks against the southern flank also increased, which caused the army group to fear a penetration via Staraya Russa into the rear of the attack front. On 15 August the army group summed up its knowledge of the enemy's intentions in a report stating that, according to statements by prisoners, the Russians planned to break through the gap between Kholm and Staraya Russa with Thirty-fourth Reserve Army in order to halt the attack on Leningrad. Four Soviet divisions were identified at the front and an additional one near Gorkiy; another four divisions were known to be part of Thirty-fourth Reserve Army. Heusinger reported by telephone that, according to radio intelligence, a Soviet cavalry division had been ordered to advance to Dno and establish contact with partisans there. The German troops were exhausted and, according to a report by the general commanding X Army corps, could not be expected to resist for very long.³⁶⁸

This development jeopardized the attack for the encirclement of Leningrad, as reinforcements for the defence of the south-eastern sector of the army group front could be drawn only from those forces around Leningrad.

After the 'draining' of Sixteenth Army in deference to the *idée fixe* of a

³⁶⁷ Because of weather conditions this attack had to be postponed; the corps of Sixteenth Army therefore attacked in echelon up to 10 Aug. 1941: Leeb, *Tagebuchaufzeichnungen*, 319–25 (4–10 Aug. 1941); Charles de Beaulieu, *Panzergruppe 4*, 164 ff.; Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendices E21, F1, MGFA P-114a.

³⁶⁸ Report of chief of staff Army Group North to chief of operations department, Army High Command, 15 Aug. 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix F2, MGFA P-114a. 'The incident is inconsequential even in the view of army group. Nevertheless the Führer had Jodl call up to order commitment of one armoured corps (later reduced to one armoured division) to contain the penetration. This reacting to all pinpricks frustrates any planning on an operational scale and prevents concentration of our forces': Halder, *Diaries*, 1177, 1178–9 (14, 15 Aug. 1941); cf. sect. II.1.1(b) at n. 206.

deployment against Moscow, no assistance could be expected from the army high command. Hitler used the report on the tactically difficult situation on the southern wing of Army Group North to push through the concentration of forces against Leningrad, where he had ordered that the main effort should be made in this phase of operations. He ordered the immediate transfer there of as many mobile units from Armoured Group 3 as could be used and supplied. Halder now had to accept the transfer of XXXIX Armoured Corps, but he ordered it to be kept out of the fighting south of Lake Ilmen; it was to be used instead to form the centre of an attack via Novgorod against the southern flank of Leningrad.³⁶⁹ That was precisely the direction which had been found to be unsuitable on 26 July.

To put in order the situation on its southern wing, the army group immediately withdrew the corps command of LVI Armoured Corps and transferred it to the Lovat, which simultaneously deprived XXXXI Armoured Corps on the Luga-Narva front of the urgently demanded support for the attack. Halder and the army group rejected the obvious solution of bringing up XXXIX Armoured Corps to reinforce the wing of the attack with the explanation that an advance northward via Novgorod was operationally the best direction, the strong enemy defences on the Luga would prevent an effective use of the armoured corps, and supply problems were to be expected. I Army Corps was placed under Armoured Group 4 instead of LVI Armoured Corps. The command of L Army Corps, which had been returned by Army Group Centre, assumed command of the southern front against Leningrad. Halder strongly opposed any further transfers to the army group.³⁷⁰ The situation on the southern flank was straightened out by LVI Armoured Corps and the three divisions of X Army Corps. Between 19 and 23 August six Soviet divisions were encircled.³⁷¹ To the surprise of the army group, the breakthrough to Novgorod was achieved on 15 August. On 20 August Chudovo was reached

³⁶⁹ XXXIX Armd. Corps consisted of 12th Armd. Div., 18th and 12th Inf. Divs. (mot.): Halder, *Diaries*, 1180-1 (15 Aug. 1941), with reaction of Army Group Centre; briefing for operations department by Army Group North, 16 Aug. 1941, and situation assessment by Army High Command, 17 Aug. 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendices F4, F5, MGFA P-114a. On the withdrawal of LVI Armd. Corps see Chales de Beaulieu, *Panzergruppe 4*, 169 (statement by Armd. Group 4, 15 Aug. 1941), 76 ff. XXXIX Armd. Corps took the place of LIV Armd. Corps, which had been sent south-eastward, a senseless, fuel-consuming movement in the opposite direction.

³⁷⁰ Halder, *Diaries*, 1178-9 (15 Aug. 1941). He attempted at first to divert only an infantry division (mot.) from the armoured corps to be brought up. The playing down of the alarming reports from Army Group North, which did not take the situation so lightly, could be based on reports from Armd. Group 4; it was, however, primarily due to Halder's disappointment at not being able to rehabilitate the armoured corps for the attack on Moscow. For Leeb's demand, see Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix F2, MGFA P-114a; Leeb, *Tagebuchaufzeichnungen*, 332 (15 Aug. 1941).

³⁷¹ The astonishing result of this 'pinprick' (Halder) was: 18,000 prisoners, 234 artillery pieces, 201 tanks, 243 machine-guns, and 117 mortars captured or destroyed (figures according to Müller-Hillebrand, *Nordabschnitt*, pt. 1, 127, MGFA P-114a). On the transfer and the attack cf. Manstein, *Lost Victories*, 199 ff.

and the railway line between Moscow and Leningrad cut. The units of the approaching XXXIX Armoured Corps followed the infantry corps into the future deployment area of the 'point of main effort East'. On the left, XXXVIII Army Corps advanced through forests and swamps; XXXXI Armoured Corps attacked towards Krasnogvardeysk. On 20 August the road and rail links with Leningrad were also cut at this point. Divisions of Eighteenth Army had already taken Kingisepp and Narva on 17 August. The attacks towards the coast of Estonia were also proceeding according to plan; on 28 August Tallinn fell. This phase of the attack thus developed more favourably than had been expected. Only XXXXI Armoured Corps, which, after very hard initial fighting, had broken through and believed it could break into Leningrad with the help of the two divisions to be brought up from LVI Armoured Corps, was disappointed, a disappointment comparable to that of III Armoured Corps against Kiev. In both cases the troops of the mobile units felt restrained from the rear, not by the enemy.³⁷²

For the next phase of the operation, Army Group North placed XXXIX Armoured Corps under the command of Sixteenth Army; with the addition of XXVIII Army Corps, the 'Group Schmidt' was formed (named after the general commanding XXXIX Armoured Corps, General Rudolf Schmidt). Because of concern about the vulnerability of the long southern and south-eastern flank, the third mobile unit of the army group, LIV Armoured Corps, remained on the Lovat (with 3rd Infantry Division (mot.) and SS Totenkopf Division; its 8th Armoured Division had been transferred to XXXXI Armoured Corps). Here, however, German deliberations were already based on the idea of an offensive encirclement of the enemy forces confronting II Army Corps by an attack in the direction of Demyansk.³⁷³

On 21 August the army group issued orders and assigned objectives for the attack front against Leningrad and for offensive flank protection.³⁷⁴ In the course of this attack, 12th Armoured Division reached the Neva on 30 August and thus also cut Leningrad's most important links to the east. (See the Annexe Volume, No. 16.)

Even now, in the last decisive preparatory phase, elements of Sixteenth Army (II Army Corps) were assigned to co-operate with Ninth Army, which had captured Toropets after its success at Velikie Luki. To shorten the front and reach a favourable starting-position for future participation in the offensive to the east (Moscow), Sixteenth Army was to continue its attack with the

³⁷² Chales de Beaulieu, *Panzergruppe 4*, 136 ff. On III Armd. Corps cf. sect. II.1.1(a) at n. 131. In both cases these were subjective impressions at the point of an attack, which cannot be maintained upon examination of other conditions.

³⁷³ Cf. order of battle of Army Group North, 20 Aug. 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix F7, MGFA P-114a.

³⁷⁴ Army Group North, order No. 5 for the continuation of the attack, 21 Aug. 1941, *ibid.*, appendix F8; order to Sixteenth Army, 25 Aug. 1941, *ibid.*, appendix F9; Leeb, *Tagebuchaufzeichnungen*, 338 (20, 21 Aug. 1941), n. 331.

line between Ostashkov and the Valday hills as its preliminary objective.³⁷⁵ The boundary between the two army groups was moved north.

On 24 August, Army Group North submitted a first general study of the forces necessary for the encirclement of Leningrad and for flank cover, and of their disposition. On 29 August 'Army group order No. 1 for the encirclement of the city of Leningrad' was issued.³⁷⁶ Leeb assumed that the Red Army would shift its main defensive effort in the north to the Volkhov sector and consider Leningrad as a position that could not be held in the long term.³⁷⁷ The task of securing the front on both sides of Lake Ilmen was to be left to Sixteenth Army. Armoured Group 4 was to lead the attack on Leningrad and take over the lower Volkhov sector to relieve Sixteenth Army. Leeb at first planned an advance to a further encirclement front along the line Izhora-Detskoe Selo-Pulkovo-Uritsk, which would establish bridgeheads across the Neva between Shlisselburg and Ivanovskoe. A 'closer' siege-line would be formed later. Every opportunity to advance was to be exploited. If the population played a significant part in the fighting, industrial cities were to be bypassed, captured from the rear, or encircled. Leningrad itself was not to be attacked with infantry, but to be cut off. Military facilities were then to be destroyed and all water and energy supplies cut off. Armoured Group 4 would receive the conditions under which an offer of surrender could be accepted. The situation assessment of the army group was largely based on reports by deserters and civilians leaving Leningrad to the effect that parts of the population, industrial facilities, armaments, and works of art were being evacuated from the city. Like Army Group South at Kiev, Army Group North misinterpreted these actions, including the removal of food and utility installations, as a preparation for the ending of resistance in Leningrad, whereas they were actually intended to strengthen other fronts and save valuable machinery. The Soviet troops remaining in the city and civilians suitable for any kind of military service were to continue fighting under the overall leadership of the political organs. If the city were destroyed and the front collapsed, they were to fight underground.

The optimism of Leeb and the chief of his general staff, Lieutenant-General Kurt Brennecke, can be seen in their situation assessment of 31 August, in which they already considered using the units that would be available after the encirclement of Leningrad for attacks north and south of Lake Ilmen in the direction of Moscow.³⁷⁸ But to make that possible the siege had to succeed

³⁷⁵ OKH GenStdH/Op.Abt. (I) No. 1 457/41 g.Kdos. Chefs., 24 Aug. 1941, to Army Groups North and Centre, BA-MA RH 2/v. 1326. For the deliberations of Leeb and Army High Command see Leeb, *Tagebuchaufzeichnungen*, 338, 342 (20, 24 Aug. 1941). At this time Halder was very dissatisfied with what he considered to be the slow progress of Army Group North and its excessive flank cover: *Diaries*, 1194 ff. (22 Aug. 1941).

³⁷⁶ Army Group North, situation assessment to Army High Command, 24 Aug. 1941, and army group order No. 1, 29 Aug. 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendices G1, G2, MGFA P-114a; deliberations of Arm'd. Group 4: Chales de Beaulieu, *Panzergruppe 4*, 109 ff.

³⁷⁷ Leeb, *Tagebuchaufzeichnungen*, 344 (26 Aug. 1941).

³⁷⁸ Situation assessment by chief of the general staff and reflections of C.-in-C. on continuation

quickly and the Finns had to make progress in Karelia and reach the Svir between Lakes Ladoga and Onega. A secure boundary would also have to be established with Ninth Army.

However, Armoured Group 4's at first optimistic assessment of the situation had to be adjusted in the first days of September because of increasingly stubborn enemy resistance and rain. The slow progress made by units of Eighteenth Army from Estonia also delayed the start of the attack by XXXXI Armoured Corps. Because of heavy enemy attacks on the Volkhov front, the group responsible for making the main effort on the right wing was increasingly diverted from its objectives from as early as 25 August, when 18th Motorized Infantry Division had to be switched from Chudovo and Lyuban to the north. In its place 12th Armoured Division took over the thrust against Leningrad but was able to advance no further than Izhora. The third division of the corps (20th Motorized Infantry Division) attacked towards the Neva in order to establish bridgeheads. From 3 September all three mobile divisions of the armoured corps were employed in defence, which ruled out the concentration of all armoured units of Armoured Group 4 against Leningrad. XXXVIII Army Corps thus had to begin its attack on Leningrad from the south-east on 7 September without armoured support.³⁷⁹

On 4 September the army group command envisaged an attack in three phases.³⁸⁰ First, 'liquidation of the pocket north of Luga and breaching of the Leningrad defence-line'; next, 'capture of the coastal fortifications' in Estonia; finally, 'a north-eastward thrust to join hands with the Finns'.³⁸¹ Final preparations for the attack were discussed at the army group command on 6 September. But no date was set; it was agreed only that the attack should begin as soon as possible.

The advance of the encirclement front against Leningrad and the assumption that the employment of XXXIX Armoured Corps would make it possible to complete the main task of Army Group North in a few days caused Hitler on 5 September to assign entirely new tasks to all forces of the army group within the framework of his directive for the attack on Moscow.³⁸² The Leningrad area was to be cut off soon in the east by attacks of German and Finnish units from the Neva bridgeheads, but only after the annihilation of enemy forces around the city had been concluded. On the lower Volkhov the encirclement front was to be closed off to the east. In co-operation with the

of operation, 31 Aug. 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix G3, MGFA P-1148; Halder, *Diaries*, 1212-13 (1 Sept. 1941); Leeb (*Tagebuchaufzeichnungen*, 346-7: 31 Aug. 1941) presents the basic discussion with Hoepner.

³⁷⁹ Chales de Beaulieu, *Panzergruppe 4*, 113 ff.; Leeb, *Tagebuchaufzeichnungen*, 346 ff. (1 Aug.-5 Sept. 1942), on the delay of the attack by Armd. Group 4.

³⁸⁰ Halder, *Diaries*, 1216 (4 Sept. 1941); Leeb, *Tagebuchaufzeichnungen*, 349-50 (5 Sept. 1941).

³⁸¹ It was still assumed that the Finns were prepared to advance beyond the Svir and on the Karelian isthmus; Leeb was primarily concerned to see enemy forces tied down. Cf. sect. II.m.2(b) at n. 159 (*Uebersicht*).

³⁸² Directive No. 35, 6 Sept. 1941, *Hitler's War Directives*, 96 ff.; Halder, *Diaries*, 1217-18 (5 Sept. 1941); Leeb, *Tagebuchaufzeichnungen*, 350-1 (6, 7 Sept. 1941).

Finns, the bay of Kronshtadt was to be blocked by mine-barrages and artillery to prevent a break-out by Soviet naval units into the Baltic. By 15 September the mobile units deployed against Leningrad and VIII Air Corps were to be transferred to Army Group Centre to be available for the attack towards Moscow. Army Group North was to cover this attack by advancing eastward north and south of Lake Ilmen.

The new and now final determination of the main point of effort for the army and Luftwaffe units in the coming attack on Moscow placed Army Group North under great pressure of time if it wanted to make use of their fighting power. The transfer of units and army troops reduced the army group to a point where its strength seemed inadequate even for purely defensive tasks.³⁸³ Immediately after receiving Hitler's new directive, the commander-in-chief of the group informed the Army High Command of his reservations.³⁸⁴ Considerably stronger enemy resistance was now being encountered on the Leningrad front; at all events the Red Army would attempt to reopen communication lines from the city to the east. A withdrawal of units and army troops by 15 September, as envisaged, would mean that action against Leningrad would have to be limited to the first encirclement line, and the purpose of the operation would not be achieved. The coastal fortifications in the bay of Kronshtadt would not be cut off, and the city—especially the airfields—would avoid being brought within range of German artillery. The encirclement east of the city between the Neva and Lake Ladoga, a joint operation with the Finns, would be endangered; and if it did not succeed, the supply-lines across the lake and from the area in between would remain open.

Leeb pointed out that the defenders of the city would mount a counter-attack when they realized that German troops were being withdrawn. With the arrival of freezing temperatures, the Volkhov and Lake Ilmen could easily be crossed. Abandoning the plan for a close encirclement would in fact lead to a permanent state of crisis and make impossible the release of additional units. He urgently requested that the units scheduled to be transferred be left with Army Group North until the conclusion of the operations envisaged against Leningrad, as otherwise the enemy would be 'let go' at the very moment when his destruction was to be completed. The consequences of the new situation were reflected in a second army group order for the encirclement of Leningrad, issued on 6 September.³⁸⁵

³⁸³ Message of Army High Command to Army Group North, 11 Sept. 1941: Müller-Hillebrand, Nordabschnitt, pt. 1, appendix G7, MGFA P-114a. The army group was most seriously affected by the transfer of the bulk of its reconnaissance units, sappers, and heavy artillery. The artillery was to be replaced by seven French mortars and twelve field howitzer batteries. The troops for these weapons were to be provided by the remaining artillery units.

³⁸⁴ Situation assessment and intentions of Army Group North to Army High Command, operations department, 6 Sept. 1941: Müller-Hillebrand, Nordabschnitt, pt. 1, appendix C5, MGFA P-114a; Leeb, *Tagebuchaufzeichnungen*, 350 (6, 7 Sept. 1941).

³⁸⁵ Army group order No. 2, 7 Sept. 1941: Müller-Hillebrand, Nordabschnitt, pt. 1, appendix G6, MGFA P-114a.

The tasks of Sixteenth Army, primarily concerned with providing offensive cover for the right flank, were redefined. After destroying the enemy west of the Valday plateau, it was to go over to the defensive along the line from Lake Velye via the north shore of Lake Ilmen to the Volkhov. Plans for an expansion of the bridgehead at Novgorod and a thrust towards Ostashkov were temporarily abandoned and were to be revived only after Ninth Army had made satisfactory progress. XXXIX Armoured Corps, which was now left with only one strong artillery group, with 20th Motorized Infantry Division, and with parts of 122nd Infantry Division, was to push on to Lake Ladoga and cover the rear of the Neva front towards the east. A later link-up with the Finns on the Svir was to be prepared. The continuation of the attack across the Neva was postponed.

Now the attack front against Leningrad was concentrated on Armoured Group 4. Under the corps command of XXVIII Army Corps three infantry divisions and 20th Motorized Infantry Division were to be subordinated to it to form the 'main point of effort East'. After sufficient forces had been provided, this reorganized Armoured Group 4 was to attack across Leningrad's outer ring of defences. To the left of the armoured group, Eighteenth Army was to advance via Krasnoe Selo against the city and the coastal fortifications on the bay of Kronstadt. The take-over of the entire front against Leningrad by Eighteenth Army headquarters was to be prepared.³⁸⁶

Air Fleet 1 was again to use VIII Air Corps to support the attack. Realizing that the attack towards Moscow could not begin before the end of September, Halder agreed to permit Leeb the use of the mobile troops until he had reached his objectives.

On 8 September Army Group North was able to report two important successes, the capture of Shlisselburg in the north and Demyansk in the south-east (by II Army Corps and LVII Armoured Corps respectively). But on the whole Leeb was compelled to regroup his forces as a result of counter-attacks and newly identified transports of enemy troops to the front. He regarded such regroupings as a 'poor man's war', as they repeatedly gave the enemy the opportunity to avoid decisive battles. On 11 September he considered the situation in the south-east of his army group, in the area of Demyansk, to be sufficiently settled to enable him to transfer the two mobile units in action there on 15 September.³⁸⁷ (LVII Armoured Corps of Armoured Group 3 had been placed under Army Group North only for Demyansk.) On the other hand, in view of the progress made in the attack on Leningrad, he requested

³⁸⁶ The remaining units were placed under Sixteenth Army and were 'used up' in defensive actions, *ibid.*; orders to Army Group North and transfers of Armd. Group 4 and mobile units: OKH/GenStdH/Op.Abt. (II) No. 1494/41, 10 Sept. 1941, Weisung für die Fortführung der Operationen [Directive for the continuation of operations], with annexe 1, BA-MA RH 2/v. 1326.

³⁸⁷ Situation assessment of Army Group North/Ia, 11 Sept. 1941: Müller-Hillebrand, Nordabschnitt, pt. 1, appendix G8, MGFA P-114a; Halder, *Diaries*, 1224 (11 Sept. 1941).

that XXXXI Armoured Corps remain with Army Group North until Krasnogvardeysk had been captured. Otherwise the battle would have to be broken off at the crucial moment, with the consequences already depicted on 6 September. Halder was sympathetic, but he pressed Leeb if at all possible to transfer Armoured Group 4 on the date set and disputed Leeb's assertion that breaking off the encirclement operation would require pulling back the front.³⁸⁸

In the meantime, the fighting in which the two divisions of Eighteenth Army still in Estonia were involved was approaching its conclusion. After the capture of Narva on 17 August 1941 the operations of the parts of Eighteenth Army in Estonia took place separately from those of the eastern wing of the army group and the front against Leningrad.³⁸⁹ (See the Annexe Volume, No. 16.)

On 9 July the first German convoy left for Riga, which had already been captured on 29 June. This was a daring operation in so far as Riga and its port Dünamünde could be completely dominated by the offshore islands. The Irben strait was not mined, however, and the first convoy arrived without losses. But the incipient resistance of the numerous heavy artillery emplacements, the air units, and the ships of the Soviet Baltic Fleet soon forced a reduction of supply shipments. German heavy army artillery, provisionally placed at appropriate points, was not able to provide adequate protection for the convoys.³⁹⁰ Together with the navy, 291st Infantry Division prepared to seize the islands. After the capture of Tallinn by XXXXII Army Corps (254th, 61st, and 217th Infantry Divisions) on 28 August, the corps was divided: 254th Division was sent east, 217th was made available for coastal defence, and 61st was made available for the attack on the Baltic islands.³⁹¹ With the capture of Tallinn, it became urgently necessary to protect the sea routes against Soviet air units and long-range artillery on the islands of Hiiumaa (Dagö) and Saaremaa (Ösel). On the other hand, the withdrawal of most of the Soviet Baltic Fleet permitted German naval units to operate without great risk. Landings on the island of Vormsi and two smaller islands in the Muhu sound were begun on 8 September to prevent Soviet ships from interfering with the landings on the larger islands. The capture of Saaremaa was begun on 14 September with a landing on the island of Muhu accompanied by massive air attacks to suppress enemy artillery fire and feints

³⁸⁸ Telephone conversation between Halder and Brennecke, 12 Sept. 1941, 12.00 a.m.: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix G9, MGFA P-114a; Halder, *Diaries*, 1227 (12 Sept. 1941); Leeb, *Tagebuchaufzeichnungen*, 354. After being briefed by Schmudt on 11 Sept. Keitel granted a postponement of 48 hours: Army group order for pulling out the mobile units of Armd. Group 4, 14 Sept. 1941: BA-MA Pz.Gr. 4, 18738/2. In fact this was not completed until 20 Sept. 1941.

³⁹¹ Melzer, *Baltische Inseln*, 26-7, 134 ff. (assignment of troops for Saaremaa), 138 ff., annexes 5, 6; M.Dv. No. 601, pp. 21 ff. (maps 1-3); cf. n. 385 above.

by German and Finnish naval units.³⁹² Against strong resistance and with fire support from cruisers and torpedo-boats, the island was captured by 5 October. Hiiumaa fell on 21 October. Thereafter the command of XXXXII Army Corps was withdrawn to be used against Odessa; 61st Infantry Division was transferred to Sixteenth Army against Tikhvin, and 217th Division was used in the attack on Oranienbaum. The last island in the group still in Soviet hands, Odensholm, was occupied without resistance by a naval shock-troop detachment on 5 December.

In the conquered Baltic areas a 'Reich Commissariat Ostland' was established, but the northern sector, with the ports, remained part of the rear area of the army under the responsibility of 207th Security Division.

After transferring numerous units for the attack on Moscow, at the end of September 1941 Army Group North was confronted with the question of how it could use the remaining units at the expected points of main effort without reducing—indeed, if possible increasing—the pressure of the ring around Leningrad while securing its eastern flank and protecting its southern flank, which would inevitably lengthen as Ninth Army advanced towards Moscow. As it was not possible to fulfil all these tasks at the same time, and as the strength of enemy attacks at specific locations could not be predicted, the army group command drew up a list of priorities.³⁹³ Top of the list was the consolidation of the situation of XXXXI Armoured Corps on the Volkhov front, where, in addition to the division already scheduled to be withdrawn from the Leningrad front, it might become necessary to remove a division from the siege of Kronshtadt. Because of the strong fortifications on the island and the presence of the reinvigorated Soviet Eighth Army, as well as the guns of the Soviet Baltic Fleet, the army group expected protracted fighting, which would make it impossible to start operations on the Volkhov front first. But that very situation would be highly desirable, as it would then make forces available for the main objective, Leningrad. The fall of Leningrad would break the back of the defence of Kronshtadt. Rest and replacements were essential for continuation of the fighting. In a long memorandum Eighteenth Army headquarters compared its personnel and material situation with the tasks it had been given and with the situation of the enemy. It came to the conclusion that heavy losses, especially of officers and non-commissioned officers, had significantly reduced the fighting value of the 9 $\frac{2}{3}$ infantry divisions remaining on the Leningrad front and the south coast of the Gulf of Finland, a conclusion that applied to all divisions. In addition to personnel replacements, more

artillery ammunition and adequate air support were urgently needed. Success could be achieved only if all available forces were concentrated on just one task at a time.³⁹⁴

On 22 September the expected enemy attacks began against the southern wing of the army group as well as from the north across the Neva, south of Shlisselburg. Under heavy attack intended to re-establish land communications with Leningrad, XXXIX Armoured Corps soon found itself in a difficult situation; a division had to be withdrawn from the encirclement front at Oranienbaum and brought up to reinforce the corps.

The corps repulsed the attacks but took significant losses. Two days later, however, the army group came to the conclusion that, in view of the constantly growing strength of the enemy south of Lake Ilmen as well as on the front between the Neva and the Volkhov, it was not in a position to mount new attacks. XXXIX Armoured Corps (with 8th and 12th Armoured Divisions and 20th Motorized and 96th Infantry Divisions) had suffered such high casualties that it would probably not be able to hold its present positions. The army group urgently requested replacements; in particular, it wanted to bring up 36th Motorized Infantry Division, which had not yet been transferred, to maintain the encirclement of Leningrad. If the close encirclement was not successful, the city would have to be forced to surrender by bombing and starvation. That outcome could not, however, be expected with certainty, as experience of other large cities had shown. Moreover, Leningrad still had a hinterland extending to the Finnish front and the water route across Lake Ladoga.³⁹⁵

In view of the special importance Hitler and Army Group North attached to the capture of Leningrad, but also because of the future fate of its defenders, it is appropriate here to outline several German deliberations at various command levels regarding the city.

As early as 6 September the question arose in Hitler's Directive No. 35 whether the surrender of the city should be accepted and what should be done with the inhabitants. In a memorandum of 21 September the department for home defence of the Wehrmacht High Command presented the following variants:³⁹⁶

³⁹⁴ The army reported the following losses as of 15 Sept. 1941: 2,035 officers, 304 replacements; 56,700 non-commissioned officers and men, 25,578 replacements. The shortfall was therefore 1,731 officers and 31,122 men: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix G16, MGFA P-1148.

³⁹⁵ H.Gr. Nord/Ia, reports to OKH/Op.Abt, as in n. 389 above; Müller-Hillebrand, *Nordabschnitt*, pt. 1 appendices G19, G21, G22, MGFA P-114a; Leeb, *Tagebuchaufzeichnungen*, 361 ff. (23-7 Sept. 1941); for the following cf. also Salisbury, *Leningrad*.

³⁹⁶ OKW/WFST/Abt. L, Chefsachen 'Barbarossa', 21 Sept. 1941, BA-MA RH 19 III/168. The result of these deliberations was that all variations considered were found to be unfeasible and that a decision by Hitler was required: Hitler's decision, 12 Oct. 1941, KTB OKW i. 1070 (103). On these questions cf. Leeb, *Tagebuchaufzeichnungen*, 373 (12 Oct. 1941) n. 484; KTB, H.Gr. Nord, BA-MA RH 19 III/168. Cf. also the problems in the case of Kharkov, *ibid.* 466. On 12 Oct. the intention to let the civilian population leave Leningrad resulted, in connection with Hitler's directive, in an addendum by the

1. Occupy the city, which was to be rejected, as the Wehrmacht would then be responsible for feeding the population.

2. Isolate the city, if possible with an electric fence to be guarded with machine-guns. Disadvantages of this solution: weak inhabitants would starve, the strong would take the food available and survive; danger of epidemics, which could spread to the German front. 'Moreover, it is doubtful whether we can expect our soldiers to fire at escaping women and children.'

3. 'Remove women, children, and the elderly through openings in the encirclement; let the rest starve.' Criticism: an expulsion beyond the Volkhov, though theoretically possible, was not feasible in practice. This solution too would involve the danger of epidemics and of some of the strongest inhabitants surviving for a long time.

4. After isolating the city, withdraw behind the Neva and leave the city to the Finns. The 'Finns have stated unofficially that they would like the Neva as their frontier, but Leningrad would have to be removed.' Thus the question of how the population should be treated would remain a German responsibility. 'Conclusion and proposal: there is no completely satisfactory solution. When the time comes, however, Army Group North must receive an order that can actually be carried out.'

The following proposals were submitted:

(a) Declare to the world that Leningrad is being defended as a fortress and that therefore the city and its inhabitants must be treated as military targets. Nevertheless, Roosevelt must be permitted, with an assurance of safe conduct, to supply the inhabitants or remove them to his part of the world after a capitulation of the city.³⁹⁷ Such an offer could not, of course, be accepted and should be treated only as propaganda.

(b) 'We first isolate Leningrad hermetically and, as far as possible, pound it to dust with artillery and air attacks (only weak air units available for the time being).'

(c) Once the city had been worn down by terror and hunger, a few passages should be opened and defenceless people let out. 'As far as possible, deporta-

C.-in-C. of the army to Army Group North with instructions to 'narrow the present encirclement ring around Leningrad only where absolutely necessary for tactical reasons'.

³⁹⁷ The deliberations concerning an American offer to take responsibility for the population were probably due, among other things, to an intelligence report of a campaign by the American Red Cross and other charity organizations in favour of the USSR. The aim was to organize an unprecedented aid campaign with nurses and doctors. A first group of 120 missionaries was already on its way to Vladivostok; the dispatch of a second group via Iraq and Iran was imminent. It would be accompanied by photographers entrusted with the task of taking 'rather a lot of pictures of the misery of refugees in Russia' in order to 'present Germany as a barbaric country in the USA': OKW/Amt. Ausl./Abw. to WPr., annexe 1, to 'Bremen', 21 Aug. 1941, BA-MA RW 4/v. 329, 6972/41, 28 Aug. 1941. Moreover, FM Mannerheim, who was also president of the Finnish Red Cross, requested help from the International Red Cross to feed prisoners of war. In spite of donations from the USA, Sweden, and Switzerland, almost a third of the approximately 64,000 prisoners died because of earlier exhaustion: Roschmann, *Gutachten*, suppl. 3 to annexe 2.

tion to interior of Russia. The rest will inevitably become scattered across the country.'

(d) 'Rest of "fortress troops" will be left to themselves through the winter. In spring we then force our way into the city (if the Finns do so first, we have no objections), remove all those still alive to the interior of Russia or take them prisoner, level Leningrad with demolition charges, and hand over the area north of the Neva to the Finns.'

These proposals, set out for internal use, were given binding form in an order of the chief of staff of the Wehrmacht High Command of 12 October 1941. After the experiences and 'extreme dangers' for the troops in Kiev—and even worse was to be expected in Leningrad and Moscow—no German soldier was to enter these cities. Small open gaps, which would make it possible for the population to escape into the interior of Russia, could 'therefore only be welcome'. Before their capture these cities were to be worn down and the inhabitants induced to flee by artillery fire and air attacks. Hitler expected that this measure would increase the chaos in Russia and facilitate the administration and exploitation of the occupied areas in the east. But all these ideas of wearing the cities down failed because of a shortage of siege artillery and suitable air units and because, in the case of Leningrad, the Finnish government did not want to extend its attacks on that front.

Even after this general decision by Hitler, deliberations continued within the army group itself about how the inhabitants of Leningrad should be treated after the city had been taken. Many were already fleeing the city. Several thousand were reported already on the way to Krasnogvardeysk and Pskov, and 100-20 Red Army men were reported to be deserting daily.

Army Group North thereupon asked the army high command whether, in the event of a surrender of Leningrad, enemy troops there should be treated as prisoners of war. If they were not, a battle to the bitter end had to be expected, with correspondingly heavy losses.³⁹⁸ On 17 October the Army High Command replied that an offer to surrender by the troops in Leningrad was to be reported immediately, as 'only at that point will a decision be taken at the highest level regarding the further treatment of this question'. But that situation never arose.

The Army High Command and Army Group North differed widely in their judgements regarding the probability of a withdrawal by the Red Army. The army group saw no sign of an imminent evacuation of large areas, such as the Wehrmacht and Army High Commands, basing their views on reports from the Luftwaffe, expected.

The quiet on the Leningrad front was not interpreted as meaning that the enemy had accepted his fate, although movements in the port on Lake Ladoga might indicate that he wanted to save troops in Leningrad by evacuating them

³⁹⁸ H.Gr. Nord/Ia, KTB, 14-17 Oct. 1941, BA-MA RH 19 III/168, and note mentioned above (p. 644).

to the interior of Russia. 'If this assumption is correct, it can also be assumed that the enemy considers the situation in Leningrad to be hopeless.' The narrow corridor held by Eighteenth Army at Shlisselburg ('the bottleneck') was a constant source of concern. Here the army group saw the possibility that the enemy might withdraw after a German attack on Tikhvin. If this did not happen, an attack would also have to be prepared in that direction. Leeb had to abandon any plans for a direct attack on Kronshtadt; a close encirclement of Leningrad was not possible with the forces at his disposal.

Thus a decisive effect was not to be expected from available artillery, as the airfields and supply facilities in Leningrad remained beyond its range. Neither did the army group, after the experience of London, expect decisive results from the use of the Luftwaffe. The possibility of starving the city into submission also seemed remote, as according to German calculations freighters and barges with a capacity of approximately 23,000 GRT were still available. Assuming personal rations of 400 grammes each, a thousand tons of food would yield 2.5 million rations. An attack was therefore necessary on the (eastern) Schlisselburg front across the lower Volkhov.

Eighteenth Army command, which would be most immediately affected by such developments, began to consider what to do if Leningrad offered to surrender and how German forces should behave towards starving civilians leaving the city. The general impression was that the troops would not be able to stand the nervous strain if required repeatedly to fire on women, children, the elderly, and others trying to escape from Leningrad.³⁹⁹

The commander of 58th Infantry Division—on the left wing of Eighteenth Army, outside the envisaged escape route for the population of Leningrad—emphasized that the troops did not fear the strained military situation, but they did fear a confrontation with the civilian population.

Our troops understand very well that we cannot feed the millions of people encircled in Leningrad without having to accept adverse effects on the food situation in our own country. For this reason the German soldier would use his weapons to prevent such break-outs. But that could easily lead to the German soldier losing his inner moral stability, i.e. he would not shrink from such violence even after the war. The command and the troops are trying hard to find another solution to this problem but have not yet found any acceptable way.

Leeb had little sympathy for the proposal of 27 October by the army high command to lay minefields in front of the German lines so as to spare the troops the task of firing on the civilian population. He saw no reason to maintain the encirclement after the surrender of the Red Army troops in Leningrad and Kronshtadt, and concluded that even then a large part of the population would die, 'but at least not before our eyes'. Deportation of parts of the population to the east should also be considered.

Subsequent developments relieved the Wehrmacht High Command as well

³⁹⁹ H.Gr. Nord/la, KTB, 24 Oct. 1941.

as the front commands and the troops of such concerns. First of all, the enemy's relief attacks between the Volkhov and the Neva had to be halted and an encirclement front established for the winter. The army group planned an attack east of the Neva with the reinforcements brought from the Oranienbaum pocket after 12 October, from France (227th and 212th Infantry Divisions), the Spanish 250th Infantry Division, and paratroop regiments.⁴⁰⁰

After an oral report by the commander-in-chief of the army, on 3 October Hitler intervened with an operations proposal of his own: to make Tikhvin the objective of the attack with the mobile units of XXXIX Armoured Corps. He argued that an attack in this direction would keep casualties lower than an operation against the enemy's front across the narrow land-bridge from the west, block the front on both sides of the Volkhov, and enable the encirclement of enemy forces between the present front, the Volkhov sector, and Lake Ladoga.⁴⁰¹

Leeb's reservations concerning this proposal stemmed mainly from the lack of adequate forces and from the postponement of the attack from 6 to 21 October. Hitler took this objection into account and on 5 October decided to cancel the attack with the mobile units and to use the units to be newly brought up on the existing defensive front of the armoured corps. The corps was to be pulled out of the front for rehabilitation and would, if necessary, advance via Tikhvin after all. The army group interpreted this use of the mobile units as being connected with the abandonment of the close encirclement of Leningrad, and requested permission to carry out the attack as planned, at least as far as Putilovo. On 6 October Hitler decided that the attack was to be carried out with the infantry already at the front and those troops which were yet to be brought up, which would require two weeks for regrouping.

After 2 October the attack by Army Group Centre at first relieved pressure on the northern sector of the eastern front. Hitler and the Army High Command considered it possible that the Red Army would withdraw substantial forces facing Army Group North, falling back to the western edge of the Valday plateau and from there to the Rzhev position in order to shorten the front. It would then be forced to abandon attempts to relieve Leningrad and would have to withdraw beyond the Volkhov. This could then require Army Group North either to advance via Tikhvin or, on the left flank of Ninth Army, to push forward via Borovich and defeat the withdrawing enemy in the Valday area. For this purpose the pulling out of the mobile units and their rehabilita-

⁴⁰⁰ To meet the 'uncovered requirements' of the three weakest divisions alone (11,673 men), Halder initially envisaged the dispatch of 8,500 replacements from convalescent companies, replacement transfer battalions, and Denmark: Halder, *Diaries*, 1254 (29 Sept. 1941).

⁴⁰¹ Army Group North to Sixteenth Army headquarters, 2 Oct. 1941, and reaction of the latter: Müller-Hillebrand, *Nordabschnitt*, pt. 1 (appendices H1, H2), MGFA P-114a; Halder, *Diaries*, 1268 (1 Oct. 1941): 'Out of this world!'; Leeb, *Tagebuchaufzeichnungen*, 367 (2, 3 Oct. 1941), 369-70 (5, 6 Oct. 1941).

tion and transfer to the area of Chudovo for rest and re-equipping was ordered on 5 October.⁴⁰² The attack from the present area of XXXIX Armoured Corps would then have only the function of tying down the withdrawing enemy. The army group issued an order to this effect on 8 October.⁴⁰³ Both operational directions were to be assigned mobile units. On 13 October the Army High Command was certain that, on the whole, the enemy facing Army Group Centre had been defeated and was now bringing up forces south of Lake Ilmen. On the other hand, his intention to break the encirclement by halting on the Volkhov and Ladoga fronts was confirmed.⁴⁰⁴

Army Group North was ordered to advance with strong forces as soon as possible from the area around Chudovo via Tikhvin and west of that town to the lower Volkhov, in order to cut the way to the east for the enemy forces south of Lake Ladoga and, together with the German forces attacking across the Volkhov from the west, to encircle them. Moreover, contact was to be established with the Finnish Karelian Army via Lodeynoe Pole. The Finns were to be requested to cross the Svir and advance to meet the Germans. The army group set the start of the attack for 16 October.⁴⁰⁵ On the first day of the attack 126th Infantry Division established bridgeheads across the Volkhov, from which the mobile units of XXXIX Armoured Corps began their advance. Rain, mud, ice, and snow made the terrain almost impassable. Not until 26 October were Malaya Vishera and Budogoshch reached. Meanwhile the isolated units of the Red Army started counter-attacks south of Lake Ladoga and near Shlisselburg.⁴⁰⁶

The assumption that the enemy was withdrawing quickly proved to be wrong. Fighting everywhere was hard, and only south of Lake Seliger was Sixteenth Army able to establish contact with Ninth Army. Leeb's request to the Army High Command to have Armoured Group 3 and the northern wing of Ninth Army placed under his authority so as to begin the annihilation of the

⁴⁰² OKH/GenStdH/Op.Abt. to Army Group North: Müller-Hillebrand, Nordabschnitt, pt. 1, appendix H6, MGFA P-114a; Halder, *Diaries*, 1273 (5 Oct. 1941). Cf., however, the new directive OKH/GenStdH/Op.Abt. (IN) No. 41252/41, 8 Oct. 1941, BA-MA RH 2/v. 1327, pp. 23 ff.; Leeb, *Tagebuchaufzeichnungen*, 370 (8 Oct. 1941). The thrust towards Tikhvin was directed against the railway line between the White Sea and Moscow and was also intended to establish contact with the Finns on the Svir front. But Halder was primarily interested in the attack by Sixteenth Army from the area around Chudovo in a south-easterly direction to reduce pressure on the northern wing of the attack against Moscow.

⁴⁰⁴ OKH/GenStdH/Op.Abt. (I) No. 1584/41, directive for the continuation of operations of Army Groups Centre and North, BA-MA RH 2/v. 1327, pp. 30 ff.

⁴⁰⁵ Army Group Order No. 2 for the continuation of the operation, 14 Oct. 1941: Müller-Hillebrand, Nordabschnitt, pt. 1, appendix H12, MGFA P-114a; Leeb, *Tagebuchaufzeichnungen*, 373 (11, 13 Oct. 1941), mentions Paulus's visit, during which the distribution of forces for both offensives was discussed. From 10 Oct. to 3 Nov. 1941 Paulus stood in for Halder, who had suffered a riding accident.

⁴⁰⁶ Leeb, *Tagebuchaufzeichnungen*, 376 ff. (16-24 Oct. 1941); Müller-Hillebrand, Nordabschnitt, pt. 1, 178 ff., MGFA P-114a; H.Gr. Nord/Ia, KTB, BA-MA RH 19 III/168.

enemy with a unified command was rejected, as the Army General Staff had not yet reached a decision about the further conduct of operations.⁴⁰⁷ First the northern wing of Army Group Centre had to close up to Kalinin and Torzhok. II and X Army Corps of Army Group North were to pursue the enemy on towards Vyshniy Volochek and Valday.

The attack on Tikhvin became bogged down in mud on 25 October. Leeb flew to Hitler, who wanted to halt the attack. Leeb proposed that the decision about breaking off the attack be postponed, as it was still making some progress. If the weather forced a halt, a bridgehead across the Volkhov should be maintained and the mobile units gradually withdrawn.⁴⁰⁸ Hitler left the decision to Leeb.

At the same time, Hitler refused Leeb's request to attack in the direction of Oranienbaum in order to release German forces tied down there. Hitler believed an attack against the strong coastal fortifications and the guns of the Soviet ships in Kronshtadt would be too costly. Eighteenth Army therefore had to go on the defensive.

On 28 October the commander-in-chief of Sixteenth Army still saw a chance of advancing to meet Ninth Army and thereby eliminating the enemy on his southern front. Leeb pointed out that Ninth Army might not even reach Vyshniy Volochek and dampened the hopes of the army in that direction. On the other hand, he permitted the attack on Tikhvin to continue without any limitations. On 29 October he considered the situation to be still quite promising: 'If we continue to make such good progress, the enemy will have to decide in the next few days whether he wants to stand and fight west of the Volkhov, even if that involves the danger of being cut off, or whether he considers it more advisable to withdraw beyond the Volkhov.'

Leeb believed that the enemy south-east of the Volkhov front was in the same situation. He considered the position of the enemy to be much more favourable to the German forces than did Hitler, and saw no reason to cancel the attack on Tikhvin. He expected more pressure on the enemy in the coming days in the area of Volkhovstroy, which might cause him to abandon his positions west of the river.

The directive of the Army High Command of 30 October for the continuation of operations against the enemy forces between the Volga and Lake Ladoga was intended to defeat the enemy around Moscow by cutting the rail link Yaroslavl-Rybinskoe, depriving him of the possibility of obtaining supplies. Costly direct attacks on the front were to be avoided. Army Group

⁴⁰⁷ Situation assessment by Leeb and request to Army High Command, 17 Oct. 1941, and its rejection, 19 Oct. 1941, in Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendices H13-H16, MGFA P-114a. The Army High Command wanted a more spacious thrust around Moscow; Army Group North, on the other hand, wanted to encircle the enemy forces facing its own sector of the front. Cf. sect. II.1.1(f) at n. 493.

⁴⁰⁸ Leeb, *Tagebuchaufzeichnungen*, 381 ff. (26-8 Oct. 1941); Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix 19, MGFA P-114a; situation assessment by C.-in-C. of Army Group North, 29 Oct. 1941, *ibid.*, appendix 20. Cf. however, KTB H.Gr. Nord, 25 Oct. 1941, BA-MA RH 19 III/168.

North was to attempt to take Tikhvin and establish contact with the Finns. If the attack on Volkhov did not succeed and Tikhvin could not be held, the bridgehead on the Volkhov was to be held.⁴⁰⁹

Tikhvin was captured on 8 November; the attack on both banks of the Volkhov advanced to within 15 kilometres of the town of that name. But the objective of this double pressure, to force the enemy to evacuate the area south of Lake Ladoga, was not achieved. Tikhvin was to become the starting-point for the final thrust against Volkhov. But that effort could succeed only if the right flank of Sixteenth Army was adequately covered. With the decision to forgo the attack by the northern wing of Army Group Centre against the enemy forces facing Sixteenth Army, as Leeb had proposed, the enemy gained freedom of action and was able at any time to create difficulties for the eastern and southern fronts of the army group.

Army Group North command attempted to acquire reserves and again concluded that the only possibility in this regard was the release of the German forces facing Oranienbaum and Kronshtadt after the conquest of that area. On 10 November Leeb visited the commander-in-chief of Eighteenth Army to discuss the possibility of an attack. Colonel-General von Kuchler declined to undertake such an operation, as the strength of the army was not sufficient for a concentrated attack, while isolated actions would involve heavy losses. The general commanding XXVI Army Corps and the divisional commanders declined to attack the strong fortifications with the forces at their disposal. Leeb stated that he nevertheless reserved the right to order an attack if the enemy transferred additional forces from Oranienbaum to the front south of Lake Ladoga and near Tikhvin.

On 12 October he reported to the Army High Command that he considered an attack on the area south of Kronshtadt to be necessary⁴¹⁰ and referred to Hitler's order forbidding the execution of the already prepared operation in October. But now the situation had developed in such a way that the fortress had to be neutralized. Again he argued that the enemy was withdrawing forces to strengthen the defence of Leningrad and pointed out that it was impossible to build up the necessary reserves for the other front sectors. And again Hitler refused to permit the attack.

Not only did four divisions of Eighteenth Army remain tied down there, as they were still responsible for securing the area between Uritsk and Petergof on the bay of Kronshtadt, but heavy artillery and a battalion of self-propelled

⁴⁰⁹ Situation assessment by C.-in-C.s of Army Group North and Sixteenth Army, request to Army High Command for continuation of operation, KTB H.Gr. Nord, BA-MA RH 19 III/168, appendices H20-H22; directive, OKH/GenStdH/Op.Abt. No. 1610/41, 30 Oct. 1941, for continuation of operations against enemy forces between the Volga and Lake Ladoga, BA-MA RH 2/v. 1327, fos. 44 ff. This attack was entirely in line with Hitler's views, as it avoided a direct attack on Moscow. After reaching the Selizharovo-Kalinin-Volga reservoir road as a supply-line, Ninth Army was not to advance further northward. Cf. sect. II.1.1(f) at n. 500.

⁴¹⁰ Leeb, *Tagebuchaufzeichnungen*, 390 (12, 13 Nov. 1941), 393 (18 Nov. 1941); assessment of chances of success by Sixteenth Army, 19 Nov. 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix H35, MGFA P-114a.

assault-guns were withdrawn. Hitler's frequently evident fear of attacking strongly fortified places unless abundant siege artillery was available thwarted what in Leeb's eyes was the only chance of freeing forces to deal with future crises.

On 19 November Sixteenth Army command still saw a possibility of destroying the enemy forces west of the Volkhov so as to gain the five divisions fighting there as relief for the mobile units and as reinforcements for the northern sector of the front. After two divisions (61st and 215th Infantry Divisions) had been brought up, the defence of Tikhvin seemed secure, but for the defence of the lake area from Ostashkov to Lake Velye and for the securing of the southern shore of Lake Ladoga two additional divisions seemed indispensable. Leeb still hoped to hold Tikhvin.

On 20 November the enemy achieved his first penetration south of Tikhvin in the front sector held by 8th Armoured Division. After the developments of the previous days, Leeb concluded that a continuous front had to be formed. He demanded that he be given four or five divisions in the event that the mobile units of XXXIX Armoured Corps were withdrawn. Abandoning Tikhvin would reduce this requirement by one division.⁴¹¹

On 1 December, however, the army group saw that the only chance of establishing reserves was in halting the attacks, going on the defensive, evacuating Tikhvin, and taking up a position south-west of the town. Only the 'bottleneck' at Schlisselburg was to be widened by additional attacks.⁴¹²

The sudden drop in temperature on 5 December 1941 to -35°C made the situation considerably worse, especially as it immobilized German units near Tikhvin, which the enemy had surrounded. Hitler ordered the town to be held and the planned relief attack south of Lake Ladoga to be postponed until the arrival of additional forces—100 tanks as material replacements, and 24 depot and trained replacement battalions with 22,300 men—on 14 December.⁴¹³

At Leeb's request, however, the Army High Command approved the withdrawal from Tikhvin on 7 December, and Hitler gave his consent the following day. The operation against the lower Volkhov had thus finally failed. Not even the order to at least keep the Leningrad-Moscow railway line under control by artillery fire could be carried out. The inevitable strengthening of Leningrad's defences following the evacuation of Tikhvin had to be accepted, as did the abandonment of the now unrealistic hope of linking up with the Finns. In

⁴¹¹ Situation assessment by Leeb, 22 Nov. 1941, with report to Army High Command: Müller-Hillebrand, Nordabschnitt, pt. 1, appendices H37, H38, MGFA P-114a; Leeb, *Tagebuchaufzeichnungen*, 394 ff. (21-4 Nov. 1941).

⁴¹² Army Group North to Sixteenth Army, 1 Dec. 1941 (Müller-Hillebrand, Nordabschnitt, pt. 1, appendix 43, MGFA P-114a), ordered Tikhvin to be evacuated in time if necessary, as the army group could not replace losses. The situation in the Schlisselburg area, on the other hand, was to be dealt with offensively, as the enemy could now escape across the frozen Lake Ladoga: Leeb, *Tagebuchaufzeichnungen*, 402 ff. (3-5 Dec. 1941).

⁴¹³ Leeb, *Tagebuchaufzeichnungen*, 405 nn. 602-8; Müller-Hillebrand, Nordabschnitt, pt. 1, appendices H43-H61; Hitler's order H48, MGFA P-114a; Halder's notes of a conference with Hitler, 6 Dec. 1941: Halder, *Diaries*, 1339.

other words, the complete isolation of Leningrad had become impossible. Leeb hoped to gain new forces for extending the encirclement near Shlisselburg by withdrawing the Tikhvin front to a 'swamp position', if necessary to the Volkhov. On this question a dispute arose between the Wehrmacht and the Army High Commands as well as the army group.⁴¹⁴

The development of the situation forced a decision to withdraw Sixteenth Army to the 'swamp position' on 9 December and to bring up 8th and 12th Armoured Divisions and place them at the disposal of the army group.⁴¹⁵

Hitler eventually approved this withdrawal, but only on condition that it was considered as a transition to a final position, and that XXXIX Armoured Corps held a line 30 kilometres in front of this position as long as possible. At the same time, XXVIII Army Corps was to attack south of Lake Ladoga to the line Shum-Lavrovo. On 14 December deep enemy penetrations of the swamp position forced the cancellation of this plan of attack as well as a withdrawal of forces to the Volkhov and the Kirishi-Malukssa railway line.

During his visit to Hitler's headquarters on 16 December, Leeb obtained approval for the withdrawals already begun⁴¹⁶ to the Volkhov, which were successfully completed by 27 December.

The front south of Lake Ilmen had stabilized with the conclusion of the attack operations of Sixteenth Army and remained quiet. Here six infantry divisions covered a sector 240 kilometres wide. Between Lake Ilmen and Shlisselburg thirteen infantry and two armoured divisions were completely exhausted and short of almost all equipment. Nine infantry divisions faced Leningrad on a front of 130 kilometres. Hitler authorized withdrawal to the Volkhov only on condition that the front was defended to the last man and the encirclement of Leningrad maintained.

Hitler's approval of the withdrawal to the Volkhov on 16 December 1941—in the absence of alternatives it can hardly be called a decision—was a move which applied along the entire front in view of the Soviet counter-offensive. In spite of its extended front, at this time Army Group North was nowhere in serious danger of being cut off from its rearward communications.

The evacuation of Tikhvin, however, represented more than the abandonment of the objective of the army group's last partial offensive—namely, the disruption of communications between the Russian interior and Leningrad via Lake Ladoga. An important step towards a link-up with the Finnish Svir front on the way to the 'edge of the tundra', as Halder once described the ultimate

⁴¹⁴ Leeb's telephone conversation with Halder, 7 Dec. 1941, and all subsequent important deliberations, as well as Hitler's decision, 9 Dec. 1941, and order to Army Group North, 15 Dec. 1941, in Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendices H49-H60, MGFA P-114a.

⁴¹⁵ Leeb, *Tagebuchaufzeichnungen*, 411 (9, 10 Dec. 1941).

⁴¹⁶ *Ibid.* 418 ff. (16-18 Dec. 1941). Hitler made his decision conditional on his talk with Leeb and the views of the C.-in-C. of Sixteenth Army, Col.-Gen. Busch. Keitel, however, had already approved in advance the withdrawal of the armoured units behind the Volkhov: *KTB OKW* 1. 1083 (109).

objective of the army group, also had to be retraced. The first objective of the second phase of operations, begun at the end of July—the encirclement of Leningrad—had not been achieved. This was not due solely to the withdrawal of major forces in favour of the offensive against Moscow; the Finnish army's refusal, not yet realized by the Germans, to advance beyond the old frontier was also a contributing factor.

Soviet defensive actions had been able to tie down major parts of Sixteenth Army at the boundary with Army Group Centre in such a way that Army Group North had been unable to transfer its forces for offensive thrusts against Leningrad and Tikhvin. The continuing commitment of divisions of Eighteenth Army to maintain the Oranienbaum pocket also relieved pressure on Leningrad. But the protection provided by the last bastion of the Soviet Baltic Fleet, the naval base and fortress of Kronshtadt in the approaches to Leningrad, was decisive in the Soviet ability to hold this beachhead. It prevented Army Group North and the German navy from achieving their main common objective, eliminating the enemy fleet and protecting the sea routes.

Until the freezing over of the Baltic, however, domination of the sea area was secure and thus the task was fulfilled.

(e) *The Actions of German Naval Forces in the Baltic until the End of 1941*

(See the Annex Volume, No. 17)

The strategic and operational guidelines for the conduct of the naval war against the Soviet Union, submitted in the 'Situation Assessment for the Eastern Campaign against Russia (Case Barbarossa)' by the naval war staff on 30 January 1941, underwent no essential changes before the opening of hostilities.⁴¹⁷ According to these guidelines, the main tasks of the navy in the Baltic were protecting Germany's coasts and shipping, including troop transports; moving supplies for Army Group North; and preventing a break-out by Soviet naval forces into the open Baltic.

These tasks determined the extent of the measures to be taken and the distribution of forces. To carry out the defensive part of their task, German naval forces laid an extensive system of mine-barrages between Memel and the southern tip of the Swedish island of Öland ('Wartburg I-III'), beginning on 18 June 1941 with a total of 1,500 mines and 1,800 explosive buoys. This system was completed by a Swedish barrage, laid to meet German demands, in Swedish territorial waters. Subsequently, however, these mine-barrages, like the booms installed at German Baltic ports, caused only German losses.⁴¹⁸

⁴¹⁷ Salewski, *Seekriegsleitung*, iii, No. 7, pp. 145 ff. Cf. *ibid.* i. 354 ff. The best overall view of the naval war in the Baltic is in *Seemacht*, 602-22.

⁴¹⁸ Explosive buoys are devices which destroy or damage enemy mine-sweeping equipment. Meister (*Seekrieg*, 11) calculates losses up to the end of 1941 as at least 10 merchant ships and 2 minesweepers. Moreover, 3 minelayers were lost in the Swedish barrage on 9 July 1941 because the naval war staff and subordinate command staffs had failed to inform them of the barrage, which had been laid on 28 June 1941.

They did not fulfil their intended function, as Soviet surface units never ventured into the protected areas.

In contrast, the two large mine-barrages at the western entrance to the Gulf of Finland between the northern end of the island Hiiumaa and Finnish Hanko, and between the Estonian Pakerort and Finnish Porkkala ('Apolda' and 'Corbetta'), with a total of 980 mines and 1,373 explosive buoys, had a clearly offensive character. A few hours before the start of hostilities, during the night of 21-2 June 1941, this mining operation was extended to within 3.5 nautical miles of the coast of Hiiumaa. The German units involved were probably sighted by Soviet forces and reconnaissance aircraft, but they were not hindered in their work. In the Gulf of Finland, Finnish submarines and minelayers supplemented the German barrages. Additional barrages were laid at the entrance to the Gulf of Riga (the Irben strait and the Muhu sound) to obstruct enemy shipping until the Soviet bases and ports in the area fell to Eighteenth Army. It was intended at the same time to push the Soviet Baltic Fleet back into the eastern end of the Gulf of Finland. However, to guard the numerous barrages and prevent possible enemy attempts to break through, only a few German and Finnish motor torpedo-boats were available. In view of the weak German naval forces and the narrow confines of the operations area, co-operation with the units under the 'Air Leader Baltic' and Air Fleet 1 was urgently necessary. From the navy's point of view, however, this co-operation remained unsatisfactory, mainly because of the priority given to direct air support for the units of Army Group North as well as the small number of aircraft available for sea patrols. The fact that the operations of Eighteenth Army were not aimed primarily at occupying the Estonian ports delayed the early use of shore-based artillery for the surveillance of the barrages and the control of sea passages, which the navy's plans assumed would be available.

In their operational planning, Soviet naval leaders had obviously assumed that they would face a considerably stronger concentration of German naval forces in this operations area. This miscalculation and the lack of combat-readiness of their own ships and formations caused them to adopt a defensive operational plan limited to a sealing off of the Gulfs of Finland and Riga and a coastal defence based on heavy concentrations of artillery. Only submarines were to undertake offensive sorties from the Baltic naval bases which were protected by mine-barrages. Immediately after the start of hostilities, ships of the Soviet Baltic Fleet began their defensive mining operations according to plan. This defensive plan and an evidently quite inadequate evaluation of reconnaissance carried out in their own coastal area led to Soviet naval forces suffering heavy losses from German and Finnish mine-barrages in the first days of the war. The German side believed that this had such a paralysing effect on the Soviet fleet command that, with the exception of the defensive measures mentioned, it refrained for the time being from initiating further actions. The expectations of the German naval war staff were thus fully

confirmed.⁴¹⁹ The Germans considered the passiveness of Soviet surface forces and the ineffectual nature of the few submarine attacks to be a first important success of their own naval warfare. They were now able to concentrate on their second task.

After Eighteenth Army had captured Liepāja, supply shipments by sea, using coastal motor-ships and smaller vessels, were begun as of 3 July 1941. Although German ships bound for ports in western Finland used Swedish territorial waters as far as possible for safety, they were seldom in danger on the open sea. Only after 6 July did light Soviet surface forces and submarines become more active. Destroyers, patrol-boats, and aircraft constantly attacked German supply-ships headed for Dünabünde but did not achieve any decisive successes, although extensive mine-laying resulted in what had until then been the safest route having to be closed for several days. Moreover, a heavy coastal battery placed near Werder to protect shipping there could not be held, which made it necessary for the time being to continue protecting transports with the few available motor torpedo-boats and additional minefields. The Soviet countermeasures necessitated the most unwelcome transfer of two additional modern minesweeper and motor-minesweeper flotillas from the western theatre to the Baltic. At first only mine-free channels for shallow-draught vessels could be cleared close to the coast, which limited the transport capacity for supplying Army Group North. On the other hand, these routes in shallow coastal waters offered the best protection against enemy submarines.

The very limited operational capability of the light German and Finnish surface forces, a result of their small numbers and of obsolescence in some cases, did not permit them to interfere effectively from the sea with supply transports of the Soviet Baltic Fleet along the Estonian coast, to the Baltic islands and to the islands west of Leningrad. Only traffic to the base at Hanko, which was also bombarded by Finnish coastal artillery, was so thoroughly disrupted that the Soviet command was forced to resort to submarines for transport purposes.

Let us now turn to the conduct of offensive operations.

The naval war against the Soviet fleet in the Gulf of Finland was co-ordinated between the Finnish naval command and the German naval war staff or local commanders. But evidently no more than a tactical co-ordination of assessments of the enemy's situation was achieved. While, in spite of its confidence in German superiority, the naval war staff believed it had to take seriously the danger of operations by Soviet submarines and surface forces, and therefore even ordered the laying of mine-barrages near its own ports, the Finnish naval command clearly relied on the Soviet naval command's operational passivity. Accordingly, it expected mine warfare to be focused east of the line Porkkala-Tallinn; from this point of view the German mine-barrages

⁴¹⁹ M.Dv. No. 601, p. 14; H.Gr. Nord/Ja, KTB, BA-MA RH 19 III/171; Rohwer, 'Minenkrieg', 16 ff. Losses in Meister, *Seekrieg*, 359, and M.Dv. No. 601, p. 47 (annexe 4a), amplified with Soviet figures published after the war: Matveev and Selyanichev, 'Krasnoznamennyj Baltijskij Flot'; Achkasov and Pavlovich, *Soviet Naval Operations*. Cf. also Salisbury, *Leningrad*, 233 ff.

Apolda and Corbetta represented rather a restriction of German-Finnish naval movements.⁴²⁰ Logically, the Finns laid their first barrage ('Valkijärvi') in that area only on 29 June, and this was then expanded when Eighteenth Army approached Tallinn.

After 6 August the capture of Kunda permitted a land-based observation and control of the barrage designed to put a stop to the transports of the Soviet navy along the Estonian coast and between Hanko and Kronstadt. On 8 August, therefore, the minelayer group 'Cobra' began a series of mine-laying operations north of Cape Juminda and was soon joined by additional light surface vessels and Finnish submarines and minelayers. By 31 August the ships had laid a system of thirty-two different barrages with a total of 1,409 mines and 912 explosive buoys in a small area (approximately 24 by 32 nautical miles). This constituted a considerable obstacle to Soviet naval movements in the Gulf of Finland, but in the view of the German navy the air units and coastal artillery assigned to guard these barrages were still inadequate.⁴²¹ The 'Juminda' barrage was intended to play an important role when the Red Army had to abandon the Baltic coast with its bases, especially Tallinn, the large islands, and Hanko. For the transfer of the ships and units stationed there to Kronstadt and Leningrad could be effected in the narrow waters only with heavy losses. When XXXXII Army Corps approached Tallinn on 19 August and the fighting for the city reached its climax on 25-6 August, the first large-scale evacuation by sea began.⁴²² With support from ships and coastal artillery, the Soviet Tenth Infantry Corps, which had been encircled in Tallinn, was able to disengage and embark on a total of about forty vessels of various sizes during the night of 27-8 August. To cover the operation, the Soviet naval command had assembled a large force: in addition to the cruiser *Kirov*, 18 destroyers, 6 torpedo-boats, 28 minesweepers, 83 patrol-boats, and 6 submarines. Although they were preceded by the minesweepers, the transport and cover formations suffered heavy losses when they broke through the Juminda barrage: 16 warships and 15 transports. Air attacks and artillery fire sank another ten transport vessels or damaged them so heavily that they had to be beached. Luftwaffe attacks had a devastating effect on the ships of the evacuation fleet, closely massed and confined to narrow channels.⁴²³ No Soviet statistics are available on losses suffered in this operation.

⁴²⁰ M.Dv. No. 601, p. 19; Meister, *Seekrieg*, 14. The commander of torpedo-boats in Helsinki was of the same opinion.

⁴²¹ Figures on the mine-barrage north of Cape Juminda: M.Dv. No. 601, map 2. By 26 Aug. 1 destroyer, 7 minesweepers, 14 steamships, and 2 barges had been sunk by the Juminda barrage: Meister, *Seekrieg*, 359 ff.

⁴²² For the Soviet perspective cf. Pterskij, *Sowjet-Flotte*, 193 ff., with corrective notes by Rohwer; specifically on Tallinn *ibid.* 201 and note pp. 519-20. Cf. also Achkasov, 'Durchbruch-Operation', 26-41, with corrective notes by Rohwer; Rohwer, 'Verluste', 44; Meister, *Seekrieg*, 15-16; more recently also Achkasov and Pavlovich, *Soviet Naval Operations*, 56 ff., although they avoid exact figures for the losses (cf. *ibid.* 63).

⁴²³ The combat formation of the Luftwaffe (seven aircraft of II Gruppe Bomber Geschwader 77) was actually earmarked for an attack on the locks of the White Sea Canal but could not carry out that operation because of weather conditions. It was therefore available to attack naval targets near the Juminda barrage from 25 to 29 Aug. 1941.

With the capture of Tallinn and the forced withdrawal of most Soviet naval vessels to the bay of Kronshtadt, supporting a landing by army units on the Baltic islands involved considerably fewer risks for the German navy than in the first weeks of the campaign. From the beginning of planning for a landing, the participation of the navy was limited to merely providing assistance in an operation to be carried out by the army. Because of the islands' proximity to the coast and the lack of an adequate number of suitable vessels to carry out a landing independently, a larger role for the navy was neither necessary nor possible. The Erprobungsverband der Ostsee ('Trial Formation Baltic') provided barges and ferries. It also had several coastal motor-boats and ordnance-carriers.⁴²⁴

As a first step, the island of Vormsi was captured by the 'Group Cellarius' on 9 September. Before the start of the crossing, 'Operation Beowulf I', minesweepers had to clear a route to Muhu, the next objective. Then the first wave of 61st Infantry Division attacked in assault-craft on 14 September. To deceive the enemy, the navy, with the support of Finnish naval forces, undertook several feints which simulated landing preparations with a comparatively large number of torpedo-boats, fast patrol-boats, and covering vessels which intervened in the fighting with their fire.⁴²⁵ In one of these actions the Finnish armoured vessel *Ilmarinen* struck a mine and sank.⁴²⁶ Troops of 61st Infantry Division were able to capture the causeway between Muhu and Saaremaa on 14 September; moreover, the crossing by the 'Trial Formation Baltic' on ferries and other vessels now began. By 21 September all units of the division were on Saaremaa. At the request of XXXXII Army Corps, the navy also participated, with the bombardment by the cruisers *Emden* and *Leipzig* and operations by the boats of 2nd Torpedo Boat Flotilla, in suppressing the stubborn enemy resistance on the Svorbe peninsula (Operation Weststurm).

The second main step in the landing operations, the capture of the island of Hiiumaa, began with a feint intended to make the enemy believe that, as on Saaremaa, this landing would be carried out at the closest point between the two islands with assault-craft.⁴²⁷ In fact, however, transport capacity now

⁴²⁴ M.Dv. No. 601, pp. 22ff. H.Gr. Nord/1a, KTB, BA-MA RH 19 III/17; cf. also Melzer, *Baltische Inseln*, 46ff.; Hubatsch, 61. *Infanterie-Division*; *Seemacht*, 610.

⁴²⁵ Detailed account of these feints in M.Dv. No. 601. The operations order from Naval Group North to commander of cruisers was issued on 9 Sept. 1941 at the same time as the order to use motor torpedo-boats near the Juminda barrage to prevent a break-out by the Soviet fleet. For this order and subsequent operations cf. BA-MA RM 7/521, fos. 14ff. An important reason for the order to use motor torpedo-boats was a report from Air Fleet 1 on 8 Sept. of a concentration of twenty-five ships in five lines astern between Leningrad and Kronshtadt (ibid. 38). In the evening of 10 Sept. the port of Leningrad was reported to be almost empty and most of the warships and merchantmen transferred to Kronshtadt (ibid. 57).

⁴²⁶ Ekman, 'Untergang der "Ilmarinen"'. Total German losses were 3 minesweepers and more than two-thirds of the personnel as a result of explosions in a shipyard in Helsinki, attributed to sabotage: BA-MA RM 7/521, fos. 28, 325.

⁴²⁷ On 16 Sept. the Luftwaffe General Staff informed the navy that 24 Soviet vessels of 300-5,000t., which had been standing by to remove Soviet personnel from Saaremaa and Hiiumaa, had been destroyed in Triigi Bay: BA-MA RM 7/522, fo. 57.

available was sufficient to land troops on the east and west coasts of the island. Only the last group crossed the sound in assault-craft. Again the navy supported the army units with a diversionary manoeuvre, in which the light cruiser *Köln* with several torpedo-boats and minesweepers bombarded hostile batteries. With the exception of Odensholm, which was abandoned by its Soviet defenders without a fight only in December, the occupation of the Baltic islands was concluded on 21 October.

Even while Tallinn was being evacuated, German and Finnish minelayers began to close the gaps in the Juminda barrage again and to extend the barrage system. At the beginning of September additional mine-barrages were laid in the eastern part of the Gulf of Finland to reduce the freedom of movement of the Soviet Baltic Fleet to the area around Leningrad, but also to prevent a break-out by some of the fleet from that city, which was now coming under increasing pressure from Army Group North.⁴²⁸ At the same time, the Luftwaffe transferred dive-bombers to that operations area. The naval war staff considered it 'highly improbable that Russian warships and merchant vessels will break out of Kronshadt Bay' to Sweden and was of the opinion that only isolated light, fast units under determined and ruthless commanders might succeed in doing so. Although Raeder persuasively presented these views to him on 17 September, Hitler ordered all necessary measures to be taken to prevent an attempted break-out.⁴²⁹

It was presumably information provided by an intelligence report that was largely responsible for Hitler's order. On 15 September agents in Sofia had recorded an exchange of telegrams between the commander of the Baltic Fleet and the commander of the Soviet Black Sea Fleet.⁴³⁰ In the telegram from the commander of the Baltic Fleet the situation as assessed by the fleet command was described as desperate. Even with British help, an attempt to break

⁴²⁸ After receipt of the above-mentioned reports from Air Fleet 1 (seen. 425) and the preparations for the bombardment of Leningrad by German army artillery, as well as reports of minesweepers off Kronshadt, a Soviet decision had been expected ever since 13 Sept. 1941 on whether the Soviet Baltic Fleet would remain at its bases or break out: BA-MA RM 7/521, fos. 258. On 13 Sept. Air Fleet 1 was ordered to support the attack on Leningrad: *ibid.*, fo. 278; cf. Sect. II. 1.2(c) at n. 906 (Boog).

⁴²⁹ *Führer Conferences*, 233; Salewski, *Seekriegsleitung*, i. 422-3; M.Dv. No. 601, pp. 12, 27 ff.; H.Gr. Nord/1a, KTB, BA-MA RH 19/III/171; Rohwer, 'Minenkrieg, (2)', 97 ff.

⁴³⁰ Intelligence report from OKW/Ausl. IIIc/O.v.D. No. 03874 to OKW/L, 24 Sept. 1941, No. 7148/41, BA-MA RW 4/v. 329. It may be safely assumed that this report did not remain unread for eleven days and that Hitler was therefore aware of it. On 16 Sept. 1941 Naval Group Command South transmitted a report from the Wehrmacht Commander South-east that the British command would do everything to save the Soviet Black Sea Fleet by having it interned in Turkish ports and placed under British command: BA-MA RM 7/522, fo. 26. According to reports received at the same time from the German missions in Stockholm and Göteborg, the Norwegian ships being fitted out there were preparing to break out and be given a British escort: BA-MA RM 7/521, fo. 290, RM 7/522, fo. 135; cf. also *Sveriges förhållande till Danmark och Norge*, 74 ff. Already on 13 Sept. Naval Group North had ordered the transfer of 2nd Torpedo-Boat Flotilla, after completion of Operation West Wind, to BSO (Befehlshaber der Sicherung der Ostsee: Commander, Baltic Sea Security with orders to prevent such a break-out: *ibid.*, RM 7/521, fos. 224, 345. Transports of 6th Mountain Div. from Oslo to Finland were suspended until 23 Sept. 1941.

through the Kattegat would not succeed. The Swedish government had therefore been requested through the British and Swedish ambassadors to permit the Soviet Baltic Fleet to enter a Swedish port. This request had not been granted, but a new attempt was to be made. On 20 September Hitler issued a new order to prevent a break-out by the Soviet Baltic Fleet. The commander in charge of cruisers requested more mines, and the naval war staff immediately created a formation of heavy surface forces available in the Baltic,⁴³¹ which, as the *Baltenflotte* ('Baltic Fleet'), was placed under the commander of battleships, who was flown in from Brest for that purpose. The northern group of this force—consisting of the battleship *Tirpitz*, the heavy cruiser *Admiral Scheer*, the light cruisers *Nürnberg* and *Köln*, and 3 destroyers, 5 torpedo-boats, and several fast patrol-boats—operated in the Åland Sea. The weaker southern group, consisting of the light cruisers *Leipzig* and *Emden* with several fast patrol-boats, was transferred to Liepāja. Moreover, all available Ju-88 aircraft in the Group Command North were placed under the command of Air Leader Baltic.⁴³²

However, this concentration of naval and air forces had no immediate operational significance, as on 21 and 23 September attacks by Dive Bomber Geschwader 2 on the battleships and other vessels anchored at Leningrad and Kronshtadt achieved considerable success, which completely eliminated the danger of a break-out. The presence of the heavy surface forces in the Baltic was therefore no longer necessary. On 23 September the naval war staff recalled the *Tirpitz* and the *Admiral Scheer* to their home ports and released the remaining units of the northern group a few days later. As mentioned above, the southern group participated in the feints and diversionary manoeuvres connected with the occupation of the Baltic islands and provided fire support for the army units.

The concentration of heavy German units in the eastern Baltic was evidently misinterpreted by Soviet naval leaders. The Baltic Fleet command feared that the German units would force their way into the Gulf of Finland to support the attack on Leningrad. In view of this danger, Stalin intervened and ordered that no Soviet unit must be allowed to fall into enemy hands. Preparations were to be made to scuttle the units at Kronshtadt and Lenin-

⁴³¹ Transmission of Führer order by naval war staff to Naval Group North, 20 Sept. 1941, 3.30 p.m. According to this order, the risk of ship losses was to be accepted 'where absolutely unavoidable'. All combat-ready motor torpedo-boats of 1st-3rd flotillas were to be employed: BA-MA RM 7/522, fo. 249. On 22 Sept. the commander of cruisers requested the designation 'Naval Force East': *ibid.*, fo. 356; on 23 Sept. the naval war staff decided on the designation 'Baltenflotte' (Baltic Fleet): *ibid.*, fo. 428.

⁴³² Sixteen aircraft were involved: F.d.Luft 1, Cb No. 5448/41, evening report, 22 Sept. 1941, BA-MA RM 7/522, fo. 347. Simultaneously the 'Air Leader Baltic' was made responsible for carrying out reconnaissance for naval operations; he was to follow orders of the commander of cruisers and the commander of motor torpedo-boats. At the same time, however, Air Fleet 1 was forbidden to attack any naval forces west of the Juminda barrage, with the exception of submarines. Two coastal flying Gruppen and Reconnaissance Gruppe 125 were placed under Air Fleet 1: ObdL/Fü.Stab/1a, No. 11883/41, 22 Sept. 1941, BA-MA RM 7/522, fo. 353.

grad if necessary.⁴³³ To deter and damage enemy units, six submarines were to be stationed west of Leningrad and Kronshtadt and additional mines were to be laid.

The broad chronological description of the action in the Gulf of Finland and the geography of these waters could give the impression that the operations of German and Finnish naval forces (on the whole successful) as well as those of the Soviet Baltic Fleet, which involved high losses but not a decisive defeat, should be considered in isolation. This is certainly not the case; the operations of the German navy and German-allied naval forces outside the Baltic are presented elsewhere (Volume VI of the present work).

Here it should merely be noted that the great volume of shipping between Norway, Sweden, Denmark, and Finland, as well as from German ports to these countries, resulted in various convoy and escort tasks for the German navy. In September alone transports for Finland required 59 troop-ships for 20,000 men, 4,278 horses, 2,454 vehicles, and 56,935 t. of equipment. In the same month 16,834.4 t. of supplies were shipped to other Baltic ports from Königsberg and Danzig aboard small vessels; 5,609 t. of captured material were brought back to Germany.⁴³⁴

The clearest expression of the close connection between the tasks of the German navy and the progress of the attack by Army Group North on Leningrad was the order to the navy to prevent a break-out by the Soviet Baltic Fleet. At the same time, Hitler's decision to withdraw important forces from Army Group North for the attack on Moscow affected the threat to Leningrad from the north. To increase Finnish pressure on Leningrad, the Army High Command wanted to transfer two heavy artillery battalions (eighteen guns) to a port in the south of Finland. On 19 September Hitler ordered armed vessels to be transferred to Lake Ladoga as soon as possible, as an early link-up between German and Finnish units could not be expected because of the withdrawal of armoured and mobile units from the army group and because the only link still open between Leningrad and the Russian interior crossed this lake. The naval war staff was able to promise vessels for both projects only after the conclusion of Operation Beowulf.

In September 1941 all three Wehrmacht services were abruptly confronted with the fact that in personnel and material terms adequate resources were simply not available to keep fighting, let alone force a decision, on all sectors of the greatly expanded, fan-shaped land front and the increasingly porous air front, as well as against the undeniably effective Anglo-American alliance at sea.

In the Baltic a consequence of this disproportion was that the small units, especially the fast patrol-boats and minesweepers, which in any case had had to remain there longer than originally planned and were urgently needed to

⁴³³ Tribuc, 'Die Räumung', 104; Rohwer ('Minenkrieg (2)', 100 n. 8) bases his account on that of Adm. Kuznetsov.

⁴³⁴ BA-MA RM 7/771, fo. 102.

escort convoys to North Africa and in the Aegean, had to be prepared as of 12 September for transfer to the Mediterranean and the Channel coast.⁴³⁵

The forces still assigned to the area of the Gulf of Finland were already allocated. If necessary the mining operation in the Aegean was to be postponed until after the operation against Crete.⁴³⁶ In view of the known strength of the Soviet Black Sea Fleet—1 battleship, 6 light cruisers, 6 destroyers, 4 torpedo-boats, 6 submarines, and 16 freighters in Sevastopol alone—and the possibility that it would attempt to escape to the Mediterranean, which the naval war staff had expected from the very beginning, this postponement was a difficult decision. On 17 September Hitler ordered the accelerated transfer of fast patrol-boats and minesweepers to the Mediterranean and, at the same time and accepting all risks involved, the use of all available forces in the Gulf of Finland.

Two other reports inevitably had a direct effect on the operational objectives of the army on the southern sector of the eastern front. On 25 September the chief of naval intelligence reported that on 9 September 1941 the British minister of war transport had informed the consul in Basra of preparations to send 168 locomotives and 3,000 wagons for the trans-Iranian railway. The Wehrmacht commander south-east reported that according to information in his possession, Afghanistan had approved the passage of four Polish divisions and Czech units as well as war material on the line Peshawar-Kabul-Termez, i.e. to the Soviet rail system.⁴³⁷ The navy had only armed merchant raiders and U-boats with which to attempt to frustrate these plans. For the Army High Command, on the other hand, these reports meant that an Anglo-Soviet southern front could become a reality; in Hitler's eyes they confirmed his strategic plan to cut the supply-routes to the interior of Russia even if that meant advancing to the Arctic Ocean and the frontiers of India. In the last weeks before the start of winter the naval war in the Baltic presented the following picture.

The German-Finnish offensive mine war and the more intensive Luftwaffe attacks on the naval bases in Leningrad and Kronshadt reduced the freedom of movement of the remaining Soviet naval forces to a point where they were unable either to intervene in the fighting around the Baltic islands or to protect shipments of supplies for the naval base at Hanko at the entrance to the Gulf of Finland. Because of the urgent need for troops on the Oranienbaum and Leningrad fronts, the loss of the positions on the Baltic coast across from Hanko, and the supply difficulties, the Soviet command on the Leningrad front decided to evacuate Hanko, especially as no important Finnish forces were tied down there. These forces, though now available, would not increase the threat on the static front north of Leningrad.

⁴³⁵ Cf. the account in Vol. VI of the present work.

⁴³⁶ In question was the relief of 5th Mountain Div. by an Italian division.

⁴³⁷ For the Afghanistan report see BA-MA RM 7/772, fo. 24; for Iran, *ibid.* 410.

Moreover, it was clear that the base would have to be abandoned with the arrival of winter and the freezing over of the surrounding waters.⁴³⁸ After long deliberations, the decision to evacuate Hanko was taken by the Soviets on 23 October. The island of Suursaari (Hogland) was to be used as a staging-post for supplying the light ships and as a base for the rescue service and the minesweeper units. On 27 October minesweepers removed the first unit, an infantry brigade of about 500 men, from Hanko and brought it to Oranienbaum, where the troops were immediately sent into action. On 3 November an evacuation convoy transported over 4,000 men with weapons and equipment to Kronshtadt without serious difficulties. By contrast, the next two convoys, on 3 and 9 November, suffered serious losses in the German and Finnish mine-barrages but were still able to bring some 1,200 men to the Leningrad front. After these losses, the Soviet naval command decided not to use any more large convoys and instead to continue the operation with small vessels and formations. In this way an additional 9,000 men and part of their equipment were gradually removed from Hanko by 28 November. The remaining troops, about 12,000 men, were to be evacuated with all available units in a single operation. The warships and merchantmen ready for action were divided into a fast and a slow group. The danger from mines and the lack of minesweeper units ready for service meant that the Soviet naval leaders accepted a high risk.

While the slow group (1 transport and 11 smaller vessels) lost only one vessel, the fast group strayed into the German Corbetta barrage. The electrical-turbine ship *Iosif Stalin* (7,500 GRT), with between 7,000 and 8,000 men on board, struck four mines. The artillery ammunition in the cargo hold exploded, causing high losses (about 4,000 men). The accompanying minesweepers were able to take 1,830 men on board, but the stricken ship could no longer be steered and ran aground on the Estonian coast. About 2,000 men were taken prisoner.⁴³⁹

These movements, and the mine explosions, were observed by German and Finnish forces; individual Soviet ships that came within range of their artillery were fired upon. But storms and the shorter periods of daylight made monitoring such movements increasingly difficult. The uncertain situation was made more complicated by the fact that the storms had torn many mines from their moorings. Only when, after 24 November, strong anti-aircraft fire was repeatedly observed over Hanko, in the absence of air attacks, and large demolition explosions and fires were seen there, was the assumption confirmed that an evacuation was imminent. Because of the weather and the

⁴³⁸ Tribuc, 'Die Räumung', 103-10, 158-84, with comments of *Marine-Rundschau*. The garrison was about 25,000.

⁴³⁹ Comment of *Marine-Rundschau* on Tribuc, 'Die Räumung', 172; *Seemacht*, 610-11. Achkasov and Pavlovich (*Soviet Naval Operations*, 70) give total losses of the army units in the evacuation of Hanko as 4,987 men, but this figure does not include the heavy losses among the personnel of the warships and merchantmen involved.

inadequate German and Finnish forces in the area, however, it could not be prevented.⁴⁴⁰

Around the end of November 1941, the formation of ice in the Gulf of Finland increasingly paralysed shipping movements. When it became evident that the conquest of Leningrad and thus the definitive elimination of the Soviet Baltic Fleet could not be expected before spring, the German and Finnish navies were forced to prepare for a continuation of the war in the Baltic in 1942. To obtain a favourable starting-position for 1942, Finnish commandos occupied the island of Suursaari on 14 December; at the beginning of January 1942 German troops occupied the island of Tyttärsaari. Neither island could be held; both had to be temporarily abandoned.

(f) *The Attack on Moscow*

(See the *Annexe Volume*, No. 18)

Hitler's study of 22 August, in which he defended his rejection of the continuation of operations with the main effort aimed at reaching Moscow, represented the climax and, it seemed, the conclusion of disputes about a 'final battle' to decide the entire campaign in the east.⁴⁴¹ Hitler ruled that the Soviet armies west of Moscow should first be thoroughly defeated one by one before the actual attack on the Soviet capital was launched. This mainly tactical plan, which Hitler had advocated in an earlier phase of the campaign, was incompatible with Halder's ideas of large-scale encirclement, as it would leave the initiative to the enemy.⁴⁴²

In addition to an explanation of the ideas contained in his study and the blunt form of his rejection of the campaign plans the army had submitted, Hitler's talk with Brauchitsch on 30 August must have contained a few positive aspects for the Army High Command, for, apart from the limitations placed on the attack by Guderian's armoured group towards the south, the commander-in-chief of the army was generally satisfied.⁴⁴³ Halder was therefore able to discuss the new offensive with some confidence at Army Group Centre headquarters on 2 September, before receiving a new directive from Hitler.⁴⁴⁴

The operations plan of the Army General Staff of 18 August 1941 envisaged the formation of a southern (Bryansk-Roslavl and Kaluga-Medyn) and a northern wing with two attacks, from the area east of Beloe and from the area

⁴⁴⁰ After the detachment of the commander of cruisers and the leader of torpedo-boats, operational command was transferred to the naval liaison staff in Helsinki on 22 Oct. 1941: BA-MA RM 7/771, fo. 120.

⁴⁴¹ *KTB OKW* i. 1063 ff. (100). Hitler's remarks to the C.-in-C. of the army and Keitel's interpretation *vis-à-vis* Bock on 25 July 1941 were typical: *ibid.* 1034 ff. (80, 81); cf. sect. II.1.1(b) at n. 206.

⁴⁴² Halder, *Diaries*, 1209 (30 Aug. 1941).

⁴⁴³ *Ibid.*, but with serious doubts about Hitler's intention really to concentrate all forces against Moscow. This was probably in part the reason for Halder's sharp criticism of the directions of Guderian's (*ibid.* 1210: 31 Aug. 1941) and Leeb's (*ibid.* 1214: 1 Sept. 1941) attacks and their conduct of operations. Bock received the news from Kesselring on 31 Aug.

⁴⁴⁴ Halder, *Diaries*, 1214 (2 Sept. 1941); Bock, *Tagebuch* 81-2 (2 Sept. 1941), BA-MA N 22/9.

around Toropets.⁴⁴⁵ The northern wing was to advance towards Rzhev and from there generally eastward. The centre of the front was to remain essentially on the defensive and was therefore to consist of only ten infantry divisions. The decision was to be achieved by the strong wings of the attack. Whether, after achieving a breakthrough, the mobile units were to continue their advance eastward and encircle Moscow from the north and south, or turn inward earlier to destroy strong concentrations of enemy troops, would depend on how well the attack developed.

This proposal was based on Halder's basic strategic conviction that a decision to the campaign should be sought only at Moscow by destroying the massed forces of the Red Army there. Basing his plans on the approaching decision on the wings of the operations area as a whole, Hitler in a directive of 6 September ordered the preparation of an operation to seek a decision against the Army Group Timoshenko,⁴⁴⁶ which had been committed to attacks along the centre of the German front. The enemy forces facing Army Group South and the southern flank of Army Group Centre still had to be defeated, but as soon as that task had been completed parts of Second and Sixth Armies and of Armoured Group 2, no longer needed in those areas, were to be regrouped for the new operation.

Hitler initially limited the activity of Army Group Centre to the encirclement of 'Army Group Timoshenko' in the 'general direction of Vyazma' with strong, concentrated armoured forces on the wings. On the southern wing these were limited to the 'available forces' of Army Group Centre and 5th and 2nd Armoured Divisions, which had been released for that purpose. The northern wing was to consist of Ninth Army, including units to be transferred from Army Group North. Not until the second phase, after the bulk of 'Army Group Timoshenko' had been destroyed 'in these highly co-ordinated, closely encircling operations of annihilation', was Army Group Centre to start its attack and pursuit in the direction of Moscow. This movement would be limited on the right by the Oka and on the left by the upper Volga; in the south it was to be covered by mobile units available from the area of Army Group South and in the north by an advance along both sides of Lake Ilmen.

On the basis of this directive the Army High Command issued a 'Directive for the continuation of operations' on 10 September 1941.⁴⁴⁷ A comparison of the texts of the two directives shows the same pattern as is found in the interpretation of Hitler's other directives. Although the same formulations were used in both, the changes in the assigned tasks made in the directive of the Army High Command went far beyond the decisions normally left to the chief of the general staff, giving Halder, in complete agreement with the views

⁴⁴⁵ C.-in-C. of the army, proposal for the continuation of operations of Army Group Centre in connection with operations of Army Groups South and North, *KTB OKW* I. 1055 ff. (95).

⁴⁴⁶ *Hitler's War Directives*, No. 35, pp. 96 ff.; draft OKH/GenStdH/Op.Abt. (I): BA-MA RH 2/v. 1326, fos. 218 ff.

⁴⁴⁷ OKH/GenStdH/Op.Abt. (I) No. 1494/41, BA-MA RH 2/v. 1326, fos. 209-17.

of the commander of Army Group Centre, abundant latitude.⁴⁴⁸ He reduced the priority assigned to defeating and 'annihilating' the 'Army Group Timoshenko': 'Only after the encirclement has been consolidated and the annihilation of the enemy forces surrounded east of Smolensk between the Roslavl-Moscow road and Bely is assured' was the pursuit in the direction of Moscow to begin. Expanding the scope of Hitler's directive, Halder envisaged the use of mobile units and infantry divisions for a frontal attack on Moscow, which Hitler wanted to avoid at all costs. The 'forces which then become available', which Hitler had not described more precisely, were defined by Halder as Second Army and Armoured Group 2, which were to attack from the area around Romny to the north-east—with the right wing probably capturing Orel—and turn the flank of the enemy forces facing the newly formed Second Army from the south. Halder thus not only removed the bulk of Second Army from the encirclement operation east of Kiev; it was clear that he intended to form a third assault group against Moscow, independent of the encirclement operation against Vyazma. It was therefore obviously in Halder's interest to release the 'forces which then become available' as soon as possible from the operation against Kiev and to make them as strong as possible. For this new grouping of forces Halder did not consider Sixth Army, but he planned to use Armoured Group 1, at first with its main effort clearly directed against the line between Romny and the mouth of the Sula, i.e. in conjunction with Armoured Group 2, while the bulk of Seventeenth Army was to advance in the direction of Poltava and Kharkov to cover the eastern flank of this movement. While according to Hitler's directive the flank of this thrust against Moscow in the second phase was to be protected by mobile units to be made available 'from the area of Army Group South' (most probably Armoured Group 1) advancing in echelon, Halder gave this task to Second Army and Armoured Group 2. He also reduced the armoured support Hitler desired for the advance south of the lower Dnieper against Melitopol as follows: 'The task of Eleventh Army to conquer the Crimea remains unchanged. As far as the situation permits, the attack of individual—if necessary Hungarian and Romanian—mobile units is to create the basis for an early advance by assorted forces towards the north coast of the Sea of Azov.'

The advance planning for the future points of main effort of the German army in the east can be seen clearly in the distribution of forces ordered in annexe I to the directive of 10 September. Special importance was attached to

⁴⁴⁸ There was thus no conflict between the army high command and FM von Bock, whose proposals were included in the directive of the C.-in-C. of the army. Subsequent discussions with Halder (e.g. on 17 Sept.) were based on a common position and marked by the clash between Bock's eagerness to capture Moscow and Halder's difficulty over being too obvious in bringing Hitler round to his own way of thinking. Cf. Bock, *Tagebuch* (17 Sept. 1941), BA-MA N 22/9, and the agreement about wheeling round near Vyazma (*ibid.*: 14 Sept. 1941). The plan for giving Arm. Group 2 considerable freedom on the right wing would scarcely have come from Bock, but had been Halder's plan since the first order of battle for the encirclement of Kiev. Cf. Reinhardt, *Moskau*, 50.

the mobile troops: in addition to a corps command and 4 infantry divisions, a further corps command of an armoured corps, 2 armoured divisions, and 2 motorized infantry divisions from Army Group South were to be transferred to Armoured Group 2. Army Group North was to hand over Armoured Group 4 command, 3 corps commands, 5 armoured divisions, and 2 motorized divisions. The 2 armoured divisions *en route* from Germany were also to be assigned to this main point of the attack. (Cf. Diagram II.1.7.)

The commander-in-chief of Army Group Centre considered the encirclement movements contained in both directives, with the envisaged link-up in the Vyazma area, to be too limited and to involve the danger again of tying down mobile troops in operations against pockets. He therefore contacted Halder and reminded him of the agreement of 2 September.⁴⁴⁹ Halder very clearly indicated to him that the description of the objective as 'Vyazma' (by Hitler) was not to be taken too seriously and that it would not interfere with the advance on Moscow which both men had planned.

Before describing the further development of preparations for the operation, we shall briefly analyse the personnel and material situation. The creation of the points of main effort for the armour placed an enormous burden on the entire transport system of the German forces in the east, as, in addition to bringing up forces from Germany itself, the transfer back of the distant units of Armoured Groups 1 and 2 and, on the northern wing of the offensive front, the transfer of forces from Army Group North had to be executed. In addition to the poor transport network for movements of forces parallel to the front, the fact that many of the units envisaged for the attack on Moscow were tied down longer than had been expected by the encirclement operations east of Kiev and in the continuation of the attack on Leningrad caused delays, and in the case of 8th Armoured Division (Army Group North) even the cancellation of its planned transfer to Army Group Centre.

At the start of planning for this operation, Halder had himself informed on the combat-readiness of the armoured divisions, which had inevitably declined as a result of continuous action and the lack of rehabilitation. On 4 September 1941 30 per cent of the tanks were completely out of action; 23 per cent were being overhauled. In half of the divisions envisaged for the operation approximately 34 per cent of the tanks were, on average, ready for action. The 125 tanks provided as replacements did not change this figure significantly. Problems in overhauling the tanks, which at this time was still done in Germany, and the continued heavy demands placed on them, gave reason to expect that they would become even more prone to breakdowns in future. Halder attempted to improve the situation and requested the release of a total of 181 tanks, which, together with the 125 already in Orsha and Daugavpils, would raise the combat-readiness, especially of the weakened armoured divisions, by

⁴⁴⁹ Halder, *Diaries*, 1234 (13 Sept. 1941); Bock, *Tagebuch* (14 Sept. 1941), BA-MA N 22/9; cf. sect. II.1.1(f) at n. 441.

10 per cent.⁴⁵⁰ In view of the continuing operations and the related heavy losses of equipment, these figures, at a time when the 'decisive' battle of the campaign was being planned, were surprisingly low.

The shortfall of motor-vehicles was estimated at 22 per cent at the beginning of the offensive. Most of those still in use were old vehicles which had undergone makeshift repairs and which would probably suffer a high breakdown rate in future. All calculations by the technical services indicated that, apart from difficulties caused by road conditions, weather, and fighting, a significant reduction of the army's mobility at the decisive moment of pursuit was inevitable. The situation could be improved only if Hitler immediately released vehicles just off the production line for service at the front. Major-General Adolf von Schell, plenipotentiary for motor-vehicles, calculated that enough vehicles would then remain to equip an armoured division for the tropics. Problems resulting from the desired release would be less serious than

⁴⁵⁰ OKH/GenStdH/Org.Abt (I) No. 702/41, 15 Sept. 1941, re armour supply east before the beginning of operations of Army Group Centre, BA-MA RH 2/v. 1326, fos. 233 ff. Of the 181 tanks only 30 were Mark IVs; the rest were Mark IIIs (95) and Czech P-38s (56). These tanks were stationed in Magdeburg and Vienna and were thus not taken from new production for newly raised units.

those which would be created if the army were largely immobilized 'on a broad front deep in Russia at the start of winter'.⁴⁵¹ But the necessary decision was not taken. The situation with regard to fuel was similar. Reserves at the supply-base were largely exhausted. Even in the sector of Army Group North, which was in a favourable position because of good rail connections and its ability to receive supplies across the Baltic, fuel stocks had dropped to 2.5 units of consumption. Except in Army Group North, and to a limited extent in Army Group Centre, it was not possible to build up stocks, primarily because of the inadequate rail network. For all transfers of units, replenishment of supplies, and reserves for at least four days as a 'buffer', 27 tank-wagon trains were needed in September 1941. As the Wehrmacht High Command was able to promise 22 trains daily by 16 September and 27 by 30 September, fuel supplies for preparing the operation could be guaranteed only to a limited extent. For operations in October requirements were estimated at 29 trains daily, but only 20 could be promised. For November only 3 trains a day were promised, as it was expected that operations would come to a halt and that rail capacity could be used to build up stocks of supplies for the winter and for transports of new equipment.⁴⁵²

In the meantime, Army Group Centre began to assemble the operational staffs, formations, and army troops for Operation Taifun ('Typhoon'), the code-name ordered on 19 September for the attack on Moscow.⁴⁵³ In addition, starting-positions for the attack of the northern wing of Army Group Centre in co-operation with Army Group North were to be improved, as Halder had already ordered on 30 August.⁴⁵⁴ The two armoured divisions of Army Group Centre in the area of Toropets and LVI Army Corps were to be used to annihilate the enemy between Lake Volgo and Valday. The plan of Army Group Centre to advance its northern wing to the upper Dvina was approved.

On 17 September the commander-in-chief of Army Group Centre submitted the operation plans to Halder.⁴⁵⁵ Bock's main concern was that the units and formations still assigned to the other army groups should be transferred

⁴⁵¹ OKH/GenStdH/GenQu, Abt. Heeresversorgung No. I/01017/41, 11 Sept. 1941, note for an oral report on the situation with regard to fuel and vehicles for new operations, *ibid.*, fos. 226 ff. Cf. the heavy losses of Armd. Group 2 in Halder (*Diaries*, 1235: 14 Sept. 1941), according to whom the combat-readiness of the divisions of the group varied between 20% and 31%.

⁴⁵² These figures were only for the requirements of the army. A further decline in the number of trains had catastrophic consequences for the soldiers fighting in the harsh winter.

⁴⁵³ On the code-names cf. *Hitler's War Directives*, 96. For the amendment of the directive regarding the attack by Armd. Group 1 from Dnepropetrovsk, 7 Sept., see *ibid.* 97. For an overview of forces available to Army Group Centre for an operation in the east, as annexe to directive for the continuation of the operation from army high command, see OKH/GenStdH/Op.Abt., 10 Sept. 1941 (cf. n. 447 above), BA-MA RH 2/v. 1326, fos. 203 ff.; this also lists the changes in troop distribution carried out in the weeks following.

⁴⁵⁴ Teletype message to Army Groups Centre and North, OKH/GenStdH/Op.Abt. (I) No. 31754/41, 30 Aug. 1941, BA-MA RH 2/v. 1326, fo. 205.

⁴⁵⁵ Halder, *Diaries*, 1241 (17 Sept. 1941). Bock complained about the slow transfer of the units from Army Group North. Cf. sect II.1.1(d) above and Halder, *Diaries*, 1250 (22 Sept. 1941); Reinhardt, *Moskau*, 53 nn. 20, 23-4.

back to his group in good time. Here he could count on help from Halder, who used tactical assignments to avoid a clear order-of-battle commitment of the staffs and troops earmarked for the attack on Moscow, and who strove to transfer them as soon as possible with little regard to the wishes of the local commanders.⁴⁵⁶

The last important conference took place at the headquarters of Army Group Centre in Smolensk on 24 September. Present in addition to the commander-in-chief of the army and Halder were the commanders-in-chief of Army Group Centre and Air Fleet 2, as well as the commanders-in-chief of the armies and armoured groups.⁴⁵⁷ The most important outcome of the conference, which departed from previous planning, was the decision that Guderian's armoured group should begin its attack two days earlier than the rest of the army group, in order to reach the surfaced road between Orel and Bryansk as soon as possible. In the meantime the supply situation had been improved to the point where an operation of the planned short duration could be carried out using stocks in the supply-bases and dumps of Supply District Centre and with current deliveries. The army group, which now had approximately 78 large formations and 1.9 million men, did not, however, possess the fighting power these figures suggested. Most of the units, e.g. almost all of the mobile divisions, had been transferred directly from operations in other areas without significant replenishment. Because of heavy losses and often inadequate replacements, in terms of their fighting ability they were no longer the units they had been on 22 June. An essential element in the decision to undertake a hazardous late-autumn offensive was the crisis-tested stamina of the German soldier and the still unshaken belief that the German forces, given adequate equipment and arms, were superior to the Red Army.⁴⁵⁸

On 26 September 1941 Army Group Centre summarized its plans in an order assigning its armies their specific objectives.⁴⁵⁹ Fourth Army, with the attached Armoured Group 4, was to concentrate the main effort of its attack

⁴⁵⁶ The attack groups, on the verge of success, had not yet produced sufficiently concrete results to create the 'basis for launching a decisive operation against the Red Army Group Timoshenko', as had been assumed in the directive of the C.-in-C. of the army of 10 Sept. (see n. 447 above). Nevertheless, on 30 Aug. the units of Second Army were ordered to be made available for Army Group Centre; on 9 Sept. they and Armoured Group 2 were ordered to remain under Army Group Centre: BA-MA RH 2/v. 1326, fos. 207-8. Cf. also Brauchitsch's urgent letter to Reichsnauf of 29 Sept. 1941, BA-MA RH 20-6/133.

⁴⁵⁷ Reports: Halder, *Diaries*, 1254 (24 Sept. 1941); Guderian, *Panzer Leader*, 105-6; Bock, *Tagebuch* (24 Sept. 1941), BA-MA N 22/9.

⁴⁵⁸ 2nd and 5th Armd. Divis. were still relatively fresh. On the material and personnel preparations cf. Reinhardt, *Moskau*, 52 ff.; for the order of battle see *ibid.*, annexe 9 (p. 318), and Diagram II.1.7: seven large formations were used to provide security in rear areas alone, which clearly shows the importance of the supply, transport, and administrative systems, but also the scale of partisan warfare behind the front. Halder was aware before June 1941 that trained replacements would be 'used up' by October (cf. sect. I.iv.1(b) at n. 221). In addition to replacement units, units in the west, security divisions, and SS brigades were already being drawn upon. More troops from allied countries were also brought up; increasing use was also made of the native population. At the front the Spanish (Blue) Division and other European volunteer units were also sent into battle.

⁴⁵⁹ Reinhardt, *Moskau*, 298-9 (annexe 1).

north and south of the road from Roslavl to Moscow. After achieving a breakthrough, the army, with covering forces protecting its eastern flank, was to wheel with strong forces towards the Moscow-Smolensk highway on both sides of Vyazma. The northern arm of the pincer movement, Ninth Army with the attached Armoured Group 3, was to break through enemy positions between the highway and the area of Belyy and push on to the Vyazma-Rzhev railway line. The main thrust was aimed at Kholm, with the mobile units turning east of the upper Dnieper against the highway west of Vyazma. The inner wings of the two armies were to feign systematic attacks and tie down the enemy by isolated thrusts with limited objectives. Apart from the pincer movement, Second Army was to cover the southern flank of Fourth Army and advance in the direction of Sukhinichi and Meshchovsk. If, in addition to the provision of cover for Fourth Army, the opportunity should present itself, the urban and industrial area of Bryansk-Ordzhonikidzeograd—especially the railway yards—was to be taken by a surprise attack. Finally, Armoured Group 2 was to push forward beyond the line between Orel and Bryansk two days before the start of the general attack. Its right wing was to be based on the Svopa and Oka sector, while the left wing was to turn the flank of the Desna position from the south so as to eliminate the enemy forces in the Desna bend in co-operation with Second Army. Ahead of the right flank, Army Group South was to push its northern wing (Sixth Army) forward north of Kharkov; ahead of the left flank Army Group North was to secure the line between Lake Zhdane and Lake Ilmen with Sixteenth Army.

At the start of the offensive Hitler addressed an appeal to the soldiers of the eastern front, in which he proclaimed the concluding phase of the war in the east: enormous stocks of food, fuel, and ammunition were ready for this offensive. During the past three and a half months of the campaign the Wehrmacht had created the conditions to destroy the enemy with a last, mighty blow before the beginning of winter. Hitler announced the start of the last great decisive battle of the year, which would crush the Soviet enemy and thus also Britain, the instigator of the war.⁴⁶⁰

(i) THE DOUBLE BATTLE OF BRYANSK AND VYAZMA

(See the *Annexe Volume*, No. 19)

On 30 September Armoured Group 2 began its attack between the Seym and the Desna in the direction of Orel and Bryansk with XXIV and XXXXVII Armoured Corps.⁴⁶¹ Its right wing was to break through to Orel, while the left wing, in co-operation with Second Army, was to complete the encirclement of Bryansk. By 2 October, the day for the start of the general attack, the two

⁴⁶⁰ Domarus, *Hitler*, ii. 1756 ff., read in the night of 1-2 Oct., published in *Völkischer Beobachter*, 10 Oct. 1941.

⁴⁶¹ Guderian, *Panzer Leader*, 109 ff. On Hitler's and Halder's misgivings over the slow progress of Army Group South, Guderian's attack, and the entire army group cf. Halder, *Diaries*, 1261 ff. (28 Sept.-2 Oct. 1941).

armoured corps had reached the line of Sevsk-Dmitrovsk-Golubovka as planned.⁴⁶² The German commanders had the impression that the long-prepared attack had surprised the enemy, as in some places he yielded ground without significant organized resistance, and local counter-attacks were reported only in the afternoon. This did not agree with information gathered from observation over the previous days. Increased enemy aerial reconnaissance had undoubtedly detected the German deployment. Soviet bombing raids on lines of communication in rear areas, and troop movements in the area west of Moscow, indicated preparations for defence. Besides, the movements of Armoured Group 2 must have revealed the German intentions to the enemy, for counter-attacks on the Bryansk front were significantly more intense than earlier local reconnaissance thrusts. In fact, communication difficulties seem to have prevented the Soviet command from realizing the objectives of the German attack in time and issuing appropriate instructions to its units at the front.⁴⁶³ Mistakes obviously due to an erroneous evaluation of intelligence about the German deployment enabled Guderian to achieve a rapid breakthrough. In spite of the surprise, however, it soon became clear that the enemy was mobilizing reserves. There could be no doubt that he was prepared to fight this last battle west of Moscow with all the means at his disposal.

Between 2 and 7 October Armoured Groups 3 and 4 were able to encircle strong Soviet forces near Vyazma.⁴⁶⁴ However, owing to the mobile units of Armoured Group 3 being halted by supply problems, the enemy again succeeded, with heavy losses on both sides, in extricating some of his troops from the pincer movement.⁴⁶⁵ Nevertheless, after the experience of previous encirclements, the eastern part of the pocket was now better secured. After reaching Orel on 3 October, Second Armoured Army captured Bryansk four days later and thus encircled large parts of the Soviet Third Army. Between the two pockets, the inner wings of Ninth and Fourth Armies advanced on Moscow via Sukhinichi and Yukhnov.

On 7 October Army Group Centre concluded that the destruction of the bulk of the enemy forces was imminent. The fighting in the isolated pockets and on their edges continued, but neither Halder nor the army group commanders considered this a sufficient reason for halting the advance. Halder interpreted the withdrawal of strong enemy forces facing Army Group North to a position along the line between Rzhev and the Valday hills as an attempt to close up from the north to positions defending Moscow. But he believed that the Soviet forces concentrated around Moscow would not be sufficient to repel the strong German attack; with 'reasonably good direction of battle

⁴⁶⁵ Reinhardt, *Moskau*, 69-70.

and moderately good weather' the encirclement of Moscow was certain to succeed.⁴⁶⁶

The planned thrust of Second Armoured Army against Tula was, however, incompatible with notice given by Second Army on 7 October that it would be able to close the Bryansk pocket only if parts of the armoured army halted their advance near and north of the city. The army group rejected this request with the explanation that, after a successful thrust by the armoured army and the right wing of Fourth Army, the enemy facing Second Army would no longer be able to escape destruction. Those parts of the armoured army still in action around the pocket were therefore to be released as soon as possible.⁴⁶⁷

After the conclusion of this first phase of the offensive, the commander-in-chief of the army came to the headquarters of Army Group Centre to discuss the situation.⁴⁶⁸ According to Brauchitsch, it was Hitler's intention to isolate Moscow in a large ring to 'exert political pressure', but not to enter the city. Brauchitsch also informed the army group that great importance was being attached to the capture of Kursk, the first indication of a new orientation that began shortly thereafter. He agreed with Halder that it was now possible to 'take a risk' and begin the pursuit in the direction of Moscow even before the units surrounding the pockets became available. Developments in the following days showed this to be a gross misjudgement of the situation.

The order to Second Armoured Army to advance on Tula was confirmed; it was also to attack towards the Oka between Serpukhov and further east. The objective was, together with the parts of Fourth Army to be released from the Bryansk pocket, to complete the isolation of Moscow from the south and west. For this reason Fourth Army was to advance first towards the line Kaluga-Gzhadsk. LVII Armoured Corps was to attack via Yukhnov towards Medyn and east of it. But parts of two armoured corps (XXXVI and XXXX) remained tied down for the time being at the Vyazma pocket. After being relieved by infantry, they were to advance eastward in the general direction of Gzhadsk.

On the left wing Ninth Army was ordered to use Armoured Group 3 and 'many infantry divisions' for its advance to the north-east in order to isolate Moscow from the north and north-west. Should the enemy attempt to hold his positions from west of Rzhev to south of Lake Iimen, parts of Armoured Group 3 and Ninth Army were to turn to attack those formations.

⁴⁶⁶ Here he clearly states his objective: Halder, *Diaries*, 1281 (8 Oct. 1941); OKH/GenStdH/Op.Abt. (IN) No. 41452/41 to Army Group North, 8 Oct. 1941, expected the enemy forces to withdraw at least to the Volkhov, perhaps even to the lake area 'west of Pestovo-Russkoe', to establish the shortest possible line to the lake area of the Valday hills. No more attacks to break the German siege of Leningrad were expected on this sector, as some of the Soviet forces there were needed to protect Moscow: BA-MA RH 2/v. 1327, pp. 23 ff.

⁴⁶⁷ H.Gr. Mitte/Ia, No. 1854/41 to Second Army, 7 Oct. 1941, BA-MA RH 19 II/123; Bock, *Tagebuch*, 104-5 (7 Oct. 1941), with strong criticism, BA-MA N 22/9.

⁴⁶⁸ Protocol of 'Conference on 7 Oct. 1941 on the start of the operation against Moscow', H.Gr. Mitte/Ia, KTB, BA-MA RH 19 II/123; Reinhardt, *Moskau*, 71.

Agreement about the favourable situation was general.⁴⁶⁹ The army group command had reservations only about the eccentric assault group which was to attack Kursk and suggested detaching two corps to Sixth Army of Army Group South for that purpose. Bock also rejected using Armoured Group 3 to attack in a northerly direction.⁴⁷⁰

After this conference Army Group Centre command issued the 'Order for the continuation of operations in the direction of Moscow' on 7 October.⁴⁷¹ The tasks of the individual armies were precisely defined. In addition to carrying out the attack across the Oka, Second Armoured Army was to hold the industrial area around Bryansk and the transport links between Bryansk and Orel until the approach of units of Second Army. Second Army retained the task of destroying the pockets and quickly clearing the road between Roslavl and Bryansk. The attack in the direction of Tula and Kaluga was described as a task to be completed later. All available forces of Armoured Group 4 were to advance along the highway from Vyazma and Mozhaysk and penetrate the enemy fortifications there.

Immediately after this order had been issued, the Army High Command intervened and directed 'on the basis of a Führer order' that on the left wing Armoured Group 3 was to be replaced by Armoured Group 4 so that it would be able to attack in a general northerly direction. There, in co-operation with the inner wings of Ninth and Sixteenth Armies, it was to destroy enemy forces between Beloe and Ostashkov.⁴⁷² The same day Army Group North was informed of the objective of the new attack by Armoured Group 3 and the consequences for the northern sector of the front.⁴⁷³ On the right wing, Kursk was to be captured rapidly. Bock's attempt to give this task to Army Group South by transferring an army corps to it had failed.

The directive of the Army High Command is the first example of the effects of Operation Typhoon, which was developing in an almost classic⁴⁷⁴ fashion, on the planning of the army leaders. Hitler's role in these deliberations cannot be determined precisely.⁴⁷⁵ However, the development as a whole leaves no doubt that he was not interested in the city of Moscow, but in eliminating the

⁴⁶⁹ Halder, *Diaries*, 1277 ff. (7, 8 Oct. 1941).

⁴⁷⁰ The attack in the north is not mentioned in the above protocol, but in Bock (Tagebuch, 104: 7 Oct. 1941, BA-MA N 22/9). Order to Army Group Centre to take Kursk, 8 Oct. 1941: BA-MA RH 2/v. 1327, p. 22. Cf. here Leeb's demand, sect. II.1.1(d) at n. 407.

⁴⁷¹ Wording in Reinhardt, *Moskau*, 300-1 (annexe 2). On 8 Oct. the army group passed the order to capture Kursk on to Second Arm'd. Army: BA-MA RH 19 II/123. To keep the armoured army free for purely offensive purposes, Higher Command XXXV, with 1st Cavalry Div. and 4th Inf. Div., was placed under Second Army.

⁴⁷² OKH/GenStdH/Op.Abt. (IM) No. 1569/41, 8 Oct. 1941, to H.Gr. Mitte, BA-MA RH 2/v. 1327, p. 19; Halder, *Diaries*, 1281 (8 Oct. 1941). Hitler's decision was based on his assessment of the behaviour of the enemy facing Army Group North (cf. n. 466 above).

⁴⁷³ Cf. Halder, *Diaries*, 1281 (8 Oct. 1941).

⁴⁷⁴ Halder, *Diaries*, 1272-3 (4 Oct. 1941).

⁴⁷⁵ In addition to reports of intelligence and the Luftwaffe, Hitler's decisions were usually based on the assessments of the enemy's situation by the Army High Command department for Foreign Armies East. It should also be noted that Jodl, Warlimont, and Löffberg generally represented Halder's views to Hitler or had suitable formulations ready for him.

bulk of the enemy's remaining armed forces and in reaching a favourable winter position for the campaign in 1942.⁴⁷⁶ Hitler's order of 12 October on the treatment of Moscow reflected the view he had been advocating for months.⁴⁷⁷

The belief that, as far as the enemy was concerned, the situation was under control was reflected in the directive of the Army High Command for the continuation of the operations of Army Groups Centre and North on 13 October 1941.⁴⁷⁸ Certain that the enemy before Moscow had been largely defeated,⁴⁷⁹ the Army High Command was now mainly concerned with smashing once and for all the enemy forces facing the two other army groups. The northern wing of Army Group North was instructed to destroy enemy groups south of Lake Ladoga and to establish contact with the Karelian Army. Army Group Centre was to capture the area around Moscow in a close encirclement and, at the same time, offensively secure its flanks—again an announcement of the thrust towards Kursk. Second Armoured Army was still available to isolate Moscow from the south-east and south. Fourth Army with Armoured Group 4 retained the task, but with the envisaged echeloning of the mobile units on the northern wing, of providing cover in the direction of Yaroslavl and Rybinsk. A later advance in this direction could be 'considered'. From the area of Kalinin-Torzhok-Staritsa a strong force of Ninth Army with Armoured Group 3 was to capture the area around Vyshniy Volochek as soon as possible and destroy the enemy forces facing the northern wing of the army group and the southern wing of Sixteenth Army before they could withdraw to the east.⁴⁸⁰ In the view of Field Marshal von Bock that was the end of the concentrated attack on Moscow. (See the Annexe Volume, No. 19.)

After 8 October worsening road conditions made the fighting increasingly difficult. The previously clear dry weather gave way to snow and occasional frost, which impeded troop movements and forced the Luftwaffe to reduce its activities. On 12 October Second Armoured Army complained of unimaginable difficulties: one kilometre per hour was the normal progress made by

⁴⁷⁶ Moscow remained for him a 'geographical term'. At this time its operational importance in his eyes was that a large number of enemy units had been assembled to defend the city, which, he believed, was bound to weaken the enemy front facing Army Group North. This misjudgement was due to a failure to identify the new units being brought up from the interior of the Soviet Union.

⁴⁷⁷ OKH/GenStdH/Op.Abt. (IM) No. 1571/41, 12 Oct. 1941, to Army Group Centre on Hitler's decision not to accept a surrender of Moscow if it were offered. For an explanation of this decision cf. n. 401 above (regarding Leningrad).

⁴⁷⁸ OKH/GenStdH/Op.Abt. (I) No. 1584/41, BA-MA RH 2/v. 1327, pp. 30 ff.

⁴⁷⁹ H.Gr. Mitte/IC, report on prisoner interrogation, 9 Oct. 1941; assessment of enemy situation, 14 Oct. 1941; information from Army Group North on withdrawal movements of enemy forces facing the southern wing of Sixteenth Army, 10 Oct. 1941: BA-MA RH 19 II/123; the clearest expression of this belief is found in directive OKH/GenStdH/Op.Abt. (I) No. 1588, 16 Oct., to army group, completely dominated by the idea that the vastness of the country offered enemy forces endless possibilities of withdrawal and manoeuvre: BA-MA RH 2/v. 1327, pp. 35 ff.

⁴⁸⁰ It was believed that the enemy units to the west of Moscow were withdrawing to the north and south. This was the reason for the order from Army Group Centre to Armad. Group 3, 12 Oct. 1941, to reach the area around Torzhok soon and capture Kalinin, Vyshniy Volochek, and Ostashkov: BA-MA RH 19 II 123.

motorized units.⁴⁸¹ As a result of their rapid advance after the battle of Kiev, some units of Second Army had become separated from each other by distances of up to 240 kilometres. After 6 October several divisions reported that an orderly distribution of supplies was no longer possible.⁴⁸² On the northern wing of the army the Vyazma-Moscow highway was the main supply-line, but it was repeatedly broken by explosive charges with time-fuses planted by the enemy. As a result the supply situation in the area of Ninth Army and Armoured Group 3 rapidly became critical. In this situation the only solution was to capture and secure the railway links between Bryansk and Orel, Orel and Tula, Sukhinichi and Kaluga, Smolensk and Mozhaysk, Velikie Luki and Rzhev, and Vyazma and Rzhev. Even possession of these lines would not remove difficulties involved in the onward distribution of supplies by truck or in maintaining existing communications; the commander of the rearward army area had to prepare the organization of cavalry squadrons of Cossacks and of Ukrainian and Belorussian prisoners of war.⁴⁸³

On 12 October XXIV Armoured Corps of Second Armoured Army reached Mtsensk. The army's right wing with 9th Armoured Division advanced towards Kursk, but the left wing, along with the bulk of Second Army, remained pinned down around the Bryansk pocket until 20 October. Fourth Army was in the Mozhaysk fortifications belt near Kaluga. Armoured Group 3 of Ninth Army had reached Kalinin, while most of its infantry was still in the area of Vyazma-Rzhev. But the pocket at Vyazma still pinned down such strong forces that the 'pursuit' in the direction of Moscow became a hard, costly struggle.⁴⁸⁴

Nevertheless, on 14 October the report from Army Group Centre on the situation of the enemy judged that he was no longer able of opposing an attack on Moscow with such strong forces that prolonged resistance was to be feared.⁴⁸⁵ In the meantime, the Red Army, largely with the help of the civilian population, continued to strengthen its positions between Orel and Kalinin with Mozhaysk as their cardinal point.

Field Marshal von Bock vainly resisted the eccentric movements ordered for the armies on his wings and the weakening of the attack as a whole, whose effects would be felt at precisely the moment when he wanted to regroup his forces to pursue the enemy.⁴⁸⁶ After a preliminary orientation by the officer responsible for Army Group Centre in the operations department of the Army General Staff, Colonel-General Helmuth von Grolman, the chief of the gen-

⁴⁸¹ Situation briefing by Second Armoured Army chief of staff, 12 Oct. 1941, *ibid.*

⁴⁸² Reinhardt, *Moskau*, 79.

⁴⁸³ On the creation of these units cf. Hoffmann, *Ostlegionen*, 11 ff.; commander of rear army area Centre, corps order No. 61 and report for Sept. 1941: BA-MA RH 19/123, pp. 178, 202-11. As of 15 Oct. all construction forces were placed directly under the army group command.

⁴⁸⁴ During this reorganization and supply phase there could be no question of a pursuit in the military sense of the term.

⁴⁸⁵ Cf. n. 479 above.

⁴⁸⁶ Bock, *Tagebuch*, 111 (14 Oct. 1941), BA-MA N 22/9; conversation between Greiffenberg and Grolman, 12 Oct. 1941, BA-MA RH 19 II/123.

eral staff of the army group sought to retain at least unlimited control of Fourth Army as an assault force for the attack on Moscow. In addition to the removal of Armoured Group 3 from the attack on Moscow, Ninth Army had also been seriously weakened by transfers of army troops, artillery, assault-guns, sappers, and construction units.⁴⁸⁷ But Bock and Greiffenberg failed in their attempts to change the situation. Finally, on 14 October, the army group issued the order for the continuation of operations, which followed almost word for word the directive issued by the Army High Command the previous day.⁴⁸⁸

On 15 October worsening road conditions caused by the weather were the main problem facing Army Group Centre. Although planned as the pursuit of a defeated enemy, the advance slowed in all sectors. The commander-in-chief of Fourth Army, Field Marshal von Kluge, believed that 'the psychologically most critical moment of the campaign in the east' had arrived.⁴⁸⁹ The lack of winter clothing, the impassable terrain, and the stubborn enemy defence, especially of roads and buildings that might serve as quarters, shattered all expectations of a quick end to operations. Fuel and supply problems were the main factors in determining the speed of the advance and the attainability of its objectives.⁴⁹⁰

Near Mtsensk and Bolkhov XXIV Armoured Corps of Second Armoured Army was involved in heavy fighting. Fourth Army gained but little ground in the east; it was delayed by well-aimed tactical attacks on the Medyn-Maloyaroslavets road, on the highway, and in the areas south of Detchino and west of Mozhaysk. Armoured Group 3 held Kalinin and its 1st Armoured Division reached Torzhok. Ninth Army took Rzhev and regrouped for the advance northward via Lukovnikovo, where it was to cut the retreat route of the enemy forces facing Sixteenth Army.⁴⁹¹

After the Bryansk pocket had been cleared, Second Armoured Army and Second Army began to prepare their further advance on 19 October. Second Armoured Army hoped to begin its attack on Mtsensk on 20 October, if road conditions permitted. Second Army was to take Kursk; the plans regarding Voronezh were postponed.⁴⁹² Fourth army continued its costly penetration of the enemy positions protecting Moscow and entered Mozhaysk. Heavy attacks by enemy armour and the extensive system of defensive positions exhausted the troops. On 18 October Ninth Army reported that it hoped to continue its

⁴⁸⁹ H.Gr. Mitte/Ia, KTB, 15 Oct. 1941, *ibid.*; Bock, *Tagebuch*, 112 (15 Oct. 1941), BA-MA N 22/9.

⁴⁹⁰ The weather conditions cannot have come as a surprise; on 10 June 1941 a 'brief survey of climatic conditions in European Russia in the months August to October' had been distributed to the armies: text in BA-MA RH 2/v. 1326, pp. 115-26. Cf. also *Wehrgeographischer Atlas der UdSSR* with numerous climate and weather charts and geographical descriptions from a military point of view, which all staffs possessed (MGFA, library).

⁴⁹¹ Cf. n. 478 above.

⁴⁹² The regrouping and advance of Second Armoured Army encountered serious transport and march difficulties: Bock, *Tagebuch*, 116-17 (20, 21 Oct. 1941), specifically: 'The Russians are slowing us down far less than the wetness and the mud', BA-MA N 22/9.

advance until it reached the line Kalinin-Torzhok-Kuvshino. Then the supply situation would require a long halt.

The head of the quartermaster-general's field office produced a memorandum on the consequences of the new operational objective, the ordered encirclement (not the conquest) of Moscow. With regard to supplies, conclusions had to be drawn for shipments in the direction of Moscow. Whereas earlier it had been possible to assume that supply transports would be able to move parallel to these lines of communication, the vast inferiority of the lateral roads now had to be taken into account. Because of the greatly increased difficulties caused by the weather and the loss of bulk transport facilities it was now necessary to demand an improvement and defence of railway connections.

Second Army headquarters needed the line between Orel and Bryansk as a basis; supplies for Second Armoured Army would have to be brought at least as far as Tula by rail. For the other armies railways had to be built to Kaluga, between Smolensk and Mozhaysk, in the north between Velikie Luki and Rzhev, and between Vyazma and Rzhev. Even if these lines, which were considered minimum requirements, were completed, serious difficulties were still expected between the railheads and individual units. This meant that the conduct of operations would have to be determined by the supply network if the fighting strength of the troops was to be maintained. In the following weeks the importance of this argument for their bare survival became clear.⁴⁹³

But neither operational considerations nor the foreseeable difficulties involved in such a large part of the army spending the winter in the Soviet Union if the fighting continued induced Hitler or the Army High Command to change their plans. In addition to the operations on the wings, the offensive against Moscow was to be continued with the assigned forces *alongside* the operations of the wings. The assessment of the enemy's intentions seems to have played a decisive role: it was feared that the Red Army would withdraw to the east, leaving a 'scorched earth' behind, to regain its strength for fighting in the spring.⁴⁹⁴ On 16 October all army groups were urged not only to reach their operational objectives but to attempt to engage the strongest possible enemy forces before they could withdraw. For this purpose pursuit detachments were to be organized. Among the armoured units they were to be provided with abundant supplies of fuel, if the fuel situation permitted, and employed against distant objectives.⁴⁹⁵ Army Group North immediately re-

⁴⁹³ Remarks of head of field office of general staff officer in charge of supply and administration of supplies for future operations, annexe 2 to H.Gr. Mitte/Ia No. 1923/41, 12 Oct. 1941, BA-MA RHf 19 II/123.

⁴⁹⁴ OKH/GenStdH/Op.Abt. No. 1588/41, 16 Oct. 1941, BA-MA RH 2/v. 1327, pp. 35-6.

⁴⁹⁵ The style of the above-mentioned directive indicates that it was suggested by Hitler. The idea of surrounding the enemy facing Seventeenth Army by having First Armoured Army turn north in the event that its attack to win a bridgehead across the Don did not succeed was incompatible with Halder's insistence on crossing the Don in 1941. This objective was motivated not only by the desire to capture the oilfields, but also by the intention to cut off the Soviet Union from supply shipments via Persia. Cf. sect. II.1.1(e) at n. 434 and sect. II.1.14 at n. 419 (Hoffmann).

ported that no disengagement moves were to be observed in the area of Sixteenth Army and that the enemy was continuing to defend himself in fortified field positions.⁴⁹⁶ The army group also referred to the promised attack by Army Group Centre, with the purpose of encircling the enemy. On 19 October the operations department replied that no final decision had been taken as to whether the encirclement was to be carried out in the manner envisaged or whether a much large envelopment from the area of Kalinin via Bezhetsk in the direction of Cherepovets offered better chances of success.⁴⁹⁷ The direction of this operation meant that Moscow would be bypassed and enemy lines of communication to northern Russia were to be interrupted instead.⁴⁹⁸ On the same day the Army General Staff instructed Army Group Centre to assemble strong, mobile forces in the area of Kalinin and Torzhok for a pincer movement against the enemy group in the Valday hills. There Halder saw another great operational task to be completed before the end of autumn. Its objective, after the destruction of the enemy forces facing Sixteenth Army, was to secure the front over a great distance towards the north-east and east. After the occupation of Rybinsk (the air distance between Kalinin and Rybinsk is about 230 km.), the line from Vologda to the lakes area and the 'western edge of the tundra' was to be reached and the railway line between Archangel and Moscow cut.⁴⁹⁹

While strategic ideas replaced reality in the thinking of the Army General Staff, a rapid thaw and rainy weather set in along the front of the army group and quickly led to a serious supply crisis. In a proposal to the Army High Command on 21 October Field Marshal von Bock attempted to take this development into account: wherever road conditions or lack of fuel were impeding the advance, personnel needed for vehicle maintenance were to be left behind, while all other officers and men were to be formed into infantry combat units and the necessary artillery, heavy weapons, and supply services with motor or local horse-drawn vehicles assigned to them. These extemporized mobile units were to be sent to the front immediately. Where serviceable vehicles were still available, mixed formations were to be formed and attempts made to reach the assigned objectives. This plan was submitted to the commander-in-chief of the army, who, however, refused to issue the necessary order.⁵⁰⁰

On 22 October, unimpressed by the fierce enemy attacks on the positions of

⁴⁹⁸ Telephone conversation between Halder and Greiffenberg, 19 Oct. 1941; cf. Reinhardt, *Moskau*, 83-4.

⁴⁹⁹ This line was the only remaining supply link via the Arctic Ocean. This thrust could only be carried out, however, if the Red Army facing Army Group North withdrew on a broad front.

⁵⁰⁰ H.Gr. Mitte/Ia No. 2086/41, 21 Oct. 1941, BA-MA RH 19 II/124; Bock, *Tagebuch*, 117 (21 Oct. 1941): 'That, however, doesn't change the fact that sensible commanders are doing it this way on their own initiative.' On 16 Oct. the army high command had issued a similar order. Cf. n. 494 and sect. II.1.1(c) at n. 273.

Ninth Army near Kalinin, the Army High Command again demanded an early attack to the north-east. At the same time a reinforcement of the attack in the south against Kursk and Voronezh, with XXXXVIII Armoured Corps, was considered. However, the army group, also bearing in mind the enemy pressure on the right flank of Fourth Army, insisted that all available forces of Second Armoured Army be concentrated for the thrust towards Tula. If the movement was to be continued via Kursk to Voronezh, the army should be divided, with XXXIV Army Corps being placed under Sixth Army and XXXV Army Corps under Second Armoured Army.⁵⁰¹ The Army High Command thereupon ordered mobile units to be assigned to Second Army, which was then to take Voronezh.⁵⁰²

On 23 October, mainly because of the difficult situation of Ninth Army, Bock reacted to the Army High Command's demand to strike north-east from the Kalinin area by ordering planning for attacks beyond Kalinin to be postponed, so that the enemy north of the Volga reservoir could first be defeated. That, he hoped, would establish a safe rear area for a further advance by Ninth Army.⁵⁰³ The more slowly the advance on Moscow proceeded—the bulk of vehicles were stuck in the mud and the troops had suffered serious losses—the more Hitler sought new solutions on the flanks. When it became clear that the enemy facing Army Group North was not withdrawing, that he was offering determined resistance between the Volga and the Volkhov, and that he would probably attempt to recapture Kalinin, Hitler decided to eliminate the enemy forces between the Volga and Lake Ladoga by cutting the railway lines via Yaroslavl and Rybinsk to Bologoe and Khotsay as well as the line via Vologda to Tikhvin. Costly direct attacks would thus be avoided.⁵⁰⁴ But the army group command was more alarmed by Hitler's intervention in the operations of its last mobile 'pursuit group', Second Armoured Army.

On 23 October Second Armoured Army had launched an offensive. XXIV Armoured Corps was successful near Mtsensk and was able to penetrate as far as Chern. During this slow and laborious movement a report from the chief of the operations department arrived on the evening of 26 October: Hitler had expressed very specific views about the progress of operations to the commander-in-chief of the army.⁵⁰⁵

Hitler demanded that Second Armoured Army should not advance eastwards beyond Tula but turn towards Voronezh to cut off strong enemy forces.

⁵⁰¹ OB H.Gr. Mitte/1a, No. 2099/41 to OKH/GenStdH, 22 Oct. 1941, BA-MA RH 19 II/124.

⁵⁰² OKH/GenStdH/Op.Abt. (I) No. 31903/41, 23 Oct. 1941 to H.Gr. Süd and Mitte, BA-MA RH 2/v. 1327, p. 41. The army group, thereupon, placed XXXXVIII Armcd. Corps with 9th Armcd. Div. and 16th Inf. Div. (mot.), as well as the 'higher command', under Second Army on 24 Oct.: BA-MA RH 19 II/124.

⁵⁰³ Army Group Centre to Ninth Army, 23 Oct. 1941, 79, BA-MA RH 19 II/124.

⁵⁰⁴ For this purpose Armcd. Groups 3 and 4 and strong infantry units of Army Group Centre were to be moved to the area north of Moscow, if possible before the first heavy snowfall: OKH/GenStdH/Op.Abt. (I) No. 1610/41, 30 Oct. 1941, BA-MA RH 2/v. 1327, fos. 44 ff.

⁵⁰⁵ Reinhardt, *Moskau*, 85–6 with sources; H.Gr. Mitte/1a, KTB, 144 ff., 157–68, BA-MA RH 19 II/124; Guderian, *Panzer Leader*, 114 ff.

He also feared that the armoured army would not have enough bridging material to cross the numerous river stretches it would encounter in its previous direction of attack. In addition, he considered Fourth Army strong enough to take over, with its right wing, the tasks of Second Armoured Army in the encirclement of Moscow. As the thrust by Armoured Group 4 with mobile units towards Bezhevka did not offer good prospects of success because of road conditions, infantry was to be transferred to Kalinin as fast as possible for that task. Armoured Groups 3 and 4 were to be combined to advance in the direction of Rybinsk and Yaroslavl. West of Kalinin Ninth Army was to go on the defensive.

The army group was to present its views on the two proposed wing operations, allowing for road conditions, supply facilities, and bridging material. On the evening of 27 October, while the the army group's response was being decided, Heusinger informed it that the Wehrmacht High Command had taken a 'firm decision' with regard to Voronezh. Only an hour later the order arrived for Second Armoured Army to halt its advance towards Tula until reconnaissance provided more information on road conditions and a decision could be taken on a possible wheeling towards Voronezh.⁵⁰⁶ On 28 October Bock and Halder discussed the measures ordered. Bock stressed that for tactical and psychological reasons he could not halt the advance of Second Army at that moment. Halder was not able to comment, but he completely accepted Bock's view and suggested describing the further advance as a 'reconnaissance in force in the direction of Tula'. Bock replied that he would order Second Armoured Army to create 'a situation that would enable it to turn towards the south-east'. In his view this meant at least reaching the Upa sector near Tula. Subsequently Bock and the command of Second Armoured Army agreed that they both shared this opinion.⁵⁰⁷

On 28 October the opposing views of the Army General Staff finally induced Hitler to rescind the order for Second Armoured Army to halt and change its direction of advance, with 'the proclaimed objective of exploiting some lucky chance to capture a bridge across the Oka intact'.⁵⁰⁸ In view of the situation of Fourth Army and the road conditions, Hitler now ordered Second Armoured army to continue its attack in a general north-easterly direction. Its task was the early capture of a bridge across the Oka east of Serpukhov by a surprise thrust and the cutting of the railway line from Moscow to the south.

On 28 October the army group also ordered Ninth Army to suspend its attack to the north and to go on the defensive along the line running from Kalinin to south of Torzhok and on to Bolshaya Kosha.⁵⁰⁹ Its main task

⁵⁰⁶ OKH/GenStdH/Op.Abt. (IM) No. 31911/41, 27 Oct. 1941, BA-MA RH 2/1327, p. 48.

⁵⁰⁷ BA-MA RH 19 II/124; Bock, *Tagebuch*, 121 ff. (27, 28 Oct. 1941), BA-MA N 22/9. This technical trick to circumvent those of Hitler's directives that were considered impractical had already been used successfully in the campaign in the west.

⁵⁰⁸ Telephone call of operations department to Army Group Centre/1a, 28 Oct. 1941, 3.10 p.m., BA-MA RH 19 II/124; Hitler's order received at OKH/GenStdH/Op.Abt. (IM) No. 1609/41, 29 Oct. 1941, BA-MA RH 2/v. 1327, p. 43.

⁵⁰⁹ H.Gr. Mitte/1a No. 2198/41 to Ninth Army, 28 Oct. 1941, BA-MA RH 19 II/124.

remained the elimination of enemy resistance in the area south and south-west of Kalinin between the Volga and the Volga reservoir, as well as the capture of road- and rail-bridges across the western tip of the reservoir.

These varied orders, in many respects contradictory and issued without regard to their feasibility, were to be replaced by guidelines for the near future. This was accomplished with the directive of the Army High Command of 30 October for the 'Continuation of operations against enemy forces between the Volga and Lake Ladoga'.⁵¹⁰

This directive contained a number of statements of intent which have been presented here in their various stages. The plan to cut off enemy forces facing the front in the north-east by cutting the railway from Yaroslavl to Bologoe and through Vologda to Tikhvin was restated. In view of calculations by the war-economy and armaments office of possible British shipments, which could be transported to the interior of the Soviet Union from ports on the Arctic Ocean, this operation was to become increasingly important.⁵¹¹ The plan for Armoured Groups 3 and 4 to attack towards Yaroslavl and Rybinsk as part of this operation has been mentioned. A change from previous plans was made for the attack by Ninth Army; its task was limited to capturing and securing the road between the last station on the railway line Selizharovo-Kalinin-Volga reservoir and the supply-points. The task of a joint offensive with the right wing of Army Group North was abandoned. In addition to the encirclement of Leningrad, that army group still had the task of tying down Soviet forces south of Lake Ilmen and 'immediately pursuing them in the event of their withdrawal'.⁵¹²

Not a word was said in the directive about capturing Moscow, the only objective that still prevented Army Group Centre from succumbing to apathy. In formulating its own 'Order for the continuation of operations', Army Group Centre therefore refrained from repeating the illusory objectives in the directive of the Army High Command and strove to present Hitler's and Halder's long-term objectives in a form that would not cause lower commands to shake their heads over them from the outset.⁵¹³

The order stated clearly that the encirclement of Moscow required the defeat of the enemy between the confluence of the Moskva river and Kalinin.

⁵¹⁰ OKH/GenStdH/Op.Abt. (I) No. 1610, BA-MA RH 2/v. 1327, pp. 44 ff.; advance briefing on 27 Oct. regarding further use of Ninth Army and Armd. Group 3, BA-MA RH 19 II/124, fos. 158-9.

⁵¹¹ Chef WiRüAmt in OKW No. 3409/41, 22 Oct. 1941, BA-MA WiI D 73. Although Hitler doubted those figures, his operational thinking aimed at cutting this supply-line. Moreover, reports had been received of its being used for deliveries of British/American supply shipments: OKH/GenStdH/Abt. Fr. Heere Ost No. 142, 4 Nov. 1941, BA-MA H 3/484. Cf. also situation reports of the navy from the Navy High Command and the naval war staff after Sept. 1941, BA-MA RM 7/771 ff., on convoys and British naval units identified in Archangel.

⁵¹² In view of their situation, this hackneyed phrase must have seemed quite inappropriate to the soldiers of the army group. This was indicated in Brauchitsch's order of the day to them, 20 Oct. 1941, which was issued with instructions to make it known to the troops but not to include it in the front newspaper: BA-MA RH 19 II/124, fo. 36.

⁵¹³ Reinhardt, *Moskau*, 302-3 (annexe 3). Cf. also Halder's memorandum, 7 Jan. 1941; sect II.I.(f) at n. 525.

The grand objective was therefore not abandoned, nor was the task of Second Armoured Army to push on across the Oka. The order also 'referred to' the industrial areas of Stalinogorsk and Kashira. Fourth Army remained the main force directed against Moscow. Its attack was to be resumed without delay north and south of the highway once the weather and the ammunition supplies had improved. Its northern wing was to advance towards Klin, i.e. against Moscow's communication to the north. The originally considered thrust by Armoured Groups 3 and 4 to Rybinsk and Vologda was included in the encirclement of Moscow as an operation to be executed later. The task of Ninth Army remained essentially to go on the defensive after reaching the lines mentioned above. Armoured Group 3 was to prepare for a thrust to the north-east.⁵¹⁴

This order represented the conclusion, for the time being, of the offensive within the framework of Operation Typhoon. In human and material terms Army Group Centre was exhausted. A pause for rehabilitation was necessary. That pause was to serve, above all, the strengthening of the forces' defensive capacity, the construction of defensive positions, and the creation of the logistical prerequisites of survival in winter under extremely unfavourable conditions.

(ii) PLANS FOR THE RESUMPTION OF THE OFFENSIVE

(See the *Annexe Volume*, No. 19)

After the Wehrmacht High Command had come to the conclusion, at the end of August 1941, that the war against the Soviet Union would continue into 1942, the Army General Staff too began by October 1941 to prepare for this development.⁵¹⁵ In regard to operations, assignments for the army groups and armies had previously always aimed at creating favourable jumping-off lines for decisive battles to crush the Red Army. One result of this objective was that regroupings were undertaken while operations were in progress and that the number and length of breaks for resting and re-equipping exhausted units were inadequate. As a consequence of the realization that none of the great battles of encirclement had had any decisive effect on the campaign as a whole, directives of the Army High Command were now intended to establish bases

⁵¹⁴ Report Ninth Army to Army Group Centre, 29 Oct. 1941, on the planned defensive positions, BA-MA RH 19 II/124. The spreading of the army along a 200-km.-wide front meant that it could not be used for offensive purposes; it was therefore requested that Sixteenth Army be ordered to advance towards the Kalinin-Vyshniy Volochek line to make the corps on the northern wing available.

⁵¹⁵ OKH/GenStdH/Op.Abt. (IIb), conference at office of the deputy chief of staff (*Oberquartiermeister*), 24 Oct. 1941, KTB OKW i. 1072-3 (105). Here the objective for 1942, the operation across the Caucasus, was discussed. Hitler too was prepared to postpone attack operations with strategic objectives until the following year. Cf. the discussion between Hitler and Brauchitsch according to Halder's notes (Halder, *Diaries*, 1290). This view is also supported by his later acceptance of the evacuation of Rostov and his leaving of the decision about Tikhvin to Leeb. Cf. Map II.1.1 and sect. II.1.1(e) at n. 330. To the navy too he expressed his preference for giving priority to the securing of areas already conquered. Cf. Salewski, *Seekriegsleitung*, i. 476, and n. 524 below.

for large-scale conquests in the coming year. But for the moment the army-group and army commands of the field army had to concentrate on quite different problems, such as holding a 'winter-proof' line, ensuring supplies, and maintaining the material and personnel strength of their forces. The chief of the Army General Staff considered these concerns to be problems that would have to be solved by the determination of the leadership and the organizational ability of the general staff.⁵¹⁶

It was therefore inevitable that opinions differed among the staffs as to how much effort should be devoted to and how many sacrifices should be made for the sake of strategic and operational planning for the future, i.e. primarily how many additional troops and what quantities of supplies would have to be provided.⁵¹⁷ In this respect the role of the commander-in-chief of the army, when he visited the field commands, seems to have been more that of a comforting old comrade than of an energetically helpful superior.⁵¹⁸ In the end, opinions about what the troops were still able to accomplish remained divided. Numerous reports of commanders in the field indicated that on 6 November the actual fighting power of the 136 large units of the German army in the east was considered to be equivalent to that of 83 such units.⁵¹⁹

By 1 October 1941 total losses of Army Group Centre had reached 229,000 men; by 16 October they had risen to 277,000. Total replacements were 151,000 men.⁵²⁰ But these figures reveal nothing about the fighting ability of individual units and soldiers or about the morale of the troops as a whole.

For Army Group Centre, as for the other two army groups, the main objectives in planning a further attack were to weaken the enemy to such an extent that he would not be able to recover by the coming spring, while at the same time gaining favourable jumping-off positions for the spring offensive, which by then was clearly recognized as necessary.⁵²¹ Hitler and the Army High Command were agreed that this would require more sacrifices from the Wehrmacht.⁵²² Both believed that the fighting strength of the army would still be sufficient after a pause for rehabilitation.

⁵¹⁶ At the beginning of Nov. 1941 Halder elucidated this difference with the alternatives of 'conservation' (*Erhaltungsgedanke*) and 'striking efficiency' (*Wirkungsgedanke*). An acceptable compromise between these two extremes had to be found and made to percolate down to army level through general-staff channels: Halder, *Diaries*, 1288 (5 Nov. 1941).

⁵¹⁷ On the conflict between Halder and the army group cf. Reinhardt, *Moskau*, 135-6.

⁵¹⁸ e.g. his visit to Army Group South on 3 Nov. 1941, when Brauchitsch stated his position regarding the future supply situation. Cf. sect. II.1.1(c) at n. 312.

⁵¹⁹ OKH/GenStdH/Org.Abt. (I), *KTB OKW* i. 1074-5 (106), assessment of the fighting power of the units of the army in the east.

⁵²⁰ Tables in Reinhardt, *Moskau*, 315-17 (annexes 6-8); 'local forces' of the rear-area services, which were difficult to count, are not considered.

⁵²¹ This emerged clearly from the personnel measures taken in mid-Dec. Cf. sect. II.1.1(g) at n. 575.

⁵²² This is proved not only by Halder's notes (*Diaries*, 1289: 7 Nov. 1941) but also by the disputes with the army groups and the armies. It is regrettable that because of an accident Halder did not continue his notes. As a result his diaries, an important source for this period of difficult decisions, are silent here.

Like the estimates of the fighting ability of their own troops, evaluations of the position of the enemy varied widely among the senior German operations staffs and field commands, not to mention the lower commands. The Wehrmacht High Command and the Army General Staff repeatedly produced forecasts based on the high numbers of Soviet prisoners, the enormous material losses of the Red Army and its supposedly exhausted fighting strength, and the assumed situation of the Red Army leaders, predicting the imminent collapse of that 'gigantic instrument of war'.⁵⁴³ To avoid this catastrophe, it was believed, large Soviet units were being withdrawn to escape capture. In contrast, German field commanders reported stubborn defence of fixed positions and offensive counter-thrusts that went beyond mere tactical actions. On the whole, however, belief in German superiority still prevailed; only the material situation had to be improved and difficulties resulting from the weather overcome.

It was intended in the sector of Army Group Centre to end the extremely exhausting and costly fighting forced on the German army by the enemy and the weather by launching a second large-scale offensive. In this decision Hitler's need to demonstrate to the German people before the end of the year his unbroken faith in victory and to restore the optimism of his allies played an important role. Nothing strengthens confidence and readiness to make further sacrifices in a war more than expectations of victory.

After Halder had discussed the possibilities that presented themselves as a 'final balance of the situation' with the head of the operations department of the general staff, Colonel Heusinger, on 5 November, he received a detailed memorandum two days later, intended to serve as the basis for a discussion of these questions by the chiefs of staff of the army groups and armies.⁵⁴⁴ Halder was mainly anxious to achieve a consensus of views in this circle of his most important general staff officers. The starting-point for the discussion was an overview of the possibilities left, in Halder's judgement, to the Soviet leaders. In his view their choices had become so few since the end of October or the beginning of November 1941 that, in spite of all efforts to mount a vigorous defence, a coherent front could not be maintained by them. Halder assumed that the Red Army would continue to withdraw in order to gain time for a new build-up and would be able to hold only the area around Moscow ('Vologda, Moscow, Tambov') and the Caucasus region. It would have to abandon the

⁵⁴³ According to the calculation of the general-staff officer in charge of supply and administration, as of 20 Dec. 1941 3,350,639 prisoners had been taken. This figure includes those who had died, fled, or been released, for whom no reliable figures are available. Cf. sect. II.1.3 at n. 56 (Hoffmann). 25,696 guns of all kinds, 13,935 tanks, and 52,221 motor-vehicles were captured. Cf. *KTB OKW* I. 1106, appendices.

⁵⁴⁴ Chef GenStdH/Op.Abt. (Ia)/GZ No. 1630/41, 7 Nov. 1941, BA-MA RH 21-2/879 with map. Hitler gave this consent on 11 Nov. 1941, but with the proviso that the troops must not lose contact with their supply-base. According to a letter of the operations department of 3 Nov. 1941, Hitler referred to Halder's objectives for the winter as being for 'east operations 1942': BA-MA RW 4/v. 578, fos. 162 ff., letter OKH/GenStdH/OQu IV/Fr. Heere Ost, 4 Nov. 1941, with map WIRü, 1 Mar. 1941, BA-MA RH 21-2/v. 879.

area in between, extending to the steppes east of the Volga. He believed that extensive evacuation measures had been detected in the foothills of the Caucasus. In the area of Leningrad too he expected evacuation and withdrawal of Red Army troops as far as Rybinsk so as to concentrate forces in the 'Moscow bridgehead' in order to hold the rail links converging there and, with help from industry in the Urals, create a new army for an attack in 1942, 'or even later'. The Caucasus front could then be held thanks to its naturally strong position and with help from the British and Americans.⁵²⁵ This view of the situation, which had already emerged from the directive for Army Groups North and Centre of 30 October, formed the basis of the memorandum of 7 November.

The logical conclusions for the conduct of the war in this large strategic framework were obvious: the enemy had to be deprived of railway lines and armaments centres for a new build-up. Assuming that the enemy carried out certain evacuations, the operational objectives of Voroshilovgrad, Ivanov, Yaroslavl, and Rybinsk, as 'minimum objectives', were indeed ambitious, but not totally unattainable, at least if all prerequisites were met in the areas of leadership and transport. But this was simply not possible. Even more unrealistic was the idea of really controlling this enormous area. Halder's recent acceptance of Hitler's strategic plan was evident in his desire to occupy Maykop, Stalingrad, Gorkiy, and Vologda as the 'maximum objective'—which, however, he considered it 'urgently desirable' to reach. Halder's objectives thus included the oilfields of the Caucasus, the transport centres for supplies sent through Iran, numerous armaments and transport centres in the interior of the Soviet Union, and the last link to the Arctic Ocean still in Soviet hands. He was well aware of the risks involved in trying to reach all these widely scattered objectives, which is why he considered it vital for the further course of the war to take up winter positions that could later be used as favourable starting-points for operations to be undertaken in 1942.

In line with his image of the enemy, he saw the main danger in the development of the weather situation, although the effects of this could be reduced by ensuring adequate stocks of supplies. Here he formulated concrete requirements intended to overcome the shortages reported by the staffs of the forces at the front. Although he recognized that the fighting ability of the German troops had been weakened, he maintained that they were clearly superior to the 'still usable Russian forces'. In conclusion, Halder urged the continuation of offensive activity with 'raiding parties' and tank columns even during the period of bad weather.

The objectives contained in the working paper for the conference in Orsha summarized here were based primarily on a draft of 1 October 1941 prepared

⁵²⁵ Halder (*Diaries*, 1284–5, 1287–8, 1289–90: 3, 5, 7 Nov. 1941) provides evidence of Hitler's concurrence with his objectives. But Hitler envisaged the occupation of the oilfields for the following year (cf. n. 515 above). Halder's view was undoubtedly influenced by the successes in the Crimea and against Tikhvin.

by the war-economy and armaments office, which Foreign Armies East passed on to the army groups and armies on 4 November. Although in the covering letter Foreign Armies East stated that it could not agree with the conclusions of the war-economy and armaments office, this seems only to have motivated Halder to push even more energetically for an attack in winter. It is astonishing that the map accompanying Halder's memorandum of 7 November, which contained the first data on the remaining Soviet military potential in the economic sector, was largely identical with that accompanying the analysis of 1 March 1941 by the war-economy and armaments office.

Attempts at co-ordination with the Wehrmacht High Command, more precisely with Hitler, with regard to the winter offensive had by no means produced the agreement suggested in Halder's diary and accepted by much of the literature on this period of the war as a historical fact. While the written report of the operations department of 3 November was accepted in its goals, it was with the reservation that lines of communication must be maintained between the troops and their supply-bases; moreover, no decision about the chain of command in winter was taken. It is clear therefore that Hitler exerted no pressure on Halder. On the contrary, the objectives which, according to Halder, had to be reached even after the onset of winter appeared as operational objectives for 1942 in Jodl's notes on Hitler's comments.

However much importance Halder may have attached to the argument in favour of conquering the centres of the Soviet economy so as to prevent a new build-up of the Red Army, a glance at the maps was sufficient to show the field commands the total lack of realism in the consequent operational aims. They were far more ambitious than anything the field commands had seriously considered. Any agreement between Halder and the general-staff officers mentioned above depended on whether their basic assessments of the enemy's situation were identical. But that was certainly not the case among the army groups and armies at this time.

With regard to the further actions by Army Group Centre to be considered here, it should be noted that the group's commander-in-chief vigorously opposed Halder's unrealistic objectives. Bock's operational aim was no longer a close encirclement of Moscow within the railway line around the city, let alone a thrust into its centre, but at most the attainment of the line Dimitrov-Zagorsk-Orekhovo-Kolomna. However, he considered a line along the Moskva river and the Moskva-Volga canal to be more realistic.⁵²⁶ He wanted to attack only close objectives, as in his opinion the reduced strength of the army group no longer permitted any strategic envelopment. These views were getting close to Hitler's earlier deliberations, which had induced him to plan the attack on Moscow as a series of individual steps to be concluded only after the Red Army units facing other sections of the front had been destroyed. The

⁵²⁶ Classification of objectives according to Bock: 'long-range, short-range, and interim.' Cf. Halder, *Diaries*, 1294-5 (11 Nov. 1941), and Bock, *Tagebuch*, 133, BA-MA N 22/9; Reinhardt, *Moskau*, 137.

supply situation necessitated a staggered advance of the individual armies in order to make any progress at all before the first heavy snowfall. This meant that those parts of the army group at that time not capable of participating in an offensive because of supply shortages had to remain where they were. At best they could be brought up later. In accordance with his assessment before the offensive in September, Bock did not believe that the front as it then was could be defended, although he did not wish merely to establish more favourable winter positions with a forward movement. Neither could he expect Sixteenth Army of Army Group North or Sixth Army of Army Group South to move closer to his sector of the front, thereby relieving pressure on Army Group Centre. On the contrary, the withdrawal of parts of Second Army had shown that a thrust in the direction of Rostov and Voroshilovgrad entirely ruled out any flank protection from that quarter.

The conference of the chiefs of staff of the army groups and the armies, as ordered by Halder, took place in Orsha near Smolensk on 13 November.⁵²⁷ From the Army General Staff the chief of supply and administration, the heads of the central department and the organization department, the officers responsible for sectors Centre and North in the operations department, and several accompanying officers were present. The composition of this group shows that internal general-staff matters were also discussed. Halder received a totally negative answer to the most important question in his memorandum: to what extent could next year's offensive be prepared for during the winter by further advances to 'operationally valuable' starting-positions? As was clear from the increasingly urgent demands for personnel and material replacements, the graphic descriptions of the imminent physical and psychological collapse of the troops, and the concern about their sheer survival during the winter, all responsible general-staff officers considered the situation to be extremely serious. As relief clearly could not be provided in time, they rejected any further large-scale offensive. They had learnt from experience in various situations during the campaign the value of such terms as 'measures in hand' and of qualifications such as 'if the supply situation permits'. In most cases it had been necessary to improvise as orders had been issued, orders accompanied by open or implied appeals to make more sacrifices, irrespective of the supply situation or the condition of the troops. In the discussion of Halder's ambitious aims in this circle there was no shortage of sarcastic comment.⁵²⁸

The chief of staff of Army Group Centre argued that only a direct thrust on Moscow was possible, without the broad envelopment of the city envisaged by

⁵²⁷ i.e. the chiefs of staff of the armies envisaged for the attack—Eighteenth and Sixteenth Armies of Army Group North, Sixth and Seventeenth Armies of Army Group South (First Armd. Army was still involved in the attack on Rostov), and the armies of Army Group Centre, except Second Army: Halder, *Diaries*, 1287 (5 Nov. 1941), 1294 ff. (11–19 Nov. 1941). On the conference at Orsha cf. Reinhardt, *Moskau*, 139–42 nn. 91–2. In an assessment of the situation the pulling out of Air Fleet 2 and II Air Corps should be considered. Cf. sect. II.1.2(a) at n. 886 (Boog).

⁵²⁸ Remark by Col. Kurt Freiherr von Liebenstein, chief of staff of Second Armd. Army, quoted in Guderian, *Panzer Leader*, 117.

Halder. In this respect he was only presenting the views of his commander-in-chief. Moreover, his staff was already busy planning an attack as soon as possible. Halder now realized that all available information indicated that a second major offensive against Moscow would not be successful. Yet that was what he demanded. His answer to misgivings about the army group's supplies, voiced by the head of the field office of the general-staff officer in charge of supply and administration, Major Eckstein—that one just had to trust to the soldier's good luck—was hardly an adequate response. He had repeatedly been informed of the supply problems by the responsible general-staff officer; they cannot have been new to him, quite apart from the fact that he also received information through operations-department channels. Why then did the commander-in-chief of the army group and the chief of the Army General Staff advocate and order an attack which, though limited to the western edge of Moscow, was nevertheless, in view of the condition of the German troops, an extremely dangerous undertaking?

Firstly, it is necessary to outline the various positions of those responsible. According to the scant evidence available on Hitler's views on the further conduct of operations in the east,⁵²⁹ he wanted in the long term an encirclement of Moscow by mobile troops, which would at the same time sever all lines of communication from the Atlantic, the Black Sea, and the trans-Caucasus area to the interior of the Soviet Union. Thereafter the city was to be subjected to an increasingly tight encirclement. Militarily it would be important only in so far as it might influence the flanks and rear area of the main future operation against the Caucasus and the Middle East.

Halder and his chief of the operations department, now chief of staff of Army Group Centre, Major-General von Greiffenberg, had from the very outset of planning looked for a decision at and in Moscow. In his dealings with Hitler Halder had always promoted and defended this operational direction with all his energy. In spite of the Red Army's failure to collapse after the battles of Minsk and Smolensk, he still sought to destroy the bulk of its units, its 'vital fighting strength', at Moscow. Now he had pushed through his plan for making this attack the point of main effort of all German operations in the east—very late and under conditions completely different from those underlying his planning, but, he believed, still not too late provided several weeks of freezing weather without snow permitted a war of movement.

In this regard he met considerable resistance to his plans in Orsha and agreed to a compromise according to which the large-scale offensive that he and Hitler wanted was to be replaced by a partial offensive adjusted to available forces and directed against the outskirts of the city. At the same time, and in spite of the reservations he expressed to Greiffenberg on 11 November, he accepted Bock's belief that the offensive with limited objectives should be started as soon as possible without the envisaged, time-consuming expansion

⁵²⁹ Halder, *Diaries*, 1290, 1304 (7, 19 Nov. 1941); Jodl, 11 Nov. 1941, BA-MA RW 4/v. 578.

of the supply network. The assessments of relative strength and the conclusions drawn regarding the depth of the attack and its direction were provided by Army Group Centre. Halder accepted these assessments and agreed to Bock's offensive plan.⁵³⁰ Neither, however, can have seriously believed that an attack on the outskirts of Moscow, under the enormous risks to supply transports and the great sacrifices to be expected, would end up at the Moskva-Volga canal. The armies and armoured groups were well aware that the positions they had reached were not favourable, but it was equally clear that they would find nothing better at the edge of Moscow. Indeed, they would be exposed there to massed air attacks and fire from the defending artillery. The chosen limited offensive could not sever the rail links to the east; the enemy would thus be able constantly to bring up reinforcements. From Bock down to the last private of the army group there could only be one real objective—the capture of the city. Only that objective could justify the disregarding of all warnings and reservations from the leading operational strategists of the army group as well as from the officers responsible for supplies. The fact that the attack was to be executed by stages and its opening delayed did not change this situation. For Halder, and probably also for Bock, more must have been involved in this high-risk operation than the mere conquest of territory, the possible occupation of a shattered, burnt-out human habitation, or a new jumping-off position for future operations. It seems probable that both men hoped that this attack would mark the beginning of the fall of Moscow and thus the end of the war against the Soviet Union.

What role did their image of the enemy play in their deliberations? In the final analysis the success of an attack by exhausted troops, without adequate replacements and dependent on vulnerable supply-lines, could not be based only on the hope of freezing, snow-free weather, for which the troops were not even adequately equipped.

The German commanders realized that the Red Army and the able-bodied inhabitants of Moscow would defend the city. This time there could be no question of strong enemy units escaping. On the other hand, they believed that the heavy Soviet losses in the battles of Kiev, Bryansk, and Vyazma-Smolensk had been a blood-letting of war material and trained soldiers who could not be replaced by hastily organized new units or militia formations. The strength of Soviet air defences and air-force units had been clearly demonstrated. The transfer of trained and fresh Soviet units from the Far East to the defence of Moscow was a known fact and mentioned in intelligence reports as well as in the battle reports of various units. There is evidence that all offices and officers concerned with such questions produced serious and constantly updated assessments of the enemy's situation. It can only be concluded that Halder and the operations department did not attach sufficient importance to these reports. As had been the case since the beginning of operational planning for

⁵³⁰ On Bock's decision, which cannot be seen as uninfluenced by Halder, cf. Reinhardt, *Moskau*, 139; Messerschmidt, *Wehrmacht*, 134; Hofmann, *Feldzug*, ii. 88 ff., MGFA P-114b.

the war in the east, materials produced by the department Foreign Armies East, however low their information value may be judged now, were evaluated by the 'experts' from the perspective of their own assumed superiority. In addition, the heavy losses of the Red Army led the German leaders to conclude that even the Soviets' enormous human reserves were not sufficient to permit the creation and training of a new, combat-ready army. There remained, however, a large number of Soviet units in the trans-Caucasus and the Far East whose existence was known and which had to be regarded as virtually intact peacetime forces. It was also known that Soviet transport facilities were sufficient to transfer these units to the fighting front. How, under these circumstances, throwing the 'last battalion' into the battle could be expected to tip the balance in favour of the German army will remain the secret of Halder and Bock. They simply placed their hopes in the demonstrated superiority of the German command system and the stamina of their own soldiers.⁵³¹ In addition to the enemy, they also in the final analysis ignored the climate, the condition of the terrain, and temperature records—all of them elementary factors about which meteorologists and geographers could have supplied abundant information.

In mid-November 1941 a line extending from Kolomna along the Moskva river to the western suburbs of the capital and from there along the Moskva-Volga canal to the shore of the Volga reservoir was still regarded as an attainable objective. From there the front was to be established via Kalinin as previously ordered—an attack with a limited objective because of the limited means available and the late season.

Thus Second Armoured Army on the right wing of the attack was ordered, while covering its right flank towards the Moscow-Voronezh railway line and with XXIV Armoured Corps forming the spearhead, to advance northward towards Kashira and Kolomna. Ever since the conference in Orsha, when an attack via Ryazan was still under discussion, the chief of the army's general staff, Colonel Kurt Freiherr von Liebenstein, had observed that, with the means available to it, the armoured army would only be able to reach Venev. Since then the supply situation had not improved.

On the left wing of the attack Ninth Army with Armoured Group 3 was ordered to push forward to the Volga reservoir and the Moskva-Volga canal on 15 November; then the armoured group was to turn towards Moscow.

At the centre of the army group Fourth Army, with Armoured Group 4 on its left wing, was to make a direct, frontal attack. In view of the supply situation and the vigorous enemy attacks beginning on 13 November against the right wing of the army, the date of the attack was still undecided.⁵³² The

⁵³¹ Halder, *Diaries*, 1294-5 (11 Nov. 1941). On the problem of the evaluation of reconnaissance results by the operations department of the Army High Command cf. Reinhardt, *Moskau*, 203-4.

⁵³² For this reason FM von Kluge had to accept some criticism as C.-in-C. of Fourth Army. Cf. Reinhardt, *Moskau*, 157-8.

echelon form of the attack left long flanks of the attacking units exposed and gave the enemy command the opportunity to move troops to threatened sectors.⁵³³

(iii) THE FAILURE OF THE SECOND OFFENSIVE

At first the attack on the two wings of the army group made surprisingly good progress. In the sector of Ninth Army, Armoured Group 3 and the parts of Armoured Group 4 advancing with it achieved a breakthrough south of the Volga reservoir on 18 November, which opened the way for a further attack on Klin and Solnechnogorsk on the Moscow-Kalinin-Leningrad railway line. When three more army corps of Armoured Group 4 began their advance, the prospects for a breakthrough on a broad front north of the Smolensk-Moscow highway seemed good.

On the right wing Second Armoured Army attacked past Tula on the right. XXXXIII Army Corps, abutting Fourth Army, came under vigorous attack by Soviet forces and had to go on the defensive. This produced a 'pocket' with a possible future threat to the left flank of the attacking wedge. The situation on the right wing was similarly difficult. Second Army had to give its full attention to the situation on the northern boundary of Army Group South around Kursk and Tim, and advance on Voronezh. This left Guderian with only XXIV Armoured Corps for the spearhead of his attack on Kashira and Kolomna. Most of XXXXVII Armoured Corps was occupied with maintaining contact with Second Army. The weak LIII Army Corps (two divisions) was to widen the base of the attack and protect the spearhead from threats to its flanks.

At first Second Armoured Army considered that the position of the enemy, though not its own supply situation, favoured an advance.⁵³⁴ On 19 November Guderian had himself informed of the condition and further expectations of XXIV Armoured Corps. There and in the operations area of LIII Army Corps enemy resistance had begun to stiffen with the arrival of new Soviet divisions, slowing down the German advance. Additional problems were caused by the lack of sufficient ice-studs for the tanks. Such supply problems, which the assistant chief of staff (operations) of the armoured army summarized on 18 November, were the main reason for Guderian's request for an early decision by the commander-in-chief of the army with regard to the indispensable objectives and thus the end of that particular phase of the offensive.⁵³⁵

⁵³³ Cf. sect. II.11.13 (Hoffmann); Reinhardt, *Moskau*, 153 ff., with the reaction of the Soviet leaders; Chales de Beaulieu, *Hoepner*, 210 ff., viewed from the perspective of Armd. Group 4.

⁵³⁴ Situation assessment in war diary of second Armd. Army, 16, 18 Nov. 1941, BA-MA RH 21-2/v. 244. According to this source 317 m.³ of fuel had been arriving daily since 1 Nov., while four times that amount was considered necessary to build up reserves. For the offensive it was therefore possible to create only three or four units of consumption because the motorized divisions received no more allocation. On 18 Nov. Brauchitsch felt that the prospects of reaching Moscow were fading; Halder, however, still considered it a 'question of will-power': Halder, *Diaries*, 1302.

⁵³⁵ Assessment of the supply situation by staff officer in charge of supply and administration, 19 Nov. 1941, BA-MA RH 21-2/v. 244.

On 20 November Guderian informed Army Group Centre that newly arrived enemy forces, Siberian divisions 'keen for battle and well trained', were being unloaded on the eastern flank of his armoured group. He wanted, in addition to the divisions of LIII Army Corps, to send 18th Armoured Division into action against them, but that division was tied down on the southern flank. Parts of the motorized divisions could not be used because of the lack of fuel. Thus 4th Armoured Division had to be left to attack eastward, which weakened the spearhead of XXIV Armoured Corps. From these facts Guderian concluded that it was doubtful whether he would be able to fulfil his assigned task of gaining a crossing of the Oka at Kashira. He wished to inform Bock personally of this situation. The following day he suggested that Lieutenant-General Paulus or a representative (from the Army High Command) should also be consulted, as he wished to raise the subject of a change of operational objectives. The armoured army was still attacking successfully and was able to destroy the two Siberian divisions. There the enemy was reported to be withdrawing and had abandoned Stalinogorsk in front of 4th Armoured Division; the crossing of the Don near Donskoe was planned for 24 November. However, the losses suffered by 112th and 167th Infantry Divisions were so heavy that their total exhaustion had to be expected.⁵³⁶ On 21 November XXIV Armoured Corps was able to capture the rail junction of Uzlovaya on the Moscow-Rostov line and, after crossing the Shat, secured its freedom of movement towards Venev.

These reports evidently gave Halder the impression that the offensive was proceeding well and that alarming reports about the condition of the troops need not be taken too seriously. On 21 November, probably after receiving the report from Army Group Centre about Guderian's intention to raise the question of the next objectives and the necessity of reaching them, he suspected that Guderian was preparing to remove the mobile units from the fighting for rehabilitation, which would mean suspending the war of movement.⁵³⁷ Halder therefore refused Guderian's request, submitted on 24 November through the army group. Nor did Halder change his instructions after hearing the direct oral report of the Army High Command liaison officer with Second Armoured Army, Lieutenant-Colonel von Kahlden.⁵³⁸ Before taking up winter positions, it was to defeat the enemy facing it.

⁵³⁶ According to a report of LIII Army Corps, 22 Nov. 1941, the two divisions suffered losses of about 200 dead and 500 wounded within three days: BA-MA RH 21-2/v. 244. On 23 Nov. 112th Inf. Div. reported 20 rifles as the average fighting strength of its companies: *ibid.* 135.

⁵³⁷ Halder, *Diaries*, 1308 (21 Nov. 1941). Guderian undoubtedly also had this idea, but for him the main danger was that the German forces would 'bleed to death'. This induced him to report the imminent exhaustion of their ability to attack, which at the end of November, with a temperature of -35°C , was not too soon. Cf. H.Gr. Mitte/Ja, KTB, 21 Nov. 1941, BA-MA RH 19 II/121; Reinhardt, *Moskau*, 156-7; Guderian, *Panzer Leader*, 119-20 (here is the origin of the error that 23 Nov. 1941 was the actual date of the conference, a mistake frequently found in the literature, although in fact it was only the originally scheduled date); Bock, *Tagebuch*, 148 (23 Nov. 1941), BA-MA N 22/9; Halder, *Diaries*, 1312.

⁵³⁸ Report by Kahlden: Halder, *Diaries*, 1313 (24 Nov. 1941), complete in war diary of Second Arm'd. Army, 24 Nov. 1941, pp. 138 ff., BA-MA RH 21-2/v. 244.

Halder was receiving numerous complaints about the condition of the troops and the conclusions to be drawn with regard to operations. The general tenor of his decisions and orders—to push the attack forward in any case and under all circumstances—therefore requires an interpretation, which at this point will apply especially to the sector of Army Group Centre and Second Armoured Army.

After the first successes of the offensive on 18 and 19 November on the wings, Hitler, Halder, and the commander-in-chief of Army Group Centre were convinced that, with sufficient vigour, the envisaged objectives could be reached. Bock and Halder were profoundly convinced that one last great effort would destroy the enemy facing them and that 'victory will go to the side that sticks it out longer'. Imbued with this certainty, Halder jotted down the points of his oral report to Hitler on 19 November; he envisaged, as an operational guideline on the southern wing, that Second Army and Second Armoured Army should continue their attack as early as possible, independently of the start of the attack by Fourth Army.⁵³⁹ In spite of the weakness of the German troops, Halder believed, the enemy could not withstand the attack. Hitler reacted to this judgement by expressing the wish that the operations against Moscow should be conducted in such a way that partial attacks would ensure that individual enemy units were smashed and not just pushed back, a directive already issued after the encirclement at Smolensk, which was an essential part of his 'study' of 22 August, and which had led to 'short' encirclement movements west of the Dnieper in the area of Army Group South. This tactic involved an acceptance of delays. But the more distant objectives of Yaroslavl, Rybinsk, and Vologda would also be kept in sight, the supply situation and the weather permitting. However, Hitler did not insist that these objectives had to be reached; it would be enough, he believed, if Vologda and Gorkiy were reached at the end of May 1942.⁵⁴⁰

As Fourth Army remained behind, the operation which the Army High Command ordered Army Group Centre to carry out on 20 November seemed to be an envelopment in which the wings played the major role.⁵⁴¹ Field Marshal von Bock, who by an extreme effort of will still agreed verbally with Halder in his assessment of the prospects of victory but who clearly realized the position of Fourth Army and the resulting danger to the inner wings of the attacking armies, vigorously protested against this order, as neither the forces of the armoured formations after reaching the envisaged line nor those of Fourth Army were sufficient for such encirclement movements. Meanwhile, on 19 November, Guderian had expressed his doubts as to whether, in view of

⁵³⁹ Halder, *Diaries*, 1304 (19 Nov. 1941).

⁵⁴⁰ Following fierce enemy attacks after 13 Nov., Fourth Army did not begin its advance: cf. sect. II.1.1(f) at n. 532. Hitler's wish, passed on as a directive from the Wehrmacht High Command to the Army High Command and then transmitted to Army Group Centre (cf. OKH/GenStdH/Op.Abt. (IM) No. 1652/41, 19 Nov. 1941, BA-MA RH 2/v. 1327, p. 58), mentions only the northern wing and Hitler's request that Army Group Centre should soon express its views on these ideas. On Hitler's timetable cf. Halder, *Diaries*, 1304 (19 Nov. 1941).

⁵⁴¹ Bock, *Tagebuch*, 144–5 (20 Nov. 1941), BA-MA N 22/9.

the supply situation and the considerable wear and tear to which vehicles had been subjected, Kashira could still be reached. Bock too doubted that on the left wing of the army group the attack could be continued eastward beyond the Istra. The moving up of the only reserve division of the army group to the front on 21 November, together with his comparison of the existing situation to the battle of the Marne in 1914 (the failure of the younger Moltke), testifies to his strange, ambivalent attitude, which reflected a final effort with all remaining reserves rather than optimistic expectations of victory.⁵⁴² At the same time he refused to yield to the urgings of Halder, Hoepner, and Guderian to give Fourth Army a clear order to begin the attack with its right wing.⁵⁴³ Halder's views on the war situation at this time were reflected in a conference of his general-staff officer in charge of supplies and administration with the deputy chiefs of staff of the eastern front on 23 November.⁵⁴⁴ He believed that, as a consequence of the German successes against the Soviet Union, Britain had lost her 'sword on the Continent' and had been pushed back to the periphery—the Siberian part of Russia, the Middle East, and North Africa. The Soviet Union had been decisively beaten, but not yet destroyed.⁵⁴⁵ He concluded that Germany would never again have an army like that of June 1941, but neither would it be necessary. Army armament programmes would have to yield priority to those of the Luftwaffe and the navy; in the area of personnel, the war would be continued with convalescents and the age-group of 1922. Halder concluded that the main effort of the war was shifting to the maintenance of morale and holding out economically. Again he described the Caucasus, the Volga line, and Vologda (with the railway line to Archangel) as the objectives for 1942. The operational objectives to be reached before the onset of winter depended on the resilience of the troops, but mere gains of territory were not decisive: 'Whether Moscow is encircled or not' would 'not decide the course of the war; the Army High Command does not insist on taking Moscow.'

These views must have greatly surprised the representatives of the eastern front. Halder informed Second Armoured Army that the structure of the Soviet forces was creaking and groaning under the German attack and that it was important not to relent. Strong enemy forces still had to be annihilated by individual blows in 1941. In conclusion he repeated his faith in the words of

⁵⁴² Ibid. 145 ff. (21 Nov. 1941); cf. *Der Weltkrieg 1914 bis 1918*, iv. 533 ff. (14 Sept. 1914).

⁵⁴³ Bock, *Tagebuch*, 148 ff. (23 Nov. 1941).

⁵⁴⁴ Detailed notes of representative of staff officer in charge of supply and administration of Second Armd. Army, 25 Nov. 1941, BA-MA RH 21-2/v. 257; Halder, *Diaries*, 1312 (23 Nov. 1941). The qualification in n. 2 of the latter—concessions to the listeners in the sense of Hitler's 'official view'—refers to his expectation 'that the realization of the fact that the two groups of belligerents cannot annihilate each other will bring about a negotiated peace', *ibid.* 1305. This remark was not particularly explosive. More important was his statement on 23 Nov. that the enemy had been decisively beaten.

⁵⁴⁵ According to the above-mentioned report of the staff officer in charge of supply and administration of Second Armd. Army, Halder used the word 'demolished' (*abserviert*); his reasoning: 'which is likewise not to be expected, as he [the Russian] has all of Asia behind him.'

Field Marshal von Bock: 'We are in a situation like the battle of the Marne.' The battle must be continued until the inner strength of the Red Army was broken. At the same time, however, the German army must recover its own fighting strength. How that should be done was a matter for the commanders-in-chief of the army groups. Combining economical use of remaining forces and executing necessary advances were more difficult than operational decisions. The influence of Hitler's views and guidelines here is unmistakable; a few months earlier Halder would not have voiced such opinions.

In spite of its continued advance eastward, the command of Army Group Centre was well aware that the bulk of its troops would have to spend the coming winter in open country and under constant threat of enemy attack. On 10 November 1941 it had therefore issued 'Guidelines for the conduct of fighting in winter and special characteristics of the winter war in Russia'.⁵⁴⁶ It was assumed that the construction of a strong defensive line in a continuous front was not possible. Only at certain strategic points were positions in depth to be established. In other areas the defence would make use of fixed strong points but would otherwise have to be conducted with mobile tactics. Most attacks by the Red Army were expected to be in the form of actions by strong formations along roads and railway lines, probably supported by tanks and armoured trains. Away from roads, attacks by ski-troops using tanks with snow tracks to achieve penetrations of up to 100 kilometres were expected. In addition, partisan operations and air attacks could be expected. Strong groups of German troops were to be kept in reserve for rest and training in the system of strong points, which was still to be constructed. Laying up of supplies and the securing of the rear areas with all transport installations and depots were to be begun immediately.

This order assumed that the military situation in the rear areas would be sufficiently stable to permit the use of at least a considerable part of the construction units and sappers to build emplacements and strong points. But the combat situation in the second phase of the attack on Moscow required the use of everyone capable of bearing arms; units could scarcely be spared for other tasks, quite apart from the shortage of necessary materials, especially timber, which had to be brought up over considerable distances. All commanders realized that construction only now beginning had to be carried out with all available resources if the positions were to be ready before the onset of hard frosts.

The clash between the measures ordered and daily tactical necessity was striking. The latter exhausted the troops, made impossible the laying up of supplies for an effective defence, and forced German commanders to abandon even half-way tenable positions and troop quarters. On the other hand, commanders were able to refer to the measures ordered for the preparation of secure winter quarters, which gave them a certain latitude in their decisions.

⁵⁴⁶ H.Gr. Mitte/Ia No. 2570/41, 10 Nov. 1941, BA-MA RH 21-2/v. 257.

The commander-in-chief of Fourth Army, Field Marshal von Kluge, has been accused of using the heavy defensive fighting to avoid pushing the two corps on his right wing into attack and of leaving them in their positions, which had been developed over the weeks. The same accusation was made against the commander-in-chief of Sixth Army. Both were subjected to sharp criticism by Halder, and both eventually began their attacks against their own better judgement.⁵⁴⁷ Both, however, were appointed commanders-in-chief of army groups at the peak of the crisis, while two generals of armoured forces, Guderian and Hoepner, who, against their pronounced sense of responsibility, had driven their soldiers on to the point of exhaustion, were replaced or relieved of their commands in disgrace.⁵⁴⁸

On 25 November, however, in compliance with the directive received from the army group, Guderian ordered the preparation of a forward line along the Don, Shat, and Upa rivers.⁵⁴⁹ The 'objective Kashira', the principle purpose of which was the severing of the railway line between Moscow and Rostov, was downgraded to effective destruction of the line by a demolition party, although this did not in fact succeed. The only operationally important objective remained the capture of Tula, especially because the flanks of the attacking spearheads were becoming exposed as a result of the failure of Fourth Army to advance rapidly and of the diverging direction of Second Army, which was moving primarily towards Kursk and Voronezh. In addition to eliminating the threat to the exposed inner flanks of Second Armoured Army and Fourth Army, the capture of Tula would provide the armoured army not only with a jumping-off point for future attacks but also with a resupply and maintenance base.⁵⁵⁰ Having reached the most forward point of the attack by Second Armoured Army just south of Kashira on 25 November, Guderian halted his advance in that direction because of fierce enemy counter-attacks. Again he asked for 296th Infantry Division so that, together with XXXXIII Army Corps and XXIV Armoured Corps, he could encircle Tula. On 27 November he therefore demanded the immediate start of the attack by the right wing of Fourth Army, when it became evident that the attack by XXXXIII Army

⁵⁴⁷ Halder, *Diaries*, 1307-8, 1315 (21, 26 Nov. 1941); regarding Reichenau, *ibid.* 1312 (23 Nov. 1941) and, *expressis verbis*, 1325 (29 Nov. 1941). On Kluge: Chales de Beaulieu, *Hoepner*, 210-11. On the problem of the crises between the neighbouring armies cf. Reinhardt, *Moskau*, 156 ff., as well as the observations in this section.

⁵⁴⁸ Cf. Chales de Beaulieu, *Hoepner*, 236, and Bücheler, *Hoepner*, 169 ff.; also sect. II.1.1(g) at n. 601.

⁵⁴⁹ Pz.AOK 2/Ia No. R 346/41, BA-MA RH 21-2/v. 257. Not until 23 Nov. was the question of the prepared defensive lines to the rear of Army Group Centre presented to Halder by Greiffenberg. Halder left the planning of its course to the army group: Bock, *Tagebuch*, 148-9 (23 Nov. 1941); Halder, *Diaries*, 1312 (23 Nov. 1941).

⁵⁵⁰ Guderian, *Panzer Leader*, 122; Walde, *Guderian*, 150 ff.; Reinhardt, *Moskau*, 166-7. On 21 Nov. Second Arm. Army demanded that it be given the army group reserve (296th Inf. Div.) and the right of disposal over 56th Inf. Div. on the left boundary in order to protect the thrust by XXIV Arm. Corps and to be able to advance on Tula and Serpukhovo if the right wing of Fourth Army were forced to halt. The task of the last-mentioned unit was originally in this direction: BA-MA RH 21-2/v. 244; Bock, *Tagebuch*, 148-9 (23 Nov. 1941), BA-MA N 229g.

Corps was hardly making any progress. Bock, however, ordered the armoured army to fight the battle of Tula alone and then, renouncing the objectives of reaching the Oka and Kashira, ordered it to cover its position towards the north and east.⁵⁵¹

Yet even after a regrouping the encirclement of Tula did not succeed, although the city was effectively isolated on 3 December. Meanwhile the temperature had dropped to -35°C ; vehicles and weapons broke down and air support could no longer be provided. Even with a last great effort the city could not be encircled and captured against the resistance of the defenders and the attacks mounted by Zhukov's forces from the north and east. On 5 December Guderian reported that he had had to break off the operation.⁵⁵² Three days later he summarized his reasons for this decision in a report to the army group and emphasized that it was more important to preserve his remaining fighting strength than to continue the attempt to capture Tula, which, even if it were captured, would be costly to defend. He received permission to withdraw to the prepared line along the Don, Shat, and Upa, as only there would he have time to regroup for the winter war and to replenish his forces.⁵⁵³

The withdrawal of the armoured army in individual sectors, with its equipment, failed because of a lack of towing-vehicles, nor were there any prepared winter positions to which the Germans could withdraw. The men would have to build their own positions, if time permitted. Guderian still assumed that the destruction of enemy supply-lines and buildings which could be used as quarters, in addition to the expulsion of the civilian population to the east, would make it possible to hold the positions. But for that it was essential that adequate supplies were available and that neighbouring sectors of the front would hold.

The decisions of Second Army, to the right of the armoured army, were to a considerable degree dependent on the left wing of Army Group South, Sixth Army under Reichenau.⁵⁵⁴ Because of the need to protect Kursk and to capture Voronezh, the weak Second Army could neither provide dependable flank cover for Second Armoured Army nor close the gap between itself and Army Group South. On 1 December, with the consent of the army group

⁵⁵¹ The assignment of 296th Inf. Div. the next day inevitably weakened the right flank of Second Army: Bock, Tagebuch, 151 (27 Nov. 1941), BA-MA N 22/9.

⁵⁵² On 25 Nov. XXIV Armd. Corps was already of the opinion that its forces were insufficient; on 30 Nov. it reported a strength of 72 tanks; because of the problems with their vehicles the motorized infantry companies were able to transport a fighting strength of only 70 men: 2. Pz.Armee/Ia, KTB, 5 Dec. 1941, BA-MA RH 21-2/v. 244.

⁵⁵³ Report Second Armd. Army headquarters, 8 Dec. 1941 (filed under 5 Dec.), *ibid.*; Bock, Tagebuch, 161 ff. (5-8 Dec. 1941), BA-MA N 22/9; army order No. 24 for occupying winter position, 2. Pz.Armee/Ia, KTB, 6 Dec. 1941, BA-MA RH 21-2/v. 177.

⁵⁵⁴ Sixth Army, however, was urged by Rundstedt and First Armd. Army to push southward to support the attack on Rostov (cf. Map II.1.1). These displacements, which also became a permanent condition on the boundary to Army Group South, resulted in arguments about front widths and strengths.

command, it therefore abandoned all further attacks. The day before Bock had warned against advancing too far on Guderian's right flank, where enemy resistance was slight.⁵⁵⁵ Thus Second Army halted its advance on 1 December and began to prepare defensive positions.

In the course of the fighting on the northern wing and in the central sector of Army Group Centre since 23 November, when the road between Moscow and Leningrad was cut, the attack by Armoured Groups 3 and 4 had made only slow progress against stubborn enemy resistance. In the end the spear-head of Armoured Group 4 advanced to about 30 kilometres from the Kremlin. In addition to the supply problems already mentioned, the separation from the corps of Fourth Army extended the right flank of the armoured group and deprived it of the necessary strength. Developments on the evening of 27 November were decisive, when Armoured Group 3 had to abandon the bridgehead over the Moskva canal near Yakhroma, which had been captured by 7th Armoured Division, and thus the belief, which had sustained the German forces, that the collapse of the north-western defences of Moscow was imminent, disappeared. On 29 November Field Marshal von Bock reported to Halder that the attack would have to be halted unless a decision was achieved within the next few days. In view of the Red Army's ability to draw on its enormous reserves, which he now recognized, and the possibility that the attack by the northern wing would not achieve a breakthrough, he feared that the situation might become a 'second Verdun', for which he was not prepared to accept the responsibility.⁵⁵⁶

In the sector of Fourth Army, clearly reacting to accusations from neighbouring armies that he was failing to support them and was preventing a successful attack on Moscow, Kluge finally decided to start the attack of the corps on his right wing. In spite of his reservations, Bock agreed and reported that the enemy was withdrawing forces from the central and southern front of Fourth Army. He believed that the high command attached great importance to the attack, 'even if it means risking the last strength of troops completely'. Halder confirmed that 'that is also the view of the Army High Command'.⁵⁵⁷

With the attack by Fourth Army, Hitler again saw the possibility of encircling large enemy formations near Moscow. This shocked Bock, who, like Guderian and other commanders-in-chief, doubted that the Army High Command had properly submitted his reports on the condition of his troops to Hitler. He demanded the immediate bringing up of reserves if the army group was to hold the front through the winter. If no reserves were available and if supply shipments could not be considerably increased, a withdrawal to a shorter front better suited to defence in winter should be ordered immedi-

⁵⁵⁵ Bock, *Tagebuch*, 148 ff. (23, 30 Nov. 1941), BA-MA N 22/9; Reinhardt, *Moskau*, 168-9.

⁵⁵⁶ Bock, *Tagebuch*, 153-4 (29 Nov. 1941), BA-MA N 22/9; Halder, *Diaries*, 1323 (29 Nov. 1941, evening situation).

⁵⁵⁷ Bock, *Tagebuch*, 153-4 (29 Nov. 1941), BA-MA N 22/9. On the morning of 29 Nov. Bock still had reservations about this attack. Cf. Halder, *Diaries*, 1325 (29 Nov. 1941).

ately.⁵⁵⁸ On 3 December Bock wanted to ascertain whether his reports had reached Hitler, as he was unable to understand enquiries he had received over the past few days about the start of the attack by Fourth Army. Nevertheless, he reported to Jodl that he still hoped, with the help of Armoured Group 3, to keep the flank of V Army Corps sufficiently free to enable it to advance to the south. The order to attack along the whole front was still in force, but the moment was approaching when the strength of the troops would be spent. If the attack were halted then, a switch to defence would be very difficult.⁵⁵⁹

The same day Kluge reported that he would have to break off his attack and pull the troops of LVII Armoured and XX Army Corps back to their starting-positions. On 3 December Armoured Group 4 also reported that it had reached 'the end' of its strength and proposed ordering the establishment of a defensive line along the Istra. The armoured group did this on its own initiative, as Bock was clearly waiting until the Army High Command and Hitler had given their consent. Like Guderian, Hoepner wrote a report in which he justified the change to a defensive strategy and in particular pointed to the repeated misjudgement of the situation of the German forces and that of the enemy.⁵⁶⁰

Army Group Centre believed that with the attack being halted it would have to withdraw in the face of local enemy counter-thrusts but that it would otherwise be able to perform its withdrawal, grounded on tactical and supply considerations, without being exposed to significant pressure from pursuing enemy forces. Physically and psychologically the troops had reached the limit of their endurance; signs of apathy were becoming apparent. The cold weather, inadequate clothing, lack of food, difficulties in caring for the sick and wounded, heavy losses—all these were factors affecting the reliability and combat-readiness of the individual soldier. In addition, serious losses of weapons and equipment and a lack of towing-vehicles and draught-animals also paralysed the German advance.⁵⁶¹ All these factors endangered fighting morale, quite apart from the effects of enemy action.

Now, however, the Red Army began its counter-offensive. Any thought of rest and rehabilitation for the German troops had to be completely abandoned and the soldier's will to survive transformed into a readiness to make sacrifices in situations where the purpose of the sacrifice was not so clear as it had been to many in the early phase of the offensive against Moscow.

Field Marshal von Bock attempted to explain to himself the origins of the 'present crisis' after a vigorous attack by the Red Army had achieved

⁵⁵⁸ Bock, *Tagebuch*, 156 ff. (1 Dec. 1941), BA-MA N 22/9.

⁵⁵⁹ Ibid. 159 ff. (3 Dec. 1941). It is difficult to understand why with this report, which still testifies to his fighting spirit though it had long since been overtaken by events, Bock attempted to give Jodl the impression that this was really 'the eleventh hour'.

⁵⁶⁰ Charles de Beaulieu, *Hoepner*, 213; Reinhardt, *Moskau*, 164–5.

⁵⁶¹ Reinhardt, *Moskau*, 164 n. 160, 172 ff.; personnel losses, *ibid.* 523 (annexe 6). Personnel losses of the German army in the east up to 31 Dec. 1941 are in *KTB OKW* i. 1120 ff; losses of Waffen-SS *ibid.* 1115–16.

penetrations during the withdrawal movements on 7 December 1941, losses through frostbite had increased, and it had become clear that troops envisaged for the creation of new units in Germany could not be released from the eastern front.⁵⁶² Bock concluded that the autumn mud, the failure of the railways, and underestimation of the enemy's stamina had led to the present situation. The mud had prevented the exploitation of the success at Vyazma. Bock concluded that the demands of the military leaders that the attacks be continued were justified as long as they believed that enemy forces were on the verge of collapse. But that assumption had been a mistake, and the army group was now forced to go on the defensive under extremely difficult conditions. In his analysis, however, Bock carefully avoided addressing the question of his own share of the blame for the disaster, and that of the chief of the Army General Staff.

(g) The Repulse of the Winter Offensive of the Red Army

(i) ASSESSMENT OF THE SITUATION AND DIRECTIVES FOR
THE WINTER WAR

In mid-November 1941 the Red Army began its first counter-offensives on the outermost wings of the front with very long-range operational objectives. These offensives, which forced First Armoured Army to abandon Rostov in the south and Sixteenth Army to evacuate Tikhvin in the north, where aimed primarily at recapturing strategically important positions. They were not part of a total, co-ordinated offensive by the Red Army to destroy the invading German army.⁵⁶³ The attacks on the armies of Army Group Centre were intended primarily to relieve pressure on the threatened capital. The counter-offensive that began on the right wing of Fourth Army on 13 November had as its main objective the shattering of the German attack front. The Red Army used the time thereby gained to bring up reserves, which were integrated into the offensive without their deployment being detected by German reconnaissance. As late as 4 December the department Foreign Armies East in the Army General Staff believed that the enemy forces facing Army Group Centre were not in a position to mount a large-scale attack 'at present' without significant reinforcements.⁵⁶⁴ On 5 December the expected enemy attacks began in the sector of Ninth Army and those of Armoured Groups 4 and 3. These attacks and the realization that the enemy was bringing up reinforcements made a withdrawal to winter positions, and the resulting reduction of casualties,

⁵⁶² Bock, Tagebuch, 164-5 (7 Dec. 1941), BA-MA N 22/9.

⁵⁶³ Cf. sects. II.1.1(c) and II.1.1(d) above; sect. II.1.13 (Hoffmann); Reinhardt, *Moskau*, 192-3.

⁵⁶⁴ OKH/GenStdH/Abt. Fr. H. Ost, situation report east No. 172, 4 Dec. 1941, BA-MA RH 19 II/127. These daily reports should be read along with the detailed printed assessments of the department, here 'Die Kriegsmacht der UdSSR, Stand Dezember 1941 [Wartime fighting forces of the USSR, as of Dec. 1941]', pts. 1 and 2. These reports contain findings on the total military potential of the Soviet Union gained through long observation.

urgently necessary. The decline in fighting strength, the lack of any hope of receiving replacements in time, and the exhaustion of the soldiers, which was approaching apathy in heavily attacked sectors, required immediate decisions.⁵⁶⁵

On 5 December, therefore, the army group command informed Fourth Army and the armoured groups of the envisaged withdrawal line. The withdrawal, which it was estimated would require two nights, should be possible, upon receipt of a special order, as of 6 December. The start of this 'preparatory measure' was made dependent on a new directive from Hitler.⁵⁶⁶

On 5 December Second Armoured Army too received approval from the army group for a withdrawal behind the Don-Shat line. Thus in the sector of Army Group Centre preparations had already been made even before Halder discussed the war situation in detail with Hitler on 6 December 1941.⁵⁶⁷

This conference was held primarily to discuss organizational and personnel questions concerning the preparation of the army for new operations in the spring of 1942. The basis for the discussion was a paper submitted by the Army General Staff, from which Hitler at first discussed only the figures on German and enemy casualties.⁵⁶⁸ In his view a comparison of these figures alone did not reflect the real fighting strength of the two armies. He therefore had no intention of taking political steps to end the war, as Dr Fritz Todt, minister for weapons and munitions, had suggested in view of the condition of the army.⁵⁶⁹ Hitler observed that Germany did not lack soldiers, but rather workers. Therefore Russian prisoners of war were to be employed in factories, mines, and steel mills to free Germans for military service. Additional reserves for the eastern front could be obtained by replacing divisions in the east with divisions from the west. But this must not lead to a reduction in the number of units in the west or the Balkans. On the contrary, he envisaged one or two armoured divisions for Norway to repel a possible Anglo-American landing. German soldiers might also be needed in Croatia.

With regard to the operational situation, Hitler and Halder seem to have

⁵⁶⁵ Situation assessment by army headquarters and armd. group, 3, 4 Dec. 1941, to Army Group Centre, BA-MA RH 19 II/127; report of Second Army headquarters, 5 Dec., on the line still to be reached by attack, *ibid.* 202.

⁵⁶⁶ *Ibid.* 199. Although Bock had feared 'another Verdun' from 19 Nov. and reported heavy losses on 1 Dec., Halder still maintained that a last effort had to be made to subdue the enemy. If it became absolutely clear that this was not possible, new decisions would have to be taken. On 4 Dec. the chief of staff of the army group still saw no need to halt the attack, except in the case of Fourth Army. Bock intended to report on 4 Dec. on whether a withdrawal would be necessary: Halder, *Diaries*, 1322 ff. (29 Nov. 1941); Bock, *Tagebuch* on dates given, BA-MA N 22/9.

⁵⁶⁷ Halder, *Diaries*, 1339 (6 Dec. 1941).

⁵⁶⁸ *Ibid.* The 'draft' mentioned there was very probably a draft of the Army High Command's 'Weisung für die Aufgaben des Ostheeres im Winter 1941/42' [Directive on the tasks of the army in the east in the winter of 1941-2]. Cf. *KTB OKW* I. 1076 ff. (108). Of the five annexes only the assessment of the enemy's situation of 1 Dec. 1941 is printed there (*ibid.* 1075). For a complete copy, unfortunately without map, see BA-MA RH 2/4. 1327, pp. 60-88.

⁵⁶⁹ Cf. sect. II.vi.5 (Müller).

been in basic agreement; subsequently Halder ensured the vigorous execution of the orders they had decided upon and was if anything even more consistent in this respect than Hitler.

In the sector of Army Group North, the full encirclement of Leningrad was to be completed; in the south the Don was to be crossed near Rostov while the winter weather permitted. In the centre Hitler had no objections to shortening the front, i.e. to a limited withdrawal, after new positions had been prepared.⁵⁷⁰

It is remarkable that, although this conference took place at a time when the most alarming reports were being received from the eastern front, the actual situation and the urgency of taking a decision were not mentioned.⁵⁷¹ But the reports of 6 and 7 December on the situation near Tikhvin, especially those concerning strong enemy penetrations near Moscow, caused Halder to conclude that local commanders should be given freedom of decision: that is, withdrawals should be permitted at threatened points.⁵⁷² The commander-in-chief of the army settled disputes in this area with Hitler, who on 8 December issued Directive No. 39 on the conduct of the fighting.⁵⁷³ This directive began with the observation that the surprisingly early winter and the supply problems it had caused had made it necessary to end the offensive and go on the defensive. The aim of this defence was to retain areas operationally and economically important to the enemy. Moreover, the German troops should be given the opportunity to recover their strength and prepare for offensive operations in the coming year. For this purpose the bulk of the army was to occupy a defensive line to be determined by the commander-in-chief of the army. This line would permit the removal of individual units and troops. In recognition of the impossibility of constructing and holding a rigid defensive line, positions were to be built behind the front, to which the troops were not to be withdrawn until after they had been completed. It was also ordered that withdrawals from individual sectors of the front were to be co-ordinated with the situation as a whole. This meant that, in the event of enemy breakthrough attempts, positions had to be held as long as was necessary to avoid the encirclement and thus the loss of individual units.

The course of the defensive line was to be determined by supply-routes; supply difficulties to be expected in the spring were to be taken into account by stockpiling provisions in well-protected strong points. Lines behind salients and rear positions were to be fortified immediately with the help of all available labour.

⁵⁷⁰ Halder, *Diaries*, 1339 (6 Dec. 1941).

⁵⁷¹ Soviet camouflage measures and the sending of newly raised and brought-up units into action without prolonged assembly periods prevented the preparations for the attack from being detected in time. The decisive factor was, however, the complete misjudgement of the remaining fighting power of the Red Army and its equipment. Halder did not take into consideration basically correct assessments by Foreign Armies East in the above-mentioned 'Kriegswehrmacht der UdSSR' (see n. 564). Cf. also Reinhardt, *Moskau*, 197 ff. (on Soviet preparations) and 202-3.

⁵⁷² Halder, *Diaries*, 1340 (7 Dec. 1941).

⁵⁷³ Hitler's *War Directives*, No. 39 (8 Dec. 1941).

The detailed directive of the commander-in-chief of the army was in line with this part of the directive of the Wehrmacht High Command.⁵⁷⁴ It stated as a basic guideline: 'Reconnaissance and preparation of lines of resistance are precautionary measures to be taken by commanders. They do not affect the determination to accomplish the tasks to be fulfilled after the winter in an offensive manner.'

Already on 6 December, before the extent of the enemy offensive had been realized, Hitler had discussed with Halder attacks to prepare for the coming spring offensive. Army Group South was to occupy Rostov and the Donets bend, conquer Sevastopol in the Crimea, and then transfer the Eleventh Army forces freed by this operation to First Armoured Army.⁵⁷⁵

After receiving additional attack units, Army Group North was to complete the encirclement of Leningrad, establish contact with the Finns, and then go on the defensive in this sector of the front as well.

Both the orders regarding defensive actions and those for limited offensives completely ignored reality. Neither sufficient time nor adequate forces were available to build a fortified line, whose general course had been set out only on 8 December. The plans of attack were far beyond the actual capacity of the army. Under these circumstances there could be no question of thinning out the front to permit parts of the army to rest and resupply in rear areas. The bringing up of replacements and new units was primarily intended to maintain the operational ability of the army in 1942, even in the event of heavy losses. Thus, except for convalescent battalions and battalions in waiting, which were to leave for the front immediately so that all would arrive by 15 January 1942, Hitler at first promised only infantry divisions and an armoured division from the west, which were to be designated after the army had submitted a comprehensive plan for the organization and deployment of forces.⁵⁷⁶

Nor was it possible to promise a radical improvement of the transport system, an essential factor in the conduct of any defence, to relieve pressure on the front. This situation was made more difficult by the fact that security and supply units had already had to send considerable parts of their fighting units to the front, although the efforts of partisan groups to paralyse the transport system would have made a strengthening of these forces necessary.⁵⁷⁷

⁵⁷⁴ OKH/GenStdH/Op.Abt. (1a) BA-MA RH 2/v. 1327, V. Eisenbahnnetz und Widerstandslinien [Railway network and lines of resistance]. Both directives were probably based on preparatory work by the operations department. Cf. n. 567 above and Halder, *Diaries*, 1333 (3 Dec. 1941, Heusinger).

⁵⁷⁵ Army Group South expected this; in Directive No. 39 the decision was left open. Cf. sect. II.1.1(c) at n. 344.

⁵⁷⁶ Questions of personnel replacement had been prepared by Halder; he rejected the call-up of the 1922 age-group in Jan. 1942 and demanded a limitation of deferments and a 'combing-out drive'. On 3 Dec. he expected three or four transports daily (of a total of 100 trains)—'however this may interfere with regular supply movements': Halder, *Diaries*, 1333 (3 Dec. 1941).

⁵⁷⁷ The creation of 'local' security units was a result of the personnel shortage, at first at army level and with the commanders of rear areas. This was the beginning of a development that deviated completely from Hitler's orders and even led to such units being taken into the Wehrmacht. Cf. Hofmann, *Ostlegionen*, 11 ff.

As both directives were based on an already outdated assessment of the situation, they were basically illusory when they were issued. The withdrawals on all fronts had been begun under enemy pressure and on orders from army headquarters, and had only subsequently been approved by the army group commands and the Army High Command, or by Hitler.⁵⁷⁸

The measures taken by the individual armies for the winter—e.g. the construction of defensive positions by Fourth Army and the reconnaissance of fall-back positions by Second Armoured Army—had only local effects or could not be carried out because of a lack of construction personnel and engineering equipment.

Realizing that the two main efforts of the Soviet attack were directed against Army Group Centre, the Army High Command directed reserves to be assembled in the area of Ostashkov, which were at the same time intended to protect the long left flank. Behind the front between Belgorod and Orel mobile units due for rehabilitation were to be deployed in such a way that they could check attacks from the direction of Voronezh. The announcement of 'preparatory measures for a transfer of forces in the area of the army group' represented only a vague promise of help for the seriously threatened, weak Second Army.

The task of the Luftwaffe units remained the provision of defensive support for the army. Moreover, they were to use their available forces for attacking the enemy air force, the Soviet armament industry, and transportation lines.

The army groups were to submit their proposals on the planned forward line, the conduct of the fighting as a whole, and the envisaged lines of resistance with blocking-positions and lines behind salients by 15 December. With regard to plans for the coming year, the army group commands were informed that objectives would be determined largely by the extent to which the army in the east, and especially the mobile units, had been rehabilitated.

The army group commands, facing problems of operational and tactical defence which became more serious every day and which relegated any consideration of future offensive operations to the background, can only have understood this directive to mean that their reports about the seriousness of the situation had not received the attention they deserved. In Army Group Centre this attitude was not limited to Field Marshal von Bock's staff; the army commanders too, especially Colonel-General Guderian, openly expressed their doubts that their reports and requests were being presented to the commander-in-chief of the army and to Hitler in the original wording; they therefore demanded a personal appearance by Brauchitsch.⁵⁷⁹

⁵⁷⁸ e.g. the withdrawals from Tikhvin and Rostov, and the above-mentioned movements of Army Group Centre. A system of pretence of systematic planning developed for what was in reality an attempt to channel forced retreats. This led to doubts about the reliability of reports and, on 26 Dec. 1941, to Hitler's first order about reporting back: BA-MA 16. Armee, 23468/8.

⁵⁷⁹ Bock, Tagebuch, 166 (8 Dec. 1941), BA-MA N 22/9.

In view of the weakened condition of the German troops, they would have been able to fight as ordered only if the bulk of the Red Army had halted its advance; that, according to assessments of the enemy's situation, was not to be expected. Foreign Armies East estimated the strength of the Red Army facing the German front at 275 large units, among them 35 cavalry divisions and 40 armoured brigades. In addition, 24 large units were assumed to be on the Finnish front, 34 others in Asia and the Far East, and 22 in the Caucasus. The last-mentioned group was thus readily available for the front in the west. New units of undetermined size were assumed to be in the area of the lower Volga and the military districts of the Urals and Siberia. The organization of a Polish legion of six infantry divisions and an armoured brigade was also known. To these units had to be added the unknown number of army troops at the disposal of the Soviet leadership.⁵⁸⁰

More important than the units of the Red Army, which could not be precisely identified, was the German opinion of the Soviet military leaders, who had shown by their attack from the Rostov area that they were now able to concentrate their actions more effectively and give them additional force by adding heavy weapons, armour, and air units. Foreign Armies East expected only a limited change to positional warfare. On the contrary, the Red Army would continue to launch large-scale attacks during the winter. At the same time, a resumption of operations in the rear areas of the German troops by partisans and sabotage detachments had to be expected.

(ii) THE CRISES IN ARMY GROUP CENTRE AND THEIR EFFECTS ON
THE COMMAND OF THE ARMY

(See the *Annexe Volume*, No. 20)

As mentioned above, the commander-in-chief of Army Group Centre, at the urging of the armies, had ordered the preparation of a line in the rear area on 5 December. Fourth Army had already constructed a winter position before the second phase of Operation Typhoon and, to judge by reproaches from its neighbouring units and from Halder, was reluctant to leave it. Most of the army group, however, had neither the forces nor the material to build winter positions capable of withstanding enemy counter-thrusts, let alone a large-scale attack. Field Marshal von Bock therefore concluded that a withdrawal over a large area was not possible, as it would not enable the troops to improve

⁵⁸⁰ These figures in the 'enemy situation report', 1 Dec. 1941, *KTB OKW* i. 1075 (107). The expectations regarding the winter fighting of the Red Army were taken from statements by prisoners and the 'Regulation on operations by the troops in the winter', issued by the People's Commissariat for Defence of the USSR on 4 Mar. 1941, which was attached in translation to 'Kriegswehrmacht der UdSSR', a study of the Soviet forces as of Dec. 1941 (see n. 564 above): BA-MA RHD 18/243. The figures from the 'enemy situation report' of 1 Dec. 1941 were rather unreliable, as is evident from the detailed calculations in 'Kriegswehrmacht'. It was assumed that the Polish Legion wanted to 'cross the Caucasus' to fight on a British front, as it consisted of former prisoners (taken during the Red Army's advance into Poland in 1939). Cf. report of 9 Sept. 1941 (see text above at n. 437).

their position. There was thus no alternative to standing fast, but this was feasible only if replacements were provided immediately.⁵⁸¹

The immediate problem, however, was to prevent a collapse of the front as a result of massive enemy penetrations. As reserves were lacking, all units were to be ordered not to disengage if that would endanger neighbouring units. This order, however, would quickly produce a conflict between the interests of the armies and of the armoured groups. Finding a solution required a strong hand and seemed to be possible only by subordinating some units to others. On 8 December Bock therefore transferred command authority over Armoured Groups 3 and 4 to the commander of Armoured Group 4, Colonel-General Hoepner.⁵⁸²

The withdrawal of the armoured groups was to be completed on 10 December. In this regard the transport centre of Klin, through which large numbers of troops would have to pass, was of extreme importance. South of Kalinin Ninth Army had to fight costly defensive battles; on the right wing of the army group, withdrawal battles of Second Army against attacks from the area of Tula and on the northern flank proceeded according to plan.

On 8 December enemy attacks became so strong that Bock had to consider a withdrawal on the left wing and as far as the centre of Fourth Army to a shortened line from Ruza via Volokolamsk to Staritsa, which would involve great losses of material and equipment.

All armies reported that the envisaged positions could not be held with available infantry forces. They—and especially Second Army, whose commander-in-chief, General Schmidt, was aware that his position was the most critical point of the entire front—demanded the immediate bringing up of reserves and replacements.⁵⁸³ But now the enemy had seized the initiative and proceeded to drive a wedge into the army's thinly held front, which could lead to the encirclement of Army Group Centre and Army Group South. Such a concentrated thrust could not be stopped with seven weakened infantry divisions. If the railway line between Orel and Kursk were lost, the army would be split in two and could no longer be supplied. As a withdrawal of the entire army along the Orel-Bryansk railway was not feasible, Second Army command was of the opinion that, if Second Armoured Army retreated at the same

⁵⁸¹ Bock, *Tagebuch*, 121 ff. (5, 6 Dec. 1941), BA-MA N 22/9. Here 'holding the original position' meant holding the line ordered on 5 Dec. on the left wing of the army group and the Don-Shat position of Second Arm. Army, as well as consolidation of the positions of Second Army east of Kursk and Orel. Kluge advocated a slow withdrawal to gain time to prepare positions and remove artillery, wounded, and captured equipment properly: BA-MA RH 19 II/122, fos. 39 ff.

⁵⁸² H.Gr. Mitte/Ia, 8 Dec. 1941, BA-MA RH 19 II/122. This was very much against Reinhardt's wishes, for such transfers involved considerable inconvenience for the persons affected. Cf. Reinhardt, *Moskau*, 206-7; Chales de Beaulieu, *Hoepner*, 216.

⁵⁸³ H.Gr. Mitte/Ia, KTB, 8-12 Dec. 1941, BA-MA RH 19 II/122, also for the following. Cf. the Annexe Vol., No. 20. The primary task of Second Army was to secure the vital transport routes for supplying the inner wings of Army Groups Centre and South. For an assessment of the situation of Second Army see BA-MA RH 19 II/127, fos. 273 ff. (10 Dec. 1941).

time, the army would have to be divided and the southern part would have to hold on to the railway line between Kursk and Konotop. In that case, however, the front could only be re-established much further west and with fresh forces. In consequence, Schmidt demanded the bringing up of at least four divisions. If the enemy succeeded in breaching the German front between Kursk and Orel, strong forces would be required to close the resulting gap. The breach of the front near Livny, reported the same day, underlined the seriousness of the situation.⁵⁸⁴

In addition to this extremely weak point on the front, the area around Kalinin, where strong penetrations had to be expected, was important for the Luftwaffe because of the large quantity of immobile material and non-air-worthy aircraft there. But even at this point help could be provided only in the form of an *ad hoc* machine-gun battalion of 255th Infantry Division.⁵⁸⁵

Altogether the commander-in-chief of Army Group Centre had to report to Halder that the army group was not able to check large-scale Soviet attacks at any point on its front. He also noted that abandoning large quantities of equipment and heavy weapons was tantamount to a defeat, and demanded that the true situation be reported to the commander-in-chief of the army. On 9 December it became clear that Second Armoured Army would be able to hold the envisaged line between the Don and the Shat for a short time only and that a withdrawal to a line from Korovinka via Dedilovo and Tula to Aleksin would then have to be planned. The focus of the defence in the sector of Fourth Army was Klin, where a counter-attack by 2nd Armoured Division was to bring the situation under control on 11 December.

On 9 December it became clear that the Red Army intended to exploit its penetrations operationally, push on to the rear communications of Second Army and Armoured Group 2, and capture Kalinin in the area of Ninth Army by an encirclement from the south.

This impression seemed to be confirmed by an intercepted radio message from the Soviet military council of the western front demanding the final rout of the 'Fascist rabble' and their merciless annihilation: 'We shall smash the Hitlerite hordes and bury them in snow-covered fields and forests near Moscow.'⁵⁸⁶

In considering the risks of foreseeable great losses of weapons and equipment in a rapid withdrawal or in 'sitting out' the enemy offensive with local containment actions and retreats, Bock and Kluge on 10 December came to the conclusion that the line proposed by the Army High Command was not far enough from the front and that fighting conditions there, compared with the present line, would be worse, as it could not be fortified quickly. The German

⁵⁸⁴ The only immediately available unit was SS Brigade 1 from the area of the commander of the rear army area Centre. On 11 Dec. the staff of 299th Inf. Div. and two regiments of Army Group South were transferred to this area.

⁵⁸⁵ H.Gr. Mitte/Ia, KTB, 8 Dec. 1941, BA-MA RH 19 II/122, pp. 53 ff.

⁵⁸⁶ Report Fourth Army headquarters Ic, 9 Dec. 1941, BA-MA RH 19 II/127, fo. 270.

forces would therefore either have to fight where they were or carry out a large-scale withdrawal. Bock fully realized that a large-scale withdrawal might reach a dimension far beyond that for which he could accept military responsibility.⁵⁸⁷ The commander-in-chief of the army, briefed orally by Halder, replied that both he and Hitler were aware of the difficult situation and that everything would be done to provide troops and supplies.⁵⁸⁸

In addition to the scant help to be obtained from bringing up weak reserves, the increasingly critical situation of Second Army required the intervention of parts of Second Armoured Army on 11 December. Bock therefore decided to place Second Army temporarily under the command of Second Armoured Army and thus to make Guderian responsible for holding the area.⁵⁸⁹ This 'army group' was given the task of halting the enemy along the general line from Kursk to the areas around Novosil and Aleksin, if not sooner. The make shift system of filling gaps with practically immobile and exhausted troops along the entire front was bound to lead to a rapid collapse; moreover, individual units no longer had the mental or physical stamina to offer resistance, let alone counter-attack. On 13 December Field Marshal von Kluge added his support to a withdrawal in a single large movement, and to the abandoning of material if that were necessary to save the troops.⁵⁹⁰

During his visit to Bock's headquarters the same day, Brauchitsch confirmed that he was aware of all reports on the condition of the troops and agreed with Bock in his new view. There was nothing left but to give the order to withdraw; otherwise the army group would go to pieces. The following day Guderian presented his assessment of the situation to Brauchitsch in Roslavl and received permission to withdraw to the line between the Susha and the Oka. He initiated this movement immediately.⁵⁹¹ The result of this conversation, conducted in the absence of Field Marshal von Kluge, was evidently not co-ordinated with the army group command. There an order had been received from Hitler to propose a line which, in the opinion of the army group, could be held. He would then discuss it with Brauchitsch when he returned.⁵⁹²

⁵⁸⁷ H.Gr. Mitte/Ia, KTB, 10 Dec. 1941, BA-MA RH 19 II/122, fo. 79—there also Bock's letter to the C.-in-C. of the army with the demand for immediate replacements.

⁵⁸⁸ *Ibid.*, fo. 87. A total of 7 convalescent battalions of 41 companies and 34 battalions in waiting (staffs) of 154 companies were to be sent to the front immediately, of which the divisions affected, in so far as they received replacements, were to be given one convalescent company and one company in waiting each. Moreover, after the survey of the Army High Command ordered in Directive No. 39 had been submitted, Hitler released three divisions from the west for Army Group Centre. For the organization of replacements for each army see BA-MA RH 19 II/127, fos. 161 ff.

⁵⁸⁹ On the basis of experience Bock expected this transfer, as with Armd. Group 4, to make the commander more willing to move forces to threatened sectors. As of 12 Dec., the large formation was referred to as 'Army Group Guderian'. Criticism in Bock, Tagebuch, 171 (12 Dec. 1941), BA-MA N 22/9; H.Gr. Mitte/Ia, KTB, 12 Dec. 1941, fos. 97-8, BA-MA RH 19 II/122; *ibid.*, 13 Dec., fos. 106-7.

⁵⁹⁰ Bock, Tagebuch, 173 (13 Dec. 1941), BA-MA N 22/9.

⁵⁹¹ Guderian, *Panzer Leader*, 125-6.

⁵⁹² H.Gr. Mitte/Ia, KTB, 13 Dec. 1941 (as in n. 589 above). During this visit Bock suggested to the C.-in-C. that he seek a replacement for him, as he still had not recovered from his illness: Bock, Tagebuch, 173 (13 Dec. 1941), BA-MA N 22/9.

Brauchitsch himself had come to the conclusion that a withdrawal of the army group to the line from Kursk to the Volga reservoir (via Orel, Medyn, Gzhatsk, and Rzhev) was inevitable. And the central sector of the army group, which had suffered relatively few attacks, would not be able to hold its position if the front on the wings were abandoned.⁵⁹³

In his first decision, obtained through his Wehrmacht adjutant, Colonel Schmudt, during Brauchitsch's visit to the front, Hitler agreed to a straightening of the front at Klin and Kalinin and to Guderian's withdrawal. But nothing was to be abandoned and there were to be no withdrawals until the most vital preparations had been made in the new lines in the rear.⁵⁹⁴ This order was in complete agreement with the views that Bock and Kluge had been advocating until that day.

Hitler's decision therefore clearly permitted local withdrawals under enemy pressure, but not unless a new line to the rear had been prepared. The line envisaged by Bock was to be fortified and occupied by security troops from the rear to the extent necessary to stop a Soviet attack there if the army group should be overrun. Again a directive from Hitler had been tied to conditions which did not exist and which neither Hitler himself nor the Army High Command could bring about in the short term. On the contrary, it soon became clear that Hitler was not thinking about strengthening a line in the rear by bringing up troops; instead, their task would be to hold the front.

Immediately after Brauchitsch's conversations with Kluge and Guderian had become known and after the order to prepare for the retreat had been received, the commander-in-chief of Second Army, Schmidt, reported to the army group⁵⁹⁵ that the line ordered ahead of the railway line between Kursk and Orel could not be held unless the enemy made serious tactical mistakes, and there was no indication of that. Because of the crucial role of the positions held by Second Army for the entire eastern front, the decision must finally be taken to use all available aircraft to bring up sufficient reserves quickly from Germany. Moreover, the armies formerly well equipped for attack should immediately transfer units and army troops to the points of the main defensive effort. Troops from the army in the west and the training army should replace the spent units; all limits on weapons and vehicles should be scrapped. These measures had to be carried out in spite of any consequences for the later conduct of the war as a whole. Schmidt also demanded 'maximum-scale' operations of the Luftwaffe in support of the army. The Red Army, he observed, was making its final efforts with newly created and poorly armed units and had been successful. 'In spite of the urgent situation we are still not making an all-out effort.' In the long term only a counter-attack could restore a secure front for the army. While Hitler and Halder wished to maintain the

⁵⁹³ Teletype message H.Gr. Mitte to Second Army, 9 Dec., BA-MA RH 19 II/127, fo. 269, and order of 15 Dec. 1941, *ibid.*, fos. 337 ff.

⁵⁹⁴ H.Gr. Mitte/1a, KTB, 14 Dec. 1941, BA-MA RH 19 II/122, fos. 110-11; Reinhardt, *Moskau*, 217; for additional decisions by Hitler cf. sect. II.1.1(g) at nn. 604 ff., 613.

⁵⁹⁵ AOK 2/1a No. 679/41, 15 Dec. 1941, to C.-in-C. of Army Group Centre, BA-MA RH 19 II/127, fos. 334 ff.

substance of a future offensive army despite all the assistance provided for the armies in the east, Schmidt, no doubt in agreement with all generals of the eastern front, virtually demanded the renunciation of the next summer offensive in order to deal with the present emergency. Moreover, the air war against Britain should be virtually wound down.

The decision promised by Hitler on the withdrawal of the front of Army Group Centre, after he had received Brauchitsch's report on the situation on the eastern front, was to have the character of a binding order with far-reaching consequences for the entire German army in the east. It therefore required further deliberations. First, on 15 December, Army Group Centre received permission to withdraw Armoured Groups 3 and 4 and the right wing of Ninth Army to the position Ruza-Volokolamsk-Staritsa. There was no dispute about this decision, as it had been agreed upon after numerous telephone conversations. But Hitler still had not taken a decision about a further withdrawal to the line from Kursk to Orel, Kaluga, Gzhatsk, and Rzhev.⁵⁹⁶

While the withdrawal of the left wing of the army group had now been definitely decided upon, Hitler did not take a corresponding decision about its right wing until 16 December, as the latter's retreat would significantly affect the position of Army Group South. Nevertheless, Kluge and Bock were agreed that XXXXIII Army Corps should be withdrawn to the west, but in no case beyond the Oka. At 1.10 p.m. on 15 December, however, Guderian reported that the corps had to withdraw to a position west of Aleksin beyond the Oka and then to the line Begatkov-Pastove.

This retreat exposed the right flank of Fourth Army and forced it to withdraw too. At Guderian's urging, Kluge therefore placed 137th Infantry Division at the disposal of XXXXIII Army Corps, but on 16 December, because of an enemy penetration near Serpukhov that led to a crossing of the Protva and the Oka, he had to use those parts that had not yet been transferred (a third) to support XIII Army Corps.

Until this point Army Group Centre command had been able to direct evacuations and withdrawals required by local tactical necessity in such a way that serious losses through encirclement of troops left behind after enemy penetrations had been avoided. This method placed a severe burden on the confidence of the soldiers in their leaders and on their discipline, which was

⁵⁹⁶ The entry in the war diary of Army Group Centre under 15 Dec., 12.10 p.m., seems doubtful (BA-MA RH 19 II/122, fo. 124). According to this entry, Heusinger informed Greiffenberg that Hitler had approved both movements. The same day, however, Halder made notes at noon of a conversation with Greiffenberg, according to which Jodl had informed him (Greiffenberg) that no withdrawals were to be carried out where the front could be held; 'no retiring before all preparations are completed' (Halder, *Diaries*, 1357). This fact is recorded clearly in Heusinger's report to Halder shortly thereafter. The directive of the army group to the armies, 15 Dec., 10.00 p.m. (No. 3111/41, BA-MA RH 19 II/127, fo. 343), also mentioned that units affected would be informed of the decision on the withdrawal 'of the rest of the front to the line from Kaluga to Gzhatsk and Rzhev envisaged by the army group'. There can be no question that Hitler might have withdrawn approval on 16 Dec. Cf. Reinhardt, *Moskau*, 217.

based on their acceptance of the need to make great sacrifices. The situation could be remedied only by the bringing up of fresh forces, whose assignment would be decided upon by Hitler alone, as the army had long since exhausted its own reserves.

As explained, the directives of 8 December assumed that sufficient time remained to bring up convalescent battalions and battalions in waiting, to transfer several units from the western to the eastern front, and at the same time to construct winter positions there.

After receipt of the earlier alarming reports, on 14 December Hitler had himself briefed by his adjutant, who had accompanied Brauchitsch during the latter's visit to Army Group Centre. Colonel Schmudt informed Hitler that he had the impression that there was no time to lose, and Hitler reacted immediately without waiting for the report of the commander-in-chief of the army or consulting the chief of the general staff. That same night he summoned the commander of the replacement army and demanded a report on units that could be flown to the front immediately. Göring was also included in the consultations so as to speed up the organizational preparations for the entire transport sector. On 16 December the head of the Wehrmacht transport department, Lieutenant-General Rudolf Gercke, who was responsible for rail transport, was ordered together with Göring to initiate immediately the dispatch of the fighting units of the divisions named by Fromm and of the battalions in waiting to the front.⁵⁹⁷

From the replacement army, troops with a strength of four and a half divisions were to be prepared to move—the Walküre divisions. In addition, Hitler ordered the transfer of five divisions from the western front, a measure that had already been envisaged on 8 December.⁵⁹⁸ An additional four divisions were to be made available from the forces in the Balkans; the Italians and Bulgarians were to take over the occupation duties there, except in areas of great significance for the war economy.⁵⁹⁹

From Germany itself, additional troops who could 'build, protect, and fight' in some form were to be equipped for winter combat and sent to the eastern front. The Luftwaffe was to make available immediately four combat Gruppen, a Gruppe of Me 110s, and five transport Gruppen for VIII Air

⁵⁹⁷ Telephonic briefing of Halder by Brauchitsch on 14 Dec. and immediate organizational preparations of the Army High Command in agreement with the Wehrmacht High Command as the basis for Hitler's decisions: Halder, *Diaries*, 1355, 1357 (14, 15 Dec. 1941). This procedure shows how far Hitler had already taken over the functions of the C.-in-C. of the army, and also that only Halder's apparatus could guarantee the organizational execution of such orders. Brauchitsch's imminent collapse had been obvious for some weeks, so that Halder urged his replacement on 4 Dec.: Halder, *Diaries*, 1381; cf. also sect. II.1.1(g) at n. 608.

⁵⁹⁸ Hitler's remark on 16 Dec. that he could not send everything out into the winter just because the enemy had achieved a few penetrations in the sector of Army Group Centre referred not to a refusal to send troops but to bringing troops back for 'winter rest'. Cf. conversation between Bock and Schmudt, 16 Dec. 1941, KTB, H.Gr. Mitte, BA-MA RH 19 II/122, fo. 131; Reinhardt, *Moskau*, 218.

⁵⁹⁹ Hitler's order, written out as: Chef OKW/WFSu/L. No. 442174/41, 15 Dec. 1941, KTB OKW I. 1083 (109).

Corps or for the air transport of the battalions in waiting. The 218th Infantry Division was to be pulled out from Denmark and replaced by local units.

Hitler's operational decisions for the conduct of the fighting of 15 December and the following days were based on the assumption that these orders, intended to provide considerable reinforcements for the eastern front, would be carried out rapidly and unconditionally. At noon on 16 December Halder informed Army Group Centre about Hitler's imminent directive to the effect that the approved withdrawal movements of the left wing, of Armoured Groups 3 and 4, and of Ninth Army were to be carried out only 'if there is no alternative'. Guderian's army group was to employ all available reserves to close the breaches north of Livny and west of Tula and then to hold the line from Livny to Dubna and Aleksin. Fourth Army was not to retreat 'one step'.⁶⁰⁰

At first Field Marshal von Bock could only answer that he had no reserves left; he requested that his answer be reported to Hitler immediately. Quite logically, he passed on to the armies the essential points of Hitler's directive as he had received them from Halder, but maintained the order for the construction of rear-area defensive positions along the line from Orel to Kursk, Gzhatsk, and Rzhev. All preparations for a withdrawal to that line were to be continued. When Colonel Schmudt informed him that night that Hitler, bypassing the Army High Command, would take all decisions personally immediately after hearing Bock's views, Bock replied that he had already reported the relevant developments to the commander-in-chief of the army on 13 December and that Hitler would now have to decide whether the army group was to stand and fight or withdraw. In either case there was the danger that the army group would 'go to pieces', for in the event of a withdrawal to an unprepared and not significantly shorter position (the line ordered by Hitler), the promised reserves would arrive too late to play a decisive role.⁶⁰¹

Without mentioning the ordered rear-area line, Bock explained why the position stipulated by Hitler was untenable and added that, because of the lack of fuel and the condition of the horses, heavy equipment and artillery would have to be abandoned. Moreover, he was troubled by the thought that the troops would withdraw even further and not obey orders to halt.

This was the main problem for the army group command. Not only among the men themselves had there been signs of panic, a horror of tanks, and a

⁶⁰⁰ H.Gr. Mitte/Ia, KTB, 16 Dec. 1941, BA-MA RH 19 II/122, fo. 129.

⁶⁰¹ Ibid., 16 Dec. 1941. Schmudt established that the Army High Command had not sent the alarming reports on to Hitler. Bock therefore retransmitted the text and thus created the same situation as in Army Group South and First Arm'd. Army on 30 Nov. 1941. Cf. sect. II.1.1(c) at n. 329. The question as to the extent to which reports from the army group and the armies went directly to Hitler cannot be answered conclusively. It should be remembered that the Army High Command tried to keep control of the army; at the same time there was proven co-operation between Halder and Jodl, and it was Jodl who selected the reports to be submitted. Hitler also received information from the Luftwaffe operations staff.

collapse of order; even the commanders of armies, corps, and divisions were no longer always 'under control' when it was a case of saving their exhausted troops. On 16 December Colonel-General Guderian had an opportunity to inform Schmudt that the fate of the army would be at stake unless replacements and fresh forces were speedily sent to the front. He requested that this should be reported directly to Hitler.⁶⁰²

When the advance briefing on the content of Hitler's expected directive reached Second Army at 1.30 p.m., Guderian observed that that order could not be carried out; the army was no longer capable of mounting more than limited thrusts. He therefore ordered a further withdrawal. The Upa position, reached on the evening of 16 December, could be held for a day or two, but on the whole a withdrawal beyond the Susha-Oka sector was necessary. He informed the commander-in-chief of the army group of his views and the measures he had taken and received from him a confirmation that Hitler insisted on his order being carried out in spite of Schmudt's report. Hitler himself contacted Guderian during the night. He acknowledged the difficulty of Guderian's situation, but the front had to be held under all circumstances. The armoured army should attempt to reach a new position that could be reinforced. He assured Guderian that he would do everything to help the army. Replacements, three twin-engined fighter Gruppen of the Luftwaffe, and fresh divisions from the west would be brought up.⁶⁰³

Beyond the measures initiated, however, an immediate success was not to be expected from this direct contact between Guderian and Hitler. On the other hand, only thirty-five minutes later Field Marshal von Bock ordered that in future any withdrawal from division level upward would require his personal approval.⁶⁰⁴

Hitler's decision, of which he informed Brauchitsch and Halder in the night of 16-17 December, was based largely on the same arguments as those exchanged between Bock and Kluge, which Bock had presented to Hitler and which, in Hitler's judgement, justified the 'great gamble' of risking the loss of Army Group Centre. He hoped to overcome this danger with an iron will and by transferring all available fighting forces to the east. On 16 December he ordered that Army Group North could withdraw to the Volkhov, but then this

⁶⁰² 2. Pz.Armee/Ia, KTB, 16 Dec. 1941, BA-MA RH 21-2/v. 277, fo. 74; Guderian, *Panzer Leader*, 125-6. In the following days Bock used the term 'Führer psychoses' to Guderian and Hoepner; these had to be overcome: H.Gr. Mitte/Ia, KTB, 18 Dec. 1941, BA-MA RH 19 II/122, fo. 142.

⁶⁰³ 2. Pz.Armee/Ia, KTB, 16 Dec. 1941, 3.00 a.m., BA-MA RH 21-2/v. 277; Guderian (*Panzer Leader*, 126) is wrong: on 9 Dec. 5 convalescent companies and 5 battalions in waiting of 27 companies were promised; the convalescent battalion was to arrive on 13 Dec.: BA-MA RH 19 II/127, fos. 263-4. The remark can only refer to the telephone conversation with Hitler, given in BA-MA RH 21-2/v. 879.

⁶⁰⁴ H.Gr. Mitte/Ia No. 3147/41, BA-MA RH 21-2/v. 879. It should be remembered that in addition to the 'hold-out order' the directive of the army group and the order of Second Arm'd. Army to fortify rear-area positions were in effect. The same was true in the other armies. The discrepancies between these directives and orders led to constant reports that an order could not be carried out.

new front was to be defended to the last man.⁶⁰⁵ Army Group South was to hold its entire front and, after the imminent capture of Sevastopol, provide reserves from the Crimea.

Army Group Centre was to proceed from the realization that large withdrawal movements could not be carried out because of the total loss of heavy weapons they would involve: 'By the personal engagement of commanders-in-chief and all commanders and other officers, the troops are to be forced to defend their positions fanatically, regardless of any enemy breakthroughs on the flanks or in the rear.' The purpose of such resistance was to gain time to bring up reinforcements from the west and from Germany itself. Only when reserves had reached the positions in the rear could a withdrawal to them be considered.

Beyond the measures Hitler had ordered, the commander-in-chief of the army ordered Army Group South on the left wing of Sixth Army to provide forces to take the pressure off Second Army near Kursk.

As of 1 January 1942, five infantry divisions were to be transferred to Army Group Centre at one-week intervals. Moreover, regiments, battalions, and 'raiding parties' consisting of home-defence troops from Germany were also to be sent east. Whatever could be dispensed with elsewhere was to be sent to the front by air.⁶⁰⁶

All these transports were affected by weather conditions and other difficulties which could not be overcome overnight. The army group did not expect help to arrive in time, and Field Marshal von Kluge offered to explain to Hitler the conflict between the order to hold the front and the means left to the army group. His aim was to achieve a more flexible conduct of the defence. Field Marshal von Bock, however, advised against such a trip to Hitler.⁶⁰⁷

Now Hitler returned to Bock's request to be relieved of his duties for reasons of health and, through the commander-in-chief of the army, suggested that he submit a request for leave of absence, which was approved.⁶⁰⁸ Kluge assumed command of Army Group Centre.

The following day, 19 December 1941, Hitler also relieved the commander-in-chief of the army of his duties. Field Marshal von Brauchitsch had been seriously ill several times during the past few weeks, but an additional reason

⁶⁰⁵ Hitler's 'hold-out order', drawn up as OKW/WFSt/Abt. L (I Op) No. 442182/41, 16 Dec. 1941, BA-MA RW 4/v. 578, according to a draft of operations dept., 15 Dec. 1941, BA-MA RH 2/v. 1327, fos. 90-1. Briefing of Army Group Centre with all envisaged transfers of troops in *KTB OKW* i. 1084-5 (110), copy Army High Command, 18 Dec. 1941.

⁶⁰⁶ Police and military guard units, Labour Service, and other rear-area services. See e.g. Winterstein and Jacobs, *General Meindl*, 59 ff. On the use of the Luftwaffe units cf. sect. II.1.2(b) at n. 891 (Boog).

⁶⁰⁷ Hitler's arguments were also his own, and he could therefore expect that no new decisions in favour of the army group would be taken: H.Gr. Mitte/Ia, *KTB*, 18 Dec. 1941, fo. 144, BA-MA RH 19 II/122.

⁶⁰⁸ Bock, Tagebuch, 179-80 (17, 18 Dec. 1941), BA-MA N 22/9. Bock seems not to have meant this very seriously; he was more concerned about securing a statement by Hitler that he had not relieved him because of failure. That was indeed not the case, otherwise Hitler would not have made Bock C.-in-C. of Army Group South a little later.

for his inability to meet the demands of his post was that, besides constant arguments to find compromises between Hitler's directives and the intentions of the general staff, new tensions were arising from the fact that the commanders in the field were increasingly making demands which he did not actually have the power to approve. Though only indirectly connected with the crises of command at the front, Brauchitsch's dismissal marked the conclusion of a conflict that had been smouldering ever since the debate about the senior command structure of the Wehrmacht before the war. To describe that conflict would go beyond the scope of the present study. It should be noted, however, that Hitler's purpose in removing Brauchitsch was quite certainly not to eliminate a possible representative of the internal resistance or to deal with military insubordination, as had to be assumed initially in the case of Rundstedt. In Hitler's eyes Brauchitsch was simply a man who had failed to inform him and to react fast enough in a crisis. That he himself was responsible for this failure and, with his intervention in all matters concerning the field army from the planning of operations down to tactical details, had constantly countermanded Brauchitsch's orders was surely due in the final analysis to his desire to command the army even at the functional level. But neither the commanders-in-chief at the front nor the chief of the Army General Staff, not to mention other advisers, seem to have regarded Brauchitsch as indispensable. Hitler's demands that he be informed directly about developments at the front, and the acceptance of operational directives bypassing the Army High Command, show that the army had begun to adjust to the wishes of its supreme commander.⁶⁰⁹

To Hitler a commander-in-chief of the army must have seemed unnecessary. He took the operational decisions himself; he kept the apparatus of the general staff; and he already communicated directly with front commanders in difficult situations. He had just now 'shown' the army that he alone knew how to overcome all obstacles, mobilize the defence potential of the country, and put the Luftwaffe in the right place. The 'buffer' between the front and Hitler, between Halder and Hitler, and in the final analysis between friction-points in the structure of the army itself, was worn out. In addition to his many other functions, Hitler now took over this one, but not in its entirety.

Formally, the process was accomplished by Hitler's declaration of 19 December 1941 that he had decided to take over direct command of the army himself.⁶¹⁰ He placed the chief of the Army General Staff immediately under

⁶⁰⁹ This reactivated conservative opposition to Hitler; the military opposition primarily in the staff of Army Group Centre is dealt with in a subsequent volume of the present work.

⁶¹⁰ Hitler's orders in BA-MA RH 2/v. 156; there also the following letters by Keitel and Halder. On 6 Dec. 1940, as a result of an incident, Hitler had demanded the concentration of the conduct of the war as a whole in the Wehrmacht operations staff: *KTB OKW* i. 215. Cf. also Jodl's efforts, evident in the memorandum on the continuation of the war against Britain, *ibid.* 212. The statement of Hitler's army adjutant, Maj. Engel, that Schmuntz had pressed Hitler to take over command of the army himself cannot be considered decisive when compared with Halder's role in this development. Cf. *KTB OKW* i. 189E.

himself and transferred all other powers of the Army High Command as the highest command and administrative authority to the chief of the Wehrmacht High Command, Field Marshal Keitel, who was to exercise them on his behalf. This first directive was overridden as early as 21 December, when Hitler reserved the right to issue direct orders concerning fundamental questions to the chief of army armament programmes and commander of the training army, as well as to the head of the army personnel office. Moreover, Hitler reserved the right to use his adjutants for special tasks, as he had done before; they were to maintain close contact with a newly established office called the 'Army High Command Staff'. This staff was the former adjutant's office of the commander-in-chief of the army. It now served to co-ordinate army matters within the framework of Keitel's overall activities. It was to maintain contact with the chief of the Army General Staff and remained an office of the army which, in economic matters, was attached to the general staff.

Along with all his new burdens, the chief of the Army General Staff, who was the person most strongly affected by these changes, evidently saw an opportunity for himself to bring about decisions immediately that affected the conduct of the war as a whole, a chance of wielding influence in a manner approaching that of a theoretical 'chief of the Reich general staff'. On 31 December, however, Keitel effectively blocked such ambitions by ordering that in official communications between the Army High Command and the Wehrmacht High Command on all questions affecting the Wehrmacht as a whole, in military or non-military areas, all submissions and reports for Hitler were to be channelled exclusively through the relevant office and departmental heads of the Wehrmacht High Command.

An indication of Halder's possible ambition was a letter he wrote on 25 December 1941 to the commanders-in-chief of the army groups, armies, and armoured armies, the commanders of the armoured groups, and the military governors on Brauchitsch's departure. 'To prevent rumours', Halder emphasized that Brauchitsch had been seriously ill, and his physical decline had also affected his mental vigour. For that reason he had requested Hitler to relieve him of his duties and grant him leave of absence. Hitler had also granted furlough to Field Marshals von Bock and von Rundstedt for reasons of health, 'after a personal, cordial exchange of views'. Halder explained that Hitler's assumption of command represented a clear strengthening of the position of the army: 'We can and should be proud that the Führer himself is now at the head of our army.'

Hitler had already taken over *de facto* the most important activity of the commander-in-chief of the army, the selection of personnel to fill the senior military positions, as the relief of the commander-in-chief of Army Group South, without previous consultation with Brauchitsch, had demonstrated. That Hitler would carry out such measures without considering earlier meritorious service became evident on 20 December 1941, when Guderian, whom

he greatly valued as a soldier, reported that he was not prepared to transmit Hitler's 'hold-on order' verbatim to his units.⁶¹¹

Several factors were involved in this decision. To explain them it is necessary to consider the decision itself more closely. On the one hand, Guderian had a 'direct line' to Hitler, of which he occasionally made use, via Schmundt. On 18 December Halder, through Keitel and Jodl, learnt of conversations between Hitler and Guderian concerning an attack by 3rd and 4th Armoured Divisions designed to dispose of enemy forces near Aleksin and Odoevo.⁶¹² Guderian rejected both actions. At the same time he transferred 4th Armoured Division to the area of Orel and 3rd Armoured Division south of Mtsensk as a reserve. He seems to have reported neither action to the army group, for on 20 December the group ordered that such rest and rehabilitation measures were to be reported in advance.⁶¹³ In the further planning of withdrawal movements Guderian, as described, while under the command of Field Marshal von Bock, refused to be deflected from his purpose and, in the face of all Hitler's orders, referred to Brauchitsch's consent of 13 December.

As he agreed with Guderian and also enjoyed Hitler's confidence, Bock had shown generosity and had even managed to cope with the difficulties presented by the team of Guderian and Kluge, without having to resort to hard, direct orders in dealing with either of the two men. The fact that, seeking to understand Guderian, he occasionally exchanged views with Halder about Guderian's 'peculiarities' and his attitude towards military obedience did not affect his high opinion of Guderian's achievements as a military commander. The situation changed with Kluge's appointment as commander-in-chief of the army group.

On 19 December Kluge briefed Halder in detail on the situation, including the threatening penetration on the right wing of Fourth Army, which Kluge had not yet turned over to the general of mountain troops, Ludwig Kübler. There, shortly before in conversation with Hitler, Guderian had rejected an operation by 3rd and 4th Armoured Divisions. Hitler was also aware of Guderian's requests to be permitted to withdraw to the prepared intermediate positions and of their rejection by Halder. Moreover, on this very day Hitler repeatedly ruled that no line was to be abandoned voluntarily until he had been informed that behind that line new positions had been prepared.⁶¹⁴ It is therefore rather astonishing that Hitler should have listened to Guderian's reports and proposals for several hours and have tried to convince him that it

⁶¹¹ H.Gr. Mitte/Ia, KTB, 19 Dec. 1941, fo. 147, BA-MA RH 19 II/122; Guderian, *Panzer Leader*, 126-7; Walde, *Guderian*, 155 ff.; 2. Pz.Armee/Ia, KTB, 19, 20 Dec. 1941, BA-MA RH 21-2/277. Already on 17 Dec. Guderian had flatly refused to obey Bock's order to withdraw units at division level or above only with his approval. Cf. the above-mentioned war diary of Second Arm. Army, 17 Dec. 1941.

⁶¹² Cf. Halder, *Diaries*, 1364 ('Situation at Dubna').

⁶¹³ 2. Pz.Armee/Ia, KTB, 18-20 Dec. 1941, BA-MA RH 21-2/v. 277.

⁶¹⁴ Halder, *Diaries*, 1369-70 (20 Dec. 1941).

was absolutely necessary to hold the line that had been reached, in spite of the great losses involved.

The lengthy instructions about details of the conduct of the fighting at the front as well as the basic guidelines for the behaviour, equipment, and supplies of the troops, down to the encirclement of Leningrad and the matter of protective covering for locomotives, clearly show the topics which dominated Hitler's attention that day. His suggestions, instructions, and orders, which, with regard to the solution of technical and personnel problems, came at least six months too late, were transmitted to the Army High Command the following day by teletype in a 'Summary of the tasks of the army for the immediate future'.⁶¹⁵ Again, and not for the last time, Hitler ordered positions to be held and defended to the last man, in order to gain time to improve the transport system and bring up reserves, remove equipment that could be repaired, and strengthen the rear lines by constructing strong points. All forces available in Germany and the west were to be directed to the eastern front, winter clothing for the troops was to be taken off prisoners and local civilians, and possible quarters for the advancing enemy were to be destroyed in areas to be evacuated.⁶¹⁶

Moreover, in this directive the greater use of allied forces, already suggested in Hitler's directive of 15 December, was taken up again and explained in greater detail. Now Italy, Hungary, and Romania were to be induced 'to provide strong forces for 1942 in good time, so that they can be brought up before the snow melts and can march to the front'.

Problems which arose in the totally unprepared war economy as a result of call-ups and personnel transfers were to be solved by the use of prisoners of war, foreign civilian workers, and not least by forced labour in the concentration camps.⁶¹⁷ This part of the directive was already concerned with preparations for the summer offensive of 1942. Let us return now to the acute crisis of December 1941.

Hitler's order forbidding a withdrawal of the front, even in case of threatening encirclement and the loss of troops and material that this would involve, was repeated not only to Guderian but also to Kluge on 20 December. It especially concerned the further withdrawal of Second Armoured Army on its northern wing to prevent the gap between it and Fourth Army near Likhvin from becoming a danger. Kluge reported that under certain circumstances

⁶¹⁵ OKW/WFSt/Abt. I. IH Op to OKH/Op.Abt., 21 Dec. 1941, *KTB OKW* i. 1085-6 (111). The version in Halder (*Diaries*, 1369-70) contains a reading mistake by the teletype transmission office.

⁶¹⁶ This destruction had a military purpose in so far as the German troops needed quarters and were concentrated there, with the result that the areas in between could not be guarded. Stalin's destruction orders were based on the same idea. However, thanks to their better preparation and equipment, the Soviet troops were not dependent on permanent structures and frequently exploited the gaps in the German strong-point system. Cf. the regulation on operations in the winter (n. 580 above).

⁶¹⁷ Cf. sect. II.v1.5 at n. 392 (Müller).

events could be stronger than the will to resist them; Hitler should realize the consequences.⁶¹⁸

During Guderian's absence the chief of staff of Second Armoured Army informed the commander of the army group that the armoured army intended to withdraw to a prepared line and to establish a rallying-position behind the Oka. Moreover, he reported that 3rd and 4th Armoured Divisions had been withdrawn from the front. Field Marshal von Kluge came to the not unfounded conclusion that Second Armoured Army wished to withdraw to a position west of the Oka. Referring to Hitler's order, he ordered the withdrawal of LIII Army Corps and XXXXVII Armoured Corps to be halted at once. When Guderian's deputy, General Schmidt, objected that the corps no longer had sufficient strength to fight, Kluge replied with understanding that in spite of binding orders commanding generals had to act according to the situation and that in the event of a successful enemy breakthrough positions simply could not be held any longer.⁶¹⁹ The two corps were ordered to hold the general line from the upper Susha to east of Chern and Odoev.

All the other armies and corps of the army group reported similar intentions to evacuate positions that could no longer be held, e.g. VII Army Corps, for which Kluge promised 600 replacements and air support in the next few days, in addition to limited assistance from the neighbouring XX Army Corps.

The dispute about the withdrawal of Guderian's army group took place by telephone between Kluge and Halder during the decisive days of Guderian's absence. The new commander-in-chief of Army Group Centre was well aware that there could be no question of rigidly holding the front at any price. The critical question was essentially one of authority, and Kluge was clearly angered that Guderian—at first with Brauchitsch's consent, to which he referred, and now having obtained a decision from Hitler—seemed to be thinking only of the fate of the units under his own command. The insinuation that his armoured army wished to withdraw to positions in the rear without fighting was for Guderian a personal insult. Kluge's judgement, in a conversation with Colonel Schmudt, that Guderian was exhausted and too pessimistic to practise his command was clearly aimed at obtaining his removal.

After Guderian had received Hitler's strict order to hold his positions, he briefed the corps under his command on the new situation and the discontinuation of the retrograde movement. On the southern wing of Second Army the enemy was mounting a powerful thrust towards the Tim, threatening Kursk and thus the communications with Sixth Army. In the area of Kaluga an unexpected attack began at the same time, forcing XXXXII Army Corps to withdraw—something Hitler and Halder had just rejected.

But Halder still believed that the attacks of the Red Army, whose poor training and equipment he had repeatedly stressed (on the assumption that the Germans were superior and that Soviet successes were due only to sheer

⁶¹⁸ H.Gr. Mitte/1a, KTB, 20 Dec. 1941, BA-MA RH 19 II/122, fos. 156-7.

⁶¹⁹ Ibid., fos. 156 ff.; 2. Pz.Armeel/1a, KTB, 20 Dec. 1941, BA-MA RH 21-2/v. 277.

numbers), would lose momentum and that it was necessary to hold out for only two weeks or so. He based his view on a tactically vague assessment of the enemy's situation, as aerial reconnaissance provided no clear results and available infantry forces were not able to carry out significant reconnaissance because of the poor weather.⁶²⁰

Enemy penetrations during the following days, until the end of the year, repeatedly confronted Army Group Centre with the same situation, in which decimated divisions had to be withdrawn by the corps or were simply lost, and the armies were requesting authorization from the army group for retrograde movements already begun, with Kluge arguing with Halder and Hitler, who finally relented in every instance when operational encirclements seemed inevitable.

These disputes with Hitler's headquarters, the results of which were constantly confronting the commanders in the field with serious conflicts of conscience, even extended to tactical movements, e.g. in the case of Guderian, who refused to obey the order forbidding him to withdraw LIII Army Corps and XXXXVII Armoured Corps behind the Susha-Oka line. That same day General Schmidt evacuated Livny on his own responsibility, which forced XXXXVIII Armoured Corps to withdraw behind the Tim-Sosna line, a move that in turn affected the entire front of Second Armoured Army.

Kluge pointed out to Halder the necessity of a retreat by XXXXVII Armoured Corps and promised the armoured army command that he would obtain Hitler's approval 'provided there is a clear determination to hold the Oka sector'. Guderian emphasized that no interference in his command would change the situation and requested to be relieved of his post, adding that he would have no objection to defending his actions at a court martial. Kluge realized that the basic difference between Guderian's and Hitler's views of the situation was, in the long run, intolerable.⁶²¹

This meant that the break between Hitler and Guderian was final, in spite of their agreement in the operational area about the measures to be taken—measures which Kluge also advocated *vis-à-vis* Halder and Hitler. The final disputes arose on 25 December on the question of the withdrawal of XXXXVII Armoured Corps and the evacuation of Chern, and because of Guderian's statement that he commanded his army as his conscience dictated. Kluge, who shared this view of a commander's responsibility, saw between it and the duty to carry out orders such a fundamental incompatibility that he informed Halder that 'either he or I [must go]'. Guderian then gave up the struggle and requested to be relieved of his command, which Hitler ordered the same day. General Schmidt took over command of the army group.

⁶²⁰ H.Gr. Mitte/Ia, KTB, 21 Dec. 1941, BA-MA RH 19 II/122, p. 172.

⁶²¹ On 25 Dec. Kluge emphasized to Halder that he was basically of the same opinion as Guderian: the German troops could not simply let themselves be slaughtered. The dispute is recorded in detail in the war diaries of Army Group Centre and Second Arm'd. Army. Cf. also Reinhardt, *Moskau*, 227 ff.; Guderian, *Panzer Leader*, 130 ff.

Although it is indisputable that the removal of a general would not have been effected any differently under Brauchitsch, the dismissal of Guderian highlighted the disappearance of the most important function of the commander-in-chief of the army: to achieve and defend a consensus, especially in difficult situations. This was probably Halder's aim in sending several trusted officers to the commands at the front and in the rear areas on 21 December 1941 so as to 'restore order and confidence'.⁶²²

The effects of Hitler's assumption of direct command of the army on Halder's position and work soon became evident. Halder's daily oral report to Hitler—together with the head of the Wehrmacht transport department, the head of Wehrmacht communications, and the general-staff officer in charge of supply and administration—was not only extremely time-consuming; in the case of direct orders it left almost no time for consultation or for the collection of the necessary data.⁶²³

Halder shared his first insights into the new style of leadership with the chiefs of staff of the army groups and armies,⁶²⁴ who were to pass them on to their commanders-in-chief. In accordance with Hitler's will, the senior commands (high commands of the army, army groups, and armies) were to conduct their operations with stricter discipline. The principle of simply issuing orders to subordinate units and leaving the execution to them, it was argued, had sometimes led to circumstances in which the intentions of the higher command had been jeopardized with serious effects on the situation as a whole. Therefore it was again necessary to issue clear, unequivocal orders. The higher command was to intervene decisively in detailed actions to ensure that the intended objective was reached: 'The soldier's duty to obey leaves no room for the sensibilities of subordinate commands; rather it requires the most rapid and best possible execution of orders as desired by the authority issuing them.' The Army High Command would issue its orders accordingly, and Halder requested that the army groups and armies should do likewise. During the transition to a coherent defensive front, this required that they should concern themselves more with the tactical details of the situation. Only in this way could they ensure that orders were issued promptly and that they did not become dependent on subordinate commands.

This represented the formal confirmation of the end of one of the most basic German military principles, 'mission responsibility'. In effect the principle of providing every commander with all necessary support and equipment needed for him to carry out his mission independently within the framework of the relevant directives and orders, trusting in his sound training, character, and ability, had been abandoned ever since the offensive drive by the German army in the east had come to a halt. In fact, however, this principle of

⁶²² Halder, *Diaries*, 1371 (21 Dec. 1941).

⁶²³ Cf. Erfurth, *Generalstab*, 287 ff.

⁶²⁴ Chef GenStdH/GZ/Op.Abt. (I) No. 10010/42, 6 Jan. 1942 (copy), BA-MA, 16. Armee, 23468/6. The individual elements of this announcement can be traced in Halder's war diary entries from the beginning of the war, but especially after 14 Dec. 1941.

command had already become a 'pious myth' with the development of modern communications and the increasing dependence of armies on air support.

At the end of his appeal to his closest subordinates in the commands, Halder stressed the will and confidence of the top leadership, which would enable them to master the difficult situation: 'We shall master it if we firmly seize the reins of command without consideration for inappropriate sensibilities, if the commands are entirely frank and truthful in their reports, and if a single will, the will of the Führer, prevails from the highest levels down to the soldier at the front.'

Hitler too had demanded absolute honesty in reports in his first 'basic order' after assuming direct command of the army.⁶²⁵ There he stated that every report was a contribution to the conduct of operations and thus could provide an impulse for important decisions. It must therefore be inspired by love of truth and conscientiousness, provide the leadership with a clear picture of the situation, or give an unequivocal answer to questions asked. Honest reporting of his own failure to fulfil his tasks and of his own mistakes did credit to a soldier. In conclusion Hitler demanded that all persons in positions of authority should strive to achieve compliance with these principles; on the other hand, subordinates should know that reports would be required only when they were actually necessary.

That was a point at which the rejection of the idea of 'mission responsibility' overlapped with required reporting practice. The demands meant that the various military staffs would have to be able to provide data, position locations, information on troop units, and similar details at any time of the day or night. As the completely shattered larger formations were often not able to provide data on the strength of their smaller units at the moment when a report was demanded and, moreover, requirements with regard to indispensable units behind the front differed depending on their location, and no reporting procedure could prevent 'unclear items' from being concealed, this system inevitably came to resemble more and more a form of harassment, and those who had to carry out its provisions increasingly saw no purpose in the complicated procedure.⁶²⁶ On the contrary, some commands seem to have taken the opportunity to report to Halder, often in extreme detail and at great length, their losses, shortages of equipment and supplies, and demands,

⁶²⁵ Der Führer und Oberste Befehlshaber der Wehrmacht: Grundsätzlicher Befehl über Meldewesen [The Führer and Supreme Commander of the Armed Forces: Fundamental Order on Reporting], 26 Dec. 1941 (see n. 578 above).

⁶²⁶ With some irony the chief of staff of Army Group North transmitted these new demands, justified by 'a certain change' after Hitler's assumption of command of the army, to the chiefs of staff of Sixteenth and Eighteenth Armies on 3 Jan. 1942: BA-MA, 16. Armee, 23468/8; transmission by chief of staff of Sixteenth Army to the corps chiefs of staff on 5 Jan. 1942, BA-MA, 16. Armee, 23468/6. The reports of the armies, supported by maps, were to be submitted three times a month and were truly colourful works of art that had to include details of forward strong points down to platoon level. Changes between the stipulated dates were to be reported daily. H.Gr. Nord/Ia, *ibid.*

repeatedly raised in vain, of which he was already aware and which often set in motion a time-consuming process of essentially pointless requests, rejections, excuses, and improvisations. The fact that Hitler was now in a position to direct individual battalions and even tanks did not relieve field commands of their responsibilities, but the impression arose that, after the elimination of the 'intermediate level' represented by the commander-in-chief of the army, Hitler himself was now to blame for all grievances. Earlier excuses—best expressed in the phrase 'If the Führer knew . . .', which had almost achieved the status of a slogan—could no longer be put forward.

(iii) THE FIGHTING RETREAT OF ARMY GROUP CENTRE UNTIL THE
STABILIZATION OF THE FRONT

The difficulties Guderian had foreseen in bringing up 4th Armoured Division under the command of XXIV Armoured Corps as a result of road conditions—deep snowdrifts which could not be kept cleared for long—prevented this unit from closing the gap in the front east of Likhvin. Other troops that had been brought up had to withdraw to Sukhinichi. By the end of the year LIII Army Corps also had to abandon Belev. This development created a broad opening for a thrust towards Sukhinichi by the attacking Soviet Forty-ninth and Fiftieth Armies. The way seemed to be open for the southern arm of the planned large-scale encirclement operation against Army Group Centre.⁶²⁷

On the left wing of the defensive front of Army Group Centre, Ninth Army under Colonel-General Strauss had come to a temporary halt in the Staritsa position. From 25 December, however, the threat became so clear that Kluge considered separating the armoured units from Armoured Groups 3 and 4 to create a mobile reserve.⁶²⁸ In the area of VI and XXIII Army Corps especially there were increasing indications of an imminent attack. The army command was ordered to halt before reaching the Volga-Gzhatsk line, to which it had requested permission to withdraw. While Kluge considered this request justified, Halder rejected the idea of a 'middle line' between remaining in the old positions and early withdrawal. He still expected a large operational breakthrough which would confront the entire army group with the question of its own survival.⁶²⁹

⁶²⁷ For Soviet operational plans and the organization of units for the deployment cf. sect. II. II. 10. atn. 292 (Hoffmann).

⁶²⁸ On 24 Dec. 1941 Hitler had already authorized Kluge to withdraw the centre and the right wing of Fourth Army westwards until the danger of XIII and XII Army Corps being cut off had been eliminated: OKH/GenStdH/Op.Abt. (IM) No. 1755/41, BA-MA RH 2/v. 1327. fo. 95. Moreover, in accordance with this order, air units were to be withdrawn from the war against Britain and prepared for short-term service in the east, depending on the situation of Army Groups Centre or North (OKW/WFSt/Abt. L (IOp) No. 442243/41), in supplement to the directive of 18 Dec. 1941.

⁶²⁹ H.Gr. Mitte/Ia, KTB, 25 Dec. 1941, BA-MA RH 19 II/122, fos. 208–9; Halder, *Diaries*, 1373 (25 Dec. 1941): 'Ninth Army begins to crumble.'

Starting on 26 December, a major Soviet attack with strong armoured forces was directed against the sector held by V Army Corps. Penetrations were achieved, and Colonel-General Hoepner expressed his doubts as to whether it would be possible to hold the position there. On 26 December Colonel-General Strauss also reported that the enemy was in a position to penetrate his left wing. On 29 December the pressure on XXXXIII and LVII Army Corps became so strong that the army group wanted to withdraw Fourth Army and the corps of Armoured Group 4 on the right wing to a line from Vereya to west of Kaluga in order to shorten the front and create reserves. The bulk of VI Army Corps was wiped out near Staritsa; as of 31 December, here too a wide gap opened in the German front for the enemy's thrust to Rzhev. On 2 January, even in this situation, Hitler insisted that Ninth Army should remain where it was. The front of XX Army Corps near Borovsk had to be held under all circumstances; Fourth Armoured Army had to transfer units for this purpose even if that endangered its own front.⁶⁰ Borovsk was lost, and all attempts to close the gap failed.

By this time the enemy had already achieved a breakthrough in the front of Ninth Army north-west of Rzhev and the army was in danger of having its rear lines of communication cut. But that danger was considerably greater for XX Army Corps north of the penetration near Borovsk, which was threatened with encirclement by enemy forces turning north. That would have represented a successful breakthrough on a broad front of a thrust aimed directly at Vyazma; even more serious, an inner arm for the planned great envelopment of Army Group Centre would have been able to achieve the desired objective. On 6 January Colonel-General Hoepner requested permission to withdraw the corps, but in vain. After waiting until 8 January for authorization of the decision, which he considered absolutely essential, he ordered the break-out of his corps, which had been cut off from its supplies, at noon that day on his own responsibility. Neither Kluge nor Halder agreed with this step. That same night Hitler relieved Hoepner of his duties and demanded that he be discharged dishonourably from the army.⁶¹

Fourth Army Headquarters next requested permission to withdraw in order to gain enough forces to protect the threatened main supply-route from

⁶⁰ From 1 Jan. 1942 Armd. Groups 3 and 4 were designated armoured armies; Third Armd. Army was placed under Ninth Army on 3 Jan. Hitler's insistence on holding Borovsk was due to agreement with 'his gentlemen', especially Halder, at least according to the war diary of Army Group Centre, BA-MA RH 19 II/122, fos. 266 ff. On the situation of Ninth Army, AOK 9/ FÜ.Abt., KTB, 1 Jan.-31 Mar. 1942, BA-MA 21520/1, indicates that Col.-Gen. Strauß, with the consent of the army group, attempted to evade this directive by the formula 'withdrawals forced by the enemy'.

⁶¹ Hoepner was dishonourably discharged from the army only after 20 July 1944: Chales de Beaulieu, *Hoepner*, 242 ff. Cf. also AOK 4, KTB, BA-MA RH 20-4/281; Pz.AOK 4, KTB, BA-MA RH 21-4/50, both under 8 Jan. 1942. Kluge's report, like Guderian's case, pointed out that the order had been given independently and that it had been issued without notification to the army group. Hoepner's successor was Gen. Richard Ruoff, until then general commanding V Army Corps. The chief of staff of the armoured army, Col. Walter Chales de Beaulieu, was also relieved of his duties. On Hoepner in general cf. Bücheler, *Hoepner*, here 165 ff.

Roslavl to Yuhnov.⁶³² Hitler approved a withdrawal between Ugra and Luza; along the line Zubovo-Tavarkovo-Medyn a new front was to be established and secured.

Beyond the intended use of the forces of Fourth Army, whose timely arrival he did not expect, Hitler also ordered units to be airlifted from the rear to Yuhnov or another appropriate landing-place along that road. In addition, units becoming available from the area north of Kaluga were to launch an attack in the general direction of Zubovo.⁶³³

For the moment the situation in Sukhinichi—encircled since 29 December, supplied by air, assigned the role of an 'Alcazar' of the eastern front in Hitler's view of the war and thus forbidden to surrender—remained unclear. As the Soviet Tenth Army did not subject the town to a thoroughly prepared assault but attacked it repeatedly though without success in passing, on the way to the operational objectives of Kirov and Vyazma, the fighting in this area continued until the end of January.

On 11 January Hitler received the commander-in-chief of the army group before issuing a new directive for it on 12 January.⁶³⁴ The views of both men, like that of Halder, were based on the belief that for every day that stubborn resistance was continued more time would be gained for restoring the situation in the sector of Army Group Centre. The closure of existing gaps in the front was to be achieved by defensive and offensive measures. As in January, Hitler still assumed that sufficient forces could be removed from the less threatened sectors.

Second Army, in whose sector the situation had unexpectedly stabilized—the feared offensives against Orel and Kursk had not taken place—was now once more under the command of Colonel-General Freiherr von Weichs, and was placed under Army Group South. Only the greatly weakened units of Higher Command XXXV remained.

Second Armoured Army was to withdraw the strongest possible forces from its eastern-front sector and attack the flank of the Soviet Tenth Army near Sukhinichi, the objective being to reduce the size of the penetration and relieve pressure on Sukhinichi, whose defenders were to tie down the enemy. The forces of LIII Army Corps south of Belev were also to defend their positions 'till the last possible moment'.

The task of Fourth Army remained to keep the supply-route from Roslavl to Medyn open. But there too the holding of the new position was no longer demanded in the same terms.

After closing the penetration north of Medyn by an attack, Fourth Army

⁶³² Halder, *Diaries*, 1384-5 (8, 9 Jan. 1942); AOK 4/Ia, KTB, 8 Jan. 1942, BA-MA RH 20-4/281.

⁶³³ Führer order, OKH/GenStdH/Op.Abt. (IM) No. 420013/42, 9 Jan. 1942, BA-MA RH 2/1327, fos. 96-7. For the mission of one such unit quickly thrown into battle cf. Winterstein and Jacobs, *General Meindl*, 59 ff.

⁶³⁴ Halder, *Diaries*, 1386 (11 Jan. 1942); Hitler's directive: OKH/GenStdH/Op.Abt. (I) No. 420020/42, 12 Jan. 1942, BA-MA RH 2/v. 1327, fos. 98 ff.

was free; if necessary, to withdraw to a line between Medyn and Vereya Ruza. Forces were to be placed at the disposal of the army group as rapidly as possible.

Ninth Army was to cut off the penetration west of Rzhev and maintain contact with Army Group North south of Ostashkov.

A demand to hold the respective front sectors unconditionally and inflexibly is no longer found in these orders, with the exception of Sukhinichi. With a concluding sentence Hitler indicated the imminent withdrawal to 'winter positions': to increase the mobility of the 'parts of the army group facing the enemy', all equipment not necessary for the actual fighting was to be withdrawn from the forward area of combat.⁶³⁵

Permission for Army Group Centre to commence retrograde movements could no longer be avoided. The reserves from Germany that Hitler had assumed would be available did not reach the front in time or in sufficient strength, and the approved measures to shorten the front did not yield the envisaged units capable of offensive operations. On 15 January, after permission had already been given in isolated cases, Hitler had to order Army Group Centre to withdraw Fourth Army and the two northern armoured armies to a line east of Yukhnov, Gzhatsk, and Zubtsov and north of Rzhev.⁶³⁶ The road between Yukhnov and Rzhev was to be secured as a lateral connection. This line was to be held against all attacks.⁶³⁷ This order was due not only to the urging of Army Group Centre and the armies on the left wing; it also took into account Halder's ideas aiming at an 'active solution', i.e. offensive actions to improve the situation at Rzhev.⁶³⁸ This possibility had also been proposed by the commander-in-chief of Ninth Army, in opposition to Kluge.

As a condition for the withdrawal to this winter line, Hitler accordingly demanded that the gap west of Rzhev should be closed, which would cut off the northern arm of the Soviet encirclement operation against Vyazma. The two other offensive tasks contained in the directive of 12 January, securing the gap north of Medyn and reopening the supply-route between Roslavl and

⁶³⁵ Pz.AOK 2/Ia, KTB, 13 Jan. 1942, BA-MA RH 21-2/v. 876, 877; Der Führer und Oberste Befehlshaber der Wehrmacht, OKH/GenStdH/Op.Abt. (I) No. 420020/42, 12 Jan. 1942, to Army Group Centre, BA-MA RH 2/v. 1327, fos. 98 ff.: 'To increase the mobility of elements of the army facing the enemy, all equipment not needed for combat' was 'to be sent back'. This indicates that a further withdrawal was expected.

⁶³⁶ Der Führer und Ober-Befehlshaber des Heeres/GenStdH/Op.Abt. (I) No. 420021/42, 15 Jan. 1942, carbon copy in BA-MA RH 2/v. 1327, fos. 101 ff.; printed in KTB OKW II/2. 1268-9. For the individual shortenings of the front wrested from Hitler cf. Halder, *Diaries*, 1387-8 (13, 14 Jan. 1942); Reinhardt, *Moskau*, 246-7, with sources for the armies affected. Strauß requested permission to resign his command on 15 Jan. after the army group had issued a tactical order to XXIII Army Corps over the head of the army command, and not because of Hitler's directive. Reinhardt's interpretation (*Moskau*, 247) is mistaken.

⁶³⁷ Halder, *Diaries*, 1387 (13 Jan. 1942).

⁶³⁸ 'Active solution', Halder, KTB III. 384 (not in trans.); Großmann, *Rshew*, 33 ff.; AOK 9/Ia, KTB, BA-MA 21520/1, and Die Winterschlacht bei Rshew [The Winter Battle of Rzhev], report of Pz.AOK 3, BA-MA RH 21-3/v. 138.

Yukhnov, were not abandoned, nor was the order to Second Armoured Army to relieve Sukhinichi. The withdrawal was to be carried out in easy stages; material losses were to be kept to a minimum and all transport facilities and possible lodging for the enemy destroyed.

Hitler's first order to 'pull back a major sector of the front', as he himself expressed it, was to be carried out in such a way that it would be dominated by 'the feeling of superiority of the troops over the enemy and their fanatical will to inflict as much damage and injury on him as possible'.⁶³⁹ Halder likewise concerned himself with the psychological effects of the order to withdraw, but he sought to attribute a certain dejection among the troops in the face of the enemy's strong position to the report procedures of the intelligence officers.⁶⁴⁰ In a directive to the chiefs of staff of the army groups, armies, and corps on 17 January 1942 he observed that the large number of enemy units reported had a certain paralysing effect which clashed with the sense of superiority of the troops. He continued: 'It is not acceptable that a command should succumb to an obsession with figures which only emphasizes the large number of units on the enemy's side and the present decline of fighting power on our side.' In providing a picture of the situation an exaggeration of the importance of the number of enemy units should be avoided. Intelligence staff were to be trained accordingly. 'Then there will be an end to the situation—which is quite unacceptable to the German general staff, when time and again the fighting spirit and toughness of our troops have put to shame the worried number-worshippers in the staffs.' This remark, made with an eye to Hitler's accusations, seems rather questionable in view of past developments and the many weeks of disputes about authorization of withdrawals which had in any case already been carried out and which were sometimes nothing other than panic-stricken flight. It should also be remembered that not only the commander-in-chief of Army Group South, but also Colonel-Generals Hoepner and Guderian, the commanding generals Graf von Sponeck and Freiherr von Gablenz (XXVII Army Corps), and on 15 January also the commanders-in-chief of Army, Group North and Ninth Army, had either already been removed from their commands or had requested to be relieved of their duties. The last-mentioned officer eventually decided to resign his command because of a dispute with Kluge. In fact this directive did not prevent any command from continuing to quote relevant figures on the enemy's strength in support of its accusations that insufficient forces were being provided to carry out the assigned tasks.

Under the new commander-in-chief of Ninth Army, General Walter Model, Hitler's first demand—that the enemy must be thrown back at Rzhev—was fulfilled after unsuccessful attempts on 21 January. The Soviet Thirty-ninth

⁶⁴⁰ Directive of Chief GenStdH No. 10/42 regarding assessment of enemy's situation, 17 Jan. 1942, BA-MA RH 20-4/287; remark of chief of staff of Fourth Army for his Ic: 'Poor Helmdach.'

Army was pushed back near Sychevka; on 23 January contact was re-established between XXIII Army Corps in the north and VI Army Corps south of the penetration.⁶⁴¹ The defensive battles of Ninth Army along this front against Soviet attacks on both sides, thinly held at first, became in the end a German encirclement operation towards the south-west.

XXIV Armoured Corps, which had regrouped after receipt of Hitler's order on 13 January, was given the task of breaking the encirclement of Sukhinichi on the southern wing of the army group with forces of Second Armoured Army. The corps now had 18th and 4th Armoured Divisions, 208th Infantry Division, newly arrived parts of 339th Infantry Division, and three 'groups'.⁶⁴² After the preparatory attack by the armoured corps caught the enemy by surprise on 18 January, it was instructed to advance rapidly to Sukhinichi. From the very start it was not assumed that the town could be held, but it was necessary to await Hitler's decision. On 21 January Hitler wanted to thrust beyond Sukhinichi to cut off the enemy forces along the supply-route between Roslavl and Yuhnov, and he promised an attack group from Fourth Army from the area around Yuhnov to provide support: however, Fourth Army headquarters indicated that this could be provided only after a delay of at least ten days. Owing to heavy losses and a temperature of -44°C , the armoured army was by no means certain that it would be able to hold the town or, as ordered on 22 January, decisively defeat the enemy there. Because of heavy counter-attacks on the flanks of the thrust it was possible to advance only with a pointed wedge of two battalions of 216th and 208th Infantry Divisions. On 24 January they and several tanks of 18th Armoured Division were able to link up with the point of the break-out effort by the 'Group von Gilsa'. Losses in securing the narrow corridor to the town, estimated at 200 dead and wounded a day, forced the abandonment of the town on 28 January, after the wounded had been evacuated and demolition, mainly of the railway facilities, had been prepared. Even an order from Hitler to hold the town if at all possible, using artillery if necessary, thereby relieving pressure on Fourth Army, did not change the situation, any more than a later appeal by Halder, who considered that abandoning Sukhinichi after the great moral victory of relieving it would be too great a loss.⁶⁴³ Field Marshal von Kluge ordered the annihilation of the

⁶⁴² 2. Pz.Armeekorps, KTB, 13 Jan. 1942, BA-MA RH 21-2/v. 876, 877. No formation had all its established units left. Divisions were broken up according to need: this was the origin of the 'groups' named after their commanders. After the arrival of Col.-Gen. Freiherr von Weichs on 15 Jan. 1942 Col.-Gen. Schmidt handed over command of Second Army.

⁶⁴³ Halder, *Diaries*, 1395 (28 Jan. 1942). Hitler's demand for more pressure on Sukhinichi was repeated in the following days, with the promise of priority in assigning replacements. Second Arm'd. Army was to receive 1,000 men daily, but they could not be brought up without endangering supply transports; thus only two companies could be created: 2. Pz.Armeekorps, KTB, 24, 29 Jan. 1942, BA-MA RH 21-2/v. 876, 877. Hitler's decree to the 'Soldaten der Kämpfe um Szuchinitschi' [Soldiers of the Sukhinichi battles], 27 Jan. 1942, is in BA-MA RH 20-4/287m, fo. 241.

enemy forces which had penetrated the area west and north-west of Bolkhov to be given priority over the tying down of forces at Sukhinichi.⁶⁴⁴

On 30 January the army group command saw the approach of catastrophe for Ninth Army, requiring intervention by Second Armoured Army, as the enemy was already 100 kilometres north-west of Smolensk at Velizh and Beloe. For this action 3rd Armoured Division, which had completed the restoration of the situation around Kursk, and parts of 211th Infantry Division along the railway line were available. On the other hand, the chance also presented itself of destroying the Soviet Sixty-first Army south-west of Belev.⁶⁴⁵ Neither operation was carried out, in spite of Hitler's repeatedly expressed wishes. On the contrary, the supplying of explosive charges and detonators ordered by the Army High Command for the destruction of the artillery of the German units in the event of a forced withdrawal was continued. On 30 January the army group ordered Second Armoured Army to give priority to tying down strong enemy forces at Sukhinichi, and to subordinate its offensive task to that purpose.⁶⁴⁶

In spite of repeated, fierce enemy attacks, the situation of Second Armoured Army stabilized, and isolated thrusts led to defensive successes against the Soviet Sixty-first Army in the sector of XXXXVII Armoured Corps. On 13 February information was received from spies that the Soviet Third Army was going to suspend its attack. Optimism resulting from the belief that the situation was now under control became so strong that arguments between the commands of the armoured army and the army group on 13 February were no longer concerned with a withdrawal but with an offensive operation against Kirov; however, no clear orders could be obtained as the Army High Command and Hitler reserved the right to make all decisions. Colonel-General Schmidt commented: 'Difficile est, satiram non scribere [It is difficult not to write a satire].' The tactical planning of the army concentrated on closing the gaps in the front. With a total of forty-five combat-ready tanks and an additional forty-four undergoing repairs, and with the troops exhausted and battle-weary, while replacements were often not ready for action, nothing more could be expected. Improving forward positions took second place to the establishment of secure lines of communication against the muddy conditions of spring. Again the remote, complicated command structure restricted initiative, e.g. in the offensive to the north repeatedly demanded by Hitler west of

⁶⁴⁴ Order H.Gr. Mitte/Ia No. 750/42, 27 Jan. 1942, BA-MA RH 20-4/287m, fos. 234 ff.; H.Gr. Mitte/Ia No. 813/42, 30 Jan. 1942, to 2. Pz.Armee, *ibid.* 288, fo. 97.

II.11.13 at n. 398 below (Hoffmann), and Reinhardt, *Moskau*, 250. 3rd Arm'd. Div. was placed under Army Group South.

⁶⁴⁶ Order, 20 Jan. 1942, H.Gr. Mitte Ia betr. Zerstörungsplan für Geschütze (re demolition charges for artillery pieces), BA-MA RH 20-4/288, fo. 48. Cf. also n. 638 above.

Sukhinichi, for which 3rd Armoured Division was to be made available. It now consisted of a battalion of eleven tanks, an infantry battalion of two companies, a sapper battalion of two companies, an artillery battalion of six guns, four anti-tank guns (self-propelled), and a motor-cycle rifle battalion. Army headquarters enquired with good reason how a decisive operation was to be carried out with these units.⁶⁴⁷

The uncertainty of the commanders was evident at a conference held on 9 March at the headquarters of Second Armoured Army, at which all commanding generals presented their opinions to the commander-in-chief of the army group. They had reservations about Kluge's demand to pull forces out of the front for rehabilitation. Nevertheless, Kluge insisted that the view that this could not be done was not acceptable. The wishes of the Army High Command had to be met. His personal opinion, however, was that the enemy would force the high command to change their plans.⁶⁴⁸ This revealing remark completely confirmed the impression which Second Armoured Army and other headquarters had gained in the past months: that correct command decisions were not being supported with sufficient vigour towards higher levels of authority.

While the danger to the outer wings of the army group had been warded off by the middle of February, threatening situations still developed, especially for Fourth Army. After the penetration by the Soviet Thirty-ninth Army west of Rzhev had been sealed off, that army and XI Cavalry Corps remained in the rear area of Ninth Army and Fourth Armoured Army. Together with increasingly strong partisan groups, now under firm military command, they threatened the rear communication lines of both German armies.

Since the breakthrough at the boundary with Fourth Armoured Army north of Medyn and the simultaneous thrust by the Soviet I Guards Cavalry Corps, Fourth Army had been in danger of being encircled. The vital supply-route between Roslavl and Yukhnov was threatened and the railway line from Bryansk to Vyazma cut. Since 18 January 1942 the thrust into the rear of the 'winter position' of Fourth Army had resulted in the isolation of four army corps in the area of Yukhnov and forced the army constantly to shift its forces to threatened sectors of the front. This led its commander-in-chief—since 20 January General Gotthard Heinrici—to assess the situation very pessimistically.⁶⁴⁹ On 1 February he expressed his doubts that it would be possible to lead the army out of its present situation. In contrast, however, the chief of his general staff and his first general-staff officer reported to the army group their conviction that such an effort would succeed. The new chief of staff of Fourth

⁶⁴⁸ *Ibid.*, 9 Mar. 1942.

⁶⁴⁹ Kluge's successor, Gen. Kübler, had not felt equal to the task and had been relieved: situation assessment Chef AOK4, 1 Feb. 1942, 10.10 a.m., BA-MA RH 20-4/288; Halder, *Diaries*, 1397 (28 Jan.-2 Feb. 1942).

Army—since 17 January Colonel Julius von Bernuth⁶⁵⁰—remarked to Halder that theoretically one could say that Fourth Army was lost, but it still had the will to keep fighting. The important thing was to reduce the salient somewhat but to hold the road between Yukhnov and Gzhatsk at all costs.⁶⁵¹

On 3 February the situation was improved and a continuous front restored by the closing of the gap between Fourth Army and XX Army Corps of Fourth Armoured Army.

The most prominent feature of this phase of the winter battle of Fourth Army—more than was true of the other armies of Army Group Centre in comparable situations—was the necessity not only to defend itself on pocket-like front sectors in all directions, but, at the same time, also to master new dangers to supply-lines and strong points in its rear area. The first major airborne operation of the Red Army had created a situation that could certainly not be dealt with by the remaining security forces alone.⁶⁵²

The enemy forces identified on 12 February behind Fourth Armoured Army in the area of Vyazma, and especially along the railway line from Vyazma westward, may not have been able to mount any major independent operations, but fighting them was difficult. Recruitment from the local population led to strong concentrations, especially in the area of Bryansk. Intelligence indicated, however, that although the regular units concerned themselves with the organization and training of the partisans, in some cases they rejected their attempts to join the Red Army. On 21 January Fourth Army reacted to this situation by ordering the immediate strengthening of the defences of all supply installations and transport centres, and the detention and imprisonment of all male residents between 16 and 50 years of age. They were to be released after the area had been pacified.⁶⁵³ In addition to fighting units in the rear area, which were combined in March under the commander of Rear Army Area Centre to form a 'Group Schenckendorff' (parts of 10th and 11th Armoured

⁶⁵⁰ His predecessor, Maj.-Gen. Günther Blumentritt, took over the position of deputy chief of Army General Staff for operations from Lt.-Gen. Paulus.

⁶⁵¹ Heinrici's report can be inferred from the records of the conference between Kluge and Heinrici, 31 Jan. 1942, BA-MA RH 20-4/288, fo. 110. Evidently he wanted to evacuate the entire salient, which would have ruled out any prospect of closing the gap at Medyn and establishing contact with Fourth Arm'd. Army. The dissenting opinion of a chief of the general staff in a crisis can seldom be documented so clearly: *ibid.*, 1 Feb. 1942, fos. 134-5; conversation between Bernuth and Halder, *ibid.* fo. 135; Halder, *Diaries*, 1396 (31 Jan. 1942). Heinrici wanted, in agreement with Kluge, to withdraw behind the Ugra. Cf. Reinhardt, *Moskau*, 251-2, with additional sources.

⁶⁵² First indications of a Soviet concentration of transport aircraft for airborne and paratroop operations on 13 Jan. 1942: AOK 4/1a, KTB, 13 Jan. 1942, BA-MA RH 20-4/281, with confirmed annexe *ibid.* in 286, Reinhardt, 'Luftlandungen'. On similar operations in the sector of Army Group North and at Demyansk cf. sect. II.1.1(g) at n. 698.

⁶⁵³ Report 537th Army Signal Reg., 23 Jan. 1942, BA-MA RH 20-4/287, fo. 108. According to this report, the staff of the partisans in Mitkino called itself the 'staff of the Soviet Twenty-third Army'. Elements of Soviet 6th Inf. Div., 5th Cavalry Div., and 6th Airborne Brg. were identified in the rear area of Fourth Arm'd. Army. The order of Fourth Army headquarters of 21 Jan. was limited to the combat area up to 10 km. behind the front on 23 Jan. 1941 and to the 'area in and north of the forest of Bogorodiskaya occupied by paratroops and partisans': *ibid.*, fos. 76, 107.

Divisions still in fighting condition, the staff of 221st Division with troops), mounted detachments and the already approved 'native' security forces were organized.⁶⁵⁴

As, in addition to the usually young civilians, escaped prisoners of war were to be found among the recruited partisans, Fourth Army headquarters issued a directive to the troops on the treatment of prisoners taken in the rear area. All 'newly conscripted soldiers and civilians, former Red Army soldiers, and regular soldiers fighting in organized units' were to be treated in principle as prisoners and sent to prisoner collection-points 'in order to neutralize the propaganda of the commissars and *politruks* and make the fighting easier for our troops'. Persons suspected of being partisans were to be turned over for interrogation to Field Security Police 750, its special unit with XII Army Corps, or Rear Area Command 559. Individual partisans or partisan groups 'caught carrying out acts of sabotage or other hostile actions directed against the German Wehrmacht' and 'Red Army soldiers in German uniforms' were 'to be shot on the command of an officer'.⁶⁵⁵

In spite of the heavy and costly defensive fighting in which Army Group Centre was involved, on 2 February the chief of the Army General Staff believed that with the incipient restoration of a continuous front—the closing of the gaps near Rzhev and Medyn—the most dangerous phase of the winter campaign was coming to an end. He regarded the dispatch of strong Soviet units to the rear area of Ninth Army as a degeneration of the war 'into a sort of slugging bout' that would not produce any military decision.⁶⁵⁶

On 12 February guidelines for a new assignment of missions were issued in the 'Directive for the conduct of the fighting in the east after the end of winter'.⁶⁵⁷

(iv) WINTER FIGHTING IN THE AREA OF ARMY GROUP NORTH
UNTIL THE RE-ESTABLISHMENT OF A SOLID FRONT

After the evacuation of Tikhvin and the withdrawal of the right wing of Eighteenth Army behind the Volkhov—the bridgeheads Grusiny and Kirishi were still held—Army Group North expected that the Red Army would attempt to break the encirclement of Leningrad with an energetic thrust to crush the 'bottleneck' at Shlisselburg. With the establishing of an 'ice road'

⁶⁵⁴ On 11 Feb. Hitler had forbidden any further creation of Ukrainian or Baltic field combat units (OKH/GenStdH/Org.Abt. (II) No. 736/42, 29 Mar. 1942, BA-MA RH 20-4/302). On 15 Mar. 1942, however, Fourth Army headquarters stated that only 'already initiated recruitments' would be carried out. This amounted to permission for the direct use of prisoners of war and other sections of the native population. Exact figures for the number with the German forces cannot be determined, as they were to be subtracted from reports on combat and supply strength. Cf. Gen.Kdo. XXXXIII. AK/IIa No. 130/42, 26 Jan. 1942, BA-MA RH 20-4/288, fo. 156 and elsewhere in this file. The shooting of exhausted prisoners was expressly forbidden. Cf. *ibid.*, fos. 225-7.

⁶⁵⁵ BA-MA RH 20-4/296. This was in line with the regulation of 18 July 1941. Cf. sect. II.1.1(b) at n. 178.

⁶⁵⁶ Halder, *Diaries*, 1397 (2 Feb. 1942).

⁶⁵⁷ Cf. sect. II.1.1(g) at n. 738.

across frozen Lake Ladoga the necessary strengthening of Soviet forces in Leningrad seemed quite possible. For this reason, on 23 December 1941 Field Marshal Ritter von Leeb considered abandoning the 'bottleneck' in order to free 227th Infantry Division for the strengthening of other sectors of the front.⁶⁵⁸

However, more likely than a thrust from Leningrad was an attack against the Volkhov front in the area of the boundary between Sixteenth and Eighteenth Armies with Chudovo and then a turn to the north as its objective. A third wedge of the attack was expected to be directed at the area around Staraya Russa south of Lake Ilmen. Another probable attack, between Rzhev and Ostashkov with the objective of cutting off II and X Army Corps, was not assumed to be imminent. The intention of the enemy units identified on the southern boundary of the army group seemed rather to be the encirclement of Ninth Army in the north. The covering forces were accordingly thin in the area around Peno, where, against Leeb's wishes, the Army High Command had sent a regiment of the newly arrived 81st Infantry Division as a reserve.

After the costly battles and heavy losses from frostbite, and in view of the low number of new units brought up—three divisions (81st, 225th, and 218th Infantry Divisions), several regiments and battalions of the army, the Waffen-SS, the Luftwaffe, and the police—the commander-in-chief of Army Group North was certain that his forces would not be able to repel a major Soviet attack.

In the north too the guiding principle of the German defence was the order to hold existing lines and strong points. The order to hold the strong points, regardless of whether or not the defenders believed they had been bypassed, and the ban on any operational evacuation without Hitler's permission were issued with the promise to close the larger gaps in the front with fresh divisions from Germany or western Europe. The strengthening of air support by the Luftwaffe and the declining fighting power of the enemy in the middle of winter would bring his attacks to a standstill. 'Until then hold every village, do not retreat a step, fight to the last bullet and shell—that is what the situation demands now.'⁶⁵⁹

The most important requirement for this form of combat was the bringing up of new units and sufficient replacements. That was all the more necessary as with the arrival of hard frost the swamps, previously almost impassable, had to be included and occupied in any defence. The army group had to resort to shifting individual units, bringing rear-area personnel up to the front, and to the conversion of 8th and 12th Armoured Divisions, already withdrawn for rehabilitation, into three construction battalions each under their divisional

⁶⁵⁸ Leeb, *Tagebuchaufzeichnungen*, 422. After the Soviet forces in Oranienbaum had been strengthened by the troops evacuated from Hanko, the command of Army Group North expected the establishment of a link with Leningrad.

⁶⁵⁹ Führerbefehl betr. Lage und Kampfführung im Osten [Führer order concerning situation and conduct of operations in the east], 1 Jan. 1942, EA-MA, 16. Armee, 23468/8.

commander. At the same time these battalions were employed as security forces in the rear of I and XXVIII Army Corps. As the last significant 'mobile' unit, the army group placed parts of 20th Motorized Infantry Division behind the army boundary near the mouth of the Tigoda river. At the same time an alternative position was reconnoitred west of the Volkhov.

The bulk of 81st Infantry Division was assembled in the area of Chudovo to counter the expected main effort of the attack at the mouth of the Tigoda. The urgently requested 225th Infantry Division from France was still in Liepaja port. In order to have at least parts of it available in time, the army group demanded that the division should be airlifted to the front via Danzig by the Luftwaffe.

On 1 January the fighting along the salient on the Volkhov between Gruziny and Malukssa reached its first climax. The army group planned to hold the 'Tigoda corner' with all available reserves and strong air support. Because of the extreme cold, -40°C , counter-attacks were considered futile.⁶⁶⁰ On 4 January Leeb concluded that enemy attempts to overrun the defences on the Volkhov had failed, but he expected further large-scale attacks. It remained to be seen whether their objective would be Leningrad or the elimination of the 'bottleneck'. Once the bay of Kronshadt had frozen over, he did not rule out the possibility of a Soviet attack against the left wing of the German forces besieging Oranienbaum.

On 8 January 1942 the expected strong enemy attack against Staraya Russa began south of Lake Ilmen; at the same time an additional thrust was taking shape south of Ostashkov, which the army group interpreted as an attempt to cut off the two southern corps of Sixteenth Army. The defensive positions around Staraya Russa were regarded as sufficiently strong to protect that important supply-point. On the southern wing, however, the enemy succeeded in penetrating the front of 123rd Infantry Division. Sixteenth Army headquarters thereupon ordered II Army Corps immediately to transfer there all non-essential elements of 12th and 32nd Infantry Divisions, which were west of Lake Velye and had not yet taken part in the fighting.⁶⁶¹

After this enemy penetration, the army had to expect that supplies from Staraya Russa for II Army Corps would be cut off, and therefore prepared to transfer such operations to Kholm and the railhead of Loknya. From there the corps was to be supplied by motorized transport. Once the enemy had made numerous penetrations of the position of 123rd Infantry Division and cut the supply-route south of Staraya Russa, Field Marshal von Leeb saw no purpose in trying to hold the position. On 10 January he had no choice but to withdraw II and X Corps to the Lovat. This action also offered the best possibility of freeing forces for the Volkhov sector.⁶⁶²

⁶⁶⁰ H.Gr. Nord/1a, KTB, *passim*, BA-MA RH 19 III/178; Leeb, *Tagebuchaufzeichnungen*, 427 ff. (1-3 Jan. 1942).

⁶⁶¹ H.Gr. Nord/1a, KTB, 9 Jan. 1942, BA-MA RH 19 III/178; AOK 16/1a, situation assessment, 9 Jan. 1942, BA-MA, 16. Armee, 23468/19.

⁶⁶² Together with this situation assessment, Leeb considered sending a letter of resignation and presumably discussed it with Halder: Leeb, *Tagebuchaufzeichnungen*, 432 (9, 10 Jan. 1942): H.Gr.

The commander-in-chief of Sixteenth Army, however, still saw no tactical need for a withdrawal, but he conceded that for supply reasons, even after the transfer to Kholm and Loknya, such a decision would have to be taken under certain circumstances, though this would result in a significant loss of fighting power.⁶⁶³

On the morning of 12 January Leeb reported this situation to Halder. At the same time he added that it was not to be expected that the front could be held against the imminent enemy attack on the Volkhov and that therefore a phased removal of XXXIX Armoured Corps via Lyuban-Tosno to the west, starting on the right wing, should be prepared.

The report of enemy penetrations between Lake Ilmen and Staraya Russa and the temporary disruption of communications to the south caused Hitler to issue an immediate order to restore the situation by offensive action. X Army Corps was to hold the line to the western shore of Lake Velye.

After this first decision, which was transmitted by Keitel and envisaged the withdrawal of forces from the southern front of Sixteenth Army for the purpose of an attack, the army group ordered the army to prepare to establish a new defensive front east of Molvotitsy, i.e. the withdrawal of II Army Corps on its southern front.

In a lengthy conversation Leeb explained to Hitler the need to withdraw II Army Corps. Staraya Russa could be considered secure. Hitler reminded Leeb of the situation on the front as a whole and stated that he could not accept a wide gap in the direction of Ninth Army. Therefore a second blocking-position was to be established along the railway line. Leeb's feelings were evident from the fact that, shortly after this conversation, he asked the commander-in-chief of Eighteenth Army, Colonel-General von Kuchler, to make plans in case 'far-reaching decisions' had to be taken, i.e. a withdrawal of the parts of the army facing Leningrad in the event of an enemy breakthrough on the Volkhov front.⁶⁶⁴ Fear of a collapse of the central section of his eastern front dominated Leeb's thoughts far more than the situation on his southern front.

The army group was promised an assault-gun battalion and the reinforcement of Air Fleet 1 with a dive-bomber Gruppe. Moreover, available tanks were ordered to be repaired immediately for use behind the front in the event of enemy breakthroughs. The bringing up of 218th Infantry Division was accelerated.

The basic difference between Hitler's plan, which envisaged the holding of

Nord/1a, KTB, 10 Jan. 1942, BA-MA RH 19 III/178. Leeb's basic idea was that the Red Army wanted to open the ring around Leningrad from the south and that all defensive forces should therefore be concentrated on the Volkhov.

⁶⁶³ The differences in the assessment of the situation by the two C.-in-C.s stem from Leeb's above-mentioned report. On 11 Jan. 1942 at 12.50 p.m. the general-staff officer in charge of supply and administration ordered the immediate rerouting of supplies for the southern wing of Sixteenth Army via Kholm: H.Gr. Nord/1a, KTB, 10, 11 Jan. 1942, BA-MA RH 19 III/178.

⁶⁶⁴ Ibid., 12, 13 Jan. 1942; Leeb, *Tagebuchaufzeichnungen*, 432 ff. He probably also suggested a possible successor.

the area around Demyansk as a base for future operations, and Leeb's purely defensive thinking persisted even after their personal conversation on 13 January. Leeb requested to be relieved of his post, and Hitler granted his request on 17 January. The commander-in-chief of Eighteenth Army, Colonel-General von K  chler, became the new commander-in-chief of Army Group North. The chief of staff, Lieutenant-General Brennecke, was also relieved and replaced by Colonel Wilhelm Hasse. The new commander-in-chief of Eighteenth Army was General Georg Lindemann.

The enemy attacks to isolate II Army Corps continued on 15 January. By then the commander-in-chief of Sixteenth Army also came to the conclusion that a withdrawal of the corps behind the Lovat was the only chance of saving it.⁶⁶⁵

On 16 January the chief of the Army General Staff, whose main anxiety at this time was the situation of Army Group Centre, whose left flank he believed would be even more endangered by a withdrawal of II Corps, objected to the 'negative direction' and the 'operations mania' in the staff of Army Group North. The group had been given an explicit order not to withdraw. The top leadership would accept responsibility. Accordingly, Hitler forbade a withdrawal of II Army Corps in an order of 16 January.⁶⁶⁶ As a means of stabilizing the situation on the Volkhov he suggested forces from the Leningrad sector, whose withdrawal from that front seemed acceptable, since the enemy was also reducing his forces there.

Thus the decision was taken in the southern sector of Army Group North, and any withdrawal, though called for by tactical and supply reasons, was forbidden. Nevertheless, a number of good reasons can be presented for maintaining the course of the front of Sixteenth Army in this sector. Firstly, the situation on the northern wing of Army Group Centre at this time was so precarious that any action which would have freed significant Soviet forces on the Kalinin front would quickly have made an encirclement inevitable. The intention of Sixteenth Army to retreat slowly and with delaying actions could scarcely have been realized. The German troops occupied more or less fortified positions and still had most of their heavy equipment and artillery. Reports on mobility and starving horses leave no doubt that little more than infantry weapons could have been brought back if the intention of the enemy units in the gap in the direction of Ninth Army was—and Leeb was certain of this—to attack vigorously from the south through the Lovat valley.

For Hitler, and also for Halder, the decisive factor—in addition to the situation of Ninth Army, the simultaneous order to Army Group Centre to hold its front, and operational plans for 1942—was very probably the need to demonstrate 'strong nerves'. On 8 January he had explained that the Soviet

⁶⁶⁵ H.Gr. Nord/Ia, KTB, 15 Jan. 1942, BA-MA RH 19 III/178. Leeb informed Keitel orally. He was so impressed by the Soviet attack on the Volkhov front that he believed 'great decisions' were imminent.

⁶⁶⁶ H.Gr. Nord/Ia, KTB, 16 Jan. 1942; Leeb, *Tagebuchaufzeichnungen*, 439 (16 Jan. 1942).

conduct of the fighting assumed an operational sensitivity on the German side from which the Soviet command was not suffering. The Soviet intention, according to Hitler, was to drive the German troops out of their strong positions and thus deprive them of their immobile heavy weapons. As this attack was not being carried out by units that could be considered of the highest calibre, strong nerves would be decisive.⁶⁶⁷ The only possibility for the Germans was therefore 'to resist as strongly as possible—on principle'. A unit was entitled to retreat only when, for lack of ammunition or supplies, it was no longer able to harm the enemy. 'The command of any formation can speak of the necessity of a withdrawal of large units only when it believes that only thus can it avoid certain annihilation.' None of these conditions applied to the southern wing of Sixteenth Army.

The new commander-in-chief of the army group had himself briefed by the commander-in-chief of Sixteenth Army on 18 January and, rejecting the latter's reasons for the necessity of a withdrawal, referred to the fate of Napoleon's army, which had been destroyed by enemy forces attacking from the surrounding countryside during its retreat. But there was no time now for theoretical discussions about a well-prepared withdrawal accompanied by various delaying actions. The same day Kuchler ordered the transfer of XXXIX Armoured Corps command to the right wing of the army group with orders to secure the southern flank from Kholm up to the boundary with II Army Corps.⁶⁶⁸

But on 27 January, even before the command arrived there, the city had already fallen. Of the parts of 218th Infantry Division ordered there only the commander, Major-General Theodor Scherer, and his staff had reached Kholm. The troops consisted of four companies of police, three companies of infantry, some smaller parts of 385th Infantry Regiment, the baggage-train, and rear area services, with a total of about 3,500 men. Attempts to provide immediate relief were unsuccessful.

Ever since 14 January General Graf von Brockdorff-Ahlefeldt, commanding general of II Army Corps, whose fronts were extended by the incipient encirclement, had been demanding reinforcements and more supplies.⁶⁶⁹ As a first unit a regimental group was airlifted to Demyansk from Riga. On 18

⁶⁶⁷ Extract from Hitler's order by H. Gr. Nord/1a No. 2/42 in BA-MA, 16. Armee, 23468/8. The data underlying this order, based on assessments of the enemy's situation by Foreign Armies East, can be easily proved, but a considerable number of C.-in-C.s did not accept Hitler's conclusions, e.g. Guderian, Hoepner, and Leeb. For those commanders who could not escape the conflict between the duties of command and the welfare of their troops by resigning their posts or reporting sick, the situation became tragic. The most obvious example was Gen. Walter Graf von Brockdorff-Ahlefeldt, who urged the withdrawal of his corps and very reluctantly became the 'hero of Demyansk'.

⁶⁶⁸ Röhricht, *Kesselschlacht*, example xii, pp. 131 ff.; popular account in Haupt, *Demjansk*, 36 ff.; Müller-Hillebrand, *Nordabschnitt*, pt. II, 245 ff., MGFA P-114a; order AOK 16/1a No. 330/42 to Gen.Kdo. XXXIX. Pz.Korps, 22 Jan. 1942: BA-MA, 16. Armee, 23468/6. As late as 20 Jan. 1942 the army headquarters, like Halder, had considered the situation at Kholm not to be dangerous: H.Gr. Nord/1a, KTB, BA-MA RH 19 III/178.

⁶⁶⁹ AOK 16/1a, KTB, 14 Jan. 1942 and following days, BA-MA, 16. Armee, 23468/11.

January the corps reported that the condition of the troops and the lack of sufficient supplies and fuel made it impossible to hold their position for more than a few days; the report was accompanied by a request that it be forwarded to the Army High Command. Moreover, the following day the corps requested the sending of a more senior general-staff officer of the Army High Command—a sign of its limited confidence in its immediate superior.⁶⁷⁰

On 23 January the commander-in-chief of the army stated clearly that he expected the corps not only to hold the front lines but also to form reserves to halt enemy penetrations. In contrast, the commanding general of the corps was of the opinion that there were only two alternatives: either to eliminate the breakthrough on the right flank by attacks or to pull the entire front back. On 26 January he again pointed out that 190 kilometres of front could not be defended with his available equipment and forces. On 27 January, after acknowledging the problems, Halder expressed his criticism of this attitude to the chief of the general staff of Army Group North. He confirmed the intention, which required the holding of the front of II Corps, to close the gap in the direction of Ninth Army at a later date, starting from there, and demanded obedience from the commanding general of the corps. Agreement between himself, Hasse, and the commander-in-chief of the army group was crucial. Hasse defended the use of the few forces of the corps and Sixteenth Army, which had to defend its eastern front and could not always expose sectors as Halder desired so as to create groups at points of main effort.⁶⁷¹ For Halder the central problem of the situation south of Lake Ilmen was the securing of Staraya Russa as a supply-base; after the solution of this question everything else was to be regarded as settled.⁶⁷² The army group itself considered the town to be already adequately secured, and it did in fact remain in German hands. The attacks by the Soviet Eleventh Army were directed towards the south and aimed at encircling the two German corps around Demyansk and at recapturing Kholm.⁶⁷³

At the same time the situation north of Lake Ilmen was dominated by the identified grouping of the Soviet Second Assault Army and Fifty-second Army for an attack across the Volkhov against German communications in the direction of Leningrad. On 13 January these units attacked on a narrow front

⁶⁷⁰ On 24 Jan. 1942 Halder dispatched Lt.-Col. Graf zu Eulenburg to report on the boundary between Army Groups Centre and North: Halder, *Diaries*, 1394 (27 Jan. 1942).

⁶⁷¹ H.Gr. Nord/Ia, 23, 26, 27 Jan. 1942, BA-MA RH 19 III/178. Halder referred to the report by Eulenburg and Brockdorff-Ahlefeldt as the cause of 'irritation' regarding agreement between himself, Küchler, and Hasse.

⁶⁷² On 28 Jan. (*ibid.*) Halder's clearly perceptible criticism caused Hasse to discuss the matter with Heusinger later and again argue his point that the Soviet Third Assault Army was aiming at Kholm and the Lovat, and that it was therefore necessary to strengthen defences in the sector of II Army Corps. Halder, on the other hand, saw this Soviet army only as a danger to Ninth Army.

⁶⁷³ The importance of Kholm as a transport centre on the only all-weather north-south road between Staraya Russa and Toropets justified the numerous attacks by the Soviet army as well as its extensive and costly defence. The thrusts under the command of XXXIX Armd. Corps to free the road to Kholm had the character only of an assault party and achieved a single delivery of assault-guns.

after a heavy artillery barrage. Following a successful penetration at Myasnoy Bor, the spearheads of the attack reached the railway line between Novgorod and Chudovo.

To the north, in the area of the Tigoda debouchment into the Volkhov and near Pogostye, enemy offensives began the following day; with the exception of the loss of a front sector near Pogostye, these were repelled.⁶⁷⁴ The two thrusts clearly revealed the enemy's intention to encircle the German units west of the Volkhov and, after destroying them, to push on to Leningrad. The thrust Leeb expected from the area of Oranienbaum was limited to an attack with armoured support against 217th Infantry Division on the left wing; the attack was thrown back. In consequence, large parts of three divisions could be taken out of the encirclement front facing Leningrad and moved to the threatened Volkhov front in order to contain the enemy penetration. The Luftwaffe provided regiments and battalions for use as infantry units; army troops, security units, and other armed personnel were sent to the front from the rear area, in addition to the Spanish (250th) Infantry Division, the Dutch Legion, and the Norwegian battalion of the Waffen-SS. Guard-duty and escort battalions were brought in by air. An extremely heterogeneous fighting force was assembled, to which Halder contributed a Walküre division (329th Infantry Division).

At the end of January 1942 Army Group North was under such pressure that it reported it would be able to defend its front only if it received more divisions in the immediate future. Attempts of blockade by Eighteenth Army at the beginning of February succeeded only with considerable effort in limiting the further fanning out of enemy forces west of the Volkhov. More units than the 'combat groups' mentioned were not available.⁶⁷⁵

At the beginning of February the lack of fighting power and differences of opinion about the necessary manning of the front led to serious disputes between the commander-in-chief of the army group and the commander-in-chief of Sixteenth Army; these had to be settled by Hitler himself. They had already arisen in January on the issue of which reserves were to be taken out of the front of the corps in the area around Demyansk so as to repel unexpected enemy penetrations. The strain increased perceptibly, as did signs that 'strong nerves' were necessary not just when facing the enemy.⁶⁷⁶

All attempts west of Demyansk to prevent a link-up of the enemy groups

⁶⁷⁴ The assessment of the situation of the enemy showed the Soviet Fifty-second Army, Second Assault Army, and XIII Army Corps with a total of 20 units: H.Gr. Nord/Ia, KTB, BA-MA RH 19 III/179, and operations atlas of the army group, *ibid.* 661D.

⁶⁷⁵ AOK 16/Ia, KTB, 1-28 Feb. 1942, BA-MA, 16. Armee, 23 468/3; army group order, 1 Feb. 1942: H.Gr. Nord/Ia, KTB, 2 Feb. 1942, BA-MA RH 19 III/179.

⁶⁷⁶ BA-MA RH 19 III/179 and AOK 16/Ia, BA-MA, 16. Armee, 23 468/3; Halder, *Diaries*, 1397-8 (2, 3 Feb. 1942). Küchler demanded that Busch take strong measures with II Army Corps. Busch considered such reproaches 'not acceptable', but ordered the corps immediately to pull a battalion out of the line and place it under its western front ('Group Eicke'). Küchler then demanded that Busch be relieved of his command, but because of Hitler's mediation this was not done. Halder and Keitel unequivocally supported Küchler's point of view.

approaching from the north and south were unsuccessful. After land contact between Staraya Russa and II Army Corps had been cut on 8 February, Sixteenth Army command attempted to re-establish contact with 290th Infantry Division on the north-western front of the pocket the following day, using the first regiments of 5th Light Infantry Division to arrive, but this unsuccessful effort produced only heavy losses. The encircled divisions of II and X Army Corps in Demyansk had supplies sufficient to last them until 13 February; thereafter a secure corridor would have to be established or else the corps would have to be supplied by air. The third possibility—to retreat to the Lovat—was no longer open, and not only because of Hitler's orders. The enemy forces there were so strong that 5th Light Division had to be drawn upon to check an attack on Staraya Russa on 15 February. The second thrust envisaged with this division against the western front of the Demyansk pocket was not carried out.⁶⁷⁷ The six divisions in this area of about 3,000 square kilometres prepared to defend themselves against attacks from all directions.

In view of the enemy's strength and the heavy losses suffered in the first attempt, the general commanding X Army Corps did not consider a renewed relief effort possible until all parts of 5th Light Division had been assembled. As that was scheduled only for 19 February and as by then the situation of 290th Infantry Division would become increasingly exposed, he requested its withdrawal behind the railway line but did not receive Küchler's agreement.⁶⁷⁸ The only assistance immediately available would be intensified Luftwaffe attacks on the Soviet First Assault Army.

Hitler thereupon intervened in the deliberations and advocated a repetition of the attack after the arrival of the entire 5th Light Division.⁶⁷⁹ Generally, however, infantry attacks without adequate armoured or air support had no prospects of success. The northern part of the forest zone east of Staraya Russa therefore had to be subjected to several days of concentrated attacks by the Luftwaffe in order to eliminate the threat to the flanks posed by the attack from the north. But such attacks, especially with the limited forces available, could not achieve the effect of days of massed artillery bombardment, as Hitler had perhaps imagined. The army group command was perfectly aware of this and therefore, like Halder, initially interpreted Hitler's 'suggestion' as permission to use Air Fleet 1 as it saw fit. Only gradually did the second, much more alarming, aspect of that suggestion become evident, when it was put in the form of an order on 4 March.⁶⁸⁰ All attacks by army units now had to be

⁶⁷⁷ This division had been reorganized from 5th Inf. Div., which had been pulled out of the front facing Moscow, as had 8th Lgt. Div., which was later brought up. Cf., however, Reinhardt, *Moskau*, 82. There can be no question of these divisions having been pulled out because victory was considered a certainty; they were exhausted.

⁶⁷⁸ H.Gr. Nord/Ia, KTB, 10 Feb. 1942, BA-MA RH 19 III/179; reports of X Army Corps to Army Group North: BA-MA, 16. Armee, 23468/11.

⁶⁷⁹ H.Gr. Nord/Ia, KTB, 10 Feb. 1942; the commanding general of the corps had demanded that the danger should be reported 'to the highest decision-making authority'.

⁶⁸⁰ Message from Halder to Army Group North, 10 Feb. 1942, H.Gr. Nord/Ia, KTB, BA-MA RH 19 III/179; OKH/GenStdH/Op.Abt. (IN) No. 420088/42, 4 Mar. 1942, BA-MA RH 19 III/707; confirmation by Hitler: H.Gr. Nord/Ia No. 1009/42, 22 Mar. 1942, BA-MA 16. Armee, 23468/8.

postponed until the Luftwaffe was able to provide adequate support. This made operationally or tactically necessary measures dependent on weather conditions and technical factors involved in air support, and it encouraged a tendency not to carry out attacks without air support or to shift responsibility for the necessary decisions to the Luftwaffe. The effect this had on the maintenance of schedules for attacks is obvious.

How strongly Hitler again believed that, in spite of the condition of the army, he could take advantage of new 'opportunities' was shown by his reaction to reports from Foreign Armies East that the Red Army was now able to mass strong concentrations of troops on the Volkhov front and at Staraya Russa by withdrawing units from more distant front sectors, e.g. from the Leningrad area. Hitler concluded that the defences of the city could now be overrun by a shock troop assault. Only with some effort was the army group command able to make him understand that neither was sufficient ammunition available for such an assault, nor could a position be established in front of the outer encirclement ring that could be held when the spring thaw set in. Moreover, the army group command pointed out, it was now too late—a clear reminder of the failure to create a point of main effort during the summer.⁶⁸¹

As late as 11 February the army group command and Sixteenth Army headquarters were uncertain whether the enemy planned to encircle Staraya Russa from the south after penetrating the Lovat valley or intended instead to turn east and encircle the German forces around Demyansk. The chief of staff of the army group considered the second possibility to be 'not so bad' because it would allow the massing of German troops at Staraya Russa to proceed undisturbed. The chief of staff of Sixteenth Army, on the other hand, saw a great danger to 290th Infantry Division, whose supply-dump had burnt out the day before. Hitler, however, rejected a new request to withdraw the division as the Luftwaffe had promised delivery of adequate supplies.⁶⁸²

The decision about freeing the two army corps in the pocket had to be based on the assumption that the forces of 5th Light Division so far available were not sufficient, and that 290th Infantry Division in the extreme north-west of the pocket, nearest to a relief thrust from Staraya Russa, had after all to be pulled back. This greatly increased the distance and necessitated a change in the direction of a new thrust—no longer from Staraya Russa eastwards, but

Leeb's comment. Cf. also Bock, *Tagebuch*, 21 Mar. 1942, BA-MA N 22/13; here the fallacy is revealed particularly clearly in the case of the Crimea.

⁶⁸¹ H.Gr. Nord/Ia, KTB, 9–11 Feb. 1942, BA-MA RH 19 III/179, shows that Hitler expected a 'positive foreign-policy effect on Finland'. Halder too seems not to have excluded the possibility that the Soviet Leningrad front could collapse 'like a house of cards'. This view was one reason for the continued recourse to the German units there; by then these would scarcely have been able to withstand a sally by the Soviet troops.

⁶⁸² Sixteenth Army learnt of this rejection on 11 Feb. through the chief of staff of the air fleet when he requested data for supply flights: BA-MA, 16. Armee, 23468/3; message on Hitler's rejection by head of operations department to chief of staff of Army Group North according to teletype message H.Gr. Nord/Ia to AOK 16 No. 374/42, BA-MA, 16. Armee, 23468/11; Halder, *Diaries*, 1401–2 (11 Feb. 1942).

southwards in the direction of the 'Group Eicke' on the western edge of the pocket. This last solution ran counter to Halder's intentions; he objected to such a 'makeshift solution' and insisted that 290th Division should hold its positions. On 13 February Hitler accepted this view, which in any case was in line with his basically still valid order.⁶⁶³

In order to assemble the relief group and prepare the air strikes, the attack envisaged for 14 February was postponed to the 18th or 19th of the month, which meant that 290th Infantry Division would be forced to hold its positions, although this was no longer possible given its situation as a whole and the enemy pressure to which it was exposed. Hasse remarked to Heusinger: 'There are certain limits. Anything beyond them is against reason and in the final analysis incompatible with discipline.' He had to accept responsibility for the orders he issued, and that required knowing that they could be carried out. He also emphatically defended his point of view to Halder.⁶⁶⁴

Airborne supply deliveries for the two 'fortresses' Demyansk and Kholm now began. On 17 February Hitler expressed his determination to have II Army Corps hold out and promised Army Group North additional forces.⁶⁶⁵ The battalions to be flown in immediately were, however, intended to make the SS Police Division and other units from the Leningrad front available for the Volkhov pocket.

On 18 February, at a major oral situation report by the commanders-in-chief of Army Groups North and Centre, in the presence of the chiefs of the Army and Luftwaffe General Staffs, Hitler made new decisions.⁶⁶⁶ In his first survey of the situation he assumed that the danger of a panic like that of 1812, which had seemed imminent in November 1941, had been overcome. The situation of Army Group South was stable, and a basis for future operations had even been created there. In the sector of Army Group Centre there was still some uncertainty, but the measures taken there promised to stabilize the situation soon. At Rzhev the encirclement of large enemy forces was preparing the ground for a success. Hitler accepted the judgement of Army Group North that the Soviet operations in that sector had only one great objective—to raise the siege of Leningrad. For military and political reasons that had to be prevented.⁶⁶⁷ (See the Annexe Volume, No. 21.)

⁶⁶³ The same view was held by the chief of staff of Army Group North in KTB, 13 Feb. 1942: BA-MA RH 19 III/179; Halder, *Diaries*, 1403 (13 Feb. 1942). But cf. draft AOK 16, 12 Feb. 1942, BA-MA, 16. Armee, 32468/3.

⁶⁶⁴ H.Gr. Nord/Ia, KTB, 15 Feb. 1942, BA-MA RH 19 III/179.

⁶⁶⁵ For this purpose 337 transport aircraft were to be made available; the additional forces included 5 police battalions, 1 battalion of the Leibstandarte, and the Norwegian Legion of the Waffen-SS. These units, however, because of their short training period, were not envisaged for immediate duty at the front; 8th Lgt. Div. was promised the following day: Halder, *Diaries*, 1405 (17, 18 Feb. 1942); H.Gr. Nord/Ia, KTB, for those days, BA-MA RH 19 III/179.

⁶⁶⁶ H.Gr. Nord/Ia, KTB, 18 Feb. 1942, BA-MA RH 19 III/179; Halder, *Diaries*, 1405 (18 Feb. 1942).

⁶⁶⁷ Hitler was alluding to the danger of an Anglo-American landing in the far north, which he considered to be very great.

In addition to the need to eliminate the enemy penetration on the Volkhov front, Hitler emphasized his intention to close the gap between Army Groups Centre and North by an attack from the area of Ostashkov. After being promised two additional divisions, Army Group Centre agreed that such an operation was feasible, while the commander-in-chief of Army Group North expressed himself more cautiously: first it was necessary to await the result of the operation south of Lake Ilmen. Hitler agreed with the measures taken there and placed 329th Infantry Division and 8th Light Division at the disposal of the army group.

Küchler obtained approval for a withdrawal of 290th Infantry Division. That this entailed a new direction of attack and would require an increase in the strength of the relief group was, however, not discussed.⁶⁸⁸

The situation in Kholm became especially critical on 19 February. There Major-General Scherer urgently requested replacements and the immediate dispatch of a company of paratroops, as otherwise the position could be held only for a very short time.⁶⁸⁹

The operations department of the Army General Staff now decided to co-ordinate all plans of attack by Army Group North in such a way that the divisions made available from the Leningrad front were to be used first against the Volkhov pocket and subsequently in part against Demyansk. There, on 22 February under enemy pressure, II Army Corps had to carry out a further straightening of its front.⁶⁹⁰ Generally speaking, Army Group North was still unable to work out a definitive schedule for the removal of battle-worthy units from the Leningrad front or the time required for the envisaged operations. On 23 February Hitler decided that the attack against the Demyansk pocket should not take place until after the arrival of 8th Light Division, i.e. in the middle of March at the earliest, dangerously close to the beginning of the spring thaw.⁶⁹¹

On 24 February the commander-in-chief of Army Group North described for Hitler the basic problems of the offensives yet to be launched. He concluded that, because of the dependence on good weather, the actions of the enemy, and air support, the forces for the two operations should be completely separated.⁶⁹² In specific terms this meant that the two divisions to be removed from the Leningrad front for the Volkhov offensive should be kept ready

⁶⁸⁸ In fact only 5th Lgt. Div. was mentioned. Küchler's report was submitted to the Army High Command and sent to the army headquarters: *Gedanken über die Lage und die Fortsetzung der Verteidigung* [Thoughts on the situation and the continuation of defence], 18 Feb. 1942, BA-MA, 16. Armee, 23468/5.

⁶⁸⁹ Army Group North reported this to the Army High Command; Halder learnt that such forces were no longer available: H.Gr. Nord/Ia, KTB, 19 Feb. 1942, BA-MA RH 19 III/179.

⁶⁹⁰ Hitler approved all requests, including the transfer of a Luftwaffe battalion to Demyansk: *ibid.*, 22 Feb. 1942.

⁶⁹¹ Hitler demanded a report on envisaged attacks, the forces to be used, the timing, and the schedule for the entire army group area by 24 Feb.: *ibid.*, 23 Feb. 1942.

⁶⁹² H.Gr. Nord/Ia, No. 470/42, 24 Feb. 1942, to OKH/GenStdH/Op.Abt., BA-MA, 16. Armee, 23468/5. This conclusion was based on Küchler's report of 18 Feb. 1942 (see n. 688 above).

exclusively for that purpose, and that another group of forces should be assembled from available and expected units for the thrust against Demyansk. Bringing up new forces was a transport problem for whose solution Kùchler demanded suitably energetic measures.⁶⁹³ He removed an additional division from Eighteenth Army on the Leningrad front; it was to be ready for action after 12 March. The two divisions from the Leningrad front for the Volkhov attack were to be ready on 5 and 6 March, after their relief units had arrived.

The attacks on the point where the Soviet armies had penetrated across the Volkhov were to be carried out towards Kretsno by the SS Police Division from the north and 58th Infantry Division from the south.⁶⁹⁴ At the same time the German units and combat groups along the fronts of the pocket were to attack the enemy forces facing them.

The northern group had a total of eleven battalions at its disposal, of which seven had an average combat strength of 420 men, the others only 180 men each. There were also fifteen artillery batteries and thirty-three tanks. The southern group had six battalions of an average strength of 320 men and was supported by twelve artillery batteries and eight tanks. As the attack progressed, an additional eight battalions, eighteen batteries, and twenty-six tanks became available. They had been scraped together as a mobile formation of the army group at the end of February 1942 and, apart from the determination of dates demanded by Luftwaffe support, were commanded down to tactical details by the supreme commander of the Wehrmacht, the chief of the Army General Staff, the army group command, and Eighteenth Army command.

The situation of the attack group south of Lake Ilmen was similar. To start the attack, after Luftwaffe units from the Volkhov front became available on about 16 March, Kùchler planned to use 329th Infantry Division, 5th and 8th Light Divisions, and the six battalions of 18th Infantry Division (mot.). Parts of 122nd Infantry Division were to be brought up later. To cover the flanks of the thrust the army group was counting on fourteen battalions from the Luftwaffe. Until the start of the relief attack the army group expected daily personnel losses of about 200 men in the divisions involved (5th Light and 18th Motorized). Of the sixteen tanks, 40 per cent might not be fit for action. It was important that no unexpected developments should force an early intervention on the western encirclement front.

⁶⁹³ Demands of this kind are to be found from the very beginning in the war diary of Army Group North, for it possessed the Baltic ports and a more efficient transport network than the two army groups further south. Therefore in the eyes of the army group only the rail system could be blamed for the failure. Cf. Rohde, *Wehrmachtstransportwesen*, 290.

⁶⁹⁴ H.Gr. Nord/Ia No. 490/42, 26 Feb. 1942; with supplements, 6 Mar. 1942, BA-MA, 16. Armee, 23468/5. Hitler's objections and suggestions, of 25 Feb. 1942 are in KTB, H.Gr. Nord, BA-MA RH 19 III/179. The police division was handed over to the Waffen-SS as of 24 Feb. 1942. Cf. Tessin, *Verbände und Truppen*, xiv. 287.

It was not only the situation at Demyansk that gave cause for concern in the army group order of 26 February 1942; that at Kholm was also repeatedly very serious. All relief thrusts by the 'Group Uckermann' had failed because of snow and stubborn Soviet resistance. The supply situation was made worse by the temporary loss of the airfield.

On 2 March, after approving the proposal of Army Group North, Hitler summoned the commanders-in-chief of the army group, both armies, and the participating army corps.⁶⁹⁵ For the Volkhov operation he proposed risking as few losses as possible and starving out the encircled enemy instead of wiping him out in attacks. Demyansk was to be defended 'like a fortress' until it was relieved. Because of the need for Luftwaffe support, the dates for the operations were set for 5 March for Kholm, 7 March for the Volkhov attack, and 15 March for the relief of the Demyansk pocket.

On this occasion Küchler attempted in vain to 'save' a mountain infantry regiment first promised by Hitler for the relief attack against Kholm and then for the operation against Demyansk. In view of this wrangling over a mere regiment, the filling of personnel gaps with 'borrowed' police units, rear-area services of all kinds, army troops, and increasingly with 'native' units, the demand made by Hitler and Halder to provide troops for the occupation of the Finnish islands in the eastern part of the Gulf of Finland seemed to the army group to be 'utter nonsense',⁶⁹⁶ as did the Luftwaffe's request a little later for attacks on the Soviet Baltic Fleet in Kronshtadt, at a time when every aircraft was needed for ground support.

The commanders-in-chief of Sixteenth and Eighteenth Armies had requested the creation of separate corps commands to direct the attacks on the Volkhov and against Demyansk, as each would then be able to concentrate on its specific task. After the conference with Hitler, Halder informed Küchler that Hitler had doubts about the commander-in-chief of Sixteenth Army. He had aged and was indecisive. Hitler also considered the commanding general of X Army Corps, General Christian Hansen, to be insufficiently decisive. Halder himself was certain that the demands of his position were physically and psychologically too much for General Graf von Brockdorff-Ahlefeldt. As a solution he proposed to remove no one and to create no new corps commands, but instead to entrust actual command of the attack group of X Army Corps to Lieutenant-General Walter von Seydlitz-Kurzbach and of the break-out group in the pocket, the 'Group Eicke', to Lieutenant-General Hans Zorn,

⁶⁹⁵ Halder, *Diaries*, 1411 (2 Mar. 1942); H.Gr. Nord/Ia, KTB, 28 Feb., 2 Mar. 1942 (3.30 p.m.), BA-MA RH 19 III/179, 688; Hitler's order, 4 Mar. 1942, *ibid.*, 707.

⁶⁹⁶ H.Gr. Nord/Ia, KTB, 3 Mar. 1942, *ibid.*, 688. Küchler diverted two battalions for Kholm from 122nd Inf. Div. In April 'local' troops with the army group were: 4 groups of 100 Ukrainians, Belorussians, German Russians, Finno-Ugrians, Estonians, Russians, Finns (in the armies); in the rear area: Estonians, Lithuanians, Latvians; a cavalry battalion each of Ukrainians, Tatars, Cossacks, Caucasians, Kazakhs, and Belorussians: *ibid.*, 13 Apr. 1942, BA-MA RH 19 III/181. So much for 'race ideology'.

both under the nominal command of the two commanding generals. Hitler attached great importance to a direct role for K  chler, who was to create a forward command post and 'gently push aside the lower commander'.⁶⁹⁷

In addition, Halder placed a general-staff officer and two assistant adjutants at the disposal of each of the commanders of the two attack groups and a major from his circle of advisers at the disposal of the commanding general of II Army Corps and his staff. This, he hoped, would reduce to a minimum any disruptive delays caused by the corps commands and the army commands.

The attempt to relieve Kholm failed. Already during the forming up in temperatures of -40°C the troops had suffered serious losses. Losses in the course of the fighting could not be replaced, and opportunities offered by the effective air support could not be exploited.

Because of unfavourable flying weather the first of the large-scale attacks by Army Group North to re-establish a workable defensive line, the planned cutting off of the enemy penetration on the Volkhov under the code-name Raubtier ('predatory animal'), was delayed a week. Both the army group command and Eighteenth Army command repeatedly, but in vain, requested permission to begin the attacks, as the assembled units could not be kept waiting indefinitely. Enemy attacks had to be expected at any time on the dangerously exposed sectors of the front, and the date for the breakthrough to the Demyansk pocket depended on the early conclusion of the Volkhov operation.

As a result of their own decisions being dependent on the combat-readiness of the Luftwaffe, the question arose for the army group command as to whether it was still justifiable to wait for air support on the scale Hitler had ordered, especially as much of the blast effect of the bombs, and also of artillery shells, would be neutralized by the deep snow.⁶⁹⁸ The attack of the SS Police Division and 58th Infantry Division, begun in extreme cold and heavy snowfall on 15 March, achieved a first link-up of the two divisions and thus the isolation of both of the Soviet armies which had pushed on westward to a point beyond Chudovo. Now the fighting units of Air Fleet 1 were free for the attack by 'Group Seydlitz' to open the Demyansk pocket.

General Graf von Brockdorf-Ahlefeldt reported that the numerous changes to the date of attack had led to symptoms of depression in the pocket. It would be best to give II Army Corps the order to fight its way out, then at least some

⁶⁹⁷ H.Gr. Nord/Ia, KTB, 3 Mar. 1942, BA-MA RH 19 III/688; Hitler's order according to OKH/GenStH/Op.Abt. (IN) No. 420088/42, 4 Mar. 1942 (see n. 695 above). On 18 Mar. 1942 K  chler established the command post Seeadler with a small staff; Army High Command order on the appointment of the two generals in H.Gr. Nord/Ia, No. 552/42, 5 Mar. 1942, BA-MA, 16. Armee, 23468/11.

⁶⁹⁸ H.Gr. Nord/Ia, KTB, 16 Mar. 1942, BA-MA RH 19 III/688. Hitler had insisted that the Luftwaffe should be used in as concentrated a fashion as possible, while the army group, in order to meet the early attack date, suggested that the bombers should be divided into small groups. Hitler had ordered an additional day of attacks against Kholm: Operationsatlas, H.Gr. Nord, Der Feldzug gegen die Sowjetunion, Kriegsjahr 1942 [The campaign against the Soviet Union, 1942], BA-MA RH 19 III/663.

of the troops in the pocket would escape annihilation.⁶⁹⁹ Hitler ordered Operation Brückenschlag ('Bridging') to begin on 21 March. Preparatory air attacks were launched on 20 March.⁷⁰⁰

The attack group under Seydlitz was organized as follows: 5th and 8th Light Divisions formed the spearheads; 329th Infantry Division was to secure the right flank and widen the penetration; on the left wing 18th Infantry Division (mot.) secured Staraya Russa. In the second line 122nd Infantry Division (one infantry regiment and one regiment of 7th Mountain Division) stood ready to support the attack. 81st Infantry Division was to the left of the attack group and had the task of deceiving and pinning down the enemy.⁷⁰¹ At first both spearheads of the attack gained ground. Soon, however, it became evident how justified the urgings to start the attack earlier had been. For the spring thaw, setting in suddenly on 24 March, greatly reduced mobility and created problems in preparing the crossings of the Lovat. Nevertheless, on 24 March Sixteenth Army headquarters believed that it was in a position to 'strike the decisive blow' on 26 March. On the pocket front enemy attacks concentrated on 30th Infantry Division with the aim of pushing it back from the railway line. In the rear area enemy airborne troops, who it was feared would attack the airfields, caused considerable losses. The continuing thaw made it impossible to use the frozen streams as supply-routes. Sleighs had to be replaced with vehicles. Difficulties in penetrating the heavily forested areas brought the attack to a halt, and on 30 March it had to be suspended. Seydlitz suggested shifting the point of main effort to the left wing and reorganizing the entire group accordingly. The reservations of the army group in this regard were due to the presence of strong concentrations of enemy forces on the northern flank and a greater vulnerability of supply-routes there. Nevertheless, Küchler agreed to Seydlitz's proposal and reported this to the Army High Command. By contrast, the commander-in-chief of Sixteenth Army was of the opinion that 'Group Seydlitz' had not exhausted all suggested possibilities, the regrouping would require two days, and the link-up with 'Group Eicke' would be delayed.⁷⁰²

Nevertheless, the army group did not change its decision. The attack was resumed on 2 April but did not reach the Lovat from the west until 15 April.

5th Light Division was so exhausted that it was no longer capable of

⁶⁹⁹ H.Gr. Nord/Ia, KTB, 16 Mar. 1942, BA-MA RH 19 III/688.

⁷⁰⁰ Hitler's decision was announced at the army group on 19 Mar. at 2.00 p.m., *ibid.* On 21 Mar. 236 aircraft attacked in front of X Army Corps, 34 in front of II Army Corps, 18 on both sides of the encirclement ring on the Volkhov, and 20 at Pogostye; 315 aircraft carried 586 t. of supplies to Demyansk. Cf. sect. II.1.2(b) at n. 891 (Boog).

⁷⁰¹ Conference of C.-in-C. Army Group North with Seydlitz, 21 Mar. 1942, 1.00 p.m., on attack procedures: H.Gr. Nord/Ia, KTB, BA-MA RH 19 III/688. *Ibid.* for Seydlitz's report, 30 Mar. 1942, 5.00 p.m., to Army Group North, to the effect, that the attack was not feasible.

⁷⁰² The distance between the spearheads was 15 km. in the south and 20 km. in the north. The direct control of 'Group Seydlitz' by the army group command, bypassing or even in conflict with Sixteenth Army command, became more pronounced in the following weeks. Seydlitz thus confronted both commands with a *fait accompli*.

offensive action. The lead of the spearhead was therefore taken over by 8th Light Division on 14 April.

But on the western edge of the pocket 'Group Eicke' was under heavy attack and had considerable difficulty in eliminating penetrations. For this reason additional forces from the pocket fronts had to be made available for Operation Fallreep ('Gangway'). This attack began on 14 April and, against vigorous enemy resistance, reached the Lovat by 20 April. Both groups were now able to establish a ferry connection across the river. By 28 April the troops were utterly exhausted by the heavy fighting, the problems created by the thaw, and the muddy roads, together with the lack of any prospect of being relieved. The task of securing and holding the 'corridor' now established to supply the two corps in the pocket against flank attacks presented serious problems.⁷⁰³ The question of what should be done after the link-up with the two corps was discussed extensively between the chief of staff of Army Group North and the head of the operations department on 12 April.⁷⁰⁴ The main topics were the lack of sufficient replacements for the army group at a time when losses were being incurred at three points of main effort and the uncertainty about where and when the enemy would establish strong attacking forces on the relatively quiet Leningrad front. It was also quite clear that preparations for the offensive on the southern sector of the eastern front would not permit the bringing up of significant forces for the other army group areas.

To save forces for future operations Heusinger and Hasse considered and advocated withdrawing the divisions of II and X Army Corps during the dry summer period. But this solution was incompatible with the offensive action planned by Hitler and Halder to close the gap in the direction of Army Group Centre, where the Rzhev salient was being held.⁷⁰⁵ Both general-staff officers agreed that major top-level decisions would soon have to be taken and that Küchler's report the following day should prepare Hitler for them. The conference on the situation and the difficulties of Army Group North with Hitler on 13 April 1942 convinced the commander-in-chief that there could be no question of additional personnel amounting to two and a half divisions for Eighteenth Army alone. Hitler recommended that the two threatening groups of enemy forces west of the Volkhov—in addition to the large pocket, a second had been created near Pogostye as a result of the breakthrough by the Soviet Fifty-fourth Army on the front of I Army Corps—should not be smashed by

⁷⁰³ In 'Brückenschlag' and 'Fallreep' losses were 4,000 dead and 13,000 wounded or missing: H.Gr. Nord/1a, KTB, 15 May 1942, BA-MA RH 19 III/182.

⁷⁰⁴ H.Gr. Nord/1a, KTB, 12 Apr. 1942, BA-MA RH 19 III/181. This conversation was to prepare the situation report of the C.-in-C. of the army group to Hitler on 13 Apr.

⁷⁰⁵ Hitler's order, OKH/GenStdH/Op.Abt. (IM) No. 42082/42, 1 Mar. 1942, to Army Group Centre, BA-MA RH 19 III/707. Both salients were to be held with heavy losses until the spring of 1943. Heusinger deliberately suggested the withdrawal of II Army Corps (all units in the Demjansk pocket) as an alternative to Halder's plan. Cf. H.Gr. Nord/1a, KTB, 12 Apr. 1942, BA-MA RH 19 III/181; the personnel question *ibid.*, 13 Apr. 1942. Between 19 Jan. and 23 Mar. 1942 the ration strength of Ninth Army rose from 151,100 to 221,200; the combat strength from 59,582 to 139,100; the number of operational artillery pieces from 369 to 608, and of tanks from 1 to 83: AOK 9/1a, KTB, 1 Jan.-31 Mar. 1942, BA-MA, 9. Armee, 21520/1.

an attack but 'smoked out'. If both enemy groups succeeded in linking up near Lyuban, they would not only form a strong attack force to relieve Leningrad on the city's most important communications to the south-east, but the German units between them on the Volkhov would be in direct danger of being encircled. Both pockets were linked with the Soviet hinterland, and in addition were receiving personnel and supplies by air.

The third problem, the solution of which the army group considered a matter of honour, was the liberation of Kholm. On 5 May this bitterly contested base was relieved by an attack group of XXXIX Armoured Corps. The intensity of the fighting on both sides is shown by the fact that the south-eastern part was not captured until 18 May and isolated Soviet groups continued fighting in the north-eastern part until 8 June. This forward bridgehead was also left standing; only in the second half of June was a continuous front to the north established.

The thaw and mud greatly reduced the mobility of both sides and forced a certain halt in the fighting on the Volkhov fronts. Eighteenth Army organized its units as well as it could and prepared to re-establish the encirclement ring. On 22 May the withdrawal of the enemy to the east led to a resumption of the attack, at first in the north-western part of the pocket. On 31 May the old penetration west of the Volkhov in the area of Myasnoy Bor was closed again. In a concentric attack by all formations and 'groups' participating in the encirclement this pocket was eliminated by 29 June. Although Army Group North had suffered considerable losses as a result of the numerous critical situations around Demyansk and on the Volkhov, on the whole it had survived the winter without decisive enemy breakthroughs. The isolation of Leningrad to the south had been maintained. For the summer of 1942 the task of the army group was to secure the lines won and to establish blocking-positions and strong-points in rear areas. These developments will be discussed later.

Remembering the horrors of the past winter, however, the army group command already began to plan for the coming months: 'If we want a quiet situation with no plans for further attacks, and if we want to conserve our forces, we shall have to establish a general line between Staraya Russa and Kholm and thoroughly prepare it for next winter.'⁷⁰⁶

On 4 May 1942, in view of its shortage of personnel and in the expectation that it would not receive sufficient forces to secure its forward line, the army group logically requested permission to withdraw the troops under the command of II Army Corps to a position on the Lovat.

(v) THE DEFENSIVE BATTLES OF ARMY GROUP SOUTH

For the expected large-scale attack by the Red Army on the southern wing of the eastern front the chief of staff of Army Group South had envisaged a mobile conduct of operations with the main objective of gaining time and

⁷⁰⁶ H. Gr. Nord/1a, KTB, 29 Apr. 1942, BA-MA RH 19 III/181; order of Army High Command/Army General Staff on the strengthening of positions, 26 Apr. 1942, and request of Army Group North: BA-MA RH 19 III/707.

launching a counter-attack from a prepared line once the units had been brought up to strength.⁷⁰⁷ A line from Melitopol via Zaporozhye and Novomoskovsk in the general direction of Kupyansk was considered a rear limit of what was strategically acceptable for the army group. The improvement of forward positions of Seventeenth and Sixth Armies was concluded by 10 December, as was the transfer of units to the expected main points of attack between Seventh and First Armoured Armies in the sector of the Italian expeditionary corps. After a visit by Hitler additional personnel and small quantities of material replacements had been received.⁷⁰⁸ The Crimea was deliberately neglected in favour of the eastern front; if necessary it was to be sacrificed and the Perekop isthmus defended as part of the southern flank of the army group. Because of a lack of personnel the positions, even in the lines held by the troops, had not been significantly strengthened.

A problem now to be faced was that of the largely uncovered flank in the direction of Army Group Centre, which had been deliberately accepted during the pursuit phase in the expectation that, with the advance on Moscow and to the middle Don, the enemy would hardly be able to exploit gaps between the army groups, so that maintaining contact between the inner wings was sufficient. This was all the more important as the army group expected that the main operational effort in 1942 would be made in the southern sector of the eastern front.⁷⁰⁹

Beyond the orders of the commander-in-chief of the army of 8 December 1941, which applied to all army groups, Army Group South was to capture Sevastopol with Eleventh Army as its last offensive action. Thereafter the bulk of that army would be given new tasks.⁷¹⁰ One of the causes of the failure of the operation against Sevastopol was the concern of Army Group South about its eastern front and its resulting refusal to transfer sufficient forces to the Crimea. The second 'special task' of the army group was to improve conditions for a major spring offensive by smaller actions against the lower Don and the Donets during the winter, as soon as the weather permitted.

The army group was therefore to hold the front between the Sea of Azov and the Donets under all circumstances. The area around Kharkov was to be solidly held and communications to the southern wing of Army Group Centre secured, especially road and rail links between Belgorod and Kursk. Army

⁷⁰⁷ Cf. n. 338 above; Sodenstern to Heusinger, 4 Dec., and Halder's order, 6 Dec. 1941, H.Gr. Süd/Ia, KTB, BA-MA RH 19 1/88.

⁷⁰⁸ Between 26 Nov. and 5 Dec. 1941 3,268 men were airlifted to First Arm'd. Army; 50 assault-guns and 60 2-cm. anti-aircraft guns were allotted to the army group. On 7 Dec. the immediate transfer of 950 replacement personnel from Vinnitsa was ordered: *ibid*.

⁷⁰⁹ Hitler's remark to Reichenau during his visit to Poltava. Cf. H.Gr. Süd/Ia, KTB, 8 Dec. 1941, BA-MA RH 19 1/88; on this see also the conference at the office of the deputy chief of staff in charge of operations, 24 Oct. 1941, KTB OKW i. 1073.

⁷¹⁰ Cf. sect. II.1.1(g) at n. 575. Like Hitler's Directive No. 39, this directive of 8 Dec. had been prepared by Halder through the assignment of tasks to the chiefs of staff of the army group. Cf. also *Führer-vortrag* and notes on the Führer conference, 6 Dec. 1941: Halder, *Diaries*, 1339 (6 Dec. 1941); printed in KTB OKW, i. 1076 ff. (108).

Group South undoubtedly regarded as quite unrealistic the order to retake Rostov and the Donets bend during the winter.

The directive of the army group to its armies reflected these plans.⁷¹¹ First Armoured Army and Sixth Army were ordered to close up towards each other after achieving slight improvements in the position of the front.

Tactical directives for the preparation of a protracted defence were supplemented by guidelines for securing the rear area. There the troops and staffs were to move closer together and prepare for a 'fortress-like' defence. Stocks were to be laid up for the period when the weather made movement of supplies impossible. The directive of 14 December for the fighting in winter assumed that the enemy's intentions were to keep open his support- and supply-lines between Moscow and the Caucasus, to tie down as many German units as possible by attacks aimed at attrition and harassment, and to destroy German winter quarters and supply-lines.⁷¹² The armies were instructed to secure the Crimea with as few forces as possible, to pull out of the front and rehabilitate the armoured formations of First Armoured Army, and, once again, to secure the most important communications on the boundary between Army Group Centre and Sixth Army. Lines in the rear were to be reconnoitred and prepared to meet an expected large-scale attack. As a last defensive line the army group ordered the 'Wotan' line to be reconnoitred, which was to extend from Melitopol via Zaporozhye, Poltava, and Romny to the upper course of the Desna.

To reinforce the fighting units, as elsewhere, elements of the security and supply troops suitable for combat were sent to the front. The army group planned to meet the problem of a possible uprising by a partial evacuation of Kharkov, but Hitler rejected this proposal as the evacuated civilians would then have to be fed behind the front. Keitel suggested sending them east to areas under Soviet control.⁷¹³ Reichenau observed that the population would resist deportation to the east, whereas, in the event that they were moved to the rear area, they would not constitute a drain on German food supplies since they would remain in areas remote from roads, which in any case were insignificant. Deportation of the civilian population to the east could be carried out only by force of arms, something which could not be demanded even of battle-hardened troops. In consequence, the civilian population remained where they were and had to feed themselves.

First Armoured Army headquarters had reservations about the defensive line on the Kalmius, far to the rear, as envisaged by the army group, since that

⁷¹¹ Preliminary order, 9 Dec. 1941, mentioned in H.Gr. Süd/Ia, KTB, 9 Dec. 1941, annexe 216, BA-MA RH 19 I/88; printed in Hauck, *Südliches Gebiet*, pt. II, appendix 7, MGFA P-114c. Ibid. for the 'Richtlinien für Kampf und Sicherungen im Winter und Frühjahr 1941/42' [Guidelines on operations and security in winter and spring 1941-2] and the 'Weisung für Kampf und Sicherung im Winter 1941/42' [Directive for operations and security in winter 1941-2].

⁷¹² H.Gr. Süd/Ia, KTB, 14 Dec. 1941, copy: Hauck, *Südliches Gebiet*, pt. II, appendix 8, MGFA P-114c.

⁷¹³ H.Gr. Süd/Ia, KTB, 18 Dec. 1941, BA-MA RH 19 I/88.

would involve abandoning Mariupol, an indispensable rehabilitation and technical repair centre for the German forces. Sodenstern reassured the army command by pointing out that this line would be occupied only after every effort had been made to hold the existing front.

Large enemy troop movements from the front facing First Armoured Army to the area facing Seventeenth Army were interpreted as preparations for an attack aiming at a breakthrough near Artemovsk and Stalino in order to attack the armoured army from the rear.⁷¹⁴

On the northern wing of Sixth Army too, strains were expected as a consequence of the development of the situation of Second Army. For this reason two-thirds of 168th Infantry Division were transferred there and placed under Second Army.⁷¹⁵ In addition, elements of 62nd Infantry Division were removed from anti-partisan operations and also placed under Second Army as the situation on the boundary to it and in its sector became threatening. The expected attack against the northern wing of First Armoured Army began on 25 December. The parts of the army already pulled out of the front and destined for rehabilitation were immediately assembled in the Stalino area as a reserve. Newly arrived tanks were to be combined in a battalion and the army reserves of Seventeenth and Sixth Armies were to be assembled in the areas of Artemovsk and Kharkov.

The fighting which now began also on the northern wing of Sixth Army and the repulsion of a thrust towards Kursk forced the withdrawal of the covering forces of Sixth Army in the Kharkov area. Reports from the intelligence service and information provided by deserters and prisoners, as well as large movements of enemy troops near Lisichansk and Kupyansk, indicated an imminent large-scale offensive aiming at a breakthrough to the middle Dnieper.

In addition, the strain on the southern wing of the army group after the Soviet landing near Kerch and Feodosiya is reflected by the fact that Hitler promised Eleventh Army fifty tanks to restore the situation there. As the tanks could not be brought to the front quickly enough from Germany, they were to be taken from a transport for First Armoured Army.⁷¹⁶

On 2 January, in addition to an offensive solution of the situation in the Crimea, Hitler demanded that his orders to hold positions should be taken 'literally and seriously' and that all preparations should be made to repulse an attack on Kharkov and to crush an uprising, which, according to foreign news sources, was perhaps to be expected.⁷¹⁷ On 10 January Reichenau reported that he viewed the situation at Kharkov with optimism and that only in the north-eastern sector was the situation of the army group strained. If a secure link

⁷¹⁴ KTB H.Gr. Süd, *ibid.*, 22 Dec. 1941.

⁷¹⁵ *Ibid.*, 2 Jan. 1942, BA-MA RH 19 I/89.

⁷¹⁶ KTB H.Gr. Süd.

⁷¹⁷ *Ibid.*, telephone conversation between Halder and Sodenstern. On 8 Jan. Hitler then issued the order for the defence of all positions and defined the cases in which withdrawal was authorized: extracts in KTB OKW II/2. 1262, BA-MA 16. Armee, 23468/8, Führerbefehle, fos. 31-2. According to this source, this order was to be destroyed after being given orally to the divisional commanders.

could be established with Second Army, that would be an important success for the conduct of the war in winter. With this objective Sixth Army began its attack with XVII Army Corps from the Prokhorovo–Oboyan line across the railway line between Prokhorovo and Solntsevo. As an attack from the Second Army sector was not possible because of a shortage of forces, this success had only a local effect. As a consequence of the difficult situation at the boundary of the army group, Second Army was placed under Army Group South, which did not please Reichenau as he now became responsible for an especially vulnerable sector of the front.⁷¹⁸

Hitler combined this change with an order to Army Group South to remove forces from First Armoured Army and transfer them to the Kharkov area. According to Hitler, the difficulties of Army Group Centre were only a result of the fact that it had not been possible to pull forces out of sectors with abundant equipment and troops in order to transfer them in good time to weak and threatened sectors. This argument was taken verbatim from remarks by the commander-in-chief of Second Army. Reichenau agreed with the view that an attack on Kharkov was imminent⁷¹⁹ and reported that the situation in the north of the army group had to be restored first. Forces of First Armoured Army could be transferred there. Moreover, he intended to remove motorized units from the front in order to create mobile reserves.⁷²⁰

On 13 January Field Marshal Reichenau suffered a stroke. As his replacement Hitler first chose the commander-in-chief of First Armoured Army, Colonel-General von Kleist, and then, the following day, Colonel-General Hoth, till that time commander-in-chief of Seventeenth Army. But Hoth was also unable to take up his duties, as Hitler on the very same day appointed Field Marshal von Bock—who had only a few weeks before been granted furlough—to be the new commander-in-chief of Army Group South. Bock assumed command of the army group on 20 January 1942. At the same time General Paulus became commander-in-chief of Sixth Army, a post which until then had been vacant.⁷²¹ The enemy attacks that began at various points along

⁷¹⁸ H.Gr. Süd/Ia, KTB, 12 Jan. 1942, BA-MA RH 19 I/89. This move was due to a request from the C.-in-C. Army Group Centre and went into effect on 15 Jan.: Halder, *Diaries*, 1386 (11 Jan. 1942).

⁷¹⁹ This expectation was not supported by a speech by Marshal Timoshenko at the end of November, which was known to the army group command. Timoshenko argued that the main aim should be the destruction of German equipment and supplies so as to render a winter and spring offensive impossible. The fighting west of Moscow offered the most favourable opportunity to do this: H.Gr. Süd/Ia, KTB, 13 Jan. 1942 (16, 11 Jan. 1942). Other reconnaissance operations indicated an imminent offensive against Kharkov and beyond to the Dnieper: BA-MA RH 19 I/89.

⁷²⁰ Sodenstern remarked: 'At present there are no motorized units capable of movement with First Arm. Army. Tactical mobility can be expected only after arrival of new vehicles and rehabilitation' (ibid., 12 Jan. 1942).

⁷²¹ Ibid., 15, 16 Jan. 1942. Reichenau died on 17 Jan. 1942; Hitler's order of the day on this occasion, 18 Jan. 1942: BA-MA 16. Armeekorps, 23468/8, fo. 14. Bock was briefed on his duties by Hider on 18 Jan.: Halder, *Diaries*, 1389 (18 Jan. 1942); Bock Tagebuch, 16, 18 Jan. 1942, BA-MA N 22/13.

the front of the army group on 18 January, especially against Seventeenth Army from the mouth of the Bakhmut to Zaliman, appeared to be essentially aimed at tying down German forces and did not indicate a co-ordinated offensive along the entire front. The situation between Bogorodichnoe and Izyum was considered serious, and 298th Infantry Division was withdrawn behind the Donets.⁷²²

On 19 January, however, Seventeenth Army reported that, given the strength of the enemy and its own lack of sufficient troops and equipment, a defence with improvisations would not be effective for long.

On 20 January it was realized that this offensive was in fact a large-scale breakthrough attack towards the Dnieper with twelve to fifteen divisions and four armoured brigades identified at the front. The fortified positions, organized like strong points, were scarcely able to offer effective resistance against these latter units. Replacements of men and equipment were brought up, some from Germany and some also from First Armoured Army, as well as a Romanian division.⁷²³ The railway line between Kursk and Orel was threatened on account of a penetration by the Soviet II Cavalry Corps in the sector of Second Army. The last dive-bomber Gruppe from the Crimea was sent into action there. The first enquiry from the chief of staff of Seventeenth Army on 22 January, whether he could authorize the abandonment of isolated strong points, suggested an incipient crisis.⁷²⁴ The commander-in-chief of Seventeenth Army doubted that the front north-west of Slavyansk could be held until the arrival of a combat group in the area north of Lozovaya. If not, the way to the railway line between Stalino and Dnepropetrovsk would be open to the Red Army.

The army group command refused to approve the evacuation requested by Seventeenth Army and referred to similar situations in Army Group Centre, where such attacks had repeatedly petered out. The army group ordered all available assault-guns of First Armoured Army to be transferred to the left wing and 14th Armoured Division to be held ready for use against an attack expected there. The situation should be restored by offensive action. Together with 'Group Friedrich' of Sixth Army approaching from the north-west, 14th Armoured Division and 100th Light Division were to attack the enemy penetration. Second Army also considered the important rail link between Kursk and Shchigry to be threatened and requested assistance. Hungarian and

⁷²³ 113th Inf. Div. was sent to Seventeenth Army instead of the Crimea: Report by C.-in-C. of army group to Hitler, 21 Jan. 1942, *ibid.*

⁷²⁴ The abandoning of a strong point meant that artillery and other heavy equipment could not be brought back. According to the directive of 1 Jan. 1942, such an action if due to lack of ammunition did not require Hitler's approval. But in the case of Seventeenth Army it meant the abandoning of two other strong points, for which Sodenstern wanted to obtain the approval of the Army High Command. The almost word-for-word adoption of the Polish and Soviet orders for the campaign of 1918-20 shows the continuity of military thinking: *Der polnisch-sowjetrussische Krieg 1918-1920*, i. 261 ff. (annexes II, IV, VIII; for the Soviet side annexe IX).

Romanian troops, as well as security divisions, were brought up and the defence of Novomoskovsk and Dnepropetrovsk was prepared. Poltava was to be got ready for all-round defence.

On 26 January Seventeenth Army command proposed a retreat of the army and the evacuation of Lozovaya, on the grounds that it would be better for the remaining German forces to move back to meet their reinforcements. That evening it wanted to withdraw to the west.⁷²⁵ In contrast, the army group believed that this would lead to a widening of the enemy penetration and that Soviet cavalry would encircle the wings of Seventeenth and Sixth Armies and make their position untenable with thrusts against their supply-line. The situation was to be restored by a concentrated attack of the reserves being brought up; until then the penetration was to be contained in such a way that the deployment of the attack groups was secured. For these attack forces—essentially 100th Light Division, 14th Armoured Division, and Armoured Battalion 60—a command staff was to be made available. Two-thirds of 113th Infantry Division were to be assembled north-east of Novomoskovsk. To ensure that the attack was carried out with less pessimism about the future, Field Marshal von Bock decided to place Seventeenth Army headquarters tactically under the command of First Armoured Army and to employ the command of III Armoured Corps as 'Group von Mackensen' on the left wing.⁷²⁶ This attack group consisted of parts of 14th Armoured Division, 100th Light Division, and XI Army Corps with the Romanian 1st, 298th, and elements of 9th Infantry Divisions. From the sector of Sixth Army, 'Corps Group Dostler' attacked with a third each of 57th, 62nd, 294th, and 79th Infantry Divisions.

Field Marshal von Bock briefed Hitler on the situation. Three Soviet cavalry corps of three divisions each and an armoured brigade had broken through the gap near Izyum. One corps had turned north to envelop Sixth Army; two corps had turned south towards the rear area of Seventeenth Army. Two infantry divisions had reached Lozovaya. As the staff of Seventeenth Army seemed 'rather tired' after the heavy fighting of the past few days, he had transferred command to First Armoured Army headquarters, which was 'fresh and eager for action' and promised to provide a strong impulse for the counter-attack. He also reported on the two groups attacking from the north. Hitler approved all his decisions.

The units earmarked for the counter-attack moved to the assembly areas in heavy frost and a snowfall. On 31 January 'Group von Mackensen' began its attack in a snowstorm, as did the two groups from Sixth Army.⁷²⁷ A completely

⁷²⁵ H.Gr. Süd/Ia, KTB, 26 Jan. 1942, BA-MA RH 19 I/89; Bock, Tagebuch, 26, 27 Jan. 1942, BA-MA N 22/13.

⁷²⁶ H.Gr. Süd/Ia, KTB (as in n. 725). The entire group was then called 'Army Group von Kleist'. For Hitler's approval and order to the armies to obtain Bock's approval before abandoning strong-points see Bock (as in n. 725).

⁷²⁷ Army order, 31 Jan. 1942: H.Gr. Süd/Ia, KTB under this date. The corps group XI Army Corps and the 'name groups' consisted of remnants and individual battalions or regiments of

successful attack could not be expected with the units of the attack groups, especially as they had to advance in continuous blizzards. They were, however, able to contain the Soviet penetration and eliminate the immediate danger of a breakthrough to the Dnieper. Throughout the subsequent weeks they were unable to push back the 'sack' near Izyum. The fighting exhausted the troops, and on 3 March the army group had to report that it was not possible at that time to regain the old front.

The army group was able to identify preparations for the feared attack on Kharkov early enough for reinforcements from the sector of Second Army to be transferred in time, even though they consisted only of the remnants of 3rd Armoured Division and a regiment of 88th Infantry Division. The Soviet offensive began on 3 March with the point of main effort between Pechenegi and Volchansk. The attack group, which advanced from the south against the right flank of Sixth Army, quickly succeeded in crossing the Donets. Another penetration of the Donets line, thirty kilometres wide, was achieved east of Kharkov, but the Red Army was not able to take the city itself. The onset of the thaw brought all movements of the Soviet counter-offensive to a halt. Army Group South had succeeded in holding its operationally most important positions, its supply-bases, and its lines of communication. A retreat to the Dnieper had been avoided. The decisive factor in this defensive success was the failure of the Red Army to concentrate its numerically far superior forces on a single point of main effort. This mistake resulted in an early exhaustion of the momentum of the attack and thus in a reduction of the pressure on the German front. This had enabled the army group command to transfer forces repeatedly from sectors less threatened or not threatened at all to points requiring the greatest defensive effort. In view of the virtual immobility of the heavy weapons, the Luftwaffe played a decisive role in the German defensive success.⁷²⁸

The special situation of the Crimean peninsula within the defensive operations of Army Group South can now be analysed.

In connection with the southern part of the eastern front as a whole, and especially with regard to the large-scale operations planned for 1942, Hitler at the end of 1941 still attached great importance to holding and securing the Crimea. The Soviet troops who had landed near Feodosiya were therefore to be annihilated and the Kerch peninsula retaken as soon as possible.⁷²⁹ Like all other major units, the commander-in-chief of Eleventh Army reported serious supply problems and personnel shortages in his divisions. Since, apart from Romanian troops, he did not have sufficient security forces at his disposal, he

divisions, local defence units, and rear-area services. Even units of the Wehrmacht commander for the Ukraine were combed for manpower: *ibid.*, 1 Feb. 1942, BA-MA RH 19 I/90.

⁷²⁸ e.g. the report of Sixth Army, 21 Jan. 1942, that no reserves were available and the only thing to do was to wait and see where the next main attack would be in order to send reinforcements there from quieter sectors (*ibid.*).

⁷²⁹ Halder, *Diaries*, 1380-1 (2, 3 Jan. 1942); AOK 11/1a, KTB, BA-MA RH 20-11/455; H.Gr. Süd/1a, KTB, BA-MA RH 19 I/89.

requested and received permission to raise volunteer units from the local Tatar population.⁷³⁰

Hitler assumed that 46th Infantry Division was available for operations against Feodosiya and therefore considered the requested use of a second division unnecessary. When Halder explained that this assumption was questionable, Hitler ordered an 'extensive report on the condition of the infantry division and the circumstances of its retreat. It soon emerged that the division's withdrawal had by no means been 'according to plan' and that at that moment it was not ready for action.⁷³¹

The second Soviet landing, at Evpatoriya on 5 January 1942, was considered to be a 'tester'. However, Manstein reported, if an attack aimed at forcing a decision was now taking shape, his forces would not be in a position to repel it.⁷³² Sodenstern observed that in that case a decision would have to be taken on whether Eleventh Army or the Crimea was to be sacrificed, as there could be no question of transferring additional forces there. On the contrary, his planning assumed that forces could be taken from the Crimea for operations elsewhere.⁷³³ The recapture of the much more important Feodosiya on 15 January required the use of XXXXII and XXX Army Corps. On 18 January the enemy forces there were defeated, and the eastern group of Eleventh Army began its attack against the Parpach position.⁷³⁴

Between 27 February and 3 March Eleventh Army had to repulse a second large-scale attack from Sevastopol as well as from the Parpach front. After this attack was repeated on 15 March the divisions of XXXXII Army Corps (46th and 170th Infantry Divisions) reported that they were no longer ready for action. In addition to the attacks at the front, activities of partisan groups in the rear area of the German forces began to achieve tactical significance. Manstein decided to use the newly arrived 22nd Armoured Division together with the divisions of XXXXII Army Corps for a counter-attack on the Parpach position.⁷³⁵ The attack failed to achieve the desired success; on the contrary, the new and inexperienced armoured division suffered heavy losses.⁷³⁶

⁷³⁰ Manstein, *Verlorene Siege*, 247 (not in trans); H.Gr. Süd/Ia, KTB, 3 Jan. 1942, BA-MA RH 19 I/89. Cf. also Hoffmann, *Ostlegionen*.

⁷³¹ H.Gr. Süd/Ia, KTB, 2 Jan. 1942, BA-MA RH 19 I/89. On 4 Jan. Reichenau reported to Hitler that the report about 46th Inf. Div. was 'objectively incorrect': Lt.-Gen. Graf von Sponeck was to blame; there was no doubt that insubordination 'with considerable prejudice and danger to the security of Germany' was involved. Reichenau was especially indignant about the outer form of the retreat: guidelines for the investigation, 10 Jan. 1942, AOK 11/Ia, KTB, BA-MA RH 20-11/456; Einbeck, *Sponeck*, 33 ff.

⁷³⁵ Conference C.-in-C. Eleventh Army with general commanding XXXXII Army Corps and commander of 22nd Armd. Div.: army order, 16 Mar. 1942, BA-MA, RH 20-11/458. Manstein wanted to use the armoured division and the newly arrived 28th Lgt. Div. offensively before they were 'spent' in defensive battles.

⁷³⁶ Report 22nd Armd. Div., 20 Mar. 1942, *ibid*. Many officers were still in France. On 30 Mar.

This failure marked the end of operationally effective fighting in the Crimea for the winter of 1941-2. Planning for the new offensives and the bringing up of heavy siege artillery were carried out simultaneously with these defensive battles. On 7 March coastal defence was transferred to the 'Naval Commanding Officer Crimea'.⁷³⁷

The conduct of the war in the Crimea in the winter of 1941-2 was governed by two diametrically opposed concepts. On the one hand, German forces there were given the task of conquering the Kerch peninsula for the coming spring offensive, as a jumping-off point for the crossing to the Caucasus. An essential condition for such an operation was the previous capture of Sevastopol. On the other hand, Eleventh Army was to be considered as a personnel reserve for Army Group South whenever the Soviet winter offensive threatened to reach the Dnieper; that would have meant abandoning the whole of the Crimea. In the event the containment of the Soviet penetration west of Izyum made it possible to leave Eleventh Army in place and to recapture Kerch; Sevastopol too was stormed later. Nevertheless, neither the crossing to the Caucasus nor domination of the Black Sea was achieved. Both operations will be discussed in the account of the war in the east in the summer of 1942.

The directive for the conduct of operations after the end of winter, issued on 12 February 1942,⁷³⁸ not only stated that the crisis had been overcome; the parts of it referring to the future were clearly based on a sober assessment of Germany's potential. As early as November 1941 the effects of the catastrophic vehicle and fuel situation on the build-up of a new operational army were incalculable.⁷³⁹ Studies and memorandums by the chief of army armament programmes and commander of the replacement army, as well as by the war-economy and armaments office of the Wehrmacht High Command, all pointed in the same direction.⁷⁴⁰ Only half a million men, including wounded who had recovered, were available to replace the approximately one million dead, wounded, sick, and missing suffered by the German forces in the east by the end of January 1942.⁷⁴¹

1942 losses amounted to 42 officers, 1,030 non-commissioned officers and men, 32 tanks (totally destroyed), and numerous other weapons and pieces of equipment: BA-MA RH 20-11/458.

⁷⁴⁰ Cf. sect. II.vi.5 at n. 398 (Müller).

⁷⁴¹ Casualty figures according to Halder (*Diaries*, 1393; 25 Jan. 1942). Cf. also *KTB OKW* i. 1106, v. appendices. On 27 Jan. 1942 Halder promised the army groups and armies in the east additional replacements of 500,000 men to compensate for shortages. These were convalescents and men previously not considered fit for military service; most were inadequately trained and at first only of limited military use. The age-group 1922, then in training, was envisaged as a source of replacements for losses in the summer offensive of 1942: OKH/GenStdH/Org.Abt. (I) No. 488/42, 27 Jan. 1942, BA-MA RH 20-4/288, p. 235.

The conclusions drawn from this personnel and vehicle situation⁷⁴² were clearly reflected in operational planning for the summer of 1942. The directive mentioned above therefore envisaged the establishment of a continuous line suitable for prolonged defence in the northern and central sections of the front. The entire offensive strength, for which the bulk of the newly trained age-group of 1922¹ was available, was to be concentrated on the southern front. The task of the army group, after elimination of the penetration west of Izyum, would be the capture of Sevastopol, and the recapture of Kerch, for an attack on the Caucasian oilfields and the mounting of a second thrust aimed at Stalingrad. In addition to eliminating the centre of arms production on the Volga, the supply-lines from Afghanistan and Iran to the interior of Russia were to be cut. This would deprive the Red Army of the means to restore its full fighting strength. The 'raids' considered as recently as December 1941 to sever transport routes from Moscow to the Russian interior via Gorkiy and to the Arctic ports via Vologda were no longer included in the plan.

The efforts made to realize these plans will be described in the account of the build-up of the operational army for 1942. After the crisis of the winter campaign, however, Hitler's basic standpoint was already clear: he saw the most serious problems not in the mobilization of reserves and replacements for the field army but in providing manpower and the means of production to equip the Wehrmacht. This led to the increasing use of previously exempted categories in Germany itself, and especially of manpower from Germany's allies and from occupied areas, and of prisoners of war. Regardless of their personal readiness to serve, most of the individuals thus taken into the armed forces were not up to the standards of the army that had been trained in peacetime and acquired experience in war. Along with the loss of weapons and technical equipment, it was especially the lack of experienced officers and non-commissioned officers which showed that the army had passed the peak of a force able to fight and conduct offensives on any sector of the front.

In retrospect one might ask when the war against the Soviet Union reached this turning-point. An unequivocal answer is possible if one disregards the problems of the conduct of the war as a whole—i.e. including the non-European theatres—armaments capacity, and the enemy's mobilization of reserves, and thus considers only the military aspect of the campaign. The decisive criterion in this question is the campaign-planning of the Army General Staff. It emerges, on the basis of the course of operations, the complete exhaustion of the units attacking Moscow, and the resulting renunciation of the attempt to achieve a decision there, that the plan for the conduct of the war as a whole had failed. In reality the enforced deviation from the operational plan—and thus the precondition for the turning-point—is to be

⁷⁴² By the end of 1941 only 660 armoured vehicles had been received to replace losses of 3,770: KTB OKW I. 1104, annexe 4 to OKH/GenStdH/GenQu/Abt. I/Qu 2 (III) No. I/58/42, 5 Jan. 1942.

dated much earlier than the stalling of the German attacks on Moscow, Leningrad, and Rostov.

The conquest of Moscow, even with the occupation of a smouldering expanse of rubble, would not have brought 'final victory' any nearer. The capture of Leningrad with German forces alone was not possible because of the skilfully executed Soviet thrusts at the boundary between Army Groups Centre and North, but neither had it been envisaged. The Finnish offensive on the Karelian front came to a halt soon after the old frontier had been reached, which meant that this chance had been lost by the end of September 1941. A glance at the position of the front of Army Groups Centre and South at their inner wings in July and August 1941 clearly reveals the cause of the failure of the offensive: the fact that Sixth Army, envisaged as the driving force of the offensive, remained stuck south of the Pripiet area. The tying down of the bulk of its divisions as well as army reserves and parts of First Armoured Army prevented the early wheeling of the German forces to encircle the enemy west of the Dnieper and the establishment of a bridgehead near Kiev. A second reason was the weakness of Eleventh Army and Germany's allies, who, like Seventeenth Army, had to launch frontal attacks against the fortified enemy positions along the tributaries of the Bug and the Dnieper. The inability of Army Group South to move forward as planned necessitated a flanking encirclement of the enemy facing it by Second Army and Second Armoured Army. This in turn made it impossible for the armoured troops to be rehabilitated; the entire movement against Moscow suffered a decisive delay, with further progress being dependent on the increasingly unfavourable weather. The Red Army thus had more time to train new reserves and move them to the front.

All criticism of Guderian's move to encircle Kiev is based on the mistaken assumption that on the southern sector of the eastern front only 'pursuit' was necessary once the Soviet Fifth Army in the Pripiet marshes had been 'out-marched' and the crossing of the middle Dnieper achieved. As the fighting in the Donets area was to show, this belief was just as mistaken as the assumption that the Crimea could be overrun. The situation at the front made it essential to capture Kiev before attacking Moscow. Contrary to what Halder expected, the Red Army did not intend to mass all its essential strength to defend Moscow, which would have opened the way to the Don and the Volga. The right flank of the attack on Moscow--the attack Halder and Bock were anxious to carry out--could never be secured with the forces of Army Group Centre alone. If the army on the left wing of Army Group South had been withdrawn for that task, the remaining forces of the group would not have been able to reach the important industrial objectives it had been assigned. Nor could the crossing to the Caucasus, either along the Don or via the Crimea, have been achieved. The success of Halder's military plan was basically in doubt as early as July 1941. The alternative Hitler envisaged from the very beginning--the concentration of the main effort on the wings of the front

as a whole—was never carried out, in consequence of Halder's tactical manoeuvring and more especially because Hitler himself did not pursue it with absolute consistency.

At the end of 1941 the German military leaders were faced with the consequences of their misjudgement of Soviet military strategy and the 'vital strength' of the Red Army after the planned battles of encirclement. The stage had been reached which Major-General Marcks, by this time seriously wounded as a divisional commander, had raised for consideration on 10 September 1940. It was not the Red Army in the east but the British Army in North Africa which now ushered in the 'second act' on 18 November and, with the counter-offensive of its Eighth Army to raise the siege of Tobruk, finally forced the execution of the long-planned transfer of the command of Air Fleet 2 with II Air Corps from the Moscow front.⁷⁴³ In addition to economic aid, the alliance with Britain now began to reduce military pressure on the Soviet Union, and the activities of the various partisan groups in Yugoslavia, supported by the Soviet Union as well as Britain, would lead to the creation of a new 'front' in the Balkans.

2. THE LUFTWAFFE⁷⁷⁴

HORST BOOG

(a) *The Surprise Attack against the Soviet Air Force*

According to Hitler's Directive No. 21, an 'effective intervention by the Russian air force . . .' was to be 'prevented from the very beginning of operations by powerful strikes'. To that end, all Soviet airfields reported operational near the frontier, as well as ground-support organizations and the flying units themselves, were to be subjected to surprise attacks with all available forces. These attacks were to continue until the Soviet air force could be considered eliminated. Because of a lack of precise information on the actual strength of the Soviet air force, the Luftwaffe operations staff had not developed exact estimates of how much time these attacks would require.⁷⁴⁵

Thus the Luftwaffe began the war in the east using the plans and tactics that had proved successful in previous 'Blitz' campaigns. Officers and men entered the conflict with the awareness of being part of a decisive weapon on the battlefield and a feeling of superiority based on previous successes and ex-

⁷⁴³ Cf. sect. II.1.2(b) at n. 891 (Boog) On the war against the Soviet Union see *Das deutsche Reich und der Zweite Weltkrieg*, vi. 701 ff.

⁷⁴⁴ Luftwaffe support for the army in the far north is dealt with in sect. II.11.1(c) at n. 54 (Ueberschär). On the role of the Luftwaffe as a whole in the east in 1941 cf. Plocher, *Krieg im Osten*, MGFA LW 4/2-4/13 (or the English translation, without annexes: Plocher, *German Air Force versus Russia, 1941*), and Kurowski, *Luftkrieg über Rußland*; for the period 22 June-8 Nov. 1941 cf. especially the daily situation reports, Ob.d.L., Fü. Stab Ic, Nos. 653 (23 June 1941)-791 (9 Nov. 1941), BA-MA RL 2 II/246-69.

⁷⁴⁵ According to the 1a op of the Luftwaffe operations staff Ia, Col. (ret.) Ernst Kusserow, in a letter of 2 Sept. 1954, BA-MA LW 107/67.

perience. The operations staffs of the army generally accepted the employment of the Luftwaffe primarily for the destruction of the enemy air force rather than for the provision of direct air support for the ground troops during the first few days of the campaign. After all, achievement of air superiority, or perhaps even supremacy, meant that the army could carry out its operations with fewer losses and without interference from enemy aircraft.

Taking advantage of the favourable weather—generally cloudless with moderate ground haze in the morning hours—German bomber, dive-bomber, and fighter formations crossed the German-Soviet frontier after 3.00 a.m. on 22 June 1941—the bombers, to preserve the advantage of surprise, at operating ceiling even ahead of the army's attack.⁷⁴⁶ In waves they struck at their targets in high- and low-level attacks. Depending on the distance of their bases from the front, the bombers each flew four to six sorties a day, the dive-bombers seven to eight, and the fighters five to eight.

The attacks in the early morning of 22 June were directed primarily against thirty-one airfields and against the supposed quarters of senior staffs, barracks, artillery positions, bunkers, and oil-storage facilities. Initially Soviet fighters showed little desire to engage in combat and turned away at considerable range if fire was opened. Soviet anti-aircraft fire was initially weak. On the morning of 22 June the Soviets lost a total of 890 aircraft, 222 of them in aerial combat or to anti-aircraft fire and 668 on the ground. The Luftwaffe, on the other hand, lost only 18 aircraft.⁷⁴⁷ By midnight on 22 June Soviet losses had risen to a total of 1,811 aircraft, with 1,489 destroyed on the ground and 322 destroyed mostly in the air. German losses rose to 35 aircraft.⁷⁴⁸

During the first days of the attack aerial reconnaissance discovered many previously unknown airfields with a large number of aircraft, which necessitated continued massed attacks by the Luftwaffe against Soviet air-force units during the following days. Between 23 and 26 June a total of 123 airfields were attacked.⁷⁴⁹ By the end of June some 330 German aircraft had been lost, against a total of 4,614 Soviet aircraft reported destroyed, 1,438 in the air and 3,176 on the ground.⁷⁵⁰ By the end of the fighting in the frontier area on 12 July, the figures had risen to 6,857 Soviet aircraft destroyed against 550 total losses and 336 damaged aircraft on the German side.⁷⁵¹

⁷⁴⁷ Situation report No. 652, Ob.d.L./Fü.Stab Ic, 22 June 1942, pp. 8-9, 11-12, BA-MA RL 2 II/246.

⁷⁴⁸ Situation report No. 653, Ob.d.L./Fü.Stab Ic, 23 June 1941, 27-8; *ibid.* According to Kozevnikov (*Komandovanie*, 36), the Soviet Union lost 1,200 aircraft on the first day of the war, 800 of them on the ground.

⁷⁴⁹ Situation reports Nos. 653-7, Ob.d.L./Fü.Stab Ic, 23-7 June 1941, BA-MA RL 2 II/246, 247. Cf. also Groehler, 'Grenzschlachten', 122.

⁷⁵⁰ On Soviet losses cf. situation reports, Ob.d.L./Fü.Stab Ic, Nos. 654-61, 24 June-1 July 1941, BA-MA RL 2 II/246-8; on German losses see the corresponding reports, GenQu der Luftwaffe, 6. Abt., BA-MA RL 2 III/713. Plocher (*Krieg im Osten*, 13, MGFA Lw 4/2) gives Soviet losses up to the night of 30 June 1941 as 4,900 aircraft.

⁷⁵¹ Report on combat-readiness of flying units as of 12 July 1941, GenQu, 6. Abt., 15 July 1941, BA-MA RL 2 III/713. Cf. also Groehler, 'Verluste der deutschen Luftwaffe', 331.

The first German surprise air attacks, with half of the Luftwaffe units stationed in the east, caught the Soviet air force unprepared and unprotected at their airfields, often with flying and technical personnel asleep in their tents. Evidently Soviet military leaders had not taken any measures to reduce the effectiveness of a concentrated German first strike from the air, although their own reconnaissance⁷⁵² as well as the German campaigns in Poland, France, and the Balkans, and finally the political situation, clearly suggested that such an attack was to be expected. Some Soviet aircraft were found uncamouflaged and closely parked on the edges of runways at airfields near the frontier. Many bomber units had not been moved further away from the frontier, and the air-bases as a rule lacked anti-aircraft guns. Soviet historians explain this situation and the resulting heavy losses of aircraft by the fact that the telegram from the people's commissar of defence, intended to inform the commanders of military districts of the time of a possible German surprise attack and ordering a combat alert and dispersal of aircraft at the airfields, reached the frontier military districts only four hours before the start of the German attack. It was therefore no longer possible to warn individual units in time. The mobility of many air units was greatly restricted by construction work at the airfields; camouflage and cover were still inadequate. Soviet historians also emphasize the inexperience of Soviet air commanders in defence against massed air attacks and the inferiority of Soviet aircraft compared with their modern German counterparts.⁷⁵³

Although the Soviet pilots, in the opinion of German observers,⁷⁵⁴ soon distinguished themselves by attacks marked by 'different ideas of the value or otherwise of human life', such efforts generally achieved little because of 'the lack of a sense of personal responsibility' among mid-level and lower leaders and the 'habit of acting only on command'. Field Marshal Kesselring, then commander of Air Fleet 2, in retrospect considered it to have been 'almost a crime' for Soviet military leaders 'to order their clumsy aircraft to attack in such tactically impossible ways'. For example, 'one squadron after another attacked at regular, predictable intervals and thus offered our fighters easy prey. It was like "a slaughter of innocents"'.⁷⁵⁵ Fighter Geschwader 3 under Major Günther Lützow shot down twenty-seven attacking Soviet bombers within fifteen minutes without suffering any losses of its own.⁷⁵⁶ Entire bomber squadrons with no fighter escort were intercepted and shot down by German fighters. Halder also considered the Soviet air force to be 'completely out of the picture'.⁷⁵⁷ Reported Soviet aircraft losses were so heavy that at first even Göring would not believe them.⁷⁵⁸

⁷⁵⁷ Halder, *Diaries*, 972 (24 June 1941).

⁷⁵⁸ Göring believed these reports of successes only after the area had been occupied, and, upon being checked, they turned out to be too low: Kesselring, *Memoirs*, 89 ff.

The Luftwaffe was thus able to fulfil its first task—achieving air supremacy or at least superiority by destroying the Soviet air force in surprise strikes—‘within two days’.⁷⁵⁹ Its low opinion of the tactical and operational abilities of Soviet air-force leaders, the level of training of Soviet crews, and the quality of their aircraft in the first months of combat was confirmed. The successful surprise and the lack of preparedness of the Soviet air force in the first days of the German offensive strengthened this impression, which was also supported by the interrogation of captured Soviet air crews.⁷⁶⁰ In the first days of the campaign both the army and the Luftwaffe were very optimistic. Major-General Hoffmann von Waldau, head of the operations department of the Luftwaffe General Staff, considered ‘complete tactical surprise’ to have been achieved and expected ‘a brilliant success’.⁷⁶¹ On 1 July 1941 the commanding general of VIII Air Corps, General Freiherr von Richthofen, believed that the bulk of the Red Army’s attack forces had been annihilated; on 13 July he believed that there were no more military obstacles on the road to Moscow. German forces could reach the Soviet capital in eight days.⁷⁶²

The Soviet bomber fleet had indeed been practically eliminated and hardly made its presence felt during the following months, even though it still undertook sporadic, ineffective, and costly attacks against the German rear area.⁷⁶³ At this time the Soviet air force was unable to create significant difficulties for the German army in the east. Although the German surprise attacks and their own qualitative inferiority very nearly resulted in a collapse of the Soviet air units, they increasingly began to offer resistance once the element of surprise had worn off; this was reflected by the decline in the number of their aircraft destroyed on the ground and the increase in the number of those destroyed in the air. More and more the Luftwaffe had to assert its superiority in aerial combat, but for the time being remained tactically and technically far superior to its Soviet adversary, which was gradually able to recover thanks to its own efforts and the breathing-space provided by the weather in the autumn of 1941.⁷⁶⁴

The total destruction of the Soviet air force was not achieved because the crews of the numerous aircraft destroyed on the ground generally survived and could be employed afresh, as could also many of the crews of the Soviet

For this reason they had deliberately avoided expanding their own knowledge, e.g. when acting as observers by talking to the pilot about his tasks. Because of their very limited knowledge they were of little value as sources of operational information. They expected to be tortured and then shot and considered that the right of the victor.

aircraft shot down over their own territory. Moreover, it was not possible to suppress the resistance of the surviving Soviet flying units indefinitely, as the Luftwaffe also suffered losses in men and machines and as its second major task of direct and indirect support for the army, which was begun with some delay around 25 June, now required most of its resources.⁷⁶⁵ The war against the Soviet air force was continued 'as a sideline' without any system and only whenever the reviving activity of enemy air units became a problem for the German ground forces. In such cases support for the army had to be reduced. The Luftwaffe had to divide itself,⁷⁶⁶ dealing with one task after the other,⁷⁶⁷ as its resources were no longer sufficient to fulfil all at once. Only by costly transfers and exposure of parts of the front was it still able to carry out concentrated attacks like those at the beginning of the campaign. Primarily, however, its strategy was determined, in accordance with Directive No. 21, by the situation on the ground, even though the Luftwaffe operations staff soon realized that the Soviet air force was much stronger than had been expected. In a conversation with Halder on 1 July 1941 Major-General Hoffmann von Waldau, who had taken a sceptical view even before the start of the campaign in the east, admitted that the Luftwaffe had greatly underestimated the Soviets, who had well over 8,000 front-line aircraft, of which only approximately half had been destroyed.⁷⁶⁸ On 3 July he noted in his diary:

The complete surprise struck at a gigantic Russian deployment . . . The military means of the Soviet Union are considerably stronger than studies before the start of the war . . . indicated. We had regarded many statistics as propagandist exaggerations. The material quality is better than expected . . . As a result we scored great successes with relatively low losses, but a large number of Soviet aircraft remain to be destroyed . . . The will to resist and the toughness of the masses exceeded all expectations.⁷⁶⁹

However, euphoria was still the dominant mood among the Luftwaffe leaders.

⁷⁶⁵ Plocher, *Krieg im Osten*, 21, MGFA, Lw 4/2. From the Soviet point of view the Luftwaffe had achieved only a tactical, not a strategic, success, having generally destroyed only obsolete Soviet aircraft that were scheduled in any case to be replaced by new models. Cf. Hardesty, *Red Phoenix*, 59. On the use of Soviet airpower cf. Greenwood, 'Great Patriotic War'.

⁷⁶⁶ Groehler, 'Grenzschlachten', 123 ff.

⁷⁶⁷ Cf. assessment of the state of the Luftwaffe in the east by the C.-in-C. of the Luftwaffe: teletype message OKH/GenStdH/G/Op.Abt. (Ia) No. 16608/41 g.Kdos., 26 July 1941 (copy), BA-MA. 18. Armeekorps, 17562/91; Richthofen, *Tagebuch* (privately owned), 1 Aug. 1941: 'If the Luftwaffe is helping the ground troops it cannot also attack targets far behind the front' (this diary used with the kind permission of Dr Gundelach, Col. (ret.) of the general staff; Halder, *KTB* iii. 300 (19 Nov. 1941; not in trans.): 'Air! Probably only in partial actions one after the other . . .').

⁷⁶⁸ Halder, *Diaries*, 994 (1 July 1941).

⁷⁶⁹ In view of the huge deployment of the Red Army, Gen. von Richthofen and Maj.-Gen. Hoffmann von Waldau were of the opinion that, after the conclusion of its virtually complete armament programme, it would have attacked Germany: Hoffmann von Waldau, *Tagebuch*, 50 ff. (3 July 1941), BA-MA RL 200/17; Richthofen, *Tagebuch* (Privately owned), 2 Aug. 1941; Hassel, *Tagebücher*, 266 (Sept. 1941). This reflected the official German position at the time, e.g. in Hitler's appeal to the German soldiers on the eastern front.

(b) Ground Support

(i) II AND VIII AIR CORPS AND THE BATTLES OF ENCIRCLEMENT OF BIALYSTOK AND MINSK⁷⁷⁰(See the *Annexe Volume*, Nos. 5 and 6)

After the surprise strikes to achieve air superiority, all air fleets in the east, in accordance with instructions, concentrated on supporting the army as their main task from approximately the third day of the campaign. From the very beginning the dive-bombers of II Air Corps were used to silence the enemy batteries in the area of Brest-Litovsk and on a range of hills extending in an east-west direction north of the city. Because of their commanding position these batteries could have seriously endangered the advance of Armoured Group 2. The armoured group had therefore attached considerable importance to preventing the batteries from firing. Contrary to its usual combat guidelines, which provided for the destruction of targets with concentrated forces, the air corps therefore suppressed their fire by continuous waves of separate flights of dive-bombers.

At the end of June bombers and dive-bombers attacked enemy forces encircled in the area of Białystok, Zelva, and Grodno,⁷⁷¹ which were trying to use the cover of the forests to escape eastwards. Warned by the appearance of reconnaissance aircraft, the Soviet troops were always able to leave the roads, which were completely congested anyway, and withdraw into the forest in time to avoid bombing attacks. The Luftwaffe therefore began armed reconnaissance flights, in which the bombers flew in on a broad front, did their own reconnaissance, and immediately attacked any targets they identified.

Enemy counter-attacks against the German flanks frequently led to crisis situations, in the overcoming of which the Luftwaffe played an important role. Thus on 24 and 25 June bombers and dive-bombers of VIII Air Corps smashed a Soviet tank attack on VIII and XX Army Corps in the area of Kuznitsa, Odelsk, Grodno, and Dombrova in relay attacks.⁷⁷² A similar attack on the flank of Armoured Group 3 near Lida was halted by continuous attacks by bombers and close-support aircraft of VIII Air Corps until reinforcements arrived in the form of V Army Corps, which, in co-operation with the air units, was able to repulse the attack. The armoured group then continued its advance without losing its freedom of manoeuvre.

By mounting continuous air attacks, both air corps of Air Fleet 2 played an effective part in preventing the break-out of Soviet ground forces from the pocket of Białystok and in the defeat of the four Soviet armies in the pocket near Minsk further east. They thus contributed decisively to the victory in the

⁷⁷⁰ On the role of Air Fleet 2 cf. Kesselring, *Memoirs*, 85-100; for the period under consideration here, the daily notes on the activity of VIII Air Corps, 19 June-3 Aug. 1941, compiled by Col. (ret.) H. W. Deichmann, BA-MA RL 8/47, and Plocher, *Krieg im Osten*, 117-43, MGFA Lw 4/2; sect. II.1.1(a) (Klink).

⁷⁷¹ Situation report No. 658, Ob.d.L./Fü.Stab Ic, 28 June 1941, p. 20, BA-MA RL 2 II/247.

⁷⁷² Richthofen, Tagebuch (privately owned), 24 June 1941.

double battle of Białystok and Minsk, which ended on 9 July. In the attempt to seal off the pocket from the air it became evident that, in view of the scattered position and flimsy construction of the houses in villages and towns, air attacks on road intersections did not have the same effect as in western Europe. In the Soviet Union the countryside was too open and obstacles created by rubble too small and too easily circumvented to have the desired effect. Better results were achieved by attacks on bridges over small rivers and streams, especially if they were in flood.

Distinguishing between friend and foe from the air proved very difficult, as German ground forces often refrained from laying out the required ground panels for fear of enemy air attacks. They thus occasionally fell victim to friendly bombing.⁷⁷³ Some relief was obtained by the increased use of air communications troops and dive-bomber and fighter control units with the most forward ground forces.

The continuous support provided by VIII Air Corps for Armoured Group 3, advancing on the northern wing of Army Group Centre, created no problems, as the corps was specially equipped and organized to provide close support. Matters were different with the heterogeneous II Air Corps supporting Armoured Group 2 on the southern wing of Army Group Centre. There it soon became clear that, because of supply problems, bombers and long-range reconnaissance aircraft could not be based as close to the front as the close-support units and fighters, and that a unified command of the corps was therefore difficult. Thus, after the first few days of the campaign the command of the close-support formations advancing with Armoured Group 3 was placed in the hands of the *ad hoc* Close Support Leader II (Major-General Martin Fiebig) and his improvised staff,⁷⁷⁴ operating within the framework of directives from II Air Corps. Fiebig quickly overcame initial difficulties.

In addition to providing direct support for the army, after 25 June Air Fleet 2 attempted to seal off the battle area by attacking the railway lines leading into it at Minsk, Orsha, Molodechno, Zhlobin, and Osipovich. It also struck at airfields in the area of Smolensk, Bryansk, Polotsk, and, on 2 July, Gomel.

All attacks on bridges were discussed in advance with the army in order to determine which of them were important for its own advance and supplies and should not therefore be destroyed. The destruction of the great railway bridge at Bobruysk was an especially important success for the Luftwaffe. However, it was rebuilt within about thirty-six hours by over a thousand workers under the direction of the people's commissar for transport and served its purpose even though it did not meet Western standards of safety.

The close-support units of Air Fleet 2 accompanied the further advance of Armoured Groups 2 and 3, while its bombers attacked roads, railway lines, and junctions in the hinterland in the area of Mozyr, Gomel, Roslavl,

⁷⁷³ Cf. Guderian, *Erinnerungen*, 168 (not in *Panzer Leader*); Tuchzeichen, supplement to Gen.Kdo. I. Fl.Korps/Ia No. 504/42 g.Kdos., 18 Mar. 1942, BA-MA RH 24-10/116.

⁷⁷⁴ Kesselring, *Memoirs*, 90-1.

Smolensk, Vitebsk, Polotsk, and Daugavpils.⁷⁷⁵ These attacks on railway lines, however, were rather of a tactical-operational nature and their strategic effect was overestimated.

Not until Guderian's armoured group was crossing the Berezina at Bobruysk and the Dnieper at Mogilev on 11 July did strong Soviet air formations attack the advancing German forces, but they suffered heavy losses at the hands of Fighter Geschwader 51 under Colonel Werner Mölders.⁷⁷⁶

(ii) THE BATTLE OF ENCIRCLEMENT AT SMOLENSK⁷⁷⁷

(See the *Annexe Volume*, Nos. 6 and 15)

After supporting the envelopment movements⁷⁷⁸ of Armoured Groups 2 and 3, the close-support units of Air Fleet 2 attacked the enemy troops in the pocket, their attempts to break out, and attempts to prise open the pocket from outside. Other forces of the air fleet concentrated on roads and railway lines. On 14 July the rail link between Smolensk and Moscow was attacked for the first time; at the end of the month the railway station at Orel was bombed. Near Yartsevo, between 23 and 25 July, VIII Air Corps, together with its 99th Anti-aircraft Regiment,⁷⁷⁹ was able, in a quick succession of attacks and using equipment capable of rapidly refuelling nine aircraft simultaneously, to slow the break-out attempt of a group of enemy forces attacking from the area north and around Dorogobyzh across the Vop, a situation which endangered not only the army units but also the command post of the air corps itself east of Dukhovshchina, as well as several of its airfields. German ground forces then arrived in time and intercepted the enemy. The air transport units used here close to the front suffered their first losses. South-east of Smolensk the enemy mounted strong attacks, attempting to break open the pocket. Support provided by II Air Corps contributed considerably to the frustration of efforts by Soviet armoured units to break through in the direction of Shatalovka. Air Fleet 2 also tried to close a gap only a few kilometres wide on the east side of the Smolensk pocket.⁷⁸⁰ As sufficient aircraft were not available at that time and paratroops, who could have closed the gap, were no longer dropped from the air after their heavy losses on Crete, the gap could to some extent be closed by day only, not at night. Field Marshal Kesselring estimated that over 100,000 Soviet troops were able to escape through it and could thus serve as cadres for newly created Soviet units. In this respect Smolensk was only a 'vulgar victory', in which it had again been shown that the Luftwaffe alone was not able to seal off gaps in the front.

⁷⁷⁹ Daily notes on the activity of VIII Air Corps, 23-5 July 1941, pp. 8-10, BA-MA RL 8/47.

⁷⁸⁰ Richthofen, *Tagebuch* (privately owned), 26 July 1941, and daily notes (as in n. 779 above), p. 27 (2 Aug. 1941); KTB OKW i. 1036 (25 July 1941); Kesselring, *Memoirs*, 92-3.

Although the Smolensk pocket could not be considered essentially closed until 5 August, the commander-in-chief of the Luftwaffe, acting on the basis of Directive No. 34 of the Wehrmacht High Command of 30 July 1941, had ordered the transfer of VIII Air Corps to the northern sector of the eastern front for an earlier date. On 3 August it was temporarily removed from Air Fleet 2⁷⁸¹ (cf. Table II.1.2). In spite of the bad weather, most of the bomber and dive-bomber formations of II Air Corps were sent into action even earlier to strike at roads and railway lines in the area of Roslavl, Sukhinichi, Bryansk, and Unecha used to bring up fresh Soviet forces to attack the large salient at Yelnya. A secondary task of the corps was the elimination of river monitors, which seriously interfered with the advance of 1st Cavalry Division along the northern edge of the Pripet marshes.

The constant raids by Soviet ground-attack pilots on the German forward line of the southern wing of Army Group Centre abutting Armoured Group 2 were especially unwelcome. Although not very effective, they constituted a considerable psychological stress for the ground forces. They were usually carried out by one or two aircraft flying at low level. German fighters usually arrived too late and, as they were not armoured, could not pursue the low-flying attackers because of strong Soviet opposition with infantry weapons from the ground. Defensive patrol flights were ruled out by the shortage of German fighter forces. The German ground troops therefore had to be constantly reminded to strengthen their own defences against strafing attacks with additional machine-guns, as the Soviet infantry had done from the very beginning. This was true of the entire eastern front.⁷⁸²

The need to move the close-support formations forward to keep up with the rapid advance of the armoured units, to supply them, to set up vital communications links quickly, and to protect airfields against Soviet air attacks and attacks by Soviet stragglers, and the increasingly strong partisan groups were among the most important problems facing the ground-support troops of the Luftwaffe in the central sector and other parts of the eastern front. Their training in ground fighting and the fact that they quickly learnt to prepare for immediate all-round defence after occupying an airfield proved to be extremely valuable.⁷⁸³ Because of the frequently congested roads, the Fieseler Storch was an important and often the only form of transport linking the command staffs of the army and the Luftwaffe.⁷⁸⁴ It also provided commanders who appreciated its virtues, such as General von Richthofen, with the means of obtaining an immediate picture of the front. Frequently, however,

these machines were shot down by enemy stragglers in the broken terrain between the roads used by advancing German troops.

(iii) II AIR CORPS IN THE AREA OF GOMEL, BRYANSK, AND ROSLAVL⁷⁸⁵
 (See the *Annexe Volume*, Nos. 15 and 16)

In the first days of August II Air Corps supported the combined forces under the command of Colonel-General Guderian in their defence against a force of the Soviet Twenty-eighth Army attacking from the area of Roslavl; it helped to encircle and destroy them, and thus prevented them from endangering the ring around Smolensk. Between 9 and 24 August close-support forces of the air corps attacked the Soviet Twenty-first Army and parts of the Fifth, which were encircled by Armoured Group 2 and Second Army near Gomel. Simultaneously bomber formations attacked Soviet troop movements in the area of Chernigov, Konotop, and Gomel, as well as railway lines, in order to prevent the withdrawal of forces and the transport of new units to the front facing the southern wing of Army Group Centre.⁷⁸⁶ Between 22 and 26 August II Air

⁷⁸⁵ Plocher, *Krieg im Osten*, 163-76, MGFA Lw 4/2; cf. sect. II.1.1(c) at n. 233 above (Klink).

⁷⁸⁶ Cf. operational orders of II Air Corps, 6-9, 16-25 Aug. 1941, BA-MA RH 20-2/170a, 170b, 172a, 172b, 174, 175.

Corps, in co-operation with VIII Air Corps, wiped out a large part of the Soviet Twenty-second Army near Velikie Luki. Bombers of Air Fleet 2 again attacked Soviet air-bases to reduce enemy pressure on the army. During this fighting on the wings of Army Group Centre the German forces of the most forward positions, in the Yelnya salient, were involved in heavy defensive battles and called for air support. But the German air units in the central sector of the front were no longer sufficient to perform several tasks at the same time, considering that air attacks on Moscow had begun on 21-2 July.⁷⁸⁷ Thus Air Fleet 2 decided to use all of II Air Corps to support the southern wing of the army group and help Second Army, which had remained far behind, to advance and eliminate the danger threatening the southern flank of Army Group Centre there. It was assumed that a closing up by Second Army would in itself reduce pressure on the German forces in the Yelnya salient. The army, which in the second half of August was undecided about whether or not to hold this position, openly criticized the 'high-handed' action of the Luftwaffe.⁷⁸⁸ Only when Kesselring heard that the salient might have to be abandoned did he agree to provide air support for a few days; this was made available from 30 August until the evacuation of the position on 6 September,⁷⁸⁹ though only with parts of II Air Corps, whose bulk remained employed with Second Army⁷⁹⁰ and Armoured Group 2. The decision of the Luftwaffe proved to be correct, as no more than a tactical defensive success could be expected in the Yelnya salient, while the main effort near and east of Gomel and south-west of Bryansk helped eliminate the deep Soviet wedge between Army Groups South and Centre and establish the northern starting-position for the encirclement of Budenny's armies east of Kiev, and thus resulted in an operational success.⁷⁹¹

(iv) THE USE OF THE ANTI-AIRCRAFT UNITS⁷⁹²

(See the *Annexe Volume*, Nos. 5, 6, 15, and 16)

As in the sector of Army Group South, anti-aircraft units were used primarily against ground targets by Army Group Centre,⁷⁹³ although their task should

⁷⁹³ Cf. Ob.d.H./GenStdH/Ausb. Abt. (I) No. 2200/41 g., 22 Sept. 1941, *betr. Erfahrungen des Ostfeldzuges* [Experience of the campaign in the east], and AOK 4, Kolufu/Ia No. 3157/41 g., 12

have been to provide protection against air attacks. The high velocity and flat trajectory of the heavy anti-aircraft guns and their relatively high rate of fire made them a feared and successful weapon against armour and bunkers.⁷⁹⁴ A notable success of I Anti-aircraft Corps of Air Fleet 2 was its ability to keep open the road bridge across the Berezina at Borisov for Armoured Group 2 and the defence of that bridge against Soviet air attacks by 101st Anti-aircraft Regiment on 5 and 6 July.⁷⁹⁵ The same was true of the surprise capture of the airfield at Bobruysk and the securing of the bridge across the Berezina there by 104th Anti-aircraft Regiment. In the Yelnya salient batteries of I Anti-aircraft Corps formed the main defence of the army units fighting there for more than four weeks. By 30 August I Anti-aircraft Corps⁷⁹⁶ had shot down 259 enemy aircraft in the east. On 9 September the anti-aircraft units of Army Group Centre, which were under the Luftwaffe commander with the army group, shot down their 500th enemy aircraft; they had also destroyed 360 Soviet tanks.⁷⁹⁷

(V) THE CONDUCT OF THE AIR WAR IN THE BALTIC UNTIL THE BEGINNING OF AUGUST⁷⁹⁸

(See the *Annexe Volume*, Nos. 5, 6, and 15)

After the initial attacks to destroy the Soviet air force, Air Fleet 1,⁷⁹⁹ to which no large anti-aircraft units were directly subordinate, concentrated on supporting the ground forces advancing towards the Dvina, especially Armoured Group 4. In this task, working with the army, I Air Corps⁸⁰⁰ destroyed about 200 enemy tanks in smashing a Soviet counter-attack carried out with strong armoured forces near Shyaulyai (Raseinyai).⁸⁰¹ In addition, the air fleet de-

fended East Prussia so effectively against enemy aircraft that very soon no more significant Soviet bombing attacks were carried out there.⁸⁰² After Army Group North had broken through the old frontier fortifications and reached the general line of Opočka-Ostrov-Pskov-Tartu (Dorpat)-Pyarnu at the beginning of July, the units of I Air Corps were moved forward to the area of Daugavpils and Riga. When strong Soviet air formations had been largely destroyed over the bridgehead on the Velikaya at Ostrov on 6 July—out of 72 attacking aircraft 65 were shot down—the Soviets refrained from further large-scale bomber attacks in the sector of I Air Corps. Until the middle of August transport aircraft⁸⁰³ were temporarily responsible for all supply shipments for Sixteenth Army, as the only road from Pskov via Gdov was controlled by Soviet stragglers and units still fighting from the cover of the forests. To support the advance of the left wing of Army Group North, especially Armoured Group 4, attacks were mounted against road and rail traffic north-east and east of Pskov, in Estonia, and on the line between Leningrad and Moscow.⁸⁰⁴ The rail junction at Bologoe was an especially important target. Operations against the Soviet air force were continued with attacks on airfields at Lake Ilmen and Leningrad. Moreover, remnants of Soviet units in the swampy forests had to be kept in check from the air, a laborious small-scale war which made heavy demands on the sense of orientation of the air crews.

(vi) THE THRUST TOWARDS LENINGRAD⁸⁰⁵

(See the *Annexe Volume*, Nos. 15-18)

Reinforced by VIII Air Corps (cf. Table II.1.2) at Dno, Air Fleet 2 supported the breakthrough of the fortifications at Luga and the thrust of Eighteenth Army towards Novgorod.⁸⁰⁶ Evidently Hitler himself had issued most precise instructions for the use of the corps and the air fleet, in agreement with Göring but without informing the Army High Command.⁸⁰⁷ In doing so he intervened directly not only in the operational but also in the tactical direction of the Luftwaffe. On 15 August First Army Corps captured Novgorod with the support of VIII Air Corps.⁸⁰⁸ On 21 August Eighteenth Army reached the Gulf

of Finland at Narva, and on 28 August Tallinn was captured with the help of I Air Corps⁸⁰⁹ and the Air Leader Baltic, whose formations, however, in spite of the sinking and damaging of numerous war and merchant ships,⁸¹⁰ were not able to prevent the removal of Soviet troops and the withdrawal of the bulk of the Soviet Baltic fleet. Air Fleet 1 also played an important role in the successful defensive battle south of Staraya Russa, which lasted until 24 August.⁸¹¹ Further attacks by I Air Corps in August were directed against rail traffic south-west of Leningrad and south and east of Lake Ilmen. A revival of Soviet air activity was largely prevented by continuous attacks on air-bases. By 23 August I Air Corps reported the destruction of 2,541 and the probable destruction of 433 Soviet aircraft.⁸¹² From 14 September Air Fleet 1 participated in the conquest of the Baltic islands.⁸¹³ In the siege of Leningrad, which began on 26 September, the air fleet, which until then had only supported the penetration of the city's outer ring of fortifications with I and VIII Air Corps, was given the task of attacking important military targets in Leningrad and the Soviet Baltic Fleet in Kronstadt,⁸¹⁴ supporting the army in the containment of attempts to break out of the city, in the defence of the covering front south of Lake Ladoga, and, especially towards the end of September, by disrupting supply and evacuation traffic across the lake.⁸¹⁵ Not the least important factor in the failure of the attack on Leningrad was the inability of Air Fleet 1 to concentrate its forces on only one task at a time.⁸¹⁶ Although the city had not been captured, VIII Air Corps was transferred back to the sector of Air Fleet 2 at the end of September, over the objections of Army Group North, in order to support the attack on Moscow there.⁸¹⁷

Cf. also BA-MA RL 8/50.

(vii) V AIR CORPS SUPPORT FOR ARMoured GROUP I AND
SIXTH ARMY TO THE STALIN LINE⁸¹⁸

(See the *Annexe Volume*, No. 7)

From 26 June V Air Corps was employed primarily in defensive operations against Soviet attacks with heavy armoured support on the flanks and in the rear of Armoured Group 1 near Toporov and Brody, Klevan, Olyka, and in the area of Dubno-Rovno-Lutsk. This also helped secure further advances.⁸¹⁹ When it became clear that the Soviet forces unexpectedly wanted to withdraw to the Stalin line according to plan and, it seemed, beyond the Dnieper, V Air Corps attacked roads and railway lines leading eastwards and transport centres to prevent regrouping, transfers, and removal of troops and equipment. Destruction of rolling-stock was to be avoided so that it could be used later for moving German supplies on the Soviet lines. The main targets were the transit centres Lvov, Brody, Zlotuv, Zhitomir, Berdichev, Starokonstantinov, Belaya Tserkov, and Kazatin. Attacks on railway lines were at first concentrated west of the Dnieper in the area of Shepetovka-Kazatin-Kiev-Korosten, and were conducted by day and night in closed formations as well as by single aircraft and flights of three. By 9 July rail traffic in that area had been considerably reduced.⁸²⁰ Attacks on staff quarters seriously interfered with Soviet operations. Air attacks on 30 June had a devastating effect on the roads congested with two or three marching columns east and south-east of Lvov. However, V Air Corps did not succeed by direct support in helping Armoured Group 1, delayed at Goryn longer than expected, to advance faster, as requests for dive-bomber formations were rejected by the commander-in-chief of the Luftwaffe.

(viii) THE BREAKTHROUGH OF THE STALIN LINE⁸²¹

(See the *Annexe Volume*, Nos. 7 and 22)

While the Stalin line was penetrated with relative ease near Polonnoe-Miropolye in the direction of Berdichev on 6 July, strong bunker fortifications delayed the breakthrough near Novograd Volynskiy towards Zhitomir until 9 July. The formations of V Air Corps played an important part in repulsing enemy counter-attacks. In particular, during the armoured battles of Rovno-Dubno and Zhitomir-Berdichev their close fighter cover prevented any significant action by the enemy air force against the German armoured spearheads, and eliminated threats to their flanks.⁸²² To prevent retreat by Soviet troops,

⁸¹⁸ On the activity of Air Fleet 4 until the beginning of Oct. 1941 cf. daily reconnaissance reports June-Oct. 1941, BA-MA RH 19 I/130-15; radio messages, reports, and the daily enemy information sheet (to No. 104, 30 Sept. 1941) of its operations dept. Ic with the air, ground, and sea situation and the progress survey of the air fleet, BA-MA RL 7/468; 7/471-3. Cf. Plocher, *Krieg im Osten*, pp. 29-43, MGFA Lw 4/2, and sect. II.1.1(a) at nn. 77 ff. (Klink).

⁸¹⁹ Hoffmann von Waldau, *Tagebuch*, 56 (15 July 1941), BA-MA RL 200/17.

⁸²⁰ Halder, *Diaries*, 1027, 1030-1 (11, 12 July 1941).

⁸²¹ Cf. Plocher, *Krieg im Osten*, 43-52, MGFA Lw 4/2, and sect. II.1.1(a) at n. III (Klink).

⁸²² Hoffmann von Waldau, *Tagebuch*, 57-8 (15 July 1941), BA-MA RL 200/17.

they subsequently returned to attacks on columns and railway lines and for the first time attacked the Dnieper crossings at Cherkassy, Kanev, Kiev, and Gornostaypol. Because of the lack of very heavy bombs, it was not possible to destroy the bridges completely; attempts were therefore also made to sever railway lines east of the Dnieper to prevent the bringing up of fresh Soviet forces. In this regard the destruction of the rail junction of Bakhmach was especially important.⁸²³ SD-2 fragmentation bombs caused considerable losses among the Soviet troops, who in some places were retreating along the roads in four parallel columns. V Air Corps had a major share in the successes of Armoured Group 1, as well as of Sixth and Seventeenth Armies, and helped create the conditions for the now envisaged encirclement of the Soviet forces in the Ukraine west of the Dnieper.

Because of the lack of roads, the flying units were initially supplied with bombs and fuel by transport aircraft. The speed with which they could be moved forward and supplied depended on how rapidly communications and lateral connections could be constructed, how rapidly new airfields could be reconnoitred and prepared, and how much traffic the roads used for the advance could accommodate. The chief of staff and the quartermaster of V Air Corps therefore often had to fly along the roads in a Fieseler Storch, make a landing, find the fuel columns, and personally ensure that their right of way, confirmed in writing, was respected.

Soviet air-force units that had escaped destruction attempted to delay the German advance by attacks on armoured spearheads and supply-routes. Their high-altitude and low-level attacks were aimed primarily at bridges, such as those at Lutsk, Dubno, Rovno, Ostrog, Polonnoe, Miropolye, Novograd, and Zhitomir. With considerable courage and tenacity they repeatedly attacked targets which, from previous losses to German anti-aircraft fire and fighters, they knew to be heavily defended.

(ix) IV AIR CORPS⁸²⁴ ON THE RIGHT WING OF ARMY GROUP SOUTH⁸²⁵

(See the *Annexe Volume*, Nos. 7 and 8)

This corps began its direct and indirect support of the army with Eleventh Army's attack across the Prut on 2 July. It supported the advance of this army, which, in co-operation with the main forces of Army Group South, was aimed in a north-eastern direction via Balti towards Mogilev Podolskiy on the Dniester and later against Kishinev. Romanian and Hungarian forces were supported in their advance by their own air forces. To isolate the operations area, road and rail traffic, especially bridges, was attacked in the Odessa area, on the lower Dnieper at Zaporozhye and Dnepropetrovsk, and on the Dniester

⁸²⁴ On the activity of IV Air Corps; see BA-MA RL 8/26 (Corps order No. 1, 18 June 1941), RL 8/27 (reconnaissance reports 22 June–3 Sept. 1941).

⁸²⁵ Cf. Plocher, *Krieg im Osten*, 52 ff., MGFA Lw 4/2.

at Mogilev Podolskiy. From mid-July, after the crossing of the Dniester, IV Air Corps provided continuous support for the advancing German and Romanian ground units.

(x) THE LUFTWAFFE IN THE BATTLE OF ENCIRCLEMENT AT UMAN⁸²⁶

(See the *Annexe Volume*, Nos. 8 and 11)

V Air Corps was assigned the task of supporting Armoured Group 1 at the point of main effort in the battle. Its mission was not only to make possible a rapid advance but also to support Seventeenth Army and to attack enemy air formations and communications in the enemy's rear. In view of its declining effective strength, these multifarious tasks exceeded the capacity of the corps. The pressure of time resulting from the planned army operations and the speed and mobility of the flying units increasingly made them the most important support of the army in crisis situations and soon restricted their activities almost exclusively to such support. To prevent Soviet troops from escaping to the eastern bank of the Dnieper, railway lines and marching columns west of the river were continually attacked. Soon the attacks were extended to include terrain east of the river in the area of Konotop, Glukhov, Gorodishche, Priluki, and Bakhmach. Although the attacks were carried out even in bad weather and persistent rain, and although thunderstorms reduced the roads to quagmires, it proved impossible to prevent the escape of some of the enemy forces to the east. Stuka dive-bombers were especially important in breaking the resistance of Soviet troops trapped in the pocket near Uman, Golovanevsk, and Novo-Archangelsk. German fighter formations had achieved air superiority there in spite of very serious supply problems.⁸²⁷

Because of the shortage of aircraft and the priority given to close support for German forces at the point of main effort in the battle of Uman, V Air Corps had to reject urgent requests for help from Sixth Army, which was seriously threatened on its northern flank by the Soviet Fifth Army. This greatly reduced the army's confidence in the Luftwaffe, but the only available fighter Geschwader in the huge operations area between Korosten, Kiev, Kremenchug, and Zaporozhye—Fighter Geschwader 3—could not possibly provide simultaneous cover for Sixth Army in the area of Korosten and Kiev, for Seventeenth Army near Uman, and for Armoured Group 1 near Zaporozhye. Between 4 and 7 August V Air Corps supported the thrust of XXIX Army Corps of Sixth Army towards Kiev from the south. Soviet aircraft clearly tried to concentrate the main weight of their attacks on the airfield at Belaya Tserkov, forward infantry units, and all bridges in the battle area, but without lasting success.

⁸²⁶ Ibid. 54-60, and sect. II.1.1(a) at n. 117 (Klink).

⁸²⁷ Summary assessment of Luftwaffe activity in the battle of encirclement at Uman, in the daily order of the C.-in-C. of Air Fleet 4 and Cmdr. South-east, 14 Aug. 1941, BA-MA RH 20-11/91.

(xi) THE REPULSE OF THE SOVIET THRUST AT BOGUSLAV
AND KANEV⁸²⁸

(See the *Annexe Volume*, No. 11)

On 7 August, when Army Group South—its northern flank covered by Sixth Army with Armoured Group 1—was about to launch its thrust against Dnepropetrovsk and Nikoláev, attempting to establish a bridgehead on the east bank of the Dnieper and to mop up resistance west of the river with Eleventh and Seventeenth Armies, Soviet forces, at first in division strength, attacked across the river near Kanev, broke through the weak German covering units, and overran supply facilities. Parts of Sixth Army (Group von Schwedler) and 11th Armoured Division of Armoured Group 1 were turned south and north respectively to cut off this penetration. However, before they could make contact V Air Corps attacked the enemy armour and cavalry units which had broken through with all available aircraft. The operation order caught the corps completely by surprise; there was no time for target reconnaissance or briefing. The bomber, dive-bomber, and fighter crews had to attack their targets individually or in twos and threes, in difficult weather conditions, and in relays without overall co-ordination. At the same time they had to conduct reconnaissance to provide the command with a picture of the situation. In the first three days 94 tanks and 148 other motor-vehicles were destroyed. On the fourth day of fighting it became clear that the Soviets had employed an entire army, Twenty-sixth, for this breakthrough attempt, with three fresh and two weakened infantry divisions, two cavalry divisions, and one or two armoured divisions. They were pushed back by Group von Schwedler with support from dive-bomber formations near Kanev and prevented from breaking through until eventually they withdrew to the east bank of the Dnieper on 13 August. On the congested bridges near Kanev the Soviet forces suffered especially heavy losses from dive-bomber attacks on 15 August. V Air Corps had contained the breakthrough, which had already been accomplished for two days until the arrival of the first German ground forces and thereby averted a serious threat to German army operations in the Ukraine.

(xii) MOPPING-UP OPERATIONS IN THE SOUTHERN DNEIPEB BEND⁸²⁹

(See the *Annexe Volume*, Nos. 11 and 12)

From 17 August onwards bomber formations of V Air Corps were employed by day and night in attacks against the transport centre Dnepropetrovsk to prevent the withdrawal of major enemy forces and their digging in on the east bank of the river. On that day alone the remaining 44 operational fighters of the corps shot down 33 Soviet aircraft, among them 29 bombers, and de-

⁸²⁸ Cf. sect. II.1.1(c) at n. 219 (Klink); Plocher, *Krieg im Osten*, 60–6, MGFA Lw 4/2.

⁸²⁹ Cf. sect. II.1.1(c) at nn. 225 ff. (Klink); Plocher, *Krieg im Osten*, 66–77, MGFA Lw 4/2. On the activity of Air Fleet 4 in this period cf. also its directives Nos. 3 (18 Aug. 1941) and 4 (29 Aug. 1941), BA-MA RL 7/466; reconnaissance reports, 22 Aug.–12 Sept. 1941, *ibid.* 467.

stroyed 3 more on the ground.⁸³⁰ On 30 August Fighter Geschwader 3 under Major Lützow scored its thousandth air victory in the east.⁸³¹ German air operations were made increasingly difficult by insufficient supplies of fuel and ammunition, as well as by the extreme distances, which made it necessary to use the poorly supplied airfield at Krivoy Rog as a base for some units. Transport aircraft had to ferry in the most urgent supplies, as supply columns could make little progress on the rain-sodden roads and the railheads were still too far west. In spite of timely warnings from air officers who had been sent to Lipetsk in the Soviet Union in the years 1926-31, the supply columns were equipped with vehicles which were poorly suited to the terrain and road conditions in the east and generally broke down completely in mud. It was necessary to resort to Russian volunteer helpers, who repaired captured Soviet vehicles in their own home-made workshops and set up their own supply columns with them.

To improve direct support of Armoured Group 1, V Air Corps formed a staff of the Close Support Leader South under Lieutenant-Colonel Clemens Graf Schönborn, to whom Gruppe 1 of dive-bomber Geschwader 77, Gruppe 2 of Fighter Geschwader 3, and Gruppe 3 of Fighter Geschwader 52 were made available. In accordance with instructions from the air corps, he attacked enemy preparations for a counter-attack against the German bridgehead at Dnepropetrovsk. Bombers also attacked all roads and railway lines leading to the bridgehead, which was substantially expanded on 28 August as a result of diminishing enemy pressure.

On the northern wing of Army Group South a Close Support Leader North was created for Sixth Army. His task was to prevent the retreat of the Soviet Fifth Army from the area north of Kiev across the Dnieper by attacking transport centres and enemy columns.⁸³² Major Lützow, with Gruppe 3 of Dive-bomber Geschwader 77 and Gruppe 3 of Fighter Geschwader 3, was made close-support leader. Other forces of V Air Corps were also used for the same purposes.

The weak German fighter forces protecting the wooden bridge across the Dnieper at Gornostaypol, which had been captured in a surprise attack by 111th Infantry Division, were unable to prevent its destruction by strong Soviet air attacks; these considerably delayed the attack of Sixth Army. In contrast, on 8 September German fighter units under the Close Support Leader South effectively assisted Seventeenth Army in establishing a bridgehead on the east bank of the Dnieper at Kremenchug and were able to defend it and its crossings against persistent Soviet air attacks. V Air Corps provided support by bombing Soviet air-bases at Kharkov, Poltava, and Kiev. The employment of the Luftwaffe was also an important factor in the expansion of the bridgehead into the southern jumping-off position for the next large-scale

operation, the encirclement of the armies under Budenny's command in and east of Kiev.

Meanwhile, IV Air Corps supported the advance of Eleventh Army in the south of Army Group South, preventing the withdrawal of enemy troops and equipment from Nikolaev and Odessa, and attacking port facilities at Sevastopol and Novorossiysk. At the beginning of September, most importantly, it supported the crossing of the Dnieper by Eleventh Army and thus helped to establish a jumping-off point for the attack on the Crimea.

(xiii) ANTI-AIRCRAFT UNITS IN THE SOUTH

II Anti-aircraft Corps under Lieutenant-General Otto Dessloch was assigned the tasks of protecting the mobile units of the army, especially Armoured Group 1, of supporting army units in breaking enemy opposition on the ground (fortifications, tanks), and of protecting airfields, especially in so far as they were bases for bombers and dive-bombers. The Luftwaffe commanders attached to the large army formations used their anti-aircraft guns to provide protection against air attacks for the ground troops. Since the beginning of the campaign all units of II Anti-aircraft Corps had been integrated into the armoured and motorized infantry columns to protect the armoured spearheads in particular from enemy aircraft. They also provided valuable assistance in destroying fortifications and were increasingly used in ground fighting as the danger of Soviet air attacks diminished, e.g. against enemy armour in the tank battles of Dubno-Rovno-Lutsk, Zhitomir, and Berdichev, and in the battle of encirclement at Uman.⁸³³

(xiv) THE BATTLE OF ENCIRCLEMENT AT KIEV (28 AUGUST-26 SEPTEMBER)⁸³⁴

(See the *Annexe Volume*, Nos. 12, 13, and 23)

Although the chief of Air Fleet 2, Field Marshal Kesselring, considered an advance on Moscow to be correct and feasible after the victory at Smolensk, so that after a short rest he would have preferred such an operation,⁸³⁵ he like the Luftwaffe leaders, who evidently did so without objection, had to accept Hitler's decision to turn south. In the resulting battle of encirclement east of Kiev the army units were supported in the northern part of the encirclement by Air Fleet 2 with II Air Corps and in the southern part by Air Fleet 4 with

⁸³³ On the activity of II Air Corps cf. Plocher, *Krieg im Osten*, 81-7, MGFA Lw 4/2, and annexe 77a, MGFA Lw 4/12; Gen.Kdo. II Flakkorps Ic, 9 Apr. 1942, *Daten zur Geschichte des II. ⁸³⁴ Cf. sect. II.1.1(c) at nn. 227 ff. (Klink); Plocher, *Krieg im Osten*, 350-77, MGFA Lw 4/3, and pp. 1-109, *ibid.*, Lw 4/7.

⁸³⁵ Kesselring, *Memoirs*, 94, 97-8.

V Air Corps. The flying units provided aerial reconnaissance; they ensured air superiority over the battlefield, its isolation by bombers from enemy actions from outside, and the smashing of the enemy within the pocket, especially by the close-support units. V Air Corps⁸³⁶ attacked the railway line between Romodan and Poltava, as well as Soviet troops on both sides of the roads east of the line from Khorol to Lohvitsa, employing strong bomber formations to prevent their retreat and the removal of equipment. At the same time formations of the Close Support Leader of V Air Corps struck at enemy columns and field positions in the area of Lubny, Lohvitsa, Priluki, and Yagotin, and near Akhtyrka, Gadyach, and Mirgorod. Because of the weakness of the advance detachments of Armoured Group 2 and in view of the continuous flank attacks by the enemy, the situation near Lubny and Lohvitsa was precarious and could be stabilized only by air attacks. The formation of a new group of enemy forces around Mirgorod, Gadyach, Akhtyrka, and Poltava by elements of enemy units that had escaped from the pocket and been reinforced from the east—which could have carried out dangerous relief attacks against the Sula sector—was prevented by waves of bombing attacks and simultaneous support by V Air Corps for the attack by Seventeenth Army in the direction of Poltava. Fighters cleared the area of enemy aircraft. To suppress the activities of enemy air-force units the airfields at Kharkov and Poltava were repeatedly bombed. The air attacks on the Soviet forces in the pocket prevented their commanders from assembling them to break through the encirclement ring and inflicted heavy losses, which increased as the pocket became smaller. On 16 and 17 September V Air Corps had to seriously restrict its activities because of a shortage of fuel caused by the over-extended supply-lines and the inadequate transport system. From 18 September Gruppe 3 of Dive-bomber *Geschwader* 77 and Gruppe 3 of Fighter *Geschwader* 52 operating from Belaya Tserkov supported Sixth Army's attack on Kiev. According to an earlier directive from Hitler, they were to reduce the city to 'rubble and ashes' and do 'half the work'⁸³⁷ for the army by bombing the fortress until it was ripe for attack. This made it possible to take Kiev the next day. Subsequently the dive-bombers were used to crush any resistance within the pocket. Between 12 and 21 September alone V Air Corps flew 1,422 sorties, dropped 567,650 kg. of bombs and 96 Type-36 incendiary bomb clusters, shot down 65 enemy aircraft, destroyed 42 on the ground, wrecked 23 tanks, 2,171 motor-vehicles, 6 anti-aircraft batteries, 52 trains, and 28 locomotives, and damaged 355 motor-vehicles, 41 horse-drawn wagons, and 36 trains; it also destroyed a bridge and severed 18 railway lines. German casualties were only 9 men killed, 5 wounded, and 18 missing, with 17 aircraft lost and 14 damaged.⁸³⁸

⁸³⁶ Cf. the relevant parts of situation reports Ob.d.L./Fü.Stab 1c Nos. 724-47, 2-26 Sept. 1941, BA-MA RL 2 II/257-61.

⁸³⁷ Gen. Fritz Brand in Halder, *Diaries*, 1161 ff. (8 Aug. 1941).

⁸³⁸ According to a battle report of V Air Corps in Plocher, *Krieg im Osten*, 358-9, MGFA Lw 4/3.

II Air Corps⁸³⁹ on the northern front of the encirclement supported Armoured Group 2 and Second Army in crossing the Desna, bombed railway lines to isolate the battlefield,⁸⁴⁰ and, with the forces of Close Support Leader II, assisted the advance of Armoured Group 2 towards Konotop and further towards Romny. Bomber Geschwader 3 and 53,⁸⁴¹ Fast Bomber Geschwader 210,⁸⁴² and Fighter Geschwader 51⁸⁴³ under his command contributed significantly to the success of the encirclement operation and to breaking the last resistance of the Soviet armies in the pocket, as army commanders themselves confirmed.⁸⁴⁴ On 18 September units of 104th Anti-aircraft Regiment especially distinguished themselves in preventing the break-out of superior enemy forces through a gap in the encirclement ring near Romny.⁸⁴⁵ The ruthless use of the two air corps, the speed and force of their attacks, and the cover provided by their fighters and anti-aircraft artillery accelerated the operations of the army units in spite of rain, storms, and mud—an especially valuable gain of time in view of the approaching winter.

(XV) SUPPORT FOR THE ADVANCE OF SEVENTEENTH AND SIXTH ARMIES
BY V AIR CORPS⁸⁴⁶

(See the *Annexe Volume*, No. 13)

On 2 October Seventeenth Army began its attack towards the Donets south of Kharkov; the same day Sixth Army attacked towards Kharkov and Kursk. Soon, however, both armies' advance was slowed by the stubborn resistance of the Soviet troops under Marshal Timoshenko. In addition, the soft ground slowed the motorized units more than the infantry, which were equipped with horse-drawn carts. Even before the attack, bombers of V Air Corps sought to disrupt enemy rail movements near and east of Kharkov in order to cut the flow of supplies and prevent the removal of industrial assets, machines, and food from Kharkov and the Donets basin to the east. Between 23 September and 12 October they destroyed 95 trains, including 4 ammunition and 4 fuel trains, and 12 locomotives; they heavily damaged another 288 trains and 10

locomotives, and cut railway lines at 64 points.⁸⁴⁷ These successes indirectly reduced the strong Soviet pressure on the German troops. The uninterrupted Soviet air attacks from the airfields at Kharkov and Bogodukhov interfered with the movements of the German army. Between 25 and 27 September V Air Corps therefore temporarily concentrated its attacks on those airfields, which quickly led to a decline of enemy air activity. Although the corps had placed the bulk of its fighters at the disposal of Air Fleet 2 and had only Gruppe 3 of Fighter Geschwader 52 for its own use, (which in fact it had to transfer to IV Air Corps in the Crimea on 22 October), it achieved air superiority in the area of Seventeenth Army and over Kharkov, and was thus able to attack enemy columns, troop concentrations, and assemblies of armoured vehicles on the roads west of the city and the city itself, with the exception (as requested by Sixth Army) of its north-eastern part. Kharkov was an important command, transport, and transit centre for Soviet military movements. It was conquered on 24 October. The support provided by V Air Corps for the two armies was largely indirect. Aerial reconnaissance at an early stage discovered a marked increase in rail traffic between Rostov, the Caucasus, Voronezh, and Stalingrad, especially on the line connecting Baku, Rostov, and Voronezh. In spite of supply problems at their base at Taganrog and strong enemy fighter opposition along this main line, German bomber forces were able for weeks to carry out attacks extending to Mineralnye Vody, and to cause considerable damage: 79 trains were destroyed and 148 damaged by direct hits.⁸⁴⁸

(xvi) IV AIR CORPS AND THE CONQUEST OF THE CRIMEA⁸⁴⁹

(See the *Annexe Volume*, No. 14)

After the capture of Odessa on 16 October, IV Air Corps supported the attack of Eleventh Army to conquer the Crimean peninsula. Not the least important objective of this attack was to eliminate the threat to the Romanian oilfields from Soviet aircraft based there.⁸⁵⁰ The task of the corps was to support the infantry advancing across the Perekop isthmus—the only land link between the Crimea and the mainland—which provided little or no cover, and to protect it against the concentrated attacks of several hundred Soviet bombers and fighters, which also operated at night. Command of the German fighter units was placed in the hands of Colonel Mölders,⁸⁵¹ who after his hundredth

victory in the air on 16 July 1941 became the first German flyer to be awarded the Oak Leaves with Swords and Diamonds to the Knight's Cross. The combat formations of IV Air Corps concentrated their attacks on Soviet airfields in the Crimea. The dive-bombers were directed against the strongly fortified positions on the isthmus. Reinforced to a temporary strength of 6²/₃, bomber, 3 dive-bomber, 2 ground-attack, and 5 fighter Gruppen, IV Air Corps attacked Soviet field positions, batteries, bunkers, troop concentrations, and assembly areas. On 26 October, after eight days of fighting, a breakthrough was achieved on the isthmus. The fleeing enemy was then attacked from the air. By 16 October the Crimea was occupied, with the exception of Sevastopol, which from 17 December onwards was attacked by Eleventh Army with support from a specially organized close-support formation. The danger to Romania from the Crimea was thus eliminated. Stronger forces now became available for the air war at sea.⁸⁵²

As the Soviet navy still dominated the Black Sea and large-scale landings had to be expected at any time, continuous reconnaissance at sea was necessary in addition to attacks on loading and embarkation ports, but, because of a lack of adequate forces and the prevailing unfavourable weather, this was not possible on the desired scale. Unnoticed by German aerial and naval reconnaissance, which discovered neither the preparations in Sevastopol and Novorossiysk nor its approach by sea, the Soviet Fifty-first Army landed near Kerch on 26 December and the Soviet Forty-fourth Army near Fedosiya on 29 December. On 5-6 January 1942 a lesser Soviet force landed at Evpatoriya.⁸⁵³ All available German air units in the south were employed to attack troops after their landing. The landing at Feodosiya led to the withdrawal of 46th Infantry Division, the loss of the Kerch peninsula, the breaking off of the attack on Sevastopol—which, however, continued to tie down strong German encirclement forces—and, for the Luftwaffe, the tying down of IV Air Corps to Eleventh Army, for which it was now to provide continuous direct and indirect support. Half the staff of V Air Corps, which by then was already in Brussels, had to be returned to the combat sector of Air Fleet 4 as 'Special Staff, Crimea'.

(xvii) THE SETBACK AT ROSTOV⁸⁵⁴

(See the *Annexe Volume*, No. 13, and Map II.1.1)

V Air Corps was intended to support the attack by First Armoured Army via Shakhty towards Rostov, envisaged for 3 November. Its tactical operations staff was therefore transferred to the operations staff of the armoured army at

Mariupol. A fuel shortage and poor ground conditions delayed the start of the attack until 5 November. It was soon partially halted at Dyakova. With considerable assistance from the close-support forces of the air corps the danger to the southern flank of the armoured army was eliminated. Soon, however, the attack became bogged down in the mud. The heavy rail traffic discovered by long-range reconnaissance on the lines north of Rostov, and especially from Valuyki to the east, was continually attacked by bombers of V Air Corps. By 12 November they had destroyed 12 trains and 51 locomotives, and reported 161 trains and 32 locomotives damaged. Fighters in action ahead of the front of First Armoured Army were also successful. But because the cold often made it impossible to start up the engines, their interceptor wings were frequently unable to defend their most important base, at Taganrog, against the numerous Soviet air attacks; in addition, the anti-aircraft units were often unable to fire at enemy aircraft because of the lack of low-temperature lubricant. On 12 November Bomber Geschwader 54 and 55 (except for one Gruppe of the latter), with an average of six to nine combat-ready aircraft, were withdrawn from the front and transferred to Germany. Sabotage and bad weather considerably impaired the supplying of the close-support formations of V Air Corps either by rail or by air. These forces had at their disposal only their aircraft and their best technicians. The vehicles necessary in order to maintain their combat-readiness had to be borrowed from the army, the anti-aircraft units, and Luftwaffe intelligence units. Winter clothing and food had to be brought in by air. In view of the permanent fuel shortage, it was only because of the bad weather—which prevented German and Soviet aircraft alike from taking off—that the fighter and dive-bomber formations of the close-support leader were not totally out of action. 'At Rostov', the head of the operations department of the Luftwaffe operations staff noted, 'we are making no headway, either because of supply problems or on account of difficulties with the weather.'⁵⁵ On 20 November, three days after the start of the renewed attack by First Armoured Army, which on that day pushed to within some five kilometres of Rostov, the situation on the army's eastern flank became so threatening that Air Fleet 4 placed Bomber Geschwader 27 of IV Air Corps under V Air Corps. In view of the crisis, the close-support leader, whose activities had been seriously restricted by the weather from 17 to 20 November, now attacked towns strongly held by enemy forces in this area with fighters and dive-bombers in spite of light snowfall and a cloud ceiling of only 150 metres. The bomber formations attacked troop movements, rail traffic, and unloading-points far behind the front facing First Armoured Army. This support made it possible to take Rostov on 21 November, but it had to be abandoned again on 27 November because of strong enemy pressure. The front was re-established behind the Mius. Further north too, hard pressed by a strong Soviet counter-offensive, Seventeenth and Sixth Armies withdrew

⁵⁵ Hoffmann von Waldau, *Tagebuch*, 82 (15 Nov. 1941), BA-MA RL 200/17; cf. *ibid.* 79 (21 Oct. 1941), and Halder, *Diaries*, 1290 (7 Nov. 1941).

behind the Donets. The withdrawals, especially that of First Armoured Army, were supported by V Air Corps, as well as by formations of IV Air Corps.⁸⁵⁶ As Army Group South subsequently described the situation, these relay attacks by Air Fleet 4 foiled not only a breakthrough towards Taganrog, but also the destruction of the southern wing of First Armoured Army. An orderly retreat was made possible only by the attrition which the constant air attacks wrought upon the attacking Soviet troops.

Not only was Army Group South too weak to conquer the Crimea, the Donets basin, and the oilfields of the Caucasus all at the same time, but Air Fleet 4 was not strong enough to support simultaneously the advance of four armies, suppress Soviet air activity, attack supply shipments by rail, cut the flow of oil from the Caucasus, and eliminate the Soviet Black Sea Fleet. Its personnel were exhausted by the uninterrupted sorties. 'The campaign in the east won't reach the desired final objective this way,' Major-General Hoffmann von Waldau wrote in his diary. 'Rostov with the bridgeheads east of the Don as the jumping-off point for Maykop force was lost. . . The war is extending and becoming harder and longer.'⁸⁵⁷ After the withdrawal of V Air Corps⁸⁵⁸ Air Fleet 4 was left with only IV Air Corps to fulfil its many tasks, the most important being continued support of the defensive efforts of Army Group South. Rostov was the first serious setback of the German campaign in the east.

(xviii) THE LUFTWAFFE ON THE VOLKHOV AND AT TIKHVIN⁸⁵⁹

(See the *Annexe Volume*, Nos. 21, 18, and 19)

In the second half of October Air Fleet 1⁸⁶⁰ employed I Air Corps⁸⁶¹ primarily to support the breakthrough by XXXIX Armoured Corps of the Soviet defences on the Volkhov and the subsequent attack on Tikhvin. For this purpose the commander of Bomber Geschwader 77, Colonel Johann Raithel, was appointed *ad hoc* Air Leader Tikhvin.⁸⁶² In addition to his Geschwader he commanded Long-range Reconnaissance Staffel 5 (F) of Gruppe 122, a

Gruppe of Fighter Geschwader 54, a heavy anti-aircraft battalion, and air-signal units. Besides providing direct support for German ground forces, the flying units attacked railway lines leading to the flanks of the advance. The planned torching of the oil lakes—open storage facilities for large quantities of oil—near Rybinsk was not successful. After the capture of Tikhvin on 9 November formations of I Air Corps joined in the defensive battles there, which went on for four weeks. In addition, they mounted continuous attacks against rail traffic east of the Volkhov and Lake Ilmen, as well as against military targets in Leningrad. They were not, however, able to disrupt the flow of supplies to the city by the ice route across Lake Ladoga between 25 November and 3 December,⁸⁶³ as the holes made in the ice by the bombs quickly froze over. Earlier attempts by the Luftwaffe to disrupt shipping across the lake by using Siebel ferries operated by the Luftwaffe had also been unsuccessful, as they were too slow and also unprotected. Altogether the German and Finnish ships employed proved not to be strong enough for this task. In late autumn and early winter information provided by aerial reconnaissance became increasingly scanty. This was due less to the growing strength of enemy fighter and anti-aircraft defences⁸⁶⁴ than to the weather and the smaller number of operational reconnaissance aircraft. Moreover, their effectiveness, was reduced by the freezing of swamps, rivers, and lakes in winter. Reconnaissance along a relatively small number of routes had thus to be replaced by the much more time-consuming reconnaissance of large areas. Transfers of units further reduced the supplemental aerial reconnaissance by fighters and bombers. The severe winter greatly reduced the activities of Air Fleet 1. After the evacuation of Tikhvin on 12 December I Air Corps supported the defensive battles of the troops retreating to positions on the west bank of the Volkhov (the 'swamp positions').

In the general emergency Luftwaffe ground personnel became infantry soldiers with the task of defending airfields⁸⁶⁵ and of fighting in the ranks of army units. As their ground-combat training was inadequate, they suffered heavy losses. They remained, however, part of the Luftwaffe and formed the core of the Luftwaffe field divisions created in 1942.⁸⁶⁶

(xix) AIR FLEET 2 AND PREPARATIONS FOR THE ATTACK ON MOSCOW
(See Table II.1.3)

In connection with the preparations for the attack by Army Group Centre on Moscow, ordered by Hitler's Directive No. 35 of 6 September 1941, Air Fleet 2, which co-operated with that army group and whose staff was located in a

forest camp near Smolensk, was significantly reinforced.⁸⁶⁷ At the end of September VIII Air Corps⁸⁶⁸ was transferred from the front at Leningrad to the left wing of the army group in the area of Smolensk, where it was assigned the tasks of supporting Ninth Army, more particularly the spearheads of Armoured Groups 3 and 4. The corps had not been rehabilitated after the fighting in the north and was therefore considerably weaker than had been envisaged for the attack. Individual army units considered this to be so serious that they advised against the attack.⁸⁶⁹ Armoured Group 4 was also reinforced by II Anti-aircraft Corps,⁸⁷⁰ which for this purpose had been transferred from Air Fleet 4 to Air Fleet 2 and moved to Roslavl. II Air Corps⁸⁷¹ at Shatalovka-East was also reinforced by formations from Air Fleet 4 and, together with I Anti-aircraft Corps, which was used as 'reinforcement and assault artillery', deployed on the right wing of Army Group Centre for co-operation with Second and, especially, Fourth Armies and Armoured Group 2.⁸⁷² Its close-support forces were combined under a single close-support leader.

(xx) THE DOUBLE BATTLE OF BRYANSK AND VYAZMA⁸⁷³

(See the *Annexe Volume*, Nos. 18 and 19)

With direct and especially indirect support from Air Fleet 2, which therefore had to reduce its attacks on industrial targets in and around Moscow,⁸⁷⁴ the attack launched by Army Group Centre on 2 October made rapid progress.⁸⁷⁵ Immediately after the capture of Orel the airfield there became a base for dive-bombers and fighters and a supply-centre with the primary task of providing fuel for Second Armoured Army.⁸⁷⁶ It became the target of fierce Soviet air

attacks. Around 10 October the two pockets at Bryansk and Vyazma were sealed. General Freiherr von Richthofen had the impression that 'the Russians can now be finished off militarily, if everybody makes an all-out effort'.⁸⁷⁷ While the Soviet troops in the northern pocket were all defeated by 13 October, large elements of those in the southern pocket at Bryansk were able to break out to the east, although they were constantly pursued by II Air Corps. On 20 October the Soviet troops in the southern pocket also surrendered. Air Fleet 2 had made a significant contribution to this success.⁸⁷⁸

In the fighting in the Vyazma pocket between 2 and 13 October II Air Corps alone shot down 29 enemy aircraft and destroyed 14 tanks, 17 bunkers, 104 artillery pieces, 18 fortified field positions, 5 pockets of resistance, and 94 machine-gun nests. It also destroyed or captured a goods train and 579 vehicles, broke up a cavalry squadron and 7 columns, fought 23 infantry attacks to a standstill, and captured 3,842 prisoners.⁸⁷⁹

(xxi) THE CRISIS WEST OF MOSCOW⁸⁸⁰

(See the *Annexe Volume*, Nos. 19 and 20)

After 7 October the weather worsened, and at the end of the month operations and sorties became increasingly difficult as the roads turned to bottomless mud and the forward air strips became sodden. In the Kalinin area the army could be supplied only by air. For some elements of Second Armoured Army food had to be air-dropped.⁸⁸¹ As Major-General Waldau noted in his diary on 16 October 1941, 'The boldest hopes disappear in rain and snow'.⁸⁸² Flying was increasingly restricted, especially that of reconnaissance aircraft; on some days only one or two machines in Air Fleet 2 were able to take off. Nevertheless, in addition to providing support for army units, the Luftwaffe had to continue its attacks on Soviet airfields, especially around Moscow, where activity was constantly increasing, and against rail transports. In a bombing and strafing attack lasting one and a half hours close-support forces of II Air Corps prevented the demolition of a bridge across the Snopot until German armoured troops were able to capture this important crossing. The only

surfaced road for the advance of Second Armoured Army between Orel and Tula was threatened by an attack carried out by Soviet armoured forces in spite of unfavourable (muddy) ground conditions, and this was only repulsed by the employment of a large number of bombers of II Air Corps operating in very bad weather at extremely low level and with heavy losses. By 13 November the situation had been stabilized after the ground had frozen, which increased the mobility of German tank and infantry units.⁸⁸³ With this kind of action and under such climatic and ground conditions the combat-readiness of the flying units declined visibly, as did the effectiveness of their attacks on the enemy.

After the mud and period of bad weather the resumption of operations against Moscow was ordered for 17 November in the optimistic expectation of a period of mild frost. After a few days, however, the weather changed to fog and snow, and temperatures dropped to below -30°C . This development, the intensifying Soviet air attacks from well-equipped airfields in and around Moscow, and the premature and hasty pulling out⁸⁸⁴ of the staffs of Air Fleet 2 and II Air Corps⁸⁸⁵ with the bulk of their units posted for duty in the Mediterranean—even though the operational objective had not been reached—further weakened the Luftwaffe forces in the central sector of the eastern front. Only VIII Air Corps remained (cf. Table II.1.4), taking over command from Air Fleet 2 on 30 November.⁸⁸⁶ In addition to its own forces, it had command of Close Support Leader II, I and II Air Corps, 12th Anti-aircraft Division, and the air district (*Luftgau*) of Moscow. The weakness of the German air units, the almost unusable field airstrips, and the massed Soviet anti-aircraft fire made sustained, effective operations against the strong Soviet air activity in the area of Moscow impossible. All remaining formations had to be used for direct and indirect support of the ground forces, which still made some progress with relatively weak air support until the exhausted troops were no longer able to advance against the stubborn enemy resistance

⁸⁸³ Guderian, *Panzer Leader*, 116–17.

⁸⁸⁴ e.g. Richthofen in his diary (privately owned), 5 Dec. 1941; on planning and return transportation of the units of Air Fleet 2 cf. also *ibid.*, 11, 27–9 Nov. 1941; teletype message Ob.d.L./Fü.St. Ia (Robinson) No. 13003/41 g.Kdos. (op 1), 28 Oct. 1941, to Air Fleets 2, 4, 1 and Luftwaffe Commander Centre, BA-MA RL 2 II/106.

⁸⁸⁵ In Gen. Loerzer's order of the day, 13 Nov. 1941, issued on this occasion the achievements of II Air Corps since the beginning of the campaign in the east were listed as follows: more than 40,000 take-offs; over 21,000 of bombs dropped; 3,825 aircraft destroyed with certainty, 281 probably; 811 aircraft damaged; 789 tanks, 614 artillery pieces, 14,339 vehicles destroyed; 240 field and other positions and 33 bunkers destroyed; 3,579 attacks on railway lines made and tracks destroyed at 1,736 locations; 159 trains and 304 locomotives destroyed; 1,584 trains and 103 locomotives damaged. The anti-aircraft units of the corps had shot down over 100 aircraft; the air signals units had, under enemy attack, laid and maintained more than 3,000 km. of cables and transmitted 40,000 radio messages and 30,000 teletype messages: Plocher, *Krieg im Osten*, 466 ff., MGFA Lw 4/4.

and the weather.⁸⁸⁷ On 8 December Hitler⁸⁸⁸ reluctantly ordered the attack to be halted and positions already taken to be held. As the objectives of the attack had not been reached, Major-General von Waldau consoled himself with the thought of the enormous territory that had been conquered and the heavy Soviet losses.⁸⁸⁹ Richthofen, who described the operational objective of 'a totally defeated enemy' as 'an ideal planned in October', could only tell himself: 'The Russians are certainly much worse off.'⁸⁹⁰

Hitler's directive of 8 December 1941 contained operational tasks for the Luftwaffe far behind the enemy front. It was to 'impede the recovery of the Soviet armed forces as far as possible by attacking armament and training centres, specifically Leningrad, Moscow, Rybinsk, Gorkiy, Voronezh, Rostov, Stalingrad, Krasnodar, etc.' The enemy's lines of communication were to be severed. Moreover, the army was to be supported in its defensive battles. Only when the operations of the army had been concluded were units to be pulled out of the front for rehabilitation, as far as the situation permitted. Rehabilitation areas were to be established close to the eastern front. Ground organization should be maintained in such a way that rapid switching of forces was possible. Long-range aerial reconnaissance was to be executed to discover enemy regroupings in good time. Air defences were to be strengthened. Flying units for Army Group South were not to be withdrawn from the Moscow front

⁸⁸⁷ Cf. success reports of VIII Air Corps, 30 Nov.–13 Dec. 1941, compiled daily by its liaison officer with Army Group Centre, BA-MA RH 19 II/127, pp. 143–56, and pessimistic entries in Hoffmann von Waldau's Tagebuch, 84, 86, 91–2, 94 (23, 27, 28 Nov., 9 Dec. 1941), BA-MA RL 200/17; Halder, *Diaries*, 1310 (22 Nov. 1941)—'The troops here are finished'—1326–7 (30 Nov. 1941), 1329 ff. (1 Dec. 1941), 1340 (7 Dec. 1941)—'But worst of all, the Supreme Command does not realize the condition our troops are in...'

⁸⁹⁰ Richthofen, Tagebuch, (privately owned) 5 Dec. 1941.

without Hitler's permission. This directive is interesting in that it attempted to make good past negligence, a result of Directive No. 21, by ordering attacks on Soviet armaments centres. But how were such tasks to be performed with the few remaining air units (cf. Table II.1.4)? First, VIII Air Corps had to support the withdrawal, begun on 13 December, against attacks by fresh Soviet troops, and it became fully occupied with helping to master the resulting crisis. For the first time Luftwaffe ground personnel and persons from anti-aircraft and air-signal units were assembled to form Luftwaffe fighting formations and field regiments and sent into ground actions to support the army.⁸⁹¹ Even pilots for whom aircraft were no longer available or whose aircraft were not ready for action and 'most valuable specialists' were used in ground fighting in accordance with Richthofen's wishes.⁸⁹² In view of the long and expensive training these individuals had received, this policy (like his diary entry: 'The men really enjoyed facing the enemy for once, at 150 metres with a carbine'⁸⁹³) seems rather irresponsible, even though understandable in view of the crisis confronting the ground troops.

In his new directive of 16 December,⁸⁹⁴ which now took into account the real situation on the eastern front, Hitler finally ordered reinforcements for VIII Air Corps: three newly created bomber Gruppen, one bomber Gruppe from the western front, one twin-engine heavy fighter Gruppe from the night fighter strength, and five transport Gruppen, one of them from Air Fleet 4 and the other four obtained by 'taking the last Ju-52 from the chief of training and by the relentless plundering of commands and staffs, except for machines absolutely necessary for courier duty'. As with the army, the directive interfered radically in important basic details of tactical combat operations, organization, and training of the Luftwaffe. Particularly in the last-mentioned area, this led to serious restrictions and problems in the training of bomber crews, for which the Ju-52 was especially important. The transport groups were combined under the command of the air transport leader in Smolensk, Colonel Fritz Morzik, who was responsible to VIII Air Corps. After 18 December entire parts of Army Group Centre were thus supplied by air, the only effective way to ferry in new personnel and equipment.⁸⁹⁵ From January-February 1942, when the air transport leader was transferred under the command of Air Fleet 1, transport aircraft were also used in the first great airlift to supply German forces cut off in a pocket with an expanded air transport fleet operating primarily from Pskov. The army units trapped in the pockets of Demyansk and Kholm (95,000 and 5,000 men respectively) were thus able to hold out

⁸⁹¹ Cf. above, at n. 866; Richthofen, *Tagebuch* (privately owned), 19, 20 Dec. 1941; Halder, *Diaries*, 1386 (11 Jan. 1942); cf. Luftgaukommando VIII, Quartiermeister No. 46 (16)/42 g.Kdos. Qu/Ib, 13 Jan. 1942, BA-MA RL 20/282.

⁸⁹⁵ Richthofen, *Tagebuch* (privately owned), 20, 22 Dec. 1941.

until relief forces reached them in the middle of May 1942. These supply flights proved very costly, as they were over enemy territory and, to ensure accurate targeting, passed within range of enemy infantry weapons at the dropping-points. With a total transport volume of 24,303 t.—not counting the 15,446 soldiers who were flown into the pockets and the 22,093 wounded flown out—the supplying of the Demyansk pocket alone cost 262 aircraft and 385 men.⁸⁹⁶ Like the bombers, the fundamentally 'strategic' air transport units were again given the role of providing direct support for the army, a role they were to maintain for a long time. For the moment there could be no question of independent operations by the Luftwaffe. On the central sector of the eastern front its activities were now entirely determined by the needs of the army; because of road conditions and the difficult terrain it also became an often decisive factor in tactical and operational ground fighting as 'flying artillery'.

(c) *The Air War at Sea*⁸⁹⁷

In the east the air war at sea was conducted in three geographically separate areas—the Black Sea and the Sea of Azov, the eastern Baltic, and the Arctic Ocean. Because of its proximity to the coasts, the air war was dependent on the conduct of the land war, which remained at the centre of attention. The air war at sea was therefore fought with relatively weak forces and varying intensity and with little activity or initiative on the Soviet side.

German objectives and targets on the Black Sea were the base of the Soviet Black Sea Fleet at Odessa; the naval base and commercial port of Nikolaev, which was also a centre of shipbuilding and ship repair; the commercial port of Kherson at the Dnieper estuary; the naval base and fortress of Sevastopol; the naval base of Novorossiysk, which was also the terminus of an important Caucasus railway line; and the terminals of the oil pipelines at Tuapse and Batumi. Another target was the Soviet Black Sea Fleet itself, which in 1941 consisted of an ageing battleship, 5 cruisers, 17 destroyers, 43 submarines, 2 patrol vessels, 70 torpedo cutters, 2 minelayers, and 7 minesweepers.⁸⁹⁸ German, Romanian, and Bulgarian coastwise shipping and tanker and merchant shipping through the Bosphorus also had to be protected. Occupation of the Crimean peninsula was important for the air war at sea, as its position made it an 'aircraft-carrier' for operations over the Black Sea. Soviet fighter units there, in co-operation with the Black Sea Fleet, were able to protect transport ships close to the coast so effectively that they could not be attacked in daytime. This situation changed only after German troops had occupied the Crimea. But the lack of sufficient Luftwaffe forces prevented the full exploi-

tation of the Crimea's favourable position. Some insignificant successes by Soviet submarines against German shipping through the Bosphorus had to be accepted. Initially the war against the Soviet battle and merchant fleets and their bases was conducted by IV Air Corps⁸⁹⁹ as a secondary activity without co-ordination with naval operations—in 1941 there were only weak Romanian and Bulgarian and no German naval forces in the Black Sea—but always in connection with the operations of Army Group South. After the breakthrough by Eleventh Army on the Perekop isthmus, V Air Corps was also employed against enemy ships in the Black Sea and the Sea of Azov, and for the destruction of the ports of Kerch and Novorossiysk to prevent the embarkation and disembarkation of troops there. But the lack of adequate forces ruled out any systematic operations against the Soviet Black Sea Fleet.

In the Baltic the main targets of German air operations were the ports of Riga and Tallinn, the Soviet base at Hanko on the south coast of Finland, the main base of the Soviet Baltic Fleet at Kronshtadt, the shipyards and repair facilities at Leningrad, and the fleet itself. It consisted of the two battleships *Marat* and *Oktyabrskaya Revoliutsiya*, the heavy cruisers *Kirov* and *Maksim Gorkiy*, the mine-laying cruiser *Mart*, 27 destroyers, 100 motor torpedo-boats, and 94 submarines.⁹⁰⁰ Other targets for air attacks were the locks of the White Sea canal and the Leningrad sea canal to Kronshtadt. The most important task of the Luftwaffe was constant surveillance of the strong Soviet Baltic Fleet, which, it was feared, was in a position to endanger ore transports from Sweden and shipments of supplies by sea to Finland, northern Norway, and Army Group North. There was virtually no systematic Soviet reconnaissance of German coastal areas or German routes of advance by sea. Only the Gulf of Finland was kept under regular surveillance by Soviet air units. By contrast, their air patrols on the Baltic coast at the start of the war had been very active but were later pushed back by the advance of Army Group North. The Soviet air force carried out no bombing, mining, torpedo or combined sea-air operations. Indeed, no co-operation between the Soviet fleet and air units was observed by the Luftwaffe in the Baltic, although it did take place.⁹⁰¹

In 1941 German air superiority permitted the use of older types of aircraft with low losses. Luftwaffe operations were conducted primarily by the Air Leader Baltic, whose formations mined sea routes, the port of Kronshtadt, the Neva, and the White Sea canal and were employed in mine-sweeping, convoy, and reconnaissance duties, in attacking Soviet ships at sea and in ports, and in keeping track of shipping in the eastern Baltic.⁹⁰² By 31 August 1941 they had flown 1,775 sorties and sunk or damaged numerous Soviet warships and

merchantmen. With a total of 20 aircraft lost they had shot down 46 enemy aircraft and destroyed 12 on the ground.⁹⁰³

The units under the Air Leader Baltic provided important assistance in the conquest of the Baltic islands. In this operation the air leader together with the staff of 10th Anti-aircraft Regiment, 10th Air Signals Regiment, an air-signal battalion for special duties, and an air-reporting leader was placed under the *ad hoc* staff of Air Leader 'B' under Major-General Heinz von Wühlisch, although his tasks were taken over again by Air Leader Baltic after the withdrawal of several flying units in the middle of September.⁹⁰⁴ During the operations to seize the Baltic islands (see the Annexe Volume, No. 17) his aircraft flew 1,524 sorties against Saaremaa and Hiiumaa with only light losses and destroyed or damaged several Soviet aircraft, warships, and merchant vessels.⁹⁰⁵ On 27 October 1941⁹⁰⁶ the post of Air Leader Baltic was abolished after its tasks in that area had been largely achieved with the occupation of the coast, and when its flying units were needed in the Mediterranean (Coastal Air Gruppe 806), in the west with Air Fleet 3 (Coastal Air Gruppe 506), and in the Black Sea or northern Norway (Sea Reconnaissance Gruppe 125). The staff was transferred as 'Air Leader South' to Saki in the Crimea. Its remaining tasks were taken over by I Air Corps. Earlier, this corps, together with units of VIII Air Corps attached to Air Fleet 1 in August and September, had attacked ships in Kronshtadt and Leningrad on Hitler's orders to prevent the feared break-out of the Soviet Baltic Fleet to Sweden. On 21 September the Soviet battleship *Marat* was struck by a 1,000-kg. bomb dropped by aircraft of Dive-bomber Geschwader 2 and settled on the sea bed. The attacks had to be flown in a target area of 10 × 10 km. through the massed fire of approximately 1,000 anti-aircraft guns. But it was not possible to sink the Soviet ships. With their heavy guns, among them those on the stern of the *Marat*, they continued to play an important role in the fighting for Leningrad.⁹⁰⁷

In the area of the Arctic Ocean, the Barents Sea, and the White Sea the railheads of Murmansk and Archangel were attacked—the latter to a lesser extent because of navigational problems involved in entering it from the sea. Other targets were the Soviet naval base of Polyarny, along with Murmansk

the only port on the north coast of the Soviet Union free from ice throughout the year, and the Soviet Arctic Fleet itself.⁹⁰⁸ The 'Air Leader Kirkenes' also had to protect coastal shipping along the north Norwegian coast, especially shipping within the range of Soviet aircraft, and in addition had to mount constant dive-bomber attacks on the heavily fortified Soviet batteries on the west side of the Rybachiy Peninsula. He was responsible for aerial reconnaissance east of Spitsbergen, Bear Island, and the North Cape—tasks which because of frequent sea mist and a lack of sufficient forces and equipment could not be carried out adequately. Finally, he was to attack Soviet supply shipping, which was generally done by armed reconnaissance, and also—though not very effectively—by mining the entrances to Murmansk and to the White Sea.⁹⁰⁹

The activity of Soviet flying units in the far north was at first defensive and limited to escorting convoys and providing fighter protection over naval bases. It was surprising that the Soviet command did not order the nickel-mining area of Petsamo and the long supply-routes to be systematically attacked. Nor were any combined Soviet sea-air operations observed in northern waters. Evidently the Soviet command considered them to be a secondary theatre and for that reason only weak air units were stationed there.

In the periods of 22 June to 31 July and 1 September to 31 October the Luftwaffe estimated that it had sunk 79 merchant ships of 156,000 GRT, 1 cruiser, and several destroyers and submarines, and had damaged 137 merchant ships of 371,000 GRT, 2 battleships, 3 cruisers, and several other warships in the three geographical areas in which the war at sea in the east was fought.⁹¹⁰ In fact, in 1941 the Luftwaffe sank only 1 battleship, 1 cruiser, 7 destroyers, 1 coastal defence ship, 1 submarine, 3 motor torpedo-boats, 1 submarine-chaser, 2 gunboats, 2 ice-breakers, and 1 monitor.⁹¹¹ Claims of other successes cannot be substantiated. In the war in the east as a whole the air war at sea played only a subordinate role, which the German navy acknowledged with regret and which gave rise to serious questions of authority, even including the demand for a naval air arm.

(d) *Attempts at an Independent Strategic Air War against the Sources of Soviet Strength*

The failure of the Luftwaffe to prevent a recovery of the Soviet air force by destructive strategic attacks against its aircraft factories, sources of industrial strength in rear areas, railway lines, and other transport routes for supplies and replacements from the factories to the front made itself increasingly felt. Any systematic attacks on the armaments industry and sources of strength in the Soviet hinterland from the very beginning would not, however, have been

⁹¹¹ According to Rohwer, 'Sowjetische Kriegsschiff-Verluste'.

compatible with Directive No. 21, which ruled that the bulk of Luftwaffe formations in the east should support the ground forces for the duration of the mobile operations of the army. It was only after the general line Volga-Archangel-Astrakhan had been reached, so as to shield the conquered European part of the Soviet Union against the Asian part, that 'if necessary, the last industrial area remaining to Russia in the Urals' was to be eliminated by independent strategic attacks by German bomber formations. Actions which had until then been planned and indeed rigorously executed as more or less independent or seemingly operational Luftwaffe missions were usually carried out to support the army and were tied to its operations. At most they can be considered indirect support for the army and, less often, for the navy. Among such attacks were the bombing of railway lines to cut off Soviet land forces on the battlefields and to accelerate their destruction; the mining of important ports, canals, and shipping routes; and occasional attacks on ships. Besides, German interest in capturing the Soviet armaments industry, stockpiles of food, and the engineering structures on railway lines intact, west of the line from the Caspian Sea via the Volga and Gorkiy to Archangel, made a strategic bombing war within that area undesirable.⁹¹²

In addition to the general misjudgement of the duration of the campaign to break Soviet resistance and of the support which would be required by the army, it was certainly also a wrong assessment of the Soviet armaments potential which prevented the Luftwaffe leaders from carrying out systematic, centrally directed air attacks on the enemy's aviation and other industries. The Soviet air armaments potential was underestimated; the scale of industrial relocation⁹¹³ beyond the Urals and of the new industrial centres in Siberia was not recognized. As late as mid-November 1941 the Luftwaffe operations staff believed that in the period from 1 December 1941 to 1 May 1942 European Russia—excluding the areas of Moscow and Voronezh, which were to be conquered during that period—would be capable of a total production of only 1,240 front-line aircraft and the Asian part of the Soviet Union of only 1,300, without deducting the probable losses in production caused by German air attacks. It was expected that the Red Army would have only 2,000 front-line aircraft in the spring of 1942 and that they would probably only be able to 'support the Soviet army with major forces at points of main effort'.⁹¹⁴ In fact the assumed production figures were far too low: on average the Soviet aircraft

(IIIc/IV), 19 Nov. 1941, BA-MA OKM, Case GE 958/PG 32957, pp. 274 ff. On the assessment of the strength of Soviet flying units in the second half of 1941 cf., in addition to situation reports of Luftwaffe operations staff/ Ic (BA-MA RL 2 II/246-69), Halder, *Diaries*, 1201 (26 Aug.), 1219 (7 Sept.), 1228 (12 Sept.), 1237 (15 Sept.), 1280 (8 Oct.), 1350-1 (12 Dec.).

industry was already producing 1,400 aircraft a month by the end of 1941; in March 1942 the figure was 1,647, and for the year as a whole the total was 25,436, an average of 2,000 a month,⁹¹⁵ in spite of the industrial relocations carried out in 1941-2. Pessimistic Soviet assessments of their own situation in captured documents⁹¹⁶ also probably tended to confirm the views of the Luftwaffe leaders, for whom a large-scale strategic bombing campaign was not feasible in any case as some of the Soviet armaments centres were beyond the range of German bombers.

But in spite of the decision of the Luftwaffe leaders not to mount a strategic bombing campaign in the east, for whatever reasons, it would have been necessary, in view of the basic assumption of Directive No. 21 that the war against the Soviet Union could be won in a short, swift campaign and in accordance with the principle supported by the Luftwaffe leaders of advance preparation, especially of independent, long-range air operations,⁹¹⁷ at least to prepare studies for such missions and to determine what targets should be considered, which were the most important, what priorities should accordingly be established within the framework of the conduct of the war as a whole, what forces would be necessary for these operations, and what their probable performance would be in relation to the results to be achieved. But no such forward-looking planning for a systematic, centrally directed, independent strategic bombing campaign against the Soviet war economy after the completion of the war of movement was undertaken by the Luftwaffe. Evidently it was not even envisaged in such an event to combine and train long-range bomber units under a single command. All flying units were and remained under the individual air fleets, which were themselves organized for co-operation with the army, and it was accepted without question that an air fleet should use all available forces to support the army units in the area for which it was responsible, especially as the army was constantly requesting such assistance. A long-range bomber unit under the direct command of the commander-in-chief of the Luftwaffe would have been independent in the choice of its targets, but that would not have excluded its temporary use to support the army. But even this organizational preparatory measure was never taken.⁹¹⁸

The principle of co-operation with the army could not, however, be maintained without exception as more and more new aircraft and tanks appeared on the Soviet side, and it was logically concluded that these must have been produced somewhere. As early as 4 July 1941 Air Fleet 2 observed that in spite of heavy losses the number of Soviet aircraft had scarcely declined.⁹¹⁹ The army began to point out that here and there the enemy had regained air superiority and that the direction of Soviet air units was increasingly marked

by a 'clear-headed and aggressive leadership'.⁹²⁰ On 17 July the Luftwaffe operations staff intelligence department estimated the total number of Soviet aircraft at approximately 5,000; on 12 August it still assumed 3,800 aircraft of all kinds, although Soviet aircraft losses were put at 10,300.⁹²¹ On 9 October Soviet losses were calculated at 12,700 aircraft of all kinds, leaving 2,600 front-line and training aircraft in service.⁹²² On 21 October the figure was 2,550. The Soviet air force had not been knocked out of the war, although on 11 December Hitler was able to speak publicly of 17,322 aircraft destroyed, a figure which according to the Luftwaffe rose to 20,392 by the end of the year.⁹²³ Clearly the Soviet aircraft industry was producing a steady and sufficient volume of replacements. But the Luftwaffe failed to realize even remotely the real magnitude of this production effort.

In view of the situation described above, the Luftwaffe was occasionally forced to undertake strategic operations. The resulting bombing attacks, however, were not of a strategic nature in the true sense of the term, as they were carried out with inadequate forces, were not sustained, and were not based on an overall plan. They were rather unsystematic isolated actions against strategic operational targets (cf. Diagram II.1.8), while the bulk of the aircraft continued to be used in indirect and increasingly also in direct support of the army. With the exception of the attacks on Moscow, these actions were due to initiatives of individual air fleets or air corps, in whose operations areas the respective targets were located.⁹²⁴

The attacks on Moscow⁹²⁵ represented the only operational-strategic use of the Luftwaffe in 1941 on orders from Hitler or the Wehrmacht High Command. At the end of June and the beginning of July 1941⁹²⁶ Hitler had stated repeatedly that Moscow had to be attacked early in the war and, like Leningrad, razed to the ground. On 14 July he considered it necessary to strike Moscow as the 'centre of Bolshevik resistance and prevent the orderly evacuation of the Russian governmental apparatus'. He also wanted to counteract enemy propaganda about the exhaustion of the force of the German attack. In

Directive No. 23 of 19 July 1941 on the 'Continuation of the war in the east' it was therefore ordered that 'The attack on Moscow by Air Fleet 2, temporarily reinforced by bomber forces from the west, is to be carried out as soon as possible as "retaliation for Soviet attacks on Bucharest and Helsinki".' Firstly, however, the directive stated that 'For the Luftwaffe it is especially important, if forces in the centre of the front become available, to shift the weight of its support with fighter and anti-aircraft forces to the army's attack on the south-east front, if necessary by speedily bringing up reinforcements or by an appropriate regrouping.' This makes it clear that it was not the air attack on Moscow but support for the army in the south-east that was to be the main aim of the Luftwaffe's efforts. Indeed, as early as the beginning of August Air Fleet 2 was weakened by the loss of 11½ flying Gruppen, i.e. a third of its aircraft (cf. Table II.1.2), as a result of a new shift of the main effort of the overall attack and the related transfer of VIII Air Corps to Air Fleet 1 in the north. This was due primarily to the execution of Hitler's original plan for the campaign.⁹²⁷ To what extent, in addition to the principal military reasons, his decision was influenced by propaganda and ideological factors, such as his view of Leningrad as the 'exponent of the [Bolshevik] revolution', is difficult to determine. But in Hitler's case these should not be underestimated.⁹²⁸ This does not mean that the Luftwaffe did not give priority to military targets and aspects in carrying out this mission. Leningrad, after all, was also an important industrial and armaments centre. From September to the end of December 1941, a total of approximately 1,500 t. of high-explosive bombs was dropped on the city, although it was defended by several hundred fighters, 600 anti-aircraft guns, and approximately 300 barrage balloons. The weight of bombs dropped on Leningrad during this period, including incendiary bombs, thus equalled the weight dropped on average on a German city every night during the last year of the war. Air Fleet 1 was far too weak to achieve any strategic effect with such attacks. These four months saw 79 per cent of all air attacks on Leningrad over the entire war.⁹²⁹

The first air attack on the Soviet capital, which in addition to being the seat of government and the military commands was also the country's most important transport junction and a major armaments centre, was made in the night of 21–2 July 1941 with good visibility from altitudes of between 2,000 and 4,000 metres by 195 bombers of Geschwader 2, 3, and 53 under the command of II Air Corps and augmented by Pathfinder Bomber Gruppe 100. High-explosive bombs totalling 104 t. in weight and 46,000 incendiary bombs were dropped by the 127 aircraft that reached the target area. These bomber units were later temporarily reinforced with units from Bomber Geschwader 4 of Air

Fleet 1, normally used to lay mines, Bomber Geschwader 54 and 55 of Air Fleet 4, and Bomber Geschwader 28 from IX Air Corps of Air Fleet 3 stationed in the west. Available forces were clearly not sufficient for an effective operation and had to be scraped together from wherever they could be found. The first attacks were made at night, as German fighters could not provide complete protection during the day because they did not have sufficient range. The attacks were aimed at militarily and politically important targets, although under the conditions prevailing other buildings and facilities were also hit. The bombing attacks made in late autumn and the winter of 1941-2 were of an operational rather than a strategic character, not only because the city was then within the operations area of the army, but also because a strategic effect could not be expected from the number of aircraft involved. Moscow's anti-aircraft defences and air-raid protection had been improved steadily and with increasing intensity since the outbreak of the war in the east. The anti-aircraft defences with approximately 1,000 guns were, as German bomber crews reported, stronger than those of London. Moscow was also protected by 585 fighters and numerous barrage balloons and search-lights.⁹⁰ The city was attacked a total of 76 times at night and 11 times during the day. By 25 October 1941 59 attacks had been carried out and Gust over 1,000 t. of high-explosive bombs dropped, approximately half of what the Royal Air Force dropped on average in a single night in its strategic attacks on Germany in 1944. The 75th German attack on Moscow took place on 6 December 1941, and the last on 5 April 1942.⁹¹ Only the first 3 attacks were carried out with more than 100 bombers; 6 involved 50 bombers each, 19 involved 15-40, and 59 involved 3-10 aircraft.⁹² German losses were especially low in the first three attacks—only one aircraft in each attack—and remained within acceptable limits later. This proves that the failure of the attacks on Moscow to achieve any effect on the war in the east as a whole was due more to the weakness of the attacking German formations than to the strength of the Soviet air defences. In their turn, the long-range Soviet bombing attacks on Berlin, made with heavy losses and inadequately trained crews as a response to the attacks on Moscow, also remained without any significant military effects. They merely provided another demonstration of the performance of Soviet aircraft, as long as the Baltic islands were available to them. According to Soviet figures, 1,088 persons were killed in the air raids on Moscow.⁹³

The German air offensive against Moscow was an attempt with inadequate forces and in an inadequate form to demonstrate strength at a moment when

⁹⁰ On the organization of Moscow's air defences cf. Groehler, 'Luftverteidigung Moskaus', 119-21.

⁹¹ Cassidy, *Moscow Dateline*, 77. Cf. Zur Frage des operativen Luftkrieges im Osten [On the question of operational air war in the east], 3-4, collection of materials of the Studiengruppe Geschichte des Luftkrieges, Karlsruhe, BA-MA Lw 106/13.

⁹³ Cassidy, *Moscow Dateline*, 77. On Soviet strategic bombing raids on Germany see Grochter, *Bombenkrieg*, 160-6.

German expectations of victory were high. It was, as Göring later explained,⁹³⁴ a series of prestige attacks hastily initiated as an answer to Hitler's sarcastic question whether he, Göring, believed that there was a Geschwader left in the Luftwaffe with enough courage to fly to Moscow. Even though this explanation does not correspond to the facts, it clearly shows the frivolousness and lack of planning with which the attacks were initiated. Not without reason did Kesselring give the order for the first attack on Moscow only half-heartedly.⁹³⁵ The timing of the start of the attacks was clearly wrong, because in July the main task was still to provide all-out support for the ground troops to help them reach their operational objectives.⁹³⁶

Severing the supply-routes from the ice-free ports in the far north of the Soviet Union by means of regular strategic bombing would have been a more worthy objective for the German bombers, especially after the ground forces had failed to reach their objectives Murmansk, Kandalaksha, and the Murmansk railway line, and the front had hardened. The main target should have been the Murmansk railway line, which was serviceable throughout the year, and not the parallel poor road or the White Sea canal, which could not be used in winter because of ice and was in any case suitable only for small ships. The question must, however, be asked whether, in 1941, the Luftwaffe General Staff and the German leadership were fully aware of the potential importance of this supply-route for possible shipments from Britain (in the first place). While a significant strengthening of the Soviet Union through such assistance was still not to be expected at that time, the importance of this supply-line, soon to be heightened by the start of Anglo-American supply shipments,⁹³⁷ should have been foreseen. As early as 1942 more than half of all supplies sent to the Soviet Union were shipped to Russia via the North Atlantic route, which by then was fiercely challenged.⁹³⁸

Even the instructions for the theatre in the far north⁹³⁹ in Directive No. 21 clearly show that for the German military planners the offensive elimination of the supply-line there was of secondary importance and to be achieved only after northern Norway and the Petsamo area had been secured. They viewed the world largely from a continental European perspective and were not sufficiently aware of the global-strategic potential of a supply-line via the

Deane, *Strange Alliance*, 87 ff.; Lukas, *Eagles East*, 233 ff. The Soviet Union received, among other equipment, about 14,800 American aircraft and 427,284 trucks (a quarter of the total being delivered via Murmansk), which was equal to two-thirds of the initial truck stock of the German army in the east. These vehicles greatly increased the mobility of the Red Army and were a major factor in its offensive operations in the later years of the war.

⁹³⁹ On the assessment of the importance of the far north and the use of the Luftwaffe to support the army there in 1941 cf. sects. II.III.1(c), and (d) at n. 89 (Überschär).

Arctic Ocean and the ports of Murmansk, Kandalaksha, and Archangel. Certainly the hope of a short campaign, during which supply questions would not be especially significant, played a role in their thinking. And they probably also believed that the encirclement of Leningrad and linking up with Finnish forces north-east of the city would greatly reduce the importance of the far north. In later directives from the Wehrmacht High Command and Hitler the tasks of securing Norway and the nickel-mines in Petsamo against enemy landings and air attacks were still repeatedly described as the main objectives of the Wehrmacht commander or the army headquarters command in Norway.⁹⁴⁰ Air Fleet 5 therefore saw its main task as attacking supply shipments for Britain in and around Scotland, defending Norway against British sea and air forces, and covering the arrivals and departures of German naval forces. It considered support for the advance of the Army Command Norway from Finland to be an incidental additional task.⁹⁴¹ The briefing of the Luftwaffe for Operation Barbarossa similarly described the severing of the Murmansk railway line as a 'secondary task' to be carried out with elements of Air Fleet 5.⁹⁴² It is obvious that the far north was treated as a minor theatre of the war from the very beginning.⁹⁴³ This was also evident in the assignment to that area of only weak and primarily tactical instead of strategic Luftwaffe units, which were not significantly reinforced during the summer of 1941 and were thus in no position to fulfil either their 'secondary task' or their main task of supporting the army, although Murmansk and the Murmansk railway line became regular targets of the Luftwaffe and attacks were occasionally carried out on Archangel.⁹⁴⁴ Regardless of whether the strategic importance of occupying Murmansk and cutting all transport lines from the port was taken seriously enough—it was certainly recognized—or whether, as a result of the excessive demands made on the Luftwaffe in all theatres of the war, not enough bomber formations could be made available for that purpose, the failure to take sufficiently strong measures in the far north had serious strategic consequences.⁹⁴⁵

Moreover, carefully planned, sustained attacks on tank and aircraft plants would have been of basic importance. Just as the flow of new aircraft could not be stemmed, the supply of more tanks could not be halted, as Hitler observed with surprise and irritation at the beginning of August 1941.⁹⁴⁶ At that time Anglo-American deliveries had not yet started. The importance of the Soviet tank factories was therefore obvious. The same was true of Soviet aircraft plants, whose systematic destruction would have considerably reduced pressure on the German front line. The railway lines to and from Siberia, from the Arctic Ocean and the Caspian Sea to the interior of the country, the oil refineries in Tuapsc and the oil pipelines in the Caucasus and from Guryev on the Caspian to Orsk, the cracking-plants for the production of aviation fuel in Ufa and Orsk, and the oilfields of Groznyy and Baku—all these would have been worthwhile targets for an independent strategic air war. In October 1941 demands along these lines from V Air Corps were not listened to at higher levels.⁹⁴⁷

Although in terms of its personnel and technical superiority over the Soviet air force the Luftwaffe would have been in a position to conduct a systematic, independent, long-range air war in the east for a certain time, and although its operational training and knowledge of existing important strategic targets repeatedly raised the question of the need for such a strategic air war for the Luftwaffe leaders, only isolated missions were flown against strategic targets in 1941, and only when bomber forces could be temporarily spared from the ground fighting and the weather for a limited time offered a favourable opportunity for a successful strategic attack.⁹⁴⁸ But there was no planned, independent air war against the sources of Soviet military strength in 1941. The reasons were to be found, among other places, in Luftwaffe doctrine, in the tasks assigned to the Luftwaffe by the Wehrmacht High Command and the commander-in-chief of the Luftwaffe, who insisted on continuing the war against supply shipments for Britain. Other reasons were the lack of a strategic bomber fleet large enough for all theatres of the war, the lack of an appropriate strategic plan and an appropriate organization of the strategic bomber forces, the increasing use of bombers for direct support of the army and the resulting heavy attrition, the lack of a suitable large bomber, and last but not least the failure of the German attack on Moscow in December, which required the use of almost all Luftwaffe units in the east for ground fighting. The prerequisite for a large-scale, independent, strategic use of the Luftwaffe envisaged in Directive No. 21—the reaching of the above-mentioned line between the Volga and Astrakhan, and thus the end of the war of movement—was not fulfilled in 1941.

The protection of the Romanian oilfields by units of the German Luftwaffe mission in Romania can be considered strategic in a defensive sense. Repeated attacks by Soviet air forces were successfully repulsed by anti-aircraft and

fighter units belonging to the mission and by suitable Romanian forces. After the conquest of the Crimea these attacks ceased. By December 1941 the Luftwaffe mission had recorded 95 enemy attacks by a total of 336 aircraft. Because of the inadequate night-flying training of Soviet crews, most of the raids were carried out in daylight; 81 of the participating Soviet aircraft were shot down.⁹⁴⁹ Much damage was prevented by the use of dummy facilities and staged fires. German and Romanian losses were kept low and the oil installations suffered no significant damage. Oil production and transports were not affected.⁹⁵⁰

(e) *The Situation of the Luftwaffe at the Turn of 1941-1942*

On 18 September 1941 the state secretary for aviation and inspector-general of the Luftwaffe, Field Marshal Erhard Milch, stated to the industrial council: 'Perhaps we underestimated the Russians earlier, but now they are soft.'⁹⁵¹ On 15 October 1941 he considered some of the bomb and ammunition requirements of the Luftwaffe quartermaster-general to be 'much too high, especially if one considers that the war situation indicates that the great campaign against Russia will be concluded in the near future'.⁹⁵² At about the same time, in accordance with instructions from Hitler, the chief of the operations department of the Luftwaffe General Staff was considering the strengthening of the air defences of the Reich territory by bringing back anti-aircraft units from the east as well as the strength of the Luftwaffe units to be left there after the conclusion of military operations. He proposed to the head of the Army General Staff that only 8 bomber Gruppen, 3 dive-bomber Gruppen, 10½ fighter Gruppen, 3 aerial reconnaissance Staffeln, and 5 anti-aircraft regiments under two air fleets should remain in the east.⁹⁵³ The organization department of the Luftwaffe General Staff ordered a reorganization of the occupied eastern territories in air command districts (*Luftgau*), to come into effect 'at the conclusion of operations in the east'. The staffs of the three new districts Rostov, Kiev, and Moscow were to be ready to be designated by 15 November 1941.⁹⁵⁴ Not only, in addition to the abolition of the post of Air Leader Baltic,

were the staffs of Air Fleet 2 and II Air Corps with their fleets and corps troops (reconnaissance, transport, weather reconnaissance, liaison Staffeln, and air-signal units) and elements of the units which might have been thought indispensable for the capture of Moscow transferred from November 1941 to the Mediterranean, where the British had opened a new offensive, but the staff of V Air Corps, which had been removed from Air Fleet 4 on 30 November 1941, was at the same time transferred with its corps troops to Brussels to organize a new mine-laying air corps.⁹⁵⁵ Moreover, as had long been planned, a number of front-line formations were pulled out of the eastern front for rehabilitation in Germany or for new duties in southern and western Europe.⁹⁵⁶ All these actions were taken largely on the assumption that a victorious conclusion of operations in the east was imminent, which would reduce the pressure on Luftwaffe units there by the end of 1941. But, as is shown by the withdrawal of VIII Air Corps from Leningrad, in spite of the fact that operations there had not been successfully concluded, it was one more indication of the general lack of sufficient forces and seemed nonsensical not only to later observers.

Hopes of an early end to the fighting in the east were dashed by the Soviet counter-offensive at Moscow in the first days of December 1941, if indeed not before. On 12 December Freiherr von Richthofen, commanding general of VIII Air Corps, which had taken over the tasks of Air Fleet 2, informed the head of the Luftwaffe General Staff, General Jeschonnek, that in the east it was now a question of 'to be or not to be'.⁹⁵⁷ On 16 and again on 24 December, after being informed of the situation,⁹⁵⁸ Hitler immediately ordered the withdrawal of air units from the west and the creation of new operational and transport formations to reinforce VIII Air Corps and to support Army Groups Centre and North. At the beginning of January 1942 half the staff of V Air Corps under General Robert Ritter von Greim was again transferred to the Crimean peninsula on the eastern front as 'special staff Crimea', which meant that the creation of a special mine-laying air corps operating against Britain was not carried out. The other half, under the chief of staff of the corps, Colonel Hermann Plocher, reached the central sector of the eastern front at the beginning of February 1942 in order to prepare the transfer of VIII Air Corps for duty in the Crimea and the assumption of command by the newly formed 'Luftwaffe command east'.⁹⁵⁹ Thus within a few weeks the situation of the Luftwaffe in the east had been unexpectedly reversed and entered an acute crisis. Many of the transfers of Luftwaffe forces to the west for the war against

Britain, undertaken with some misgivings⁹⁶⁰ but in optimistic misjudgement of the situation in the east in the late autumn of 1941, had to be cancelled. As Göring later complained: 'What was once sent east never came back again but remained in the east.' The hope that he too had initially entertained that the struggle against Britain would not have to be halted because of the campaign in the Soviet Union, and that the Geschwader would be needed in the east 'only for the first four days to make a bigger impression', in his own exaggerated phrase, had proved to be illusory.⁹⁶¹

At that moment, however, as we know from the diary of General von Richthofen, who spent some time at this point with Göring, Jeschonnek, and Hitler, the Luftwaffe leaders at first obviously did not regard the defeat at Moscow as the beginning of the turning-point of the war in the east, any more than did Hitler or the army leaders. Göring, who was hardly interested in that war and, ever since the beginning of the campaign in the east, had largely withdrawn into his private world, was inclined to underestimate the Soviet Union⁹⁶² and, unlike his head of the Luftwaffe operations department, Major-General Hoffmann von Waldau, to take a rosy view of the situation. This tendency to ignore unpleasant facts was made easier by Japan's entry into the war on 7 December 1941. Not only Jeschonnek and Richthofen but also the sceptical Hoffmann von Waldau expected this development to lead to a great improvement on the eastern front.⁹⁶³ The transfer of Soviet troops from Siberia to Moscow would enable the Japanese to 'attack the centres of Soviet strength in the rear of our enemy', which, as Richthofen stated in his order of the day on 10 December 1941, would have a favourable effect on the German conduct of the war.⁹⁶⁴ He was inclined to see the defeat at Moscow as a 'local setback' and still hoped to be able to return to Germany with his units in three weeks, if everything went well.⁹⁶⁵ But his optimism was not entirely unclouded by forebodings, for on 11 December, as he noted in his diary, he treated his generals to 'fiery words and morale-boosters, not quite honestly, but with success'.⁹⁶⁶ Apart from the belief that the Soviet troops were also suffering,⁹⁶⁷ Richthofen found consolation in the thought that Soviet forces were not sufficiently mobile to be able to mount attacks against stubborn German resistance for any length of time.⁹⁶⁸ On 25 December Hoffmann von Waldau believed that the shock had been overcome.⁹⁶⁹ In the end Göring, Jeschonnek,

Richthofen, Goebbels, and Himmler, who were all present at Hitler's headquarters on 17 December 1941, concluded fatalistically that reverses had to be accepted in a struggle for world domination and that the people had to make sacrifices. 'No doubts at all of victory eventually.'⁷⁷⁰

What then was the general situation of the Luftwaffe? On 27 December 1941, after six months of fighting in the east, it still had 5,167 front-line aircraft, including transporters. Its real strength had declined by 403 aircraft since the beginning of the war in the east and its combat-readiness from 3,812 to only 2,560 (from 69 to 50 per cent of actual strength). In some of the units in the east the figure was far below that, e.g. only 37 per cent of the bombers and 34 per cent of the long-range reconnaissance aircraft. Of a total of approximately 1,900 front-line machines, including transport aircraft, in the east, about 960 were ready for action;⁷⁷¹ by 10 January 1942 the figure was only 775 out of 1,713, including close- and long-range reconnaissance aircraft under army command. Only a third of all Luftwaffe units were still in the east.

There were various reasons for the low state of readiness of the Luftwaffe. To start with, the wear and tear was higher than expected; the strained supply situation impeded maintenance and repairs. The Red Army had systematically destroyed most of the suitable facilities, which often made it necessary to transport heavily damaged aircraft back to Germany, where the aircraft industry was already overburdened because of the shortage of labour. Field airstrips as a rule were primitively equipped and the responsible officers of the field air districts often lacked experience. Finally, adequate preparations had not been made for maintaining aircraft at temperatures far below freezing; in January 1942 only 15 per cent of the Luftwaffe vehicles used for transporting aircraft spares were in operating condition. Instructions for cold-start procedures were not issued until October 1941, and as late as February 1942 the deputy chief of staff in charge of supply and administration had to issue explanations. The Red Army solved the problem of ensuring the combat-readiness of its flying units by establishing two new posts, the chiefs of rear-area services and of technical services, both of them deputies of the commander-in-chief of the air force. This arrangement gave appropriate organizational priority to supply, support, and technical maintenance. New air-base organizations now ensured better maintenance and faster repair of aircraft.⁷⁷²

By 27 December 1941 German aircraft losses in the east were 2,505 destroyed, 327 of which were not due to enemy action, and 1,895 damaged. This meant that within six months of the opening of the eastern front 4,400 aircraft were permanently or temporarily out of action. On other fronts during this period an additional 1,330 front-line aircraft were lost, 779 totally. Total losses

⁷⁷¹ Report on the combat-readiness of the flying units as of 27 Dec. 1941, Generalquartiermeister der Luftwaffe, 6. Abt., 30 Dec. 1941, and as of 10 Jan. 1942, *ibid.*, 13 Jan. 1942, BA-MA RL 2 III/716, 717.

⁷⁷² Overy, *Air War*, 50 ff. Cf. sect. II.11.2 at n. 19 (Hoffmann).

on all fronts since the beginning of the war in the east were therefore 5,730, about three-quarters of them in the east. This figure represented a third of all losses of front-line aircraft in the twenty-eight months since the outbreak of the war.⁹⁷³

In comparison, new production (excluding seaplanes, gliders, and courier aircraft) from June until the end of December 1941 was only 5,147,⁹⁷⁴ far too low to make up for the losses of the previous six months. Only with the reuse of about 2,000 repaired aircraft over this period would that have been possible. But repaired aircraft as a rule were used for training, and not all of them were suitable for front-line duty. Moreover, many of the new and repaired aircraft were forever being transferred or redirected or in transit, and were thus not yet available to the supply and replacement officer of the Luftwaffe.

Between 22 June and 27 December 1941 personnel losses of the three branches of the Luftwaffe—the flying, anti-aircraft, and signals units—which on 20 May 1941 numbered 1,269,000 men,⁹⁷⁵ totalled 6,232 killed (including 732 officers), 2,564 (476) missing or captured, and 11,425 (831) wounded. It can be assumed that the bulk of these losses were suffered in the east. They increased total Luftwaffe personnel losses since 1 September 1939 to 16,525 (2,321) killed, 10,859 (1,677) missing or captured, and 21,290 (1,844) wounded.⁹⁷⁶ Crew losses of the flying units in the east were 3,010 (including 664 officers) killed, missing, or captured. This represented a fifth of the flying crews lost in this way since the start of the war in 1939. At the beginning of September 1939 the Luftwaffe had had a little over 4,000 air crews, or 11,000–12,000 men, in its front-line units.⁹⁷⁷ Together with wounded, crew personnel losses in the war in the east amounted to 4,404, including 1,008 officers. Personnel losses of front-line crews thus remained within acceptable limits and in comparison were far lower than aircraft losses. Further, as the number of training hours had not been significantly reduced since the start of the war in 1939⁹⁷⁸ and the number of crews undergoing flight training had scarcely declined, the Luftwaffe, in terms of quantity and quality of its flying personnel, was still far from exhausting its resources.⁹⁷⁹ On 27 December 1941 it had 6,149

⁹⁷³ Cf. Reports on the combat-readiness of the flying units as of 21 June and 27 Dec. 1941. Generalquartiermeister der Luftwaffe, 6. Abt., 24 June, 30 Dec. 1941, BA-MA RL 2 III/713, 716. Inaccurate figures in the original texts prevent precise calculations; however, the figures are sufficient to illustrate the general situation of the Luftwaffe. Somewhat different figures in Groehler, 'Verluste der deutschen Luftwaffe', 330–1.

⁹⁷⁷ Figures from Völker, *Luftwaffe*, 184–5; Kreipe, Köster, and Gundelach, MGFA Lw 15/1, annexes 14 and 15; report of the general-staff officer of the Luftwaffe in charge of supply and administration, 6th dept., on the combat-readiness of the flying units as of 2 Sept. 1941, BA-MA RL 2/III/702.

⁹⁷⁸ Cf. *Defeat of the German Air Force*, 3ff. and fig. 3.

⁹⁷⁹ Of course since 1941 the staff officer of the Luftwaffe in charge of supply and administration (Generalquartiermeister) had warned about the shortage of bomber crews (cf. Kreipe, Köster, and

front-line crews and an actual strength of only 5,167 front-line aircraft⁹⁰—274 more crews than on 21 June 1941. Much the same was true of their combat-readiness.

Although the Luftwaffe was still a strong, efficient, and combat-ready instrument of war at the end of 1941, the figures nevertheless show that in terms of material and armaments it was declining. In view of the recovery of the Soviet air force and the entry of a powerful new enemy, the United States, into the war, this development was bound to have serious long-term consequences, especially as the already existing armaments gap threatened to become wider as a result of the growing number of tasks the Luftwaffe would have to discharge in the future. In addition, there was a real danger that flight training would have to be curtailed because of high fuel consumption over the past nine months and the dwindling of stocks to only twice the consumption of a combat month. In the second half of 1942 this danger became a reality when the average number of practice flying hours had to be reduced from 240 to 210 hours for each pilot.⁹¹ By the winter of 1941–2 the number of bomber pilots instructed in instrument flying declined sharply when the Ju-52s until then used for training were transferred to air transport units.

In addition to the failure to predict requirements and attrition, as well as the losses suffered by the flying units, especially the bombers, the reasons for the armaments shortfall were to be found in the direct ground support on the eastern front, the widespread optimism about the war situation as a whole and the air situation over Germany, a mood which in some places persisted until the autumn, and the inadequate and poorly managed air armaments programme. Loss and production figures⁹² for front-line models reveal that from June to December 1941 new production of night fighters, twin-engine fighters, long-distance reconnaissance aircraft, seaplanes, and transport aircraft exceeded the overall losses, while new production of bombers, fighters, dive-bombers, and close-reconnaissance aircraft—the types primarily used in the east—fell short of these losses. Only 1,660 fighters had been produced over the previous seven months to replace the 1,823 lost over the previous six months. In the case of close-reconnaissance aircraft, new production amounted to only

Gundelach, 187, MGFA Lw 15), but Groehler's statement ('Verluste der deutschen Luftwaffe', 322–3) that in the first 8–9 months 'the élite of the Fascist Luftwaffe trained before the war was killed' is exaggerated for obvious reasons—to emphasize the supposedly decisive role of the Soviet army and the Soviet air force in the defeat of the Luftwaffe—and its inaccuracy is demonstrated by the figures given above. Even assuming (which is improbable) that only the élite suffered the losses, it would have largely perished in other campaigns and other theatres.

⁹⁰ Cf. annexe 41 (1)–(9) in Kreipe, Köster, and Gundelach, MGFA Lw. 15/1, and the report on the combat-readiness of the flying units of the Luftwaffe as of 27 Dec. 1941, Generalquartiermeister der Luftwaffe, 6. Abt., BA-MA RL 2 III/716; as of 21 June 1941, *ibid.* 713. Murray, *Strategy*, 81–102, although essentially right in his general assessment of the situation, takes perhaps too negative a view of Luftwaffe air-crew and aircraft losses and their immediate effects on Luftwaffe operations.

Source: Plocher, *Krieg im Osten*, annexe 2, MGFA Lw 4/17.

half the losses. This was primarily the result of the use of the Luftwaffe to provide co-operation with, and subsequently direct support for, the army in the east, a logical consequence of its entire previous theoretical and practical development.⁹³ When the war against the Soviet Union dragged on longer than initially expected, this kind of co-operation became a 'Verdun' for the Luftwaffe, a constant, heavy drain on its resources with no end in sight (cf. Diagram II.1.9).

Because of the lack of sufficient close-support forces—VIII Air Corps under General von Richthofen was the only close-support corps in the Luftwaffe—the twin-engined bomber, the backbone of the Luftwaffe and better suited to an operational and strategic air war, was increasingly employed in direct support for the army, sometimes under *ad hoc* close-support commanders. This kind of operation, as a rule at low level by medium bombers, which were too large and ponderous for this purpose, resulted in heavy losses and frequent damage, as Soviet ground forces used infantry weapons for unexpectedly strong opposition to such easy targets.⁹⁴ It soon became evident that German infantry and armoured units were able to make progress against the generally

stubborn and dogged Soviet resistance only when they were supported by the Luftwaffe. On the other hand, the generous granting of air support in all blitzkrieg campaigns led to the army demanding such support not only against enemy forces concentrated for decisive offensive or defensive engagements but also against weak forces too small to justify an air attack, offering too few targets, which could be just as easily destroyed by artillery. Admittedly, numerous tractors for hauling heavy artillery broke down during the winter. As the army was often ignorant of the basic principles for the use of the Luftwaffe,⁹⁸⁵ especially the principle of concentrating the main effort of air attacks within the decisive combat area, demands for air support, often unnecessary and incapable of fulfillment, increasingly dissipated the strength of air attacks and rendered them ineffective. Only in the operations of Air Fleet 2 at the beginning of the campaign against the Soviet Union, in the army's attack against Leningrad in August and September, and in the attempt to take Moscow in the following months were the Luftwaffe forces used in a genuinely concentrated fashion in the east in 1941. Göring therefore repeatedly emphasized the principle of a maximum concentration of force at the most important point of an attack.⁹⁸⁶

Under growing Soviet pressure, especially after the German army had gone over to the defensive on the entire eastern front in December 1941, the principles of an operational air war, which had been made all the more necessary by the loss of forward momentum, were virtually discarded in favour of direct support for the army.⁹⁸⁷ Hitler's assumption of command of the army on 19 December 1941 also contributed to this development.⁹⁸⁸ As supreme commander of the Wehrmacht he now not only co-ordinated the requests of the army and the tasks of the Luftwaffe in a general way in the decisive ground battles⁹⁸⁹ but also, as commander-in-chief of the army, increasingly directed tactical air support to overcome the crisis. His main military interest, however, had always been in the land war.⁹⁹⁰ Soon he ordered that 'planned attacks [by

⁹⁹⁰ Cf. Hitler in Jodl, Tagebuch 1937-1939, 27 Jan. 1938 (IMT xxviii 345-90): 'For Germany the army is the decisive factor; the other Wehrmacht services have only an auxiliary and complementary role', and in order of the day on the occasion of his taking over direct command of the army on 19 Dec. 1941: 'Among the Wehrmacht services the army, however, carries the burden of the fighting' (Domarus, *Hitler*, ii. 1814). Cf. also Irving, *Hitler's War*, 360; Picker, *Hitler's Table Talk*, 27 (10 Sept. 1941).

the army] are to be postponed unless reliable support by the Luftwaffe is available'.⁹⁹¹ General Hoffmann von Waldau complained that the tone in which the army's demands for air support were presented often disregarded the equal status of the Luftwaffe,⁹⁹² which was probably due to the fact that the army was able to refer to orders from Hitler. The use of the Luftwaffe to provide direct support for the army was in agreement not only with the views of many army commanders even before the war⁹⁹³ but also with those of many Luftwaffe leaders who were former army officers, e.g. the commander-in-chief of Air Fleet 2, Field Marshal Kesseling, who ordered the generals of his flying and anti-aircraft units to 'consider the wishes of the army as my orders'. He prided himself 'on anticipating the wishes of the army and on carrying out any reasonable request based on the development of the situation as quickly and completely' as possible.⁹⁹⁴ In this way the Luftwaffe in the east was made completely subordinate to the army. The importance of the air fleets as operational planning and co-ordinating staffs declined. Command of the flying units was increasingly concentrated in the hands of the air corps, which were orientated more towards tactical actions and army operations, or in the hands of *ad hoc* close-support and air leaders created to support army units.⁹⁹⁵ The air corps in the east became tactical air corps, the 'operational' air fleets tactical air fleets.

Under the pressure of circumstances the Luftwaffe in the east became the 'flying artillery' of the army,⁹⁹⁶ at first with the approval of the chief of the Luftwaffe General Staff, who was devoted to Hitler but who later realized the absurdity of using bombers in this manner,⁹⁹⁷ as did the head of his operations department at the beginning of 1942.⁹⁹⁸

⁹⁹⁸ Hoffmann von Waldau, *Tagebuch*, 116-17 (16 Jan. 1942), BA-MA RL 200x/17.

Air transport units, which had an essentially strategic function and had already suffered severe losses—well in excess of 100 aircraft—in the conquest of Crete,⁹⁹⁹ were likewise increasingly used for direct ground support. Often as a result of Hitler's personal intervention, they were soon detailed to carry fuel, mines, and even infantry reserves to the front.¹⁰⁰⁰ The supplying by air of the pockets at Demyansk and Kholm¹⁰⁰¹ had far-reaching consequences in two respects: for one thing, the aircraft used had to be taken from instrument flying courses, which seriously interfered with the training of bomber crews, especially as they were often flown by instruction crews and any losses therefore affected the future training of crews. For another, the Luftwaffe, leaders, and Hitler in particular, felt, in spite of the heavy losses of transport aircraft, that the eventual liberation of the encircled ground forces and the holding of the front for future operations had demonstrated the correctness of such costly operations, and were therefore later only too ready to order similar actions at Stalingrad and in North Africa even when there was no longer any hope of freeing the encircled army units by land. Only in conjunction with offensive actions on the ground and over territory held by German forces would a prolonged employment of the expensive transport aircraft and their crews have been justified. After the turn of 1941–2, the ratio between new and lost Ju-52s became negative: in the first six months of 1942 the figures were 235 new aircraft¹⁰⁰² as against 516 aircraft lost. But at the end of 1941 this danger was not yet apparent to the German leaders.

Direct support for the army was also costly in terms of the number of close-reconnaissance aircraft lost. Of 56 close-reconnaissance Staffeln at the start of the campaign, only 19 were still ready for action at the end of the year. The limited readiness for action of the long-range reconnaissance units since the beginning of the campaign made their losses especially serious. Such losses also demonstrated the wastefulness of the tactical fragmentation of these units between the army and the Luftwaffe and the resulting frequent duplication of effort and omissions in reconnaissance. Oversights resulting from such a lack of reconnaissance aircraft—long-range reconnaissance aircraft were also used as bombers on the battlefield—were an important factor in the German failure to realize in time the scale of the westward transports of fresh Soviet troops from Siberia in the late autumn of 1941.¹⁰⁰³ By the end of March 1942 all close- and long-range reconnaissance, anti-aircraft, and air-signal units assigned to

(ret.) Schmidt to Generals Deichmann and Plocher, 28 Apr. 1955, Führungsakademie der Bundeswehr, Luftwaffen-Archiv 4 (bk. 1); Kesselring, *Memoirs*, 96.

the army were progressively returned to Luftwaffe commands, and the Luftwaffe staffs in the armies disbanded and replaced by Luftwaffe liaison officers with the army staffs.¹⁰⁰⁴ This reduced the need for staffs and made possible a more economical and more concentrated use of the weakened reconnaissance units. The final result of these measures, however, was that the Luftwaffe was bound even more closely to the army, as the air fleets and air corps now had to concern themselves even more with the wishes of the army and found even less time for the operational-strategic tasks of the flying units.¹⁰⁰⁵

To be able to devote themselves again to these urgent tasks, as senior Luftwaffe officers in the east reported in retrospect,¹⁰⁰⁶ or actually demanded at the time,¹⁰⁰⁷ the Luftwaffe leaders would have had to detach the bomber formations suited to long-range tasks from direct-support actions for the army, as indeed was called for by their losses in such actions. As four-engined bombers were lacking, twin-engined types should have been used for long-range attacks and single-engined aircraft for close-support and air-defence tasks. But this would have required a different order of battle and the availability of adequate replacements to meet the needs of army operations.

The Luftwaffe was organized regionally in air fleets and independent air corps that were generally dependent on co-operation with the corresponding army units. Each of these large units was a 'little Luftwaffe' within its own region and capable of fulfilling the most varied offensive and defensive tasks. But this regional fragmentation prevented them from solving problems on a larger scale, as they existed in the Soviet Union because of the vastness of the area and the strategic objectives to be attacked. The resulting concentration of forces on an *ad hoc* basis by transfers over often considerable distances—as with VIII Air Corps or the bomber formations operating against Moscow—generally required much time and always entailed a significant number of breakdowns and other failures.¹⁰⁰⁸ Moreover, it was an illusion to believe that bomber crews who had long been flying ground-support missions in ground contact could suddenly be used to attack distant targets calling for considerable navigational skill and experience. The acquisition of such skills again required time.¹⁰⁰⁹ To reduce bomber losses a functional organization of air units—not only in the east—into long-range bomber, support or close-support, and fighter commands corresponding to the British bomber, fighter, and co-operation commands or the American tactical and strategic air forces

¹⁰⁰⁹ This became evident in 1943-4 in the preparations of IV Air Corps for strategic long-range bombing. The preparations required so much time that the pull-back of the front carried out in the meantime eventually made such operations impossible. Cf. Herhudt von Rohden, 'Letzter Großeinsatz'.

would have been necessary around the turn of 1941-2 if not before. Hitler's Directive No. 39 of 8 December 1941, in which he demanded attacks on armament and training centres in the Soviet hinterland as well as direct and indirect support for the army, could have provided the impulse for such a step. But there is no record of such deliberations in the Luftwaffe General Staff at this time, probably because the strained situation in the east seemed to leave no time for such a reorganization and because it would have raised the question of creating air units within the army. That would have contradicted one of Göring's most vigorously defended principles: that all aircraft, of whatever kind and function, had to remain under his command.

In contrast, the Red Army was able to put its experience in the war into practice. The Soviet air force recovered and its integration in the total political, military, civilian, and economic war effort was improved. Air armies were created, as well as a strategic reserve consisting of large units of specific types of aircraft (fighters, ground-attack aircraft, etc.), which could be switched from one front to another, a strategic long-range bomber command, and a strategic air-defence command consisting of fighters. These organizational innovations gave the flying units greater strategic mobility, the ability to concentrate attacks more quickly, and the ability to achieve air superiority over the key areas of ground operations at a time when the over-extended and in every respect overtaxed Luftwaffe was scarcely in a position to concentrate on a point of main effort. Moreover, Soviet air strategists continued to develop the idea of attacks to paralyse enemy air units and ground-support organizations, to interfere with supply movements, and above all to support their own ground forces. They reformulated their doctrine accordingly.¹⁰¹⁰

From the intelligence sources, the second influence determining the Luftwaffe's situation assessment at the end of 1941, came reassuring reports as late as the winter of 1941-2. The number of enemy incursions from March to the end of August 1941, Luftwaffe Commander Centre (home air defence) reported, had not risen as sharply as the number of enemy aircraft shot down by German air defences over Germany itself.¹⁰¹¹

The monthly war-economy situation reports of the Wehrmacht High Command described the effects of the British and the few Soviet raids on Germany until after the turn of the year as 'insignificant'.¹⁰¹² The navy evidently viewed the air war with less optimism and, because of its main areas of activity in the Mediterranean and around Britain, was more concerned about the future. As early as 25 July 1941, therefore, the chief of the naval war staff enquired from the intelligence department of the Luftwaffe operations staff what the material

¹⁰¹¹ General report on enemy activity and defensive successes, 24 Mar.-31 Aug. 1941, Luftwaffenbefehlshaber Mitte, Führungsabteilung I, Gruppe Ic—No. 2945/41 g.Kdos., 9 Sept. 1941, BA-MA RL 7/577.

¹⁰¹² Cf. Hoffmann von Waldau, Tagebuch, 78 (16 Oct. 1941), BA-MA RL 200/17, and the war-economy reports of the War Economy and Armament Office of the Army High Command, June-Dec. 1941, BA-MA RW 19/99.

and personnel situation of the Luftwaffe would be 'after the liquidation of the eastern problem', what, in view of the other theatres of war, it thought it could achieve against Britain, when it believed it would be able to reach its former numerical strength in terms of aircraft, and how it assessed the Royal Air Force then and in six months' time.¹⁰¹³

Remembering the unsuccessful German air campaign against Britain in the summer of 1940, the operations department of the Luftwaffe operations staff assessed the success of the British daylight attacks in June and July 1941 by concluding that 'the heavy losses suffered in these raids . . . will soon force the enemy to abandon such operations'. German fighter forces in the west were indeed operating under a certain strain, but it was a great advantage that the pilots, if their aircraft were shot down, could 'bail out' over their own territory. The effect achieved by the night attacks on the German war economy was 'quite unimportant' and was 'regarded merely as a nuisance'. In the last two months 'no significant damage to the war economy' had 'been inflicted by air attacks'. It would be possible to 'offset' the expected increased night attacks by 'equipping all night fighters with radar'.¹⁰¹⁴ At the end of July 1941 the technical officer of the Luftwaffe operations staff believed that, assuming the envisaged production targets could be achieved and losses in the east in autumn and winter were not excessive, it would be possible, in terms of personnel and equipment, to compensate for losses of fighters in the east by February 1942 and for losses of bombers by May of that year. This forecast was based on an assumed monthly German production of 1,000 aircraft and a British production of 700. This latter figure was 50 per cent short of the level the British aircraft industry had actually achieved.¹⁰¹⁵ As late as 1 August 1941 section west of Luftwaffe operations staff intelligence did not expect any significant increase in American aircraft deliveries to Britain, if, as had been the case until then, Britain received only half of all American deliveries.¹⁰¹⁶ In the summer of 1941 German officers thus underestimated not only Britain but also the United States. A comparison of air armaments, dated 30 July 1941,¹⁰¹⁷ assumed for

¹⁰¹⁷ Comparison of air armament Germany-Italy and Britain-USA 1939-1943, as of 1 July 1941, pt. 1, 6-7, Der Generalluftzeugmeister No. 1123/42 g.Kdos., 30 Aug. 1941, BA-MA RL 3/1833. As late as 1942 the head of development in the technical office of the director-general of air armament (Generalluftzeugmeister) stated—quite incomprehensibly—that for a long time he had known nothing about the development of an American four-engine bomber, which had come as a surprise to him (development conference, 30 Oct. 1942, BA-MA RL 3/34, p. 2347). After the war Schmid's successor as head of the Luftwaffe operations staff/Ic, Col. (ret.) Wodarg of the general

1943 an Anglo-American superiority of at most 48 per cent in fighters and 63 per cent in bombers in Europe and of only 50 per cent in aluminium production, as against a German 'Elch' (Elk) programme to double the strength of the Luftwaffe,¹⁰¹⁸ implementation of which was doubtful from the start because of the shortage of aluminium. In fact combined Anglo-American aircraft production in 1943 was 34,715 fighters and 37,083 bombers, as compared with only 11,198 fighters and 8,295 bombers and ground-support aircraft in Germany.¹⁰¹⁹ In the comparison of 30 August 1941 the four-engined bombers, of which Britain and the United States built 14,100 in 1943, were counted twice, which made the underestimation even more serious.

In June 1941 the head of department 5 of the Luftwaffe operations staff was still of the optimistic opinion that the United States would not be 'able to participate actively in the war in the foreseeable future'.¹⁰²⁰ Yet in October 1940 the German aircraft producer Fritz Siebel had uttered a warning about the enormous American bomber and air-armaments programme.¹⁰²¹ But, in spite of initial doubts, Göring shared Hitler's purposive optimism, which confidently expected the war in the east to be finished before the United States was ready to intervene, as well as his erroneous belief that Americans were incapable of 'producing anything other than refrigerators'.¹⁰²² As late as 18 September 1941 even Milch estimated probable American aircraft production for 1942 at 16,000.¹⁰²³ That year the Americans in fact produced 47,836 aircraft. The underestimation of Soviet aircraft production after the end of 1941 has already been mentioned.¹⁰²⁴

So far, therefore, no air-armaments measures had been taken that might have had a positive effect on the situation of the Luftwaffe in the east by the beginning of 1942. The 'development stop', Göring's order of 9 February 1940 to pursue only those development plans 'that can be completed in 1940 or will produce results at the latest in 1941',¹⁰²⁵ was in a general sense still in force; it was repeated by the Wehrmacht High Command in October 1941,¹⁰²⁶ and

staff (interview, 18 Apr. 1972, MGFA), stated: 'Compared with the lead we had . . . initially, no one could have imagined that the Western Allies could organize such an armament programme.'

There it was stated that 'the demands' were 'to be limited to the most important developments and those absolutely necessary for field use'.

continued to delay promising new developments. The method of telescoping various development phases¹⁰²⁷ so as to accelerate the series production of aircraft, as it had evolved under the enormous time pressure created by Hitler's increasingly ambitious and constantly changing political and strategic aims, continued to be practised and led to design faults whose elimination after series production had started caused additional delays and reduced output even further. Aircraft production still used primitive, inefficient methods¹⁰²⁸ and suffered from a manpower shortage when sufficient workers from the promised demobilized army divisions did not become available. This shortage in turn prevented the introduction of second or third shifts to make full use of existing production capacity. Production of new aircraft was also slowed in part by the lack of enough replacement engines, a result of the emphasis on quantity rather than depth in armament programmes. The replacements needed had to be taken from new aircraft.¹⁰²⁹ The director-general of air armament, Ernst Udet, could not master the problems of his office, although he was not to blame for all of them. Too much the artist, Bohemian, and test pilot, he was not the organizer and manager he would have needed to be to direct and step up modern mass production of aircraft. As a sensitive person he increasingly felt the burden of responsibility for the failures in aircraft production and his own inability to remedy the situation.

Göring and Jeschonnek were not unaware of Udet's inadequacies. On 14 May 1941 an 'industrial council of the Reich Marshal for the production of aircraft equipment'¹⁰³⁰ was created to assist Udet in the rationalization and improvement of the performance of the aircraft industry. Milch was instructed to support and keep an eye on Udet, which led to considerable friction between the two men. But Udet's 'slipping programmes'—a new aircraft programme, a new draft, or changes in existing programmes were introduced every few weeks without one of them being carried out completely—made these measures necessary. On 20 June 1941, after Hitler, in the expectation of an early victory over the Soviet Union, had ordered arms production in general to be cut back in favour of aircraft production for the intensified war against Britain to be fought after victory in the east,¹⁰³¹ Göring announced a

fourfold increase in the size of the Luftwaffe and gave Milch comprehensive special powers to carry out this task.¹⁰³² Udet remained nominally director-general of air armament but was in practice placed under Milch. Since Göring's programme¹⁰³³—which had been designed specifically for the war against Britain and therefore placed special emphasis on increasing monthly production of bombers, fighters, and twin-engined fighters to 880, 720, and 225 aircraft respectively, with less emphasis on types designed to intervene in ground fighting and on transport aircraft—could not be carried out immediately, a reduced programme, the Elch programme, was worked out. This envisaged only a doubling of the Luftwaffe. Milch, convinced that aircraft production could be substantially increased,¹⁰³⁴ ordered the feasibility of the reduced Göring programme to be examined, and on 10 November 1941 came to the conclusion that 'the "Göring aircraft delivery programme" can be fulfilled, apart from some changes in the output figures'.¹⁰³⁵ Udet, however, continued to maintain that even the delivery figures envisaged in the Elch programme could not be met. On 20 August 1941 he informed the Luftwaffe staff officer in charge of supply and administration that 'in the present material and personnel situation' monthly bomber production would have to decline from 340 to 322 by the end of the year, while fighter production would drop from 221 to 208 by November and not rise again until 1942, as would bomber production. Total monthly output of new military aircraft indeed declined from 1,010 in August 1941 to 734 in November and 780 in December 1941. As Udet observed: 'An increase in deliveries to the figures of the Elch programme cannot be expected unless preference in principle is ordered for the air-armaments programme with regard to allocation of materials and personnel.'¹⁰³⁶

In the meantime, however, the Wehrmacht High Command¹⁰³⁷ had come to realize that enemy air armament was assuming a threatening character, that operations in the east could not be concluded or army armament strengthened as quickly as had been expected, and that armaments programmes on the whole would have to be simplified. Certainly the Luftwaffe General Staff seems to have become generally less optimistic in its assessment of the air

situation, at least with regard to Britain. Jeschonnek, together with other high-ranking Luftwaffe officers, advocated a strengthening of the fighter units.¹⁰³⁸ In September 1941 an increase of monthly aircraft production to 850 bombers and twin-engined fighters, 485 fighters, 174 dive-bombers and ground-attack aircraft, and 90 transport aircraft was called for.¹⁰³⁹ On 18 September 1941 Milch explained to the industrial council¹⁰⁴⁰ how this increase could be achieved: 'to put it simply, we are confronted with the question of whether we shall have no aircraft at all in 1943 or whether we shall have a large number of those that have proved their worth.' In 1942-3, therefore, the 'tried and tested old models' were to be 'produced in large numbers . . . At first quantity will be given priority.' Of course, development programmes could not be abandoned completely, 'but we must not forget that what we develop must contribute to winning this war'. Series production of aircraft already developed, which did not have so many 'teething problems' as new types, was therefore still given priority over development, as the latter required too many engineers, who were more urgently needed for the former. The armaments programmes of the individual Wehrmacht services, however, competed with each other. On 11 September 1941 Hitler ordered their co-ordination.¹⁰⁴¹ Because of the growing requirements of the war in the east, the expected needs of future theatres, and the defence of Germany against air attacks, army and anti-aircraft equipment again came to the fore. This trend was confirmed in the decree 'Armaments 1942' of 10 January 1942. The air-armaments programme was thus denied the means of production equal to the increasing tasks and losses of the Luftwaffe in the east and its simultaneous involvement in other theatres of the war. Available raw materials were no longer sufficient to carry out all programmes of the Wehrmacht branches at the same time. General Thomas reported that an increase in aircraft production seemed virtually impossible before 1943 and that even previous levels could be maintained only if the anti-aircraft programme were cut back.¹⁰⁴²

Udet had realized the inadequacies of German air armament, which were not exclusively his fault but were rooted primarily in German armament policy. In the autumn of 1941, after his friend Fritz Siebel had warned him again about the immense air-armaments potential of the Americans, whose support for the British was becoming increasingly overt,¹⁰⁴³ and considering the demands to increase air armaments to be unfulfillable, he concluded that

the war could no longer be won. Tension between Udet and Milch, who still believed in victory, increased, especially as Milch did not shrink from interfering in Udet's area of responsibility (which admittedly was necessary).¹⁰⁴⁴ Feeling himself squeezed out and persecuted by Milch and abandoned by Göring, desperate about the air-armaments situation, and profoundly depressed, Udet committed suicide on 17 November 1941. Officially his death was explained as the result of an accident during the testing of a new weapon.

This deliberate disinformation by Göring, and the practice, based on Hitler's Order No. 1 on secrecy, of limiting information to the smallest possible number of people even within the top leadership, prevented the true reasons for Udet's death from becoming known to all Luftwaffe leaders at the time and being generally understood as an indication of the futility of continuing the war. The crisis in the east shortly thereafter also helped divert attention from Udet's death. Milch still considered the air-armaments situation to be not so hopeless as Udet had believed.¹⁰⁴⁵ There were still numerous material and labour reserves that could be exploited by intensive rationalization of production and distribution of weapons and aircraft to the troops, especially in the occupied areas in the west and by the use of prisoners of war, without whom later production increases would not have been possible. The shift of emphasis to greater production of tried and tested aircraft, with much lower priority being given to new developments, helped to avoid or at least delay an admission of the foreseeable total failure of the air war. Contrary to rational insight, even the powerful emotions released by the setback at Moscow were often apt to reinforce this tendency, as when the head of the operations department of the Luftwaffe General Staff—in spite of his admission that the objective of the campaign against the Soviet Union had not been reached (Rostov, Leningrad, and Moscow had not been captured; the war was now becoming 'very serious'; and food supplies and transport were guaranteed 'only to a limited extent')—concluded his reflections at the end of 1941 with the words: 'There is still the hope that spring will bring military successes again . . . to help overcome all depressing thoughts. The nation's readiness for sacrifice has probably never been so great . . . as in this war. The important thing is to maintain that will.'¹⁰⁴⁶

The plan to eliminate the Soviet air force and the Soviet Union itself in 1941 had indeed failed. The struggle in the east had to be continued while at the same time a struggle against a powerful new enemy, the United States, began

¹⁰⁴⁴ Cf. Irving, *Rise and Fall*, 119–20, and the report of the head of the Berlin office of the Donau-Flugzeugbau AG, Budapest, Schmid, on the 'over-organization' of the area of the director-general of air armament, 22 Mar. 1943, BA-MA RL 3/859. Cf. also Boog, *Luftwaffenführung*, annexes 3.2a, b.

¹⁰⁴⁵ In view of his many statements to the contrary, it is doubtful that, at the beginning of 1942, Milch seriously questioned that the war would end in a positive way for Germany, in spite of the remark by Speer (*Third Reich*, 301) that Milch and others believed that the war had to be won with available weapons by the autumn of 1942, otherwise it would be lost.

¹⁰⁴⁶ Hoffmann von Waldau, Tagebuch, 126–9. BA-MA RL 200/17.

in the west. Largely undisturbed by the Luftwaffe, Germany's third important enemy in the air, Britain, was able to continue recovering and building up her air force. In spite of the unbroken feeling of superiority of the German air crews with regard to their morale and flying ability,¹⁰⁴⁷ in terms of armaments potential and strength the flying units of the Luftwaffe were soon inferior not only to the Soviet air force but also to each of the other two great air forces in the European war, the Royal Air Force and the United States Army Air Force. Unlike the army, which had had periods of rest between the individual campaigns before 22 June 1941, the Luftwaffe had been involved in almost uninterrupted combat in the most diverse theatres of the war and, as was now most obvious, could not expect to have any time to rehabilitate its personnel or equipment in the future. As a support weapon in the east and in North Africa, it was no longer able to concentrate its forces on objectives of its own choosing, and it was now burdened with a growing number of tasks that it could not fulfil.¹⁰⁴⁸ To make available the numbers of aircraft necessary on the fronts in the east, south, and west of Europe and to protect Germany itself against the expected attacks by the British and American bomber fleets, it would have been necessary—contrary to the decisions that had actually been taken in this regard—to give air armaments the highest priority within the German armaments programmes as a whole and to rescind the development stop in order to preserve the qualitative superiority of German aircraft. That, however, would have demanded a clear acknowledgement of the situation in which Germany found herself at the end of 1941. All these measures would have required firm, uniform, and forward-looking leadership in every theatre of the war.¹⁰⁴⁹ But such leadership did not exist. As far as is known, there were no such deliberations among the Luftwaffe leaders at this time. They were too involved in dealing with the most pressing problems at the fronts, especially in the east, and in filling gaps. A remark by the head of the Luftwaffe General Staff at the beginning of 1942 was typical of this situation and of the attitude of the senior Luftwaffe officers: first Russia would have to be defeated; then it would be possible to concentrate on training.¹⁰⁵⁰ This marked the beginning of the end of the Luftwaffe.

II. The Conduct of the War through Soviet Eyes

JOACHIM HOFFMANN

I. THE BEGINNING OF THE WAR

IN the early hours of 22 June 1941 the German and German-allied armies crossed the Soviet frontier and penetrated into Lithuania, the Soviet-annexed parts of Poland, and soon afterwards also into Romania. The attack by armoured and motorized formations, supported with massive strikes by the Luftwaffe, gained ground rapidly, even though the Soviet troops offered often stubborn resistance in the frontier area itself, e.g. at Liepāja, Brest, and Przemyśl. There was, however, no question of a systematic defence by the Soviet divisions against the German attack. This seems the more astonishing as the Soviet leadership, in a multitude of reports arriving in Moscow through diplomatic channels, espionage, reconnaissance, or in other ways, had been very well informed that aggression was imminent.¹ The argument that the Soviet Union had been taken by surprise by the German attack is totally devoid of foundation. Taken by surprise—according to the judgement of the future Soviet minister of defence, Marshal of the Soviet Union Grechko—were the frontier troops alone, but not the government or the senior commands of the army.² Besides, the element of surprise cannot explain the unpreparedness of defences, since the Soviet theory of war maintained the principle that modern wars began without a declaration of war, with a surprise attack.³ There has been lively discussion in the Soviet literature on the reasons for such disregard of numerous warnings. The emerging opinion was that Stalin was indulging in illusions about the continuing validity of the non-aggression treaty and anticipated the possibility of a warlike conflict with Germany only in the event that the Soviet Union allowed itself to be taken in by 'provocations' from 'victory-drunk German generals'.⁴ As the wish and will of the 'wise and experienced leader of the Soviet Union, the great Stalin'⁵ were unassailable law, his attitude was bound to be adopted also by the Red Army command authorities responsible for the country's external security.

Not only did the Red Army leadership simply brush aside all those well-founded warnings, but it actually halted such defensive measures as were being initiated by responsible military leaders—a procedure which, according

¹ Khrushchev's speech, 25 Feb. 1956, according to Telpuchowski, *Geschichte des Großen Vaterländischen Krieges*, 28E; Chor'kov, 'Meroprijatija', 88–9.

to the future Soviet defence minister, Marshal of the Soviet Union Malinovskij, bordered on the criminal.⁶ Thus, immediately before the war, the commanders of the Baltic and Kiev Special Military Districts had on their own initiative taken a number of measures to enhance the combat-readiness of their troops. These measures, however, had to be suspended and rescinded on orders from the Red Army General Staff.⁷ Requests by other commanding officers to be allowed to move their units forward into defensive positions and to man gun emplacements had likewise been rejected. Blackout and air-raid precautions were also prohibited; uncamouflaged aircraft were lined up in close order on their airfields; and it was forbidden for anti-aircraft artillery to open fire. Once the Central Directorate of Political Propaganda had labelled warnings of a conflict as 'provocative rumours', the initiative of field commanders was paralysed; no one wished to be accused of having fallen for enemy provocations.⁸ Particularly damaging to the combat-readiness of the Soviet forces was the well-known statement issued by the Tass agency on 14 June 1941, which officially and categorically denied the possibility of a German attack on the Soviet Union, describing all rumours to the contrary as 'lies and provocations'. Soviet military historians, compelled to prove that the 'Communist Party, the Soviet government, and the military command' had done an 'enormous job' strengthening the country's defence capability on the eve of the war, endeavoured to escape from the dilemma they find themselves in by concealing the true causes and responsibilities. An attempt was made to explain the heavy defeats suffered by the Red Army in the initial phase of the war by references to a 'series of political, economic, and military factors' which basically were no one's fault. However, the responsibilities cannot be fudged. Apart from Stalin and his close entourage in the Politburo, the Central Committee, and the Soviet government, the Red Army's lack of preparedness for defence was due to omissions by Voroshilov, the People's Commissar for Defence, and his successor Timoshenko, as well as by Zhukov, chief of the Red Army General Staff, and more particularly Golikov, head of the reconnaissance department in the general staff,⁹ who is accused of having deliberately doctored all information to suit what he thought Stalin wished to hear.¹⁰

Under these circumstances the advance of the German army groups, scarcely impeded by uncoordinated opposition in the frontier districts, was bound to produce a dangerous crisis on the Soviet side during the very first days. On 22 June 1941 the commands of the military districts—now renamed North-west Front, Western Front, South-west Front, and, in the case of the Odessa Military District, Soviet Ninth Army—and many of the army staffs

had already lost an overall view of the situation and contact with their formations. After the many penetrations achieved by the German forces it was impossible to restore a cohesive front. As a result of German air raids, signs of disorganization appeared in the hinterland. A situation had thus arisen in which the only salvation of the Soviet troops would have been a strategy of flexible defence and withdrawals. Yet the People's Commissariat for Defence and the Soviet general staff, with no accurate idea of what was really happening and, contrary to the most recent assertions,¹² in a state of total confusion, clung to the doctrine that the only task of the Red Army was to go over to counter-attacks and carry the war into the enemy's territory.¹³ At a time when Armoured Groups 3 and 4 had already achieved a deep penetration at the boundary between the North-west and Western Fronts, when German tanks on the sector of the Western Front were already at Kobrin, 50 km. east of Brest, having achieved successes also on the South-west Front, when therefore the danger of a far-ranging encirclement was beginning to take shape, on that evening of 22 June 1941 the People's Commissar for Defence ordered the 'fronts' (i.e. army groups) and armies to mount counter-attacks against the German spearheads and, having annihilated them, to occupy the areas of Suwalki and Lublin. In consequence, the over-hasty counter-attack of the Soviet XII and III Mechanized Corps near Siauliai between 23 and 29 June, as well as the attacks of VI and XI Mechanized Corps near Grodno, and those of VIII, IX, XV, XIX, and XXII Mechanized Corps for the encirclement of the German spearhead groups in the Lutsk-Rovno-Brody area, were, in view of the state of command and troops, doomed to failure from the start,¹⁴ even though Soviet units achieved a few surprise successes and managed temporarily to delay the advance of Armoured Group 1 in the southern sector.

As, however, the Soviets were unable to halt the German forces completely, let alone annihilate them, and as an exceedingly threatening situation was developing especially in the area of the Western Front near Minsk, the Soviet High Command after 27 June 1941 found itself compelled to change its moves. The strategic reserves hurriedly brought up from the interior of the country now had to be employed in the establishment of a defensive line along the western Dvina and Dnieper; as a result, they were no longer, as originally planned, available for mounting a counter-offensive. The North-west Front was now instructed to use its formations to hold the Dvina line from Riga to Kraslava, while the troops of Twenty-second, Nineteenth, Twentieth, and Twenty-first Armies were to strengthen and occupy a defensive position roughly on a line Drissa-Polotsk-Vitebsk-Orsha-Mogilev-Zhlobin all the way to Gomel-Chernigov-Kremenchug.¹⁵ Simultaneously, troops of Twenty-fourth and Twenty-eighth Armies were establishing a second line of defence further east, along the line Nelidovo-Dorogobuzh-Bryansk, to make sure that

¹⁵ Panov and Naumov, 'Vosstanovlenie strategičeskogo fronta', 15 ff.

a breakthrough in the direction of Moscow could be contained in a deeply echeloned defence system. Whereas by the end of June 1941 the Germans had crossed the Dvina and taken Pskov on 9 July, the Dysna-Zhlobin line was in fact partially held until 10 July by units of the Western Front now amalgamated with reserve armies. The former commander of that Front, Army General Pavlov, had been replaced by Marshal of the Soviet Union Timoshenko. In the sector of the South-west Front the Russians also succeeded, until 10 July 1941, in temporarily halting the German thrust towards Kiev with counter-attacks by units of IX, XXII, and XIX Mechanized Corps at Novgorod Volynskiy and with units of XV, IV, and XVI Mechanized Corps at Zhitomir and Berdichev.

Nevertheless, by 10 July the German armies and armoured groups had penetrated Soviet territory to a depth of 450–500 km. in the north-western sector, 450–600 km. in the western sector, and of 300–50 km. in the south-western sector. The Germans had occupied Lithuania, Latvia, the major part of Estonia and Belorussia, substantial areas of the Ukraine, and, after 1 July 1941, also attacked parts of the Moldavian SSR from Romania. Since 29 June 1941 the Soviet armies of the Northern Front had also been compelled to retreat in the face of German and Finnish attacks on Murmansk and into Karelia. Between 22 June and 10 July 1941 the Soviet forces suffered enormous losses of men and material. The extent of these losses is deliberately passed over in silence in the Soviet literature. Marshal Grechko nevertheless conveys an approximate idea when he writes that no fewer than 28 Soviet divisions had been totally annihilated within a span of three weeks, with a further 70 divisions losing more than 50 per cent of their personnel and equipment.

2. THE REORGANIZATION OF THE SUPREME COMMAND

The difficult situation in which the Red Army forces found themselves owing to the headlong advance of the Germans and their allies during the first few days of the war called for an immediate reorganization of Soviet strategic leadership.¹⁶ Most important of all was the creation of a unified supreme command authority, capable of checking the signs of disintegration in all sectors of the front and of initiating and co-ordinating the necessary counter-measures. As the People's Commissariat for Defence and the general staff in their existing structure were not up to these tasks, the Politburo of the Central Committee of the VKP(b) on 23 June 1941 approved a proposal of the Council of People's Commissars of the USSR for the establishment of a Headquarters of the High Command of the Armed Forces (*Stavka glavnogo komandovaniya*).¹⁷ Under the chairmanship of the People's Commissar for Defence, Timoshenko, it included Stalin, Molotov, the Marshals of the Soviet Union Voroshilov and Budennyi, and Admiral Kuznetsov. This body, how-

¹⁶ Štemenko, *General'nyj štab*, i. 30–1.

¹⁷ Žukov, 'Voenačal'niki vspominajut' in *VIŽ* (1970), No. 5, p. 52.

ever, was unable to operate satisfactorily, since without Stalin's approval Timoshenko could not take any fundamental decisions. For this reason the Headquarters of the High Command, the supreme strategic control body, was transformed on 10 July 1941 into the Headquarters of the High Command (Stavka verchovnogo komandovanija) under the direct control of Stalin,¹⁸ who since 19 July 1941 had additionally held the post of a People's Commissar for Defence, and since 8 August that of Supreme Commander. With his simultaneous chairmanship of the State Defence Committee he therefore held unlimited power. On 8 August 1941 the leading body was officially designated 'Headquarters of the Supreme High Command', more accurately, 'Headquarters of the Command of the Supreme Commander', shortened as 'Supreme Command Headquarters' (Stavka verchovnogo glavnokomandovanija). The body used by these headquarters for the preparation and execution of its plans was the general staff, initially under Army General Zhukov and from 29 July 1941 under Marshal of the Soviet Union Shaposhnikov;¹⁹ this underwent repeated restructuring. The general staff, working on the basis of Headquarters decisions, drafted directives to the troops, assigned operational and strategic tasks to the commanding generals of the 'fronts' and armies, verified the implementation of Headquarters orders, assembled strategic reserves, and ensured that the lessons of war were learnt, that the troops were trained for wartime conditions, and that they were adequately supplied with weapons and equipment. To facilitate strategic control and co-ordinate the activities of the fronts, three higher commands were set up on 10 July 1941 for the principal strategic directions: the North-west Sector (or North-western Direction) Command under Marshal of the Soviet Union Voroshilov (covering the Northern Front, the North-west Front, and the Red Banner Baltic Fleet), the Western Sector Command under Marshal of the Soviet Union Timoshenko (the Western Front), and the South-west Sector Command under Marshal of the Soviet Union Budennyi (the South-west Front, the Southern Front, and the Black Sea Fleet). The establishment of these commands for the strategic sectors, i.e. of command levels between Headquarters and the front commands, did not, however, prove a success: for one thing, they lacked the forces and means for independent action, and, for another, Headquarters continued to issue direct orders to the fronts. In 1942, therefore, the commands of the strategic sectors or directions were again abolished, and co-ordination of operations by different fronts was accomplished by the appointment of Stavka (Headquarters) plenipotentiaries whenever necessary.

The establishment of a Supreme Command Headquarters also entailed a reorganization of the People's Commissariat for Defence, which had acquired a different significance under war conditions. A number of departments, such as the Chief Directorate for Raising and Replenishing Red Army Troops, the Chief Directorate for Defence Construction, and some others, were newly

¹⁸ Vasilevskij, *Delo vsej žizni*, 123.

¹⁹ Kulikov, 'Strategičeskoe rukovodstvo', 14.

created, and other departments, already in existence—such as the Directorate of Red Army Intelligence—were raised to the rank of chief directorates. Intelligence was generally in such a desolate state that the People's Commissar for Intelligence, Peresypkin, also assumed the duties of Head of the Chief Directorate of Red Army Intelligence.²⁰ There was a tendency to appoint to the top positions of the chief directorates of the commissariats, of army services, and of specialized branches persons with an extended decision-making authority. The post of Chief of Red Army Artillery was revived; the Chief Directorate of Artillery in the People's Commissariat came under him. There was a Chief of Engineering Troops and a Chief of Guards Mortar Troops. Guards mortars or rocket mortars were the BM-13 salvo-launchers, also known as 'Katyushas' or 'Stalin organ-pipes'. These first went into action at Orsha on 14 July. Simultaneously the post of Commander of Red Army Air Forces was created, and the air-force staff now detached from the Chief Directorate of Air Forces in the People's Commissariat placed under his command. The troops of the country's air defences were placed under a separate commander and, for this purpose, removed from the direct control of military districts and fronts. The airborne troops were also given an independent commander. The Red Army's rear-area organization was also completely restructured. Lieutenant-General Khrulev of the administrative branch was appointed Chief of Rear Areas and of Rear Services with extensive full powers, and simultaneously placed in charge of the newly created Chief Directorate of Rear Areas.²¹ Security in the rear areas against plots by the enemy or by anti-Soviet resistance activists was entrusted to the special troops of the People's Commissariat of the Interior (NKVD).

It was not only the central command apparatus of the Soviet forces that underwent fundamental reorganization. The grave setbacks of the initial phase of the war also called for changes in the organization of the field army. The price was now being paid for the liquidation by Stalin of the most experienced military leaders and his lack of interest in the development of suitable means of communication. The front commands were not up to their tasks; the fronts, therefore, had to be reduced in size and their number increased. In December 1941, instead of the earlier five, there now existed nine active Fronts: Karelian Front, Leningrad Front, Volkhov Front, North-west Front, Kalinin Front, Western Front, South-west Front, Southern Front, and Transcaucasus Front. In July 1941 the lack of senior officers and communications equipment and the heavy losses of artillery pieces and engineering material were major reasons for the abolition of the rifle corps as intermediate command levels between armies and divisions. This, however, did not overcome the difficulties in the communication field.²² Most of the rifle divisions were thenceforth placed directly

²⁰ Peresypkin, 'Vojska svjazi', 36 ff.; id., 'Svjaz' General'nogo štaba', 19 ff.

²¹ Khrulev, 'Stanovlenie strategičeskogo tyła'; Goluško, 'Tył Sovetskikh vooruzhennykh sil', 33-4.

²² Malan'in, 'Razvitie organizacionnykh form', 30.

under the armies, whose number was simultaneously increased. A beginning was also made in the process of considerably reducing the combat strength of rifle divisions; the personnel and material thereby released served to establish new units. The mechanized corps, set up as recently as July 1940 on the basis of the lessons of the German campaign in France, had similarly to be abolished 'to facilitate command' and also because of a lack of tanks and motor-vehicles. In their place armoured divisions with a reduced number of tanks were established, as well as armoured brigades and tank battalions. To increase the manœuvrability of the Soviet forces a large number of smaller cavalry divisions were set up, even though the disadvantages of cavalry formations in modern war were being fully realized. The rapid advance of the German forces into the interior of the country urgently demanded an intensified construction of fortifications and defensive positions. To this end no fewer than nine independent engineering armies were created by the end of the year under the new Chief Directorate for Defence Construction. In the big cities, such as Moscow, Leningrad, Smolensk, Kiev, Odessa, and Sevastopol, detachments composed of civilians were created under the old title of 'narodnoe opolchenie' [People's Army, used in 1812].

Apart from the reorganization of the Soviet fighting forces, Headquarters turned its particular attention to efforts to replace the enormous losses suffered at the front by raising immediate strategic reserves in the interior of the country. Under the mobilization decree of the Supreme Soviet Praesidium of 22 June 1941 all persons of the 1905-18 classes liable for active service were called to the colours in the military districts—with the exception of the Central Asian, the Trans-Baikal, and the Far Eastern Military Districts. All male Soviet citizens from 16 to 50 who were not yet called up were, under special resolutions of the State Committee for Defence, obliged to undergo premilitary training; this was to ensure a sufficient pool of military manpower.²³ Although there was probably a sufficient supply of men fit for active service, a painful shortage of qualified officers soon emerged. This was only partly mitigated by the call-up of 65,000 reserve officers. In order to meet the vast officer requirements of the Red Army and the Red Fleet, the training period in the military academies and officers' schools had to be cut drastically. The state of training, especially of subalterns, many of whom had only attended three or four months of improvised courses, soon turned out to be inadequate. Even though the establishment of new units was causing great difficulties because of the continuing shortage of officers, it was nevertheless possible, between 22 June and 31 December 1941, to raise no fewer than 286 new rifle divisions (including 24 'People's Army' divisions), 22 further rifle divisions formed from other service branches, 159 rifle brigades, and a large number of artillery regiments, independent armoured brigades, and tank battalions.²⁴ During that period some of the forces—altogether 97 divisions—

²³ 50 let vooružennykh sil, 266.

²⁴ Kravcov, 'Krach nemecko-fašistskogo plana "Barbarossa"', 44.

were also withdrawn from heartland military districts, the Far East, Transcaucasia, and Central Asia and transferred to the European theatre of war. The newly established units, and those brought in from the eastern and southern parts of the USSR, were intended primarily to shore up the tottering front lines, build up deeply echeloned defences along the threatened sectors, and create some reserves for counter-attacks (at that time still limited). Simultaneously, Headquarters began, under conditions of greatest secrecy in the interior of the country, to establish reserve armies which, at the right time, would launch a counter-offensive. This was entirely in line with the demands made in the past by Tukhachevskiy and others.²⁵ The Headquarters reserves also included cannon and howitzer regiments, anti-tank regiments formed to replace the cumbersome anti-tank brigades, guards mortar regiments and battalions, communication troops, and other specialized units and independent detachments. These reserves partly consisted of forces which, like the artillery regiments of the dissolved corps, had been eliminated from the front-line troops. Bomber and fighter units also had their fleets of aircraft reduced, to allow the forces thus freed to be used for independent missions. The immediate formation of extensive strategic reserves²⁶ regardless of the difficult situation at the fronts certainly testifies to the far-sightedness of Headquarters and was to bear fruit even before the end of the year.

3. THE 'FATHERLAND WAR': FIGHT AGAINST DISINTEGRATION MOBILIZATION OF MATERIAL AND MANPOWER RESERVES

On 22 June 1941 there occurred more than the immediate break-up of cohesion between the Soviet forces deployed on the country's western frontier. The accepted theory of war, according to which the sole task of the forces of the Red Army was to attack a potential aggressor and, after the annihilation of the enemy forces, carry the war into the territory of the opponent, had also been completely discredited. Soon after the opening of the German attack, Red Army officers and headquarter staffs at all levels, up to the command agencies of the general staff and the People's Commissariat for Defence, were in a state of almost total disruption.²⁷ As for the troops which had to stand up to the assault of the enemy, there were countless instances of stubborn resistance and self-sacrificing gallantry. The Germans soon discovered that they were facing a different adversary from the kind they had met in earlier campaigns. The overwhelming impression during the first few weeks and months of the war, however, was not so much of the combat performance of the individual Soviet soldier as of a determination which acquired colossal scale. For years the main emphasis in the political training of every Red Army man had been on turning him into 'a fighter boundlessly devoted to his socialist homeland', on injecting

²⁵ *Voprosy strategii*, 79, 346 ff.

²⁶ Zemskov, 'Nekotorye voprosy', 14.

²⁷ *Istorija Velikoj Otechestvennoj vojny*, II, 49-50; Nekritsch and Grigorenko, *Genickschuß*, 279.

him with a 'sense of high responsibility . . . for the task entrusted to him in the defence of his socialist homeland', 'Soviet patriotism', 'high morale, outstanding perseverance, valour, and heroism'. Every Soviet soldier had been conditioned, in fulfilment of his 'sacred duty to defend his socialist fatherland', to fight to the last round, to his last drop of blood.²⁸ He had to be victorious or die, there was no intermediate. Even Red Army men no longer fit for combat were forbidden, by Article 58 of the Criminal Code (*Ugolovnyj kodeks*) of the RSFSR and by other regulations for service within the country, to let themselves be taken prisoner by the enemy.²⁹ Being taken prisoner always counted as desertion and treason; the Red Army was the only force in the world which had made such action severely punishable. Thus, after the Soviet-Finnish war of 1939-40 all Red Army men who had fallen into enemy hands were, on their return from captivity, deported under strict guard and were never seen again. After the Second World War all Red Army military personnel who had been prisoners of war in Germany were similarly regarded as enemies of the people and traitors to their country, regardless of whether they had gone into captivity of their own free will or, like Major Gavrilov, the defender of the citadel of Brest, fallen into enemy hands severely wounded and incapable of combat. All of them without exception disappeared in concentration camps after the war or underwent serious harassment.³⁰ As the Soviet state found it impossible to accept that Revolutionary soldiers of the Workers' and Peasants' Red Army would surrender to the class enemy, the Soviet government as early as 1917 no longer regarded itself as a signatory of the Hague Convention on Land Warfare, and in 1929 refused to sign the Geneva Convention for the Protection of Prisoners of War. As a matter of principle it took no interest in the fate of its servicemen in enemy hands; indeed there is evidence that it not only omitted to do anything that might have alleviated the situation of these prisoners, but whenever possible endeavoured, through agents in the POW camps, to make their lot even harder by provoking reprisals by the detaining power.³¹

It is against the background of this fundamental attitude to its prisoners of war that the Soviet government's note of 17 July 1941 should be viewed. In that note it announced that, on condition of reciprocity, it would consider itself bound by the rules of the Hague Convention. But what interest could the Soviet government have had in ensuring the protection and privileges of the 1907 Hague Convention for Soviet servicemen in enemy captivity when, at the same time, it had given orders that they were to be 'annihilated with all means' as 'deserters' and 'traitors'. As Tolstoy correctly observes, 'this "offer"

³¹ Pozdnjakov, 'Sovetskaja agentura'.

was patently a blind'. This is, further confirmed by the fact that the Soviet government refused to implement the most important provision of that convention and, despite repeated demands both from the International Red Cross and the Axis powers, as well as from the Western powers, never reverted to the issue. Red Cross representatives, who ceaselessly tried to visit Moscow in person to clear up assumed differences of opinion, were, regardless of their distinguished supporters, invariably refused entry.³²

To judge by official records, the fighting forces of the Soviet Union at the beginning of the German-Soviet war were imbued with self-confidence and regarded themselves as invincible. The myth of the unshakeable morale of the Soviet warriors and their invincibility later continued to be a solid component of Soviet historiography of the 'Great Fatherland War'. 'The forces of the Red Army and Fleet', a history of the armed forces published on their fiftieth anniversary still maintained, 'were tempered like steel in a moral and political respect, and boundlessly devoted to their socialist homeland.'³³ In actual fact, despite all political indoctrination and the threat of punishment, millions of Red Army men, including members of the Communist Party, ceased to resist even during the first few months of the war. The officers, political officials, and troops of the Red Army, manœuvred as they had been by their leaders into a hopeless situation, swept into the vortex of disorganized retreat, and, worn down in battles of encirclement, frequently no longer thought of resistance but surrendered in vast numbers.

That, given the Soviet doctrine, was a monstrous occurrence. It triggered special measures on the part of the Soviet leadership, which—though largely passed over in silence in the Soviet literature—call for discussion in detail. Papers captured by the German troops throw light on the Soviet reaction. An eloquent document in this respect is Order No. 001919, issued on 16 July 1941 by Supreme Command Headquarters and signed by Stalin, as People's Commissar for the Defence of the USSR, and Marshal Shaposhnikov, chief of the Red Army General Staff.³⁴ This stated: 'On all fronts there are numerous elements which actually run up to meet the enemy, and on the first contact throw down their weapons, drawing others with them . . . while the number of

³² Tolstoy, *Victims of Yalta*, 33 ff., 438; Hoffmann, *Wlassow-Armee*, 135 ff. The assertion by Streit, *Keine Kameraden*, 225 ff., that the Soviet government had genuinely tried to make the Hague Convention the basis of the treatment of prisoners of war and 'to base the treatment of prisoners on both sides on principles of humanity', and that these efforts had failed solely because of Germany's refusal, reveals ignorance of the true state of affairs and a misreading of the methods of Stalinism. The fact that the Soviet government was never really interested in keeping to the conventions on prisoners of war is unambiguously proved by the *Rapport du Comité International de la Croix-Rouge*, i. 419–53 (esp. pp. 422–3, 436, 440–3, 446–8, 453). See also Dallin, *German Rule*, 420. This fact cannot be expunged by the quotation of German documents which have long been known. For a total misinterpretation of the Soviet Note of 17 July 1941 see also Jacobsen, 'Kommissarbefehl', 192–3, and Streim, *Die Behandlung sowjetischer Kriegsgefangener*, 33–4. See also Harriman to Byrnes, 11 June 1945, *FRUS* (1945), v. 1097.

³³ 50 let vooruzhennykh sil, 246.

³⁴ Order of Supreme Command Headquarters No. 001919, 16 July 1941, BA-MA RW 4/v. 329.

steadfast commanders and commissars is not very great.' Order No. 0116 of the Political Directorate of the North-west Front, of 20 July 1941,³⁵ drew attention to a directive issued on 15 July by Stalin and the head of the Political Chief Directorate of the Red Army, Army Commissar (1st rank) Mekhlis, to the effect that 'among the persons called up in the western regions of the Ukraine and Belorussia, as well as among the persons called up in Moldavia, the Bukovina, and the Baltic regions, a large number of traitors has been found to exist.' This was confirmed also by the testimony of General Romanov, the captured commander of 172nd Rifle Division.³⁶

Particularly alarming was the fact that the collapse of morale was evident even among political activists or the Communists in the forces. Directive No. 81 of Army Commissar Mekhlis, dated 15 July 1941,³⁷ contained the following passage

Many members of the political agencies and deputies of commanding officers prefer to lounge about at headquarters, rarely visit their units, scarcely attempt to combat instances of unsatisfactory organization, confusion, panic, and indiscipline, or fight the criminal decline in vigilance. Not infrequently members of the Communist Party and the Komsomol [Communist Youth Organization] fail to provide examples of steadfastness in battle or to take steps against panic-mongers, cowards, or deserters.

Marshal of the Soviet Union Budenny, GOC Troops of the South-western Direction, similarly stated in his Order No. 5 of 16 July 1941 that it had 'frequently' happened 'that commanding officers and political functionaries are forgetting their sacred duty towards the fatherland and vilely breaking their oath'. The practical effects of the demoralization of the forces is revealed also in documents from the South-west Front, consisting of Fifth, Thirty-seventh, Twenty-sixth, Thirty-eighth, and Fortieth Armies. According to a statement of losses compiled by Major-General Tupikov, Head of the Chief Directorate for the Raising and Replenishment of Red Army Troops,³⁸ the South-west Front reported 726 soldiers taken prisoner between 22 June and 31 August 1941. A further 80,205, however, were recorded as missing in action—in other words they too had been separated from their units and had, for the most part, fallen into German hands. It is significant that, in addition to those losses and the figures of men killed, wounded, and sick, there were 14,593 men reported missing 'for other reasons'. It would probably be correct to assume that these soldiers had been shot or at least arrested by the blocking units set up in the meantime or by NKVD troops. During the same period the troops of the

³⁷ Directive of Army Commissar Mekhlis No. 81, 15 July 1941, BA-MA RW 4/v. 329; Order No. 5 of Marshal Budenny, GOC South-western Direction, 16 July 1941, BA-MA RH 24-3/134.

³⁸ Staff of the South-west Front to Head of the Chief Directorate for Replenishment and Raising of the Red Army, BA-MA RH 19 II/123, fos. 214-17.

South-west Front captured only 62 German officers and 626 NCOs and men. The 'Order to the Troops of the South-west Front', No. 41,³⁹ signed by Colonel-General Kirponos, GOC South-west Front, by Major-General Tupikov, its chief of staff, and by Member of the War Council Burmistenko, complained that officers and commissars did not act with appropriate severity in the 'shameful instances of desertion or absence without leave from their units'. During the period 10-20 August 1941 the 289th Rifle Division alone reported 76.9 per cent of its personnel missing; in 264th Rifle Division the figure was 74.6 per cent, and in 160th Rifle Division 70.2 per cent. 'Even more alarming' was the fact that among those missing from 289th and 227th Rifle Divisions were 189 and 50 officers respectively. According to a report by the commander of the NKVD troops in the rear area of the South-west Front,⁴⁰ 18,156 men of Fifth Army, 7,376 men of Twenty-sixth Army (including 31 senior and 224 other officers), 968 men of Thirty-seventh Army (including 36 officers), 796 men of Thirty-eighth Army, and 513 men of Sixth Army (including 1 senior and 21 other officers) were 'detained' between 5 July and 1 September 1941. Report No. 00134 of the War Council of Lieutenant-General Kostenko's Twenty-sixth Army, dated 16 September 1941 and addressed to the War Council of the South-west Front,⁴¹ similarly referred to disproportionate losses 'not justified by combat operations' in its 301st Rifle Division; these were due to 'runaways', 'deserters', and 'traitors to the fatherland'. Among men whose homes were on the western side of the Dnieper there had been a downright 'mass mood imbued with a wish not to fight but . . . to run off home. The same mood was observed also among some . . . of the reserve officers.' Although Colonel Sokolov, the divisional commander, and Regimental Commissar Nikolaev, the divisional commissar, had been given a 'final warning', and although a number of unit commanders, officers, and commissars had been executed by firing-squad or otherwise punished, the War Council found itself compelled to report that, because of the collapse of the men's morale, the division was 'not fit for action at the present moment'.

In order to stem this spreading disintegration, which was threatening to paralyse the striking power of the Red Army, an attempt was made to intensify political propaganda through a reorganization of the party-political apparatus in the forces. As was first done on 8 May 1937, at the time of the great purge, a separation of command was introduced. To this end the military command posts, i.e. the unit commanders at all levels, were stripped of their political duties and the entire party-political guidance of the forces placed in the hands of war commissars, reintroduced into the Red Army on 16 July 1941 and into the Soviet navy on 20 July 1941. In all corps, divisions, regiments, staffs, military training establishments, and other armed-forces institutions the war commissars, abolished as recently as 12 August 1940, were reintroduced, and in all companies, batteries, and squadrons political guides, were reintroduced

³⁹ *Ibid.*, fo. 220.

⁴⁰ Report of the commander of NKVD troops, *ibid.*, fo. 221.

⁴¹ *Ibid.*, fo. 223.

with the same functions. There were war commissars also in the technical sections of tank battalions and artillery battalions, and in the battalions of rifle divisions from December 1941. Although the Soviet interpretation of this reorganization of the Party apparatus describes it as 'an extraordinary measure made necessary by specific and complex circumstances', it firmly disputes that it was due to any kind of 'mistrust of the officers in the forces'.⁴² The demand for 'amicable co-operation between unit commander and commissar in strengthening the combat capacity of the troops' did not, however, prevent numerous difficulties from arising—as indeed had been the case between 1937 and 1940.⁴³ Even though 'any supervision of the unit commanders' activities by the commissars, as practised during the period of foreign military intervention and the civil war, [was to be] totally ruled out', the work of the commissars and politruks [political-guidance officers], in line with Lenin's demands, was bound to amount in practice to supervision. In point of fact, a divisional commander could not, even in operational and tactical matters, make a decision on his own. Orders by a unit commander not countersigned by a commissar—who represented the 'Party and government within the Red Army'—were invalid. Orders by a commissar, on the other hand, were valid even without the counter-signature of the unit commander and had to be obeyed. Alongside the commissar, the head of the Special NKVD Detachment also enjoyed unlimited authority. He was entitled to be present at all official discussions and have access to all files, he had his confidants everywhere, and he could detain any officer—including the divisional commander—or soldier and order him to be shot.⁴⁴ 'The NKVD is a terrible body which can destroy any of us at any moment,' declared General Muzychenko, GOC Sixth Army, captured near Uman.⁴⁵ This also explains the statement made under interrogation by Lieutenant-General Lukin, the captured GOC Nineteenth Army, who, on the basis of his personal experience, stated that an army commander was no longer capable 'of any independent step. He is surrounded by commissars, narks, and his War Council . . . Even generals are spied upon by narks, the regimental commanders too, etc.' If any proof were needed that the real reason for the reorganization of the Red Army was mistrust, then this is supplied by the text of the orders of the People's Commissar for Defence and

⁴⁴ Interrogation of officers (deserters) Ivan Nikitovich Kononov, major commanding 436th Rifle Regt. . . ., AOK 4, Ic/AO No. 549/41 geh., 6 Sept. 1941, BA-MA RH 22/271. The Special Detachments of the NKVD were formed in mid-July 1941 from the agencies of military counter-espionage of the People's Commissariat for Defence (organy voennoy kontrrazvedki NKO). The importance of the Special Detachments was reflected also in the ranks of their personnel. Thus a lieutenant of state security (gosbezopasnosti) corresponded to a captain, a senior lieutenant of state security to a major, a captain of state security to a colonel, a major of state security to a major-general, a senior major of state security to a lieutenant-general, and a commissar of state security to a colonel-general: Belousov, *Zapiski armejskogo čekista*, 35.

other senior command authorities, as well as by the fact that it was necessary to take the most severe reprisals against military commanders all the way up to general officers commanding armies.

The re-establishment of the Institute of War Commissars and Political Guides and, on 17 July 1941, the simultaneous reorganization of the former Chief Directorate for Political Propaganda into a Political Chief Directorate of the Workers' and Peasants' Red Army under Mekhlis, the creation of Political Directorates at front level, and of Political Departments at army, corps, and divisional level, gave rise to the development of 'mass political propaganda' by way of talks, lectures, lessons, and 'meetings' in the units. This, however, was only one aspect of the programme for the consolidation of the fighting morale of the Red Army. Another aspect was the Draconian severity, which it was hoped would have a deterrent effect. In his speech of 3 July 1941 Stalin had proclaimed a 'merciless fight' against all 'disorganizers of the hinterland, deserters, panic-mongers, and disseminators of rumours'.⁴⁶ This was followed by a whole string of orders and directives implementing his demands. Marshal of the Soviet Union Budennyi, for instance, in his Order No. 5 of 16 July demanded that such elements be 'liquidated on the spot . . . To settle accounts with cowards, panic-mongers, and deserters and to restore discipline is our most sacred duty.'

The directive of Stalin and Mekhlis dated 15 July 1941 (see above at n. 35) ordered that all units should be purged of unreliable elements. Particular distrust was henceforth focused on those Soviet 'officers, political guides, and Red Army men' whose units had been encircled and routed at the front and who, instead of taking advantage of the situation and allowing themselves to be taken prisoner, had fought their way back to their own forces from behind enemy lines, often exposed to hardship and danger. In order to prevent 'spies and White Guardists penetrating into command personnel escaping from some encirclement', these men were subjected to strict checks by the Special Detachments of the NKVD. According to Major-General Grigorenko,⁴⁷ these 'encircled' were 'welcomed with an execution order . . . by way of settling accounts with the traitors who had opened the front to the enemy':

Those shot included soldiers and officers, members of the supply services, infantrymen, airmen who had lost their machines, tank crews who had miraculously saved themselves from their blazing tanks, and gunners who had personally dragged their already useless artillery pieces without ammunition for hundreds of kilometres. And the following day those who shot them dead might find themselves in an enemy pocket and could expect the same fate as the men they executed the day before.

Only the absence of a cohesive front and the collapse of systematic leadership, according to Grigorenko, had saved 'hundreds of thousands' from senseless mass extermination. To support the NKVD troops in the performance of such

tasks, Order No. 001919 of Supreme Command Headquarters, dated 16 July 1941, envisaged the establishment within each division of so-called blocking detachments of especially reliable officers, political officials, and soldiers in battalion strength.⁴⁸ The blocking detachments were employed in the rear of the divisions, roughly along the line of the artillery positions, with orders to prevent by force of arms any unauthorized retreat of front-line troops and to shoot all cowards and deserters trying to escape from the battle. On 14 July 1941 Headquarters had, moreover, notified all generals commanding the fronts, as well as all officers, political officials, and troops, that loss of a weapon on the battlefield represented a serious violation of the military oath and would be punished accordingly.

Mistrust,⁴⁹ combined with an attempt to conceal the real reasons and his own responsibility for the collapse of the fronts, had induced Stalin ever since early July 1941 to make an example of the Western Front, encircled at Bialystok and Minsk and by then largely shattered. On his instruction Army General Pavlov, GOC western Front, together with General Klimovskikh, its chief of staff, General Semenov, chief of the operations department, General Grigoryev, commanding the communications troops, General Klich, the artillery commander, and other generals on the staff of the front, were tried by court martial, sentenced to death, and shot.⁵⁰ It seems that Zhukov, chief of the Red Army General Staff, who had a share in the responsibility for the desolate situation of the Western Front, was not entirely unconnected with this. Elsewhere too senior field officers were 'accused of treason and physically liquidated'⁵¹ because of alleged mistakes 'which sometimes were not even matters within their power'. This applied Major-General Korobkov, GOC Fourth Army of the Western Front, Major-General Kosobutskiy, commanding the 41st Rifle Corps of the North-west Front, Major-General Selikhov, commanding 60th Mountain Rifle Division of the Southern Front, Major-General Galaktionov, commanding 30th Rifle Division, and other senior officers.⁵² Lieutenant-General Rychagov, Head of the Chief Directorate of the Red Army Air Forces, was shot because, quite unjustly he was held solely responsible for the heavy losses of aircraft at the beginning of the war.⁵³ The reprisals, initially still somewhat arbitrary, were given a solid basis by Order No. 270 of Supreme Command Headquarters, dated 16 August 1941,⁵⁴ which was notified down to company level and equivalent units, and read out to all

Red Army servicemen. This fateful document, signed by Stalin in his capacity of Chairman of the State Defence Committee, by Molotov as his deputy, and by Marshals of the Soviet Union Budennyi, Voroshilov, Timoshenko, Shaposhnikov, and Army General Zhukov deserves special attention as an indication of the thinking and methods of the Soviet leadership. In it Lieutenant-General Kachalov, GOC Twenty-eighth Army of the Western Front, Lieutenant-General Ponedelin, GOC Twelfth Army of the South-west Front, and Major-General Kirillov, commanding the 13th Rifle Corps, were branded cowards, renegades, and criminals for having been encircled by the Germans and, together with some of their troops, taken prisoner. As for Lieutenant-General Kachalov, there was not the slightest doubt in Moscow that he had in fact been killed in action near Roslavl. His memory was merely besmirched for the sake of political capital.⁵⁵ The members of the War Council, the political officers, and the members of the Special NKVD Detachments, who had made no attempt to prevent the capture of the commanding officers or their units, were themselves accused of 'despicable cowardice' for 'displaying unallowed dejection'. An end was to be put to such a state of affairs: all 'cowards and deserters' were to be liquidated in future. All members of the Red Army were once more enjoined to 'fight self-sacrificingly to the last possible moment' in all conditions, and especially in encirclement; 'officers and political officials ripping off their insignia of rank in battle and escaping to the rear, or surrendering to the enemy' were to be 'shot on the spot' as 'wicked deserters' and 'traitors to the fatherland'. Henceforward superiors had to watch their subordinates closely, and subordinates their superiors; every one of them was obliged 'to liquidate by every means on the ground or from the air' any Soviet servicemen who preferred going into captivity. There was no shrinking even from the most extreme measures in the struggle against disintegration: this was made clear by Order No. 270, which threatened to hold culprits' families responsible. Accordingly, the families of officers and political officials who had become prisoners of war were to be arrested as 'next-of-kin of deserters'; families of Red Army men in captivity were to lose all state support or assistance. The rigorous manner in which these rules were applied is shown by Order No. 0098 of 5 October 1941, addressed to the troops of the Leningrad Front.⁵⁶ Basing itself on Article 58, section 1, of the Penal Code of the RSFSR, it threatened Red Army men that, if they went into enemy captivity, the members of their families would be arrested and handed over to the courts. Application of the principle of family liability emerges also from captured documents of the Chief Military Prosecutor's Office of the USSR.⁵⁷

Despite the Draconian countermeasures, there was no stopping a further growth in the number of prisoners of war. In the encirclement battles of

⁵⁵ Lewytzkyj, *Die rote Inquisition*, 195-6.

⁵⁶ BA-MA H 3/152.

⁵⁷ Glavnaja Voennaja Prokuratura (Voennyj jurist 1. ranga Vraskoj) to Voennomu Prokuratoru 54 Armii No. 08683, 15 Dec. 1941, BA-MA RW 2/v. 158, fos. 110 ff.

Bialystok, Minsk, Smolensk, Uman, Kiev, Bryansk, and Vyazma alone, i.e. up to 18 October 1941, some 2,053,000 Soviet soldiers had been taken prisoner. Altogether, some 1.5 million Red Army men had surrendered by mid-August 1941, and over 3 million by mid-October 1941—almost ten times the figure of 378,000 men missing in action admitted by Stalin in his speech on 6 November 1941, on the eve of the twenty-fourth anniversary of the October Revolution.⁵⁸ By the end of 1941 some 3.8 million Soviet servicemen had fallen into German hands,⁵⁹ and by the end of the war the total was approximately 5.25 million, an order of magnitude indirectly confirmed by the Party daily *Pravda*.⁶⁰ Even as late as 1944–45 one in every sixteen Soviet prisoners of war was a deserter, whereas during the same period 4,692 American, British, or French soldiers had to be captured before a single deserter was found. In other words, there were 330 Soviet deserters to every one deserter from the armies of the Western powers. As for the German side, in December 1941 it was an 'extremely rare' event, specially mentioned by Marshal of the Soviet Union Yeremenko,⁶¹ that the German Lieutenant Konrad with remnants of his company laid down his arms in a hopeless situation and let himself be taken prisoner. Even that instance was thought to be a sign of a decline of morale among the German troops. The vast number of Soviet servicemen who, in violation of their military duty *vis-à-vis* the Soviet regime, went into German captivity or deserted to the Germans cannot be explained by any concatenation of accidents. It is equally impossible to label 3.8 million generals, officers, political officials, and Red Army soldiers as criminals and traitors. The sheer order of magnitude suggests that there must have been deeper, undoubtedly political, reasons. That there was widespread irritation and dissatisfaction with the regime at the time of the German attack on the Soviet Union was confirmed by the attitude of the civilian population in the parts of the country occupied by German troops. It was, of course, hardly surprising that the overwhelming majority of the population in the recently annexed Baltic States, as well as in the Polish and Romanian territories, continued to feel bitter hostility towards their new government. In those areas the German troops were generally welcomed, and many inhabitants spontaneously offered them their assistance. According to official German estimates, about 75 per cent of Balts and Ukrainians 'sincerely' welcomed the Wehrmacht 'as liberators'.⁶² In the old Soviet regions the mood was admittedly more reserved, and there was also, as a rule, a difference between the friendlier rural inhabitants and the rather more pro-Soviet urban population. On the whole, however, the German forces not infrequently met with a benevolent welcome even in the old areas of the Soviet Union, while by contrast the civilian population—as Major Shabalin, Head of the Special Detachment of the NKVD with Fiftieth Army, confided to his

diary on 12 October 1941⁶³—at times was ‘not very friendly’ to Russian military personnel: ‘This will have to be remembered!’ A person familiar with the situation, Herwarth von Bittenfeld—formerly legation secretary at the German embassy in Moscow, adjutant during the war to the General of Volunteer Formations, and later ambassador, state secretary, and head of the office of the Federal President—summed up these phenomena as follows:⁶⁴

At the beginning of the eastern campaign the German troops were hailed as liberators by the majority of the Soviet population. The Soviet citizens were in no way afraid of the Germans. The inhabitants remained in their villages and towns, making no attempt to escape from the German invaders. Efforts by the Soviet administration to evacuate the population from areas threatened by the Germans were disregarded, and they mostly ended in failure. . . . Orders by the Soviet government to destroy the harvest and all stores were disobeyed. The peasants did all they could to prevent their cattle being driven away. Stalin’s order to leave the occupied territories to the Germans as scorched earth were regarded as an act of desperation which only served to intensify hatred of the dictator.

But even if the local population, as occasionally happened, displayed no more than a passive attitude, this still ran counter to the official doctrine. After all, there was the unassailable principle that Soviet society represented a ‘moral and political unity’, that the nations of the Soviet Union were linked to one another in ‘unbreakable friendship’, that every Soviet citizen was inspired by ‘self-sacrificing patriotism’, and that the ‘entire Soviet people’ was rallying in ‘boundless devotion’ to the Communist Party.

This instability of domestic conditions in the Soviet Union, as reflected in the behaviour of a large part of Red Army troops and civilians *vis-à-vis* the German invaders, has its explanation in the public’s experience of Soviet rule during the Stalin era. Forcible collectivization of agriculture, with its concomitant features of artificially created famines and reprisals, in the course of which millions of farmers denounced as ‘kulaks’ [wealthy peasants] were driven into misery or, as Stalin stated to Churchill in 1941, ‘beaten to death’, ruthless industrialization, the paranoia of the great purge, and the ubiquitous system of the NKVD and the concentration camps—all these had left deep scars on the public’s memory. Scarcely a family was left untouched.⁶⁵ Given that basic attitude, there was little doubt—even in the sceptical judgement of Dallin⁶⁶—that ‘a skilful effort to win over the population, civilian or military, to oppose the Soviet regime, could have yielded substantial, and during the first months of the war perhaps decisive, results’. There is evidence that, at the beginning of the war, Stalin feared nothing more than the establishment of a Russian

counter-government on the German side, and hence an immediate transformation of a defensive war against a foreign enemy into a civil war threatening his regime. The subsequent leaders of General Vlasov's Russian Liberation Movement, who were exceedingly well informed on the mood and conditions inside the Soviet Union, invariably emphasized that in that case the foundations of the Red Army and the Soviet state could have been shaken from within. That Stalin managed fairly soon to overcome this initial insecurity was due primarily to the fact that, contrary to propaganda statements about an alleged campaign of liberation, Hitler from the outset waged his war for the purpose of territorial expansion, colonial oppression, and exploitation, in order, as he put it, to turn Russia into a 'German India'.⁶⁷ Soon the Soviet government had convincing arguments available to persuade Russians, Ukrainians, and Belorussians—less so the minorities on the periphery—of the need for resolute struggle against the foreign invaders. Even at the time of Stalingrad, when political co-operation with the Russian population had long become a requirement for the German forces' self-preservation, all a leading article in the Party daily *Pravda* had to do—as Goebbels himself complained⁶⁸—was to quote from *Deutsche Ukrainische Zeitung* in order to demonstrate the Germans' intentions of exploitation and enslavement.

Disastrous for the reputation of the Germans, even in the first phase of the war, were the mass murders of the Jewish section of the population by the special squads of the Security Police and the SD (the security service of the SS) and the execution of political commissars, who very often represented the educated element in the Red Army⁶⁹ and whose duties included the welfare of Red Army men, as well as, more particularly, mitigation of the inhuman conditions in which Soviet soldiers in German captivity were kept. As early as 21 October and 2 December 1941 the quartermaster-general in the Army General Staff had laid down, for 'all Russian prisoners of war in the occupied Russian territory, including the region of Wehrmacht commanders Ukraine and Ostland, in the Government-General, in Norway, and in Romania', food rations at an entirely adequate level;⁷⁰ it seems, however, that these rations—

⁶⁷ Picker, *Hitler's Table Talk*, 24.

⁶⁹ Interrogation of Maj.-Gen. Sotenskiy, Fifth Army commander of artillery, VAA, beim AOK 2, Lt. Count Bossi-Fedrigotti, Report No. 24, 28 Sept. 1941, BA-MA RH 19 II/123.

⁷⁰ The conclusions drawn in Streit's dissertation *Keine Kameraden*, 137 ff., are factually without foundation and are indeed disproved by the contents of the tables and data in that study. His attempt to connect the quartermaster-general, just because of his instructions on the food rations of prisoners of war, with Hitler's 'policy of extermination' in the east is not justified in any way. The rations approved for Soviet prisoners of war by the quartermaster-general in the Army General Staff were adequate and in fact higher than those of the German population even years after the conclusion of the Second World War: see Hoffmann, *Ostlegionen*, 83 ff., 178.

exceedingly large number of Soviet soldiers—those who had not been prepared to fight to the last drop of blood ‘for the Soviet homeland, the Party and government, and for Comrade Stalin’, i.e. potential allies of Germany—perished from starvation, epidemics, or brutality in German captivity” soon became common knowledge on the Soviet side. Regardless of how the individual soldier felt about Stalin, it once more stiffened the Red Army. The damage thus done to the reputation of the Germans was never entirely undone, even after the spring of 1942, when conditions in the POW camps began to improve, or after 1943, when they became tolerable and a start had long been made on building golden bridges for the political officials of the Red Army.

The Soviet government showed some skill in filling the political vacuum and exploiting the Germans’ mistakes for their own purposes. A simple but effective mass campaign was launched on a vast scale, designed to make the public forget their antagonism and rouse the nations of the Soviet Union, and every

” The frivolous manner in which figures are manipulated in this context is exemplified by Jacobsen, ‘Kommissarbefehl’, 197, 279, and Streit, *Keine Kameraden*, 10, 105, who speak of 5.7 million prisoners of war and 3.3 million dead, of whom, according to Streit, about 600,000 had been shot. By contrast, Streim, deputy head of the Central Office of the Land Justice Administration in Ludwigsburg, in his book *Die Behandlung sowjetischer Kriegsgefangener*, 244 ff., evidently on the strength of more accurate information, arrives at the conclusion that of roughly 5.3 million ‘at least 2,530,000 Soviet prisoners of war’ had died, including 140,000 who lost their lives through separation measures. A critical analysis of the original documents unknown to these authors, and of other data and factors, leads one to the result that of exactly 5,245,882 prisoners of war some 2 million had died of starvation and epidemics by the spring of 1942. A few tens of thousands were probably executed by the SD, but no precise statement is possible on this point. Roschmann actually mentions only 1,680,000 deaths.

The original document ‘Nachweisung des Verbleibs der sowjetischen Kriegsgefangenen nach dem Stand vom 1.5.1941’ [Record of whereabouts of Soviet prisoners of war, as of 1 May 1941], Kriegsgef. Org. (Id), BA-MA RH 2/v. 2623, is reproduced by Jacobsen, ‘Kommissarbefehl’, 279, as document No. 42 with disfiguring changes. A difference of 280,810 between prisoners of war transferred to the OKW area and those actually arrived there is rendered by Jacobsen as ‘perished in transit camps or disappeared’. The original document explains that difference by ‘losses in transport, counting-errors, and such like’. Indeed, counting-errors probably played a significant part. Jacobsen explains the loss of ‘490,441’ prisoners of war in the OKH area and ‘539,716 (of which 66,694 escapes)’ in the OKW area as follows: ‘Escapes, transfers, to SD (executed)’. The original document, however, states for the OKH area ‘other losses (e.g. escapes, transfers to SD, to Lw’ and for the OKW area ‘other losses (e.g. transfers to SD, Lw, SS)’.

There is no mention here of ‘executed’. Neither transfer to the SS, or even to the SD, can be simply equated with execution—especially as the entire auxiliary police (‘protection squads’, ‘order service’, etc.) in the Reich Commissariats Ostland and Ukraine under the sole authority of the Reich Leader SS were largely recruited from prisoners of war. The security police and the SD also had their own security squads and auxiliary services, such as the 8,000-man ‘Družina’ Brigade, the 20,000-strong Tartar formations in the Crimea, Operation Zeppelin, and others. The total strength of ‘protection squads’ under the Reich Leader SS had grown to 300,000 men in 1942, according to Krausnick and Wilhelm, *Die Truppe des Weltanschauungskrieges*, 168 ff.

On the prisoner-of-war problem see also ‘Monatliche Meldung über Kriegsgefangenenzugang—Februar’ [Monthly report on accretion of prisoners of war—February], OKH/GenStdH/GenQu, Abt. Kriegsverwaltung (Qu 4) No. II/1241/45, 23 Mar. 1945, BA-MA RH 2/v. 2623; ‘Kriegsgefangenenlage im Operationsgebiet Ost—Sowjets—Stand 1.2.1945’ [Prisoner-of-war situation in operations area east—Soviets—as of 1 Feb. 1945], OKH/GenStdH/GenQu, Abt. Kriegsverwaltung (Qu 4) No. II/898/45 geh., 7 Mar. 1945, *ibid.*; Hoffmann, *Wlassow-Armee*, 142 ff.

single Soviet citizen, to mobilize their efforts in the service of a cause which Stalin, in his speech of 3 July 1941, had for the first time called a 'war for the defence of the fatherland'. This conflict was described by him not as an ordinary war between two armies, but as a just war by the entire 'Soviet people' against the Hitlerites. Stalin appealed to the Soviet citizens to turn their whole country, in alliance with Great Britain, the United States of America, and 'all freedom-loving nations', into one vast war camp. All mental and physical efforts of the Soviet nations were to be placed at the service of the struggle against the enemy, and the entire domestic life of the country was to be subordinated to the interests of the front. That which in Germany was attempted only after the defeat of Stalingrad, and then only half-heartedly—the conduct of a 'total war'—had become reality during the first few days of the war by the proclamation of the people's 'fatherland war'. Henceforth it was no longer a case of attaining the goals of international Communism, but of defending 'our freedom, our honour, our homeland'—in the spirit of Grand Duke Alexander Nevskiy, who in 1240 defeated the Swedes on the Neva and in 1242 the Order of German Knights on Lake Peipus, in the spirit of Grand Duke Dmitriy Donskoy of Moscow, who in 1380 inflicted a crushing defeat on the Tartars under Mamay on the Field of Quails, in the spirit of Kuzma Minin, the mayor of Nizhniy Novgorod, who, along with Prince Dimitriy Pozharskiy, organized a people's force and in 1612 drove the Poles from Moscow, and finally in the spirit of Generals Suvorov and Kutuzov, who had successfully fought against Napoleon's armies. The official slogan 'Workers of all lands, unite!', which until then had adorned every newspaper and every official document, was replaced by the slogan 'Death to the German occupiers!' Even the Orthodox Church became a welcome ally in this struggle. The policy of suppressing it was discontinued, and it began to bless the arms of the Red Army.⁷²

In order to unite all efforts in the service of the conduct of the war, the State Defence Committee (*Gosudarstvennyi Komitet Oborony*) was established on 30 June 1941 under Stalin's direct control.⁷³ Its decisions had to be unconditionally obeyed by all Party, state, and military authorities, and by all citizens. Simultaneously, new people's commissariats were created, including a separate one for the tank industry and mortar production, as well as numerous new Directorates and Committees for every conceivable area. The State Defence Committee, as the supreme agency of national defence, saw its principal task as the transformation of the Soviet economy to the requirements of the war. Industry, agriculture, and transport had to be entirely reorganized and a redistribution had to be carried out of raw materials and foodstuffs. To that end current economic plans were suspended, and replaced by already prepared economic mobilization plans. These called for an immediate in-

⁷² Stalin, *Großer Vaterländischer Krieg*, 31; Rauch, *Geschichte des bolschewistischen Rußland*, 440 ff.; Stökl, *Russische Geschichte*, 730 ff.

⁷³ Belikov, '*Gosudarstvennyi Komitet Oborony*'.

crease in the production of war material, and for priority allocation of manpower, raw materials, and energy to the war industry.⁷⁴ However, by the time these plans came into force, the transfer of strategic stockpiles to the western frontiers of Belorussia and the Ukraine—as ordered by Stalin, Mekhlis, and Zhukov—had already resulted in the loss of major parts of the mobilization stocks.⁷⁵ Simultaneously, by their advance the Germans also gained possession of territories with highly important production facilities, territories where before the war 58 per cent of Soviet steel, 71 per cent of pig-iron, and 57 per cent of rolling-mill items had been produced. German seizure of the Nikopol region soon resulted in the loss to the Soviets of 92 per cent of manganese production. In losing the Donets basin, the Rostov coalfields, and the Moscow coal basin the Russians lost 63 per cent of their coal extraction. Faced with these developments, on 4 July 1941 the State Defence Committee found itself compelled to order a new economic mobilization plan to be prepared, based predominantly on the industrial capacities of the Volga region, the Urals, western Siberia, Kazakhstan, and central Asia. It was intended as a matter of urgency to develop this 'second industrial basis' into the country's real armaments centre.⁷⁶ But before armaments production could be started there, it was necessary to reorganize and modernize the foundries in the Urals and western Siberia, such as those of Magnitogorsk and Kuznetsk, where high-quality steels, rolling-mill products, and pipes had not previously been manufactured. At the same time, new ore deposits had to be opened up and the necessary facilities for the extraction of manganese, molybdenum, nickel, zinc, etc., set up. The fuel and power industry likewise had to be put on a new basis. New power stations had to be built, the capacity of existing ones increased, and the transport network improved in every respect. This process of a fundamental transformation of existing industrial enterprises in the eastern parts of the country, combined with the opening up of new raw-material, fuel, and energy sources, was further complicated by the large-scale evacuation of industrial equipment from the western and central parts of the Soviet Union.

In connection with the rapid advance of the German armies, Stalin, in his radio address of 3 July 1941, had demanded that 'all valuable assets' were to be 'absolutely' destroyed before they fell into enemy hands. Not only were all rolling-stock units, stockpiles of raw materials, and reserves of motor-fuel to be destroyed, but also every kilogramme of grain and every domestic animal—without any regard for the civilian population, who would be left behind and thus doomed to starvation. This was the 'scorched-earth policy' which had been declared to be the programme in an unpublished directive of the Central Committee of the Soviet Communist Party and the Council of People's Commissars addressed to Party and state officials on 29 June 1941.⁷⁷ In towns and localities threatened by the enemy destruction on the greatest possible

scale was carried out, provided there was still time to do so. Thus, on orders of the Supreme Command Headquarters, engineering squads were set up in Kharkov under the control of the Chief Directorate for Military Engineering, in co-operation with the South-west Front, with the sole task of blowing up or mining all major buildings and houses in the region.⁷⁸ In the subsequent fighting for Moscow the Soviet leadership ordered all inhabited localities in the territory of the enemy forces 'to be totally destroyed' and the forests set on fire in order 'to drive the Germans out into the frost'.

Before the destruction of the buildings, however, every effort was to be made to save all movable chattels, especially industrial equipment, from seizure by the Germans and to transfer them to the eastern regions of the country. This evacuation of production facilities from the western regions and their reassembly in safe areas—described as 'relocation'—is presented in Soviet histories of the Second World War as one of the greatest economic achievements ever, 'as a magnificent victory of the entire Soviet people and its Communist Party'.⁷⁹ Under the direction of a special Evacuation Council, headed until mid-July 1941 by Kaganovich and thereafter by Shvernik, between July and November 1941, in accordance with a strict schedule, no fewer than 1,523 industrial enterprises were transported to the east from the areas of Rostov, Kursk, Voronezh, Tula, Moscow, Kalinin, Leningrad, and Murmansk.⁸⁰ Special importance was attached to the speedy relocation of tractor plants, aircraft factories, enterprises for the manufacture of arms and ammunition, plants of non-ferrous and ferrous metallurgy, and installations of the chemical industry.⁸¹ Thus in the Ukraine 283, in Belorussia 109, in the Moscow region 498, and in the Leningrad region 92 industrial plants of economic importance to the Union as a whole were dismantled and transferred. Of the 1,523 enterprises which arrived in the eastern part of the country, 1,360 were major armaments works. Approximately 80 per cent of the evacuated enterprises were directed to the Urals, western Siberia, central Asia, and Kazakhstan; the rest went to the central regions of the Soviet Union: 667 to the Urals, 244 to western Siberia, 78 to eastern Siberia, 308 to central Asia and Kazakhstan, and 226 to the Volga region.⁸² The main difficulty about this evacuation was the need to carry it out within a short period of time, often over vast distances, and occasionally under enemy action. It was impeded also by the shortage of transport and the overloading of the railway system; the relocation of the industrial plants required no fewer than 1.9 million railway wagons. It was not therefore surprising that the industrial equipment frequently failed to arrive at its destination on time or complete, or that it arrived damaged.⁸³ Some evacuated equipment quickly became stuck *en route*, owing to the disorganization of the transport system; thus, the relocation increasingly

became a transport problem. Resumption of production at the new locations was initially also impeded by the lack of workshops and the necessary transport connections, inadequate supplies of fuel and power, and not least a shortage of skilled labour. Armaments production, having undergone an increase during the first three months of the war, dropped to a low towards the end of the year.

On the whole, however, the colossal capacity of the Soviet armaments industry was reflected in the fact that a far greater quantity of weapons and war material was produced during the six war months of 1941 than during the first six months of the year. In the first half of 1941 Soviet factories had produced 1,800 modern tanks, 3,950 aircraft, 15,600 artillery pieces and mortars, 11,000 sub-machine-guns and machine-guns, 792,000 rifles and carbines, and 18.8 million shells. During the second half of the year, despite the loss of highly important industrial regions, production amounted to 4,740 tanks, 8,000 aircraft, 55,500 artillery pieces and mortars, 143,000 sub-machine-guns and machine-guns, 1.5 million rifles and carbines, and 40.2 million shells. Anti-tank rifles were first produced in the second half of the year, reaching a total of 18,152.⁸⁴ It should be remembered, moreover, that there was not only a quantitative increase in the output of tanks and aircraft, but that in the main new, more efficient types were being produced. The armaments industry's skill in increasing its output so massively is revealed even more clearly by a comparison of its output in 1941 and 1942. When Lieutenant-General Lukin, GOC Nineteenth Army, was taken prisoner by the Germans in December 1941, he pointed out to his captors—who had some very inaccurate ideas of the capacity of Soviet armaments production—that Soviet industry was virtually capable of equipping an armoured brigade with 60, or even more, modern T-34 and KV tanks each day. In actual fact, tank production in 1942 increased from 6,542 to 24,445, that of military aircraft from 12,516 to 21,342, and that of all types of artillery pieces and mortars from 71,100 to 127,092.⁸⁵ If one considers that this production came predominantly from the country's second industrial base, one can form an idea of what the Soviet armaments industry would have been like if the capacities of the western parts of the country had been fully available.

No less important to national defence than an increase in armaments output was an increase in agricultural production. By November 1941 the German troops had occupied a territory which, before the war, had produced 38 per cent of the Soviet Union's grain and 84 per cent of its sugar beet. Also within those regions were 38 per cent of all Soviet cattle and 60 per cent of pigs. Although major efforts had been made to evacuate at least the movable chattels of collective and state farms, in particular their grain-stores, livestock, and agricultural equipment such as tractors, from the regions threatened by the enemy, this transfer had only been partially successful.⁸⁶ Agricultural

⁸⁴ 50 let vooružennykh sil, 265.

⁸⁵ Nikitin, 'Perestrojka', 16 ff.

⁸⁶ Arutjunjan, *Sovetskoe krest'janstvo*, 35 ff.

production in 1941, compared with the preceding year, declined from 36,446,000 to 24,298,000t. of grain, from 1,500,000 to 478,000t. of sunflower seeds, from 17,355,000 to 1,670,000t. of sugar beet, and from 987,000t. to 826,000 of meat. This drop in production of foodstuffs and agricultural produce continued in a thoroughly alarming manner in 1942. If the nutrition of the Red Army and the Soviet Union generally was to be ensured, then cropping areas in the eastern parts of the country, especially in the Volga region, the Urals, Siberia, central Asia, and Kazakhstan, had to be substantially extended and production increased in every respect. Moreover, this would have to be achieved against the background of a steady diminution of available manpower, farm equipment, tractors, vehicles, and motor-fuel, under wartime conditions and often in climatically unfavourable latitudes.

An indispensable condition for an increase in armaments production and agricultural output was the mobilization of the requisite manpower—a task which had been embarked upon on a major scale immediately after the beginning of the war. A decree of 26 June 1941 by the USSR Supreme Soviet Praesidium introduced a seven-day week for all persons in employment, the daily working hours were increased, and all kinds of leave in the Soviet Union were cancelled in return for financial-compensation. A decree of 26 December 1941 by the USSR Supreme Soviet Praesidium declared all workers and clerical employees in the armaments industry to be 'mobilized persons'.⁸⁷ It was now forbidden to change or leave one's place of work without authorization. The application of military categories to the non-military sphere was reflected also in the creation of mobile workers' squads and construction battalions. Measures were simultaneously taken to integrate women, children, and elderly people into the labour process on the greatest possible scale. On 23 February 1942 a decree of the USSR Supreme Soviet Praesidium designated the entire urban population capable of work—men from 16 to 55, women from 16 to 45—as mobilized for the duration of the war.⁸⁸ In the countryside, from 17 April 1942 there was compulsory labour for all males from 14 to 55 and all females from 14 to 50. In fact, however, even children from the age of 12 upwards were obliged to reach a standard work norm of at least 50 work-days per annum. It was no longer just a case of making every fit person work, but of extracting from workers as much output as possible. To that end the work targets were raised excessively. Any mobilized person leaving his place of work without authorization was regarded as a 'deserter' to be tried by court martial. Rigorous punitive measures were to ensure fulfilment of the work norms and observance of work discipline.⁸⁹ Thus the principle of 'total war' applied in the Soviet Union from 1941 as the supreme guideline of all Soviet life. This was to become one of the reasons for the growing strength of the Red Army and for its superiority over the troops of the Wehrmacht.

4. THE STRUGGLE FOR LENINGRAD

By 10 July 1941 the attack by Army Group North across the Baltic States in a north-easterly direction, with the general objective of Leningrad, had made massive progress. The rapid success of the German troops was largely due to the fact that the command of the Baltic Special Military District under Colonel-General Kuznetsov had, by literally obeying the directives of the Soviet general staff, failed to put its units in a state of defence in good time.⁹⁰ After some hasty but unsuccessful counter-attacks by XII Mechanized Corps and elements of III Mechanized Corps near Siauliai and Kaunas, Eighth Army under Lieutenant-General Sobennikov had retreated to Riga and across the Dvina (Daugava), Twenty-seventh Army under Major-General Berzarin via Daugavpils to Opochka, and Eleventh Army under Lieutenant-General Morozov to Polotsk.⁹¹ An attempt by the command of the new North-west Front to establish a stable line of defence along the Dvina, from Riga to Kraslava, had failed from the very start. While Eighth Army was hurriedly withing towards the north and by 10 July 1941 had been forced back to a line from Tartu to Pärnu,⁹² preparations were made to build up a new line of defence along the Velikaya south of Pskov with units of Twenty-seventh Army. But this endeavour also failed when the Germans succeeded in capturing the fortified localities of Ostrov and Pskov and in crossing the river on a broad front. Unfulfillable demands by Headquarters, combined with marked shortcomings in the command of the North-west Front⁹³ and to some extent in that of its subordinate armies, had brought about a situation whereby on 10 July 1941 Eleventh and Twenty-seventh Armies were manning a rather weak delaying-position in the area of the Cherekha river south-east of Lake Peipus.

With the Germans having crossed the boundaries of the Leningrad region and gained favourable jumping-off positions for further attacks in Pskov and Ostrov,⁹⁴ for the first time the danger of a strategic breakthrough towards Leningrad began to emerge. Leningrad, the ancient historic St Petersburg, was not only the second largest city of the country (after Moscow), an important industrial centre, and with Kronshtadt the base of the Red Banner Baltic Fleet, but also, as the 'cradle of the Revolution' and 'Lenin's city', of enormous political and ideological, as well as strategic, significance for the whole of the Soviet Union. Vigorous preparations were therefore put in hand to put the city into a state of defence and to secure its more distant and closer approaches by defensive lines. On orders from Supreme Command Headquarters, Lieutenant-General Popov, the GOC Northern Front—which had not so far been involved in the fighting—had to prepare a defensive line along the Luga, from Narva to the south-east as far as Lake Ilmen, and to man it

with some of the troops of the Northern Front together with divisions of the newly raised Leningrad People's Army, a kind of civilian militia. Lieutenant-General Pyadyshev, the deputy GOC Northern Front, was appointed to the command of this special 'Luga Tactical Group'.⁹⁵ The air forces of the Northern Front, under Major-General Novikov, were instructed to lend the greatest possible support to the operations of this group. With a view to mobilizing Leningrad's manpower and material reserves for the defence of the city, a special commission was formed on 1 July 1941 under the chairmanship of Zhdanov, Secretary of the CPSU Central Committee; other members of this commission were such leading Party and government figures as Kuznetsov, Shtykov, Popkov, and Solovyev.⁹⁶ The entire available civilian population, some 500,000 people, were henceforth enlisted for the construction of positions which, extending to 900 kilometres, surrounded Leningrad in multiple echelon.⁹⁷ Behind the outer line of defences along the Luga between Petrodvorets (Peterhof), Krasnogvardeysk (Gatchina), and Kolpino, a second line was established at the southern approaches to the city. This inner ring of defences extended from Avtovo-Predportovaya-Srednaya Rogatka to the Neva. A double line of fortifications was also established at the Karelian isthmus.⁹⁸

Construction of the defensive sector along the Luga had not yet been completed when Armoured Group 4, its flank covered by Sixteenth Army, which was hanging back slightly, reached Soltsy, established a bridgehead further north near Luga, and, reaching out towards the north, advanced as far as the Kingisepp area. However, on 14 July 1941, as the Germans threatened to advance beyond Soltsy and Shimsk in the direction of Novgorod, they were struck a fierce blow on their flank by the Soviet Eleventh Army. This caused a temporary crisis and necessitated a regrouping and weakening of the attacking units. That thrust into their flank, along with the stubborn resistance on the Luga defensive sector, caused the offensive against Leningrad to be temporarily halted. Nevertheless, the situation in the city remained tense, especially after the Finnish Karelian Army, on 10 July 1941, had gone over to the attack north of Lake Ladoga and pushed back the Soviet Seventh Army under Lieutenant-General Gorelenko almost to Petrozavodsk and Olonets. On 31 July, moreover, the Twenty-third Army under General Pshennikov was involved in heavy fighting as a result of an offensive by the Finnish South-eastern Army from the Karelian isthmus. During the next few weeks the Soviet troops were forced to abandon Vyborg and fall back to Leningrad's outer belt of defences. In the course of July 1941, despite vigorous opposition, the Soviet Twenty-seventh and Eleventh Armies on the left wing of the North-west Front had been forced back beyond Dno as far as the Lovat between Staraya Russa and Kholm. When on 7 August the Germans reached the Gulf of Finland at Kunda, the Soviet Eighth Army on the right wing of the North-west Front was

split in two: 10th Rifle Corps took up defensive positions around Tallinn, while 11th Rifle Corps withdrew to Narva.⁹⁹

After a brief pause, on 8 August 1941 the German northern assault group opened its attack on Kingisepp, advancing from its bridgeheads on the Luga; as a result, the Soviet Eighth Army elements fighting there soon found themselves in a difficult position. In spite of stubborn resistance the Soviet troops had to abandon Kingisepp, and on 21 August Krasnogvardeysk fell. However, Forty-second Army under Major-General Shcherbakov succeeded in foiling a German attempt to break through to Leningrad and, with the assistance of Eighth Army and units of the Baltic Fleet, in delaying the German advance to the coast. Not until the middle of September did the Germans succeed in reaching the Gulf of Finland near Strelna and in surrounding the remnants of Eighth Army in the Oranienbaum pocket. The attack of the southern assault group, which began on 10 August in the direction of Novgorod-Chudovo-Lyuban, at first also gained ground rapidly. Forty-eighth Army under Lieutenant-General Akimov (replaced since the beginning of September by Lieutenant-General Antonyuk) had been forced to abandon Novgorod and to fall back to the Malyy Volkhovets river. A surprise counter-thrust by Thirty-fourth Army under Major-General Kachanov and by elements of Eleventh Army near Staraya Russa indeed succeeded in holding up the German attack for a few days, but not in preventing the capture of Chudovo.¹⁰⁰

In view of the growing threat from the south-east and south-west, Marshal of the Soviet Union Voroshilov, at a meeting of the Party leaders of the city of Leningrad on 20 August 1941, considered it essential to mobilize the last forces and resources in order to repulse the enemy. Zhdanov demanded an enlistment of workers on the same scale as in 1918-19. 'The enemy is at our gates,' he declared, 'this is a matter of life and death.' A War Council was set up for the defence of Leningrad under Voroshilov and Zhdanov, and a series of drastic defence measures were put in hand.¹⁰¹ At the same time, on 23 August 1941, Supreme Command Headquarters considered it opportune to split the existing Northern Front into a Leningrad Front under Lieutenant-General Popov (a member of Zhdanov's War Council) and a Karelian Front under Lieutenant-General Frolov. Eighth, Twenty-third, and Forty-eighth Armies came under the new Leningrad Front. The duties of the short-lived War Council for the Defence of Leningrad were assumed on 30 August 1941 by the War Council of the Leningrad Front. As a result of this restructuring, the commander of the Leningrad Front was now able to devote his undivided attention to the defence of the city. Simultaneously, Fifty-fourth Army under Marshal of the Soviet Union Kulik and Fifty-second Army under Lieutenant-General Klykov, both of which continued to be under the direct command of Headquarters, were brought up to the eastern bank of the Volkhov in order to

¹⁰¹ *Istoriya ordena Lenina Leningradskogo Voennogo okruga*, 223.

prevent any further advance by the Germans in the direction of Volkhov and Tikhvin.

In spite of all the efforts of the defenders, however, the German attack continued to make progress. The pressure of the German troops, who since 26 August 1941 had been attacking towards the north-east via Chudovo and Lyuban, along the Leningrad-Moscow railway line, was so strong that the Soviet Fifty-fifth Army under Major-General Lazarev could not withstand it. Mga was lost, and on 8 September the Germans had reached Lake Ladoga at Shlisselburg and severed Leningrad from its land communications to the east. As a result, Forty-second, Fifty-fifth, and Twenty-third Armies, as well as units of the Red Banner Baltic Fleet, were encircled in the city. Shortly before, resistance near Tallinn, which had been defended by 10th Rifle Corps under Major-General Nikolaev and naval units under Vice-Admiral Tributs, had come to an end. On 28 August 1941 began the evacuation of the naval units and the remnants of the defenders—but, because of inadequate preparations, that evacuation entailed heavy losses.¹⁰² Of 67 vessels participating in the breakthrough, only 33 reached Kronstadt or Leningrad; the remainder were caught in the mine-barrages or were lost through air attack, motor torpedo-boat attack, or artillery fire. Of the defenders of Tallinn, 15,000 men were taken prisoner; 3,000 of them were Estonians.

On 8 September 1941 German troops reached Lake Ladoga and a few days later the Gulf of Finland, thus tightening their stranglehold on Leningrad. When, in the Uritsk-Pulkovo Heights sector, they had pushed right up to the outer suburbs from the south, the fate of the city seemed to be sealed. From 4 September 1941 onwards Leningrad had been under German artillery bombardment. In early September the command of the Leningrad Front actually regarded the military situation as so desperate that, just as in Kiev, Kharkov, and elsewhere, preparations were being made for the destruction of the most important buildings in case the Germans penetrated into the city.¹⁰³ In this critical situation Supreme Command Headquarters decided on one final attempt to hold the city against the expected assault by the enemy. On 9 September Stalin dispatched Army General Zhukov to Leningrad on a special mission. He was instructed to replace Marshal of the Soviet Union Voroshilov—who had been appointed GOC Leningrad Front only on 5 September—as well as a number of other commanders who were not up to their tasks and had been conducting the city's defence 'with inadequate steadfastness'. Thus the incompetent GOC Fifty-fourth Army, Marshal of the Soviet Union Kulik, was relieved of his command. Forty-second Army, on the particularly threatened southern outskirts of Leningrad, was taken over by Major-General Fedyuninskiy. Lieutenant-General Khozin was appointed chief of staff of the Front. It was not just that some of the commanders of the forces at Leningrad had proved failures and given up hope. Even more

¹⁰² Ačkasov, 'Operacija po proryvu', 29.

¹⁰³ Zhukov, *Reminiscences*, 315.

alarming were instances of exhaustion and disintegration among the troops themselves. It was against these that Zhukov, in line with his full powers, was to fight with all means at his disposal. Present-day accounts of the battle before Leningrad abound in instances of heroic resistance and self-sacrifice by Soviet soldiers. 'In the defence of Leningrad the forces and the population displayed an unprecedented mass heroism. Fighting on the approaches to the city was one great heroic deed,' it is stated in the *History of the Great Fatherland War*.¹⁰⁴ What the will to resist was really like in September 1941 is illustrated by Order No. 0098 of 5 October 1941, issued by Zhukov, the GOC Leningrad Front, and members of the War Council Zhdanov, Kuznetsov, and Admiral Isakov, and addressed to the troops of the Leningrad Front. This order was to be passed on to all commanding officers, unit commanders, and political officials down to company level. It dealt with an 'unparalleled incident' in the area of the 289th Independent Machine-gun Battalion stationed in the Slutsk-Kolpino fortification zone, an event which had produced far-reaching consequences. German soldiers had penetrated into the position of the battalion's No. 2 Company, had engaged the Red Army men in conversation, and without obstruction from their superiors had succeeded in persuading them to desert. What most alarmed the Front command was the fact that not only had the immediately concerned military leaders and political officials tolerated this 'criminal fraternization', but the commissars and staff members of the Political Departments and Special NKVD Detachments at battalion level, fortified-zone level, and the level of 168th Rifle Division and Fifty-fifth Army had taken no action, and instead had tried to hush up the incident. Measures now taken included execution by firing-squad and other punishments. The Leningrad Front threatened all traitors and cowards, and all those exhibiting 'criminal inactivity', with merciless liquidation and with arrest and court sentences for their families. Zhukov,¹⁰⁵ here as elsewhere, left no doubt that he would suppress all manifestations of defeatism with 'hardness and ruthlessness', and that he would not shrink from holding family members liable.

That these methods were not entirely successful is shown by the relatively high number of prisoners taken at Leningrad. German monitoring teams operating in this area and intercepting enemy radio traffic collected quite a few indications of persistent demoralization among Soviet formations. As late as August 1941 the officer commanding 191st Rifle Regiment of 198th Rifle Division (Twenty-third Army) was shot dead by a subordinate while trying to go over to the Germans.¹⁰⁶ Twenty-third Army HQ, in a signal to 19th Rifle Corps and six divisions subordinated to it, complained 'that the number of men missing in action is disproportionately high compared to other losses'.¹⁰⁷ Similar observations were made in Fifty-fifth Army, which reported heavy

losses of prisoners and deserters: 'Morale among the fighters of 125th Rifle Division is low.'¹⁰⁸ A particular shock to the Soviet leadership was the behaviour of the 2,500 Leningrad University students who had been enlisted and immediately sent to the front; a very large proportion of them—the figure of 2,000 is mentioned—went over to the Germans.

Naturally, the various measures for stabilizing the front, including efforts to base the defence on deeper echelons and to involve the guns of the Baltic Fleet, as well as attempts to mount counter-attacks, could only produce results over several weeks. They certainly had practically no effect on the decisions of the German troops, who, albeit often in heavy fighting, broke through the defensive belt around Leningrad during the first days of September. The German command felt convinced that it would be possible, without great difficulty, to penetrate the city itself and to take possession of it. Hitler, however, preferred to see Leningrad tightly encircled, besieged, and starved into submission rather than have the city captured—because he feared that, as had happened in Kiev and elsewhere, the Germans would suffer heavy losses from mines and time bombs if they forced their way in. On 17 September, when a withdrawal of battle-worthy units finally weakened the German attacking forces, the War Council of the Leningrad Front issued a 'most strict' Order to Forty-second and Fifty-fifth Armies, signed by Zhukov, Zhdanov, Kuznetsov, and Khozin, forbidding them to fall back by as much as a single step from the defensive lines on the southern edge of the city. The defenders actually succeeded in gradually stiffening their resistance and, in certain sectors, e.g. from the Oranienbaum pocket and on the Volkhov, even in improving their positions by counter-attacks.¹⁰⁹ The blockade of Leningrad, which began in the second half of September, is presented in Soviet historiography as one of the 'most frightful atrocities of the German Fascist conquerors' and as a 'systematic murder of the city's peaceful inhabitants'.¹¹⁰ It is a fact that the civilian population of Leningrad—especially during the first winter of the war, when the city could be but inadequately supplied by a temporary motor road over the ice of Lake Ladoga¹¹¹—suffered a large number of deaths from starvation, bombardment, and disease.¹¹² Tragic though these events were, there is no case for moral accusations against the German troops: siege and bombardment of a defended city and fortress were still part and

¹¹² Prochorova, in *Oborona Leningrada*, 445 ff.; 'Iz dnevnika Mironovoj Aleksandry Nikolaevny', *ibid.* 754 ff.

parcel of the most usual and unquestioned methods of warfare. Soviet troops in turn applied the method of siege without scruples during the second half of the war, trying to reduce enemy cities with all the fire-power available to them. One need only cite the instances of Königsberg (present-day Kaliningrad) and Breslau (Wrocław). Indeed, in 1945 Marshal of the Soviet Union Zhukov actually prided himself on having fired no fewer than 1,800,000 artillery shells at Berlin between 21 April and 2 May.¹¹³

Towards the end of September the German armoured forces were withdrawn and fighting at Leningrad began to subside into a kind of siege warfare. The time had then come for a German attack on the Baltic islands of Saaremaa (Ösel) and Hiiumaa (Dagö), which were still being held by Red Army forces. Although possession of the Moon Sound islands and the Hanko (Hangö) peninsula had lost some of its importance to the Soviet command now that the whole of Estonia was in German hands, these bases, irritatingly, were still interfering with German control of the eastern Baltic and the Gulf of Finland. From Saaremaa, moreover, a few DB-3 long-range bombers of the Red Banner Baltic Fleet under Colonel Preobrazhenskiy had repeatedly, during August and September 1941, carried out nuisance raids as far as Berlin—a point of considerable importance to Soviet war propaganda.¹¹⁴ This explains the Soviet determination to defend those bases, 400 kilometres behind their front, to the last man. Under the command of General Yeliseev the garrison of Saaremaa resisted until 5 October and that of Hiiumaa until 21 October 1941.¹¹⁵ The garrison of Hanko, under the command of Lieutenant-General Kabanov, which held out for five months, was evacuated to Kronstadt and Leningrad in December 1941.¹¹⁶

The fact that, despite their great successes on the north-western sector, the German troops failed to attain the real objective of the operation, the capture of the city of Leningrad, was celebrated on the Soviet side as a 'huge political and moral victory of the Soviet people and a magnificent testimony to their courage and inflexible will'. 'The Fascist hordes'—it is stated in the memorial of the Leningrad military district—'having penetrated from the frontier to the suburbs of Leningrad, were unable to overcome the final 2–5 kilometres and enter Leningrad through Pulkovo and Ligovo. The steadfastness, the extraordinary heroism and valour of the city's defenders frustrated the plans of the German command.'¹¹⁷ Deliberately or otherwise, this statement overlooks the fact that during the critical days of September even Army General Zhukov and the Leningrad Front command did not believe that it would be possible to hold Leningrad. The entry of German troops into the city was at that time expected 'at any moment'.¹¹⁸

5. THE BATTLE OF SMOLENSK

When on 10 July 1941 the Germans mounted their attack on Smolensk with several spearheads between Vitebsk and Mogilev, they came up against the defensive line of the Soviet Western Front. This consisted of seven armies under the overall command of Marshal of the Soviet Union Timoshenko. The defensive forces along the Drissa-Zhlobin-Rechitsa line were composed of Twenty-second Army under General Yershakov, Nineteenth Army (in echelon behind it) under Lieutenant-General Konev, Twentieth Army under Lieutenant-General Kurochkin, Thirteenth Army under Lieutenant-General Filatov, and Twenty-first Army under Lieutenant-General Gerasimenko. Sixteenth Army under Lieutenant-General Lukin, recently arrived in the Smolensk area, formed the reserve in second echelon. Western Front HQ had been instructed to establish a solid defensive front, together with the remnants of broken units. It was to take advantage of the river obstacles of the Western Dvina and the Dnieper, and thus simultaneously cover the arrival and deployment of additional forces from the interior of the country.¹¹⁹ But in view of the inadequate artillery and armour of the divisions in the foremost line, the Germans, attacking with superior forces at the point of main effort, succeeded during the very first days in achieving deep penetrations north of Vitebsk and on both sides of Mogilev. Despite fierce resistance and repeated counter-attacks, the Soviet Twenty-second Army—except for some lesser units which offered resistance on the Lovat near Velikie Luki—was encircled, and Nineteenth Army forced back towards Smolensk. Simultaneously, the Germans had pierced the front of Twentieth Army north of Mogilev, thrown back that army north-west of Smolensk, and encircled it there along with Sixteenth Army.¹²⁰ Thirteenth Army, operating south of Mogilev, was split in two: two of its corps were caught in the Mogilev pocket, while two others, also trapped at first, succeeded in fighting their way through to the south and in establishing a new line of defence with Twenty-first Army on the Sozh. Although on 13 July Twenty-first Army made a locally successful relief attack near Bobruysk, Smolensk eventually fell on 26 July and the Germans struck further east beyond Yelnya.

The loss of the Dnieper-Dvina line and the city of Smolensk conjured up the danger of a German breakthrough to Moscow. Supreme Command Headquarters therefore took vigorous measures to stabilize the front again. Stalin in particular regarded the loss of Smolensk as very serious; he was altogether outraged at developments on the western sector of the front.¹²¹ Fresh forces were brought up without delay and defences were staggered in deep echelon. Twenty-ninth Army along the Ostashkov-Selizharovo-Olenino line, and Thirtieth Army were combined on 12 July 1941 with Twenty-fourth and

Twenty-eighth Armies standing between Nelidovo and Bryansk, and with Thirty-first Army at Torzhok-Rzhev-Kalinin, to form the Front of Reserve Armies under the command of Lieutenant-General Bogdanov. Its task was, in second echelon behind the Western Front, to secure the Ostashkov-Bely-Yelnya-Bryansk line against a possible German breakthrough in the direction of Moscow. The same purpose was served by the Mozhaysk line of defence created at the approaches to the capital and held by poorly equipped and poorly trained divisions of the People's Guard (Thirty-second and Thirty-third Armies) and by Thirty-fourth Army.¹²² Simultaneously with the establishment of deeply echeloned defences, Headquarters in a directive of 20 July 1941 ordered the launching of counter-attacks in order to weaken the enemy's striking power and to consolidate the general position around Smolensk. To this end, divisions were pulled out from the Front of Reserve Armies and formed into several army groups under the command of Generals Khomenko, Kalinin, Kachalov, Rokossovskiy, and Maslennikov. These army groups were instructed, with several spearheads from the Bely-Yartsevo and Roslavl areas, to attack in the general direction of Smolensk and, in co-operation with forces of Sixteenth and Twentieth Armies, to destroy the enemy forces which had broken through north and south of Smolensk. However, this first major offensive operation by Soviet troops, under overall command of Marshal of the Soviet Union Timoshenko, was for a number of reasons denied success.¹²³ These reasons included not only the relatively poor equipment of the attacking units as regards artillery, armour, and aircraft, but also the inability of commanders at all levels to execute a grand-scale operation.¹²⁴ The attacks, on 23 July 1941 from the Roslavl area and on 24 and 25 July from the areas of Bely and Yartsevo, were badly co-ordinated and launched at too great a distance from one another. They were checked by the quick-reacting Germans and repulsed. Although some elements of Sixteenth and Twentieth Armies, encircled north of Smolensk, succeeded with the aid of Rokossovskiy's army group¹²⁵ in breaking through to the other bank of the Dnieper, Kachalov's army group, attacking south of Smolensk, found itself encircled at Roslavl and was annihilated. The final outcome of the operation was that the Soviet troops had again suffered heavy losses, even though they succeeded in establishing themselves once more in a defensive line along the Desna and to the north of it, and even though some forces of Army Group Centre had been worn down in these battles.

The German gains, especially against the left flank of the Western Front, represented an increasing threat to the South-west Front, which was then engaged in heavy fighting for Kiev. To ward off the danger of a thrust into its flank from the north, Supreme Command Headquarters on 24 July 1941, with

¹²⁴ Panov and Naumov, 'Vosstanovlenie strategičeskogo fronta', 22.

¹²⁵ Rokossovskij, *Soldatskij dolg*, 25 ff.

quite unusual promptness,¹²⁶ established a Central Front along the boundary of the Western and South-west Fronts; this Central Front consisted of Thirteenth Army, Twenty-first Army, and the remnants of Fourth Army. Colonel-General Kuznetsov was placed in command of it.¹²⁷ Simultaneously, on 25 July 1941, the Front of Reserve Armies was again dissolved, having scarcely been in existence for ten days. From the units of that front, with the exception of Twenty-ninth and Thirtieth Armies, which had already been incorporated in the Western Front, Headquarters on 30 July 1941 created a unified Reserve Front under the command of Army General Zhukov. Significantly, State Security Commissar (3rd rank) Kruglov, a close relative of People's Commissar Beriia, became a member of its War Council. The reinforcement of the Rzhev-Vyazma-Kirov line by the Reserve Front formed from Thirty-fourth, Thirty-first, Twenty-fourth, Forty-third, and Thirty-third Armies and the appointment of Zhukov—who to this end was relieved in his former post of Chief of the Red Army General Staff by Marshal of the Soviet Union Shaposhnikov—were connected with differences of opinion in the supreme command on what were the most urgent measures at the moment. At the end of July 1941 Zhukov and the top generals of the general staff, such as Generals Vasilevskiy and Zlobin, no longer expected an immediate resumption of the German attack on Moscow; they had instead come to the conclusion that the Germans would use the advantages of their position in order to strike at the flank or the rear of the Central Front and the South-west Front.¹²⁸ Stalin, on the other hand, continued to believe that the German main forces, albeit with outflanking moves in the north and south, would persist in trying to break through to Moscow.¹²⁹ He clung to this view even when Army Group Centre, having in fact gone over to the defence at Smolensk on 30 July 1941, wheeled south on 8 August 1941 with forces of Armoured Group 2 and Second Army to attack the newly formed Soviet Central Front. In order to prevent a breakthrough of German formations in the strategic direction of Moscow—the move Stalin and Shaposhnikov feared—a new front, the Bryansk Front, was created on 16 August 1941 at the boundary between the Central Front and the Reserve Front. This Bryansk Front, under the command of Lieutenant-General Yeremenko, consisted of Major-General Petrov's Fiftieth Army and Major-General Golubev's Thirteenth Army.¹³⁰ Its immediate task was to be nothing less than the destruction of the enemy's Armoured Group 2.¹³¹ However, despite Stalin's optimism, further enhanced by Yeremenko, this grouping proved far too weak to block or halt its opponent. On 18 August 1941, when the Germans were approaching Gomel and the Novozybkov-Starodub line, and when they had already driven a deep wedge between the Bryansk and Central Fronts, Zhukov warned Supreme Command Headquarters of the danger of a far-ranging envelopment of the armies of the South-west Front.

Even at that late moment Stalin and his new chief of the general staff were not convinced that the main direction of the thrust had in fact been changed towards the south, or that the South-west Front and substantial parts of the Central Front were threatened. At any rate, they believed that the Bryansk Front would succeed in halting the enemy.¹³² They therefore authorized only the withdrawal of the right wing of the South-west Front across the Dnieper to the east. Thirty-seventh Army, under the command of General Vlasov, and the forces of the Kiev fortified zone had to stay put and continue to defend Kiev. Headquarters also expected that, once Twenty-first Army had been pulled back to the Iput, it would be possible to maintain the cohesion between the Central Front and the Bryansk Front. In order to facilitate the defensive operations against the enemy attacking towards Chernigov and Konotop, the forces of the Central Front (Third and Twenty-first Armies) were on 26 August 1941 amalgamated with those of the Bryansk Front. This measure, however, as Yeremenko had to admit, was a mistake, since it was the troops of the Central Front who had to check the main southward thrust of the Germans. Even so, it provides additional evidence that Stalin and Shaposhnikov had failed to realize in time the fundamental change in the thrust of the German operations.

Supreme Command Headquarters judged that the situation in the second half of August was promising enough to warrant an attempt to regain the initiative and recapture Smolensk. It therefore ordered the Western Front to continue its counter-attacks north of Smolensk and set it the task of reaching the Velizh-Demidov-Smolensk line with forces of Thirtieth, Nineteenth, Sixteenth, and Twentieth Armies by 8 September 1941. Simultaneously, the Reserve Front with Twenty-fourth and Forty-third Armies was to liquidate the salient at Yelnya and advance to the area west of Roslavl by the same date. While Armoured Group 2 was thus, during its advance to the south, being threatened from its rear, the Bryansk Front, substantially reinforced by air units from the Headquarters reserve, was to strike at the enemy's flank in the wider neighbourhood of Starodub (at Pochev, Trubchevsk, and Novgorod-Severskiy) and, having annihilated him, reach a line approximately from west of Roslavl to Krichev and Klinty. Headquarters hoped that these co-ordinated operations would destroy substantial elements of Army Group Centre, push the enemy back along his entire front, and thus fundamentally change the position on the western sector.¹³³ The Soviet forces, however, achieved only one success worth mentioning: Twenty-fourth Army recaptured Yelnya after heavy fighting on 6 September 1941.¹³⁴ The attack of the Western Front, on the other hand, made only slight progress in a few places and had to be halted by order of Headquarters on 10 September 1941. The Bryansk Front—whose opportunities had been greatly overrated—likewise failed to

¹³⁴ Chorošilov and Baženov, 'El'ninskaya nastupatel'naja operacija'.

score any success. Neither was Yeremenko able to check the advance of Armoured Group 2, which was driving ever deeper into the rear of the South-west Front, nor, contrary to Stalin's and Shaposhnikov's expectations, did he himself seize the initiative for destroying the units of the German armoured group.¹³⁵ Thus, on 13 September the Bryansk Front was forced to suspend its attacks and go over to the defensive; on 16 September 1941 the Reserve Front had to do likewise.

The battle of Smolensk, the biggest armed clash during the summer campaign of 1941, came to a close after almost two months' fighting without either side having achieved its objectives. The Soviet troops, despite repeated attempts, had failed to destroy the German assault groups, and hence the main forces of Army Group Centre, in the Smolensk area. Instead, the Germans had crossed the Dnieper in its middle reaches on a broad front and had advanced eastwards by, on average, 170–200 km., as they had also done in the sector of the western Dvina.¹³⁶ As a result, however, Army Group Centre—having continuously had to repel vigorous, albeit often improvised and poorly conducted, counter-attacks—had been so weakened in its attacking strength that a direct advance on Moscow had to be put off for the moment. The units of Armoured Group 2 and of Second Army wheeled to the south in order to eliminate the latent threat to the southern flank and to bring the raging battle for Kiev to a successful conclusion. This outcome of the fighting near Smolensk is described by Soviet historiography as a great defensive success of the Red Army, which, it is claimed, had managed to divert the German command from its original concept, gaining time for the further mobilization of human and material resources and for preparations for the defence of the Soviet capital. In actual fact some 80 per cent of available strategic reserves had been drawn upon to reinforce the western sector and hence to protect Moscow.¹³⁷ The defensive success at Smolensk had been achieved at the cost of exceptionally high losses. The counter-attacks ceaselessly demanded by Supreme Command Headquarters, even though 'neither objective nor subjective prerequisites for them existed', had led to the encirclement and annihilation of valuable major formations. Thus, according to German data, 426,000 Soviet generals, officers, and other ranks were taken prisoner in the battle of Smolensk—evidence of a still shaky fighting morale among the Red Army. That these figures were by no means (as claimed by the Soviet literature) 'false reports of the Fascist intelligence service'¹³⁸ is shown by the above-mentioned Order No. 270, issued about the same time, which sought to prevent the disintegration of the army by the application of Draconian measures.

6. THE FIGHTING FOR THE UKRAINE

On about 10 July 1941 the Germans also resumed their offensive against Colonel-General Kirponos's South-west Front; his chief of staff was initially General Purkaev and later General Tupikov; the War Council member was Burmistenko. The attacks were opened from the salient in the Sluch sector. Units of Armoured Group 1 and Sixth Army thrust ahead in two directions, via Zhitomir and Berdichev. At the boundary between Major-General Potapov's Fifth Army, which defended the fortified district of Korosten at the old state frontier, and the forces of the Kiev fortified district a spearhead drove ahead as far as the Irpen within a few days, thus posing a direct threat to the Ukrainian capital. With flank cover from the German Sixth Army, Armoured Group 1 simultaneously advanced southwards with a far-ranging envelopment, designed to encircle and annihilate General Muzychenko's Sixth Army and General Ponedelin's Twelfth Army well to the west of the Dnieper. South-west Front command had initially turned its attention to the right wing and mounted a number of counter-attacks from the Korosten fortified district with units of its Fifth Army. Simultaneously it prepared for the defence of Kiev against a presumed German attack,¹³⁹ which, however, was not attempted until the end of the month, and then only as a coup without real preliminary deployment. The Germans meanwhile succeeded in driving an ever broader wedge between the Soviet Fifth and Sixth Armies, and in wheeling through Belaya Tserkov in the direction of Uman. As a result, the main forces of the South-west Front, above all Sixth and Twelfth Armies, found themselves in a difficult situation: pinned down since 6 July 1941 by the attack of the German Seventeenth Army and, after that army's breakthrough at Zhmerinka on 16 July 1941, cut off from its southern neighbour, the Soviet Eighteenth Army of the Southern Front, the South-west Front forces were in growing danger of having their eastward retreat cut off by the German armoured group. Eighteenth Army, in its turn, was in danger of being encircled once the German Eleventh Army and the Romanian Third Army had crossed the Dnestr, thereby threatening its left flank. By that time the troops of the South-west Front had suffered enormous losses. Up to 30 per cent of the rifle divisions were reduced to 1,500 men, another 30 per cent had only 3,000-4,000 men, some had no artillery, and most of the armoured formations had no tanks left.¹⁴⁰ In the hope of gaining time for bringing up and assembling reserves on the Dnieper, South-west Front command had at first kept the threatened Sixth and Twelfth Armies in their positions along the old state frontier; only on 16 July 1941 had it, belatedly, ordered them to withdraw to the east.¹⁴¹ Simultaneously, from 19 July onwards, counter-attacks were made, on orders from Headquarters, by Lieutenant-General Kostenko's Twenty-sixth Army

¹³⁹ Bagramjan, 'Geroideskaja oborona'.

¹⁴⁰ Pokrovskij, 'Na Jugo-Zapadnom napravlenii', 66.

¹⁴¹ Arusanjan, 'Boevye dejstvija', 63-4.

operating south of Kiev against the flank of Armoured Group 1. Although these slowed down the German attack, they came too late to save the two armies from the encirclement threatening them.¹⁴² While the Soviet Twenty-sixth Army was, for its part, under attack, the pocket forming at Uman was assuming ever clearer outlines. From the north, Armoured Group 1 was pushing against the area east of Uman, while from the south Seventeenth Army was attacking towards the same objective. On 2 August 1941 the German forces linked up at Pervomaysk.

The grouping of Sixth and Twelfth Armies—which, because of the belated order for its withdrawal, had slipped out of the control of the South-west Front and since 23 July had been concentrated under the command of General Ponedelin and subordinated to General Tyulenev's Southern Front—now found itself encircled and was annihilated within a few days.¹⁴³ According to the history of the Soviet armed forces, some of the encircled troops succeeded in breaking out. 'Thousands, however, lost their lives on the battlefield'¹⁴⁴ because, as Colonel-General Pokrovskiy writes, 'they preferred death to the disgrace of captivity'.¹⁴⁵ An attempt is made to create the impression that there had been no prisoners. The Germans, on the other hand, reported that 'great masses of the enemy' were coming over to them. At the conclusion of the fighting at Uman on 8 August 1941 some 103,000 Soviet officers and men were counted as prisoners of war—including the two army commanders Ponedelin and Muzychenko, as well as General Kirillov, GOC 13th Rifle Corps, and other generals. The number of men killed in action was estimated at double that figure.

In view of the increasingly critical situation in the sector of the South-west Front, on 5 August 1941 Stalin, after unsuccessful attempts to halt the enemy before he reached the Dnieper, instructed the commanding generals of the fronts, as well as Marshal of the Soviet Union Budenny, GOC South-western Direction, to build up a secure line of defence along the Dnieper from the bridgehead at Kiev to Kremenchug, and thence along a general Krivoy Rog-Kakhovka-Kherson line. The troops of the South-west Direction were given definite orders not on any account to allow the Germans to break through to the eastern bank of the Dnieper.¹⁴⁶ Ninth Army under Lieutenant-General Sofronov, which had been cut off since 10 August and thereupon organized as an Independent Coastal Army, was ordered, in conjunction with the forces of the Black Sea Fleet under Rear-Admiral Zhukov, to defend the port of Odessa to the last breath.¹⁴⁷ Simultaneously, reserves were brought up from the heartland military districts; for the reinforcement of the troops defending the Kiev fortified district these were organized into the Thirty-seventh Army

under General Vlasov, and at Cherkassy into the Thirty-eighth Army under Lieutenant-General Ryabyshev (later under Major-General Feklenko); on the sector of the Southern Front a Reserve Army was formed under Major-General Malinovskiy in the Dnepropetrovsk area. The concentration of such strong forces near Kiev and on the Dnieper bend, and the determination of Supreme Command Headquarters and of South-western Direction command not to surrender an inch of Ukrainian soil, were to cost the Soviet troops dear.

The German advance continued to make rapid progress after the conclusion of the battle of Uman. On 5 August 1941, when Stalin rejected Budenny's request for permission to pull back the entire Southern Front to the Ingul,¹⁴⁸ the town of Kirovograd, situated on that river, was already in German hands. The German troops made a defence of the Ukraine west of the Dnieper—as demanded by Headquarters—impossible and by 20 August 1941 had forced the Southern Front back to the river bank between Nikopol and Kherson. Although on 19 August 1941 Supreme Command Headquarters had ordered the fronts of the South-western Direction to hold at all costs the bridgeheads at Kiev, Dnepropetrovsk, Berislav, and Kherson, these were nevertheless reduced. The Germans crossed the Dnieper at Dnepropetrovsk¹⁴⁹ and for their part established bridgeheads there as well as down river at Kakhovka; from these they advanced towards the south and south-east at the beginning of September. The Fifty-first Independent Army only just succeeded in halting the Germans at the approaches to the Crimea. The Southern Front was forced to withdraw to the Dnepropetrovsk–Zaporozhye–Melitopol line. An alarming situation had also arisen at Kremenchug, where the Germans on 2 September 1941 likewise established a bridgehead and where they assembled the main strength of Seventeenth Army and Armoured Group 1. As the Bryansk Front had failed to contain the southward thrust of Armoured Group 2 and Second Army, and as strong German motorized forces had penetrated as far as the Konotop area and crossed the Desna near Chernigov, six Soviet armies of the South-west Front, standing in the salient formed by the Dnieper and Desna, found themselves in danger of large-scale encirclement.¹⁵⁰

South-west Front command had realized the growing threat to its flanks as early as 4 September 1941.¹⁵¹ In view of the development of the situation, on 7 September 1941 Colonel-General Kirponos demanded the immediate pulling back of the (already half-encircled) Fifth Army and the right wing of Thirty-seventh Army to the Desna. But not until fully two days later, on 9 September, when the Germans attacking from the north had already reached the river at some points, did Headquarters—albeit reluctantly—authorize the request, which also had Budenny's support. Headquarters, however, demanded that the Kiev bridgehead be held.¹⁵² As the Germans had simul-

taneously achieved a penetration at the boundary between Fortieth and Twenty-first Armies and, from the bridgehead at Kremenchug, were mounting an attack towards the north, disaster was inevitable unless it proved possible to evacuate the troops of the South-west Front from the Kiev salient. At that point serious differences of opinion emerged between the top figures of the Red Army. Colonel-General Kirponos, who on 11 September 1941 demanded the immediate withdrawal of the threatened South-west Front to the Psel, was forbidden, by order of Marshal Shaposhnikov, chief of the Red Army General Staff, to pull out even a single division from the Kiev salient; he was to stand fast along the existing defensive line.¹⁵³ When Marshal Budennyi and the War Council of the South-western Direction once more repeated their request—which seemed to have the support also of Army General Zhukov, a member of Headquarters, and of leading general-staff officers, such as General Vasilevskiy—and when Budennyi pointed out that any delay in the withdrawal would result in the loss of the troops and of vast quantities of war material,¹⁵⁴ Stalin intervened in person. In a direct telephone conversation with the GOC South-west Front on the evening of 11 September he categorically prohibited any withdrawal and instead demanded, even at that time, that Kiev be held at all costs and that the enemy groupings in the Konotop-Bakhmach area be destroyed in co-operation with the Bryansk Front.¹⁵⁵ Stalin, accusing not only Kirponos but also Marshal of the Soviet Union Budennyi of 'forever looking for new lines of retreat' instead of finding opportunities for resistance,¹⁵⁶ now appointed Marshal of the Soviet Union Timoshenko to the command of the South-western Direction. The mood prevailing at Headquarters was clearly revealed in an order of 14 September 1941, in which Marshal Shaposhnikov, chief of the Red Army General Staff, described as panic-mongering the entirely accurate reports from the South-west Front about the certainty of disaster within a few days, thereby (as it were) reminding Colonel-General Kirponos and his chief of staff General Tupikov of the fate of the commander of the Western Front and his staff, and demanding strictest compliance with the directives of Comrade Stalin, in other words, holding out in their present positions.¹⁵⁷ As General Grigorenko put it, the directives of an 'incompetent Supreme Command'¹⁵⁸ prevented 'any sensible measures at the front from averting the approaching catastrophe'.

On 15 September 1941 Armoured Groups 1 and 2 linked up at Lokhvitsa. Lieutenant-General Kuznetsov's Twenty-first Army, Major-General Potapov's Fifth Army, General Vlasov's Thirty-seventh Army, Lieutenant-General Kostenko's Twenty-sixth Army, and units of General Podlas's Fortieth Army and General Feklenko's Thirty-eighth Army were thus encircled. With the

first signs of demoralization soon appearing among the trapped troops, in the absence of orders to withdraw from Headquarters, and amid dwindling prospects of an organized break-out, the new GOC South-western Direction, Timoshenko, though initially siding with Shaposhnikov, determined to act on his own responsibility. To destroy the two German armoured groups seemed impossible. But an attempt could be made, with concentrated forces, to achieve a breach in the encircling ring before this was properly consolidated, thus opening a way to the Psel for the trapped formations. Major-General Bagramyan, chief of the operations department of the South-west Front staff, was instructed to fly out to the staff of the South-west Front at once and to convey to Colonel-General Kirponos his verbal order for an immediate evacuation of the Kiev fortified district and for a speedy withdrawal of the front's main forces to the Psel. But when Bagramyan appeared at the front's staff north of Piryatin, the GOC refused to comply with the order—the only possible order left in the existing situation—on the grounds that it ran counter to Headquarters directives and to Marshal Timoshenko's original orders.¹⁵⁹ Kirponos asked to see a 'document'; after prolonged hesitation he eventually, on the evening of 17 September, agreed to enquire from Headquarters direct.¹⁶⁰ Shaposhnikov's barely concealed threats of 14 September had evidently been effective. A reply was received from Moscow in the early morning of 18 September 1941, but further valuable time had been lost. Even then, authorization was given only for the evacuation by Thirty-seventh Army of the Kirov fortified district; there was still no question of a general surrender of the Dnieper-Desna salient.¹⁶¹ But this time Kirponos did not hesitate. Before communications with his army staffs were cut off he had issued orders for a break-out by the South-west Front in an easterly direction. Under this plan, Twenty-first Army was to strike at Romny, Fifth Army was to cover the withdrawal of Twenty-first Army while simultaneously attacking towards Lohvitsa with some of its forces, Twenty-sixth Army was to withdraw in the direction of Lubny, and Thirty-seventh Army, as the South-west Front's rearguard, was to break through in the direction of Piryatin. Fortieth and Thirty-eighth Armies, some of whose units were outside the pocket, were instructed to support the break-out attempt by attacks on Romny and Lubny. But an orderly withdrawal was no longer possible. Pressed hard by the Germans, weakened by their heavy losses, and often without their commanders, the Soviet troops became increasingly disorganized and were largely involved in individual engagements. An exception amidst the general chaos was General Vlasov's Thirty-seventh Army, which had successfully defended Kiev until 19 September 1941 and which had initially succeeded in evading the German trap. The defence of Kiev is regarded in Soviet military historiography as a 'glorious page in the history of the Soviet

¹⁵⁹ 'Pravda o gibeli', 62.

¹⁶⁰ Bagramjan, *Tak načinalas' vojna*, 338.

¹⁶¹ *Istorija Velikoj Otečestvennoj vojny*, II, 109.

people',¹⁶² although the fact that the successful defender of the Ukrainian capital was General Vlasov, future commander of the Russian Liberation Army, is deliberately concealed.¹⁶³ Like the rest of the formations of the South-west Front, the troops of Thirty-seventh Army were fragmented in the course of the breakthrough battles and some of them destroyed by 26 September 1941. The staff of the South-west Front with its GOC, its chief of staff Major-General Tupikov, and its War Council member Burmistenko, under cover of 289th Rifle Division, had reached Dryukovshchina south-west of Lohvitsa on the morning of 20 September. There the column, which had been joined also by the staff of Fifth Army, was surrounded by German units and destroyed after two days of fighting. Contrary to reports alleging suicide, Kirponos, Tupikov, and Burmistenko were apparently killed in action,¹⁶⁴ while Bagramyan succeeded in fighting his way through to the Soviet lines. A number of generals, including the GOC Fifth Army, the artillery commander under the GOC Fifth Army, Major-General Sotenskiy, and others, were taken prisoner.¹⁶⁵

According to the traditional line of Soviet military history, only 'individual detachments' succeeded in breaking free of the encirclement; 'some of the soldiers joined the partisans, many died a hero's death'. Of those who surrendered to the Germans no mention is made, even by the accurately informed former chief of staff of the South-western Direction, General Pokrovskiy.¹⁶⁶ But it was these who represented the bulk of the losses suffered at Kiev. According to German reports, 492,885 prisoners were taken by Army Group South and 172,327 (since Gomel) by Army Group Centre. At least the *History of the Great Fatherland War* reported that a third of the trapped officers and men had become prisoners of war¹⁶⁷—a figure that is certainly too low, considering that on 22 September 1941 the German Sixth Army alone reported that the number of its prisoners had risen from 15,500 to 141,500 in a single day. At any rate, even Soviet publications confirm that the personnel of the South-west Front had for the most part been either killed in action or taken prisoner, and that this front, in consequence, had ceased to exist. The encirclement and annihilation of the troops of the South-west Front in the Kiev salient were a direct result of the rigid orders to hold out issued by the Supreme Command Headquarters, which were based on its mistaken estimate of the situation. Headquarters, having right up to the end placed unfounded hopes in a successful counter-attack by General Yeremenko's Bryansk Front,

was still indulging in the illusion that, in co-operation with the South-west Front, it would be possible to crush the German spearheads, at a time when the actual situation had long called for an evacuation of Kiev. By rejecting, with the aid of scarcely veiled threats, all requests for authorization of a withdrawal, and by refusing to acknowledge the danger of a double envelopment, Stalin and his chief of the general staff Marshal Shaposhnikov in fact created the conditions for the success of the German operations plan. Soviet publications frequently argue that the prolonged resistance in the Kiev salient had been of advantage to the overall course of the war in that it foiled German intentions to complete the campaign speedily and delayed the attack on Moscow.¹⁶⁸ These arguments, however, would be valid only if it had also been possible to save the troops of the South-west Front from annihilation. Instead, as Grigorenko formulates it, Headquarters had itself been responsible for this 'greatest catastrophe of the Great Fatherland War'. A huge gap had been torn in the southern sector of the front, one which was only laboriously closed by drawing on virtually all the strategic reserves of Headquarters. The units now thrown into the breach had been raised only with great difficulty and were sorely needed in other sectors of the Soviet defensive front. There was now a danger of a German breakthrough to Kharkov and into the Donets basin.

7. THE PARTISAN WAR

An important factor in the German-Soviet conflict was the partisan war, which flared up in the rear of the German army and gradually assumed considerable scale. A vast number of publications have appeared on the armed struggle of paramilitarily organized civilians in the German-occupied territories of the Soviet Union. Most of these present that form of active resistance as the manifestation of the 'profound love of the Soviet people for their socialist homeland', 'for the Communist Party, for the immortal cause of Lenin'. In this context it is argued by Soviet historiography that, apart from a 'small handful of renegades',¹⁶⁹ all strata of the population had, from the first day, confronted the German occupying troops with 'burning hatred' and had employed all their strength and means against the foreign conquerors. If one compares these versions of a patriotic historiography with the numerous documents testifying to the fact that the population in the occupied territories, if indeed they did not welcome the German troops as liberators, regarded them with curiosity and reserve, and certainly without hatred or hostility, one realizes how difficult it is to describe the beginnings of a struggle which, as a rule, consisted of uncoordinated individual actions.

In portraying partisan warfare in the east European theatre of war one has to remember that the population's participation in a struggle against foreign

¹⁶⁸ Moskalenko, *Na Jugo-Zapadnom napravlenii*, 93; Bagramjan, *Tak načinalas' vojna*, 368; Vasilevskij, *Delo vsej žizni*, 148.

¹⁶⁹ *Istorija Velikoj Otečestvennoj vojny*, II, 120.

invaders has numerous precedents in Russian history. Not only had Napoleon's campaign of 1812 demonstrated the power of irregular detachments, but there are impressive earlier instances from the wars against Swedes, Poles, Tartars, and steppe tribes. From the point of view of Marxist military theoreticians it is a simple matter of course that national independence and liberation wars were not just the business of armies against each other, but the business of the entire nation. Thus Friedrich Engels in his writings outlined the character of a total war which no longer distinguishes between front and hinterland, between combatants and non-combatants, a war in which 'all means are just, and the most effective are the best'.¹⁷⁰ Total insurrection and civil war, extending to all aspects of life, also represented the natural form of struggle of the working masses against their capitalist exploiters; this was doubly true of a conflict in which the world's 'first socialist state', the Soviet Union, had to stand up against its internal and foreign enemies. After the Party of Bolsheviks had come to power through revolution and civil war, Lenin and Trotsky had turned their attention to moulding the Red Army and the partisans, under strict Party control,¹⁷¹ into a united, though separately operating, instrument of power in the hands of the workers' and peasants' government. As a matter of fact, the partisans developed considerable activity after 1918. In spite of this, and of the fundamental Bolshevik conviction that in a future war too not only the Red Army but the entire nation would be embattled, and that it would have to be prepared for that in peacetime,¹⁷² partisan warfare gradually lost in importance in the theoretical reflections of the next few years. About the middle of the 1930s all preparations for a partisan war were definitively suspended. The stockpiles of weapons, ammunition, technical equipment, and foodstuffs accumulated for such a contingency were dispersed.¹⁷³ One reason for this step was the spirit of independence inherent in that form of warfare—a spirit which even Lenin had opposed as being destructive and which Stalin tried to suppress with all means available, including the liquidation of meritorious partisan leaders in the great purge of 1937. Another reason was Soviet military doctrine, based as it was on the idea of offensive defence. According to that doctrine, in the event of a war of 'imperialist aggressors' against the Soviet Union the war would immediately be carried to the enemy's territory; there was no room for the idea that the enemy armies might succeed in penetrating into the territory of the Soviet state.

When precisely that event occurred in 1941, when German troops were rapidly gaining ground towards the east, hasty attempts were made to remedy all omissions. In a directive issued on 29 June 1941 by the Council of People's Commissars and the Central Committee of the CPSU(B), Party and state agencies in the regions close to the fronts were enjoined, in a general way, to

¹⁷⁰ Hoffmann, 'Volkskrieg in Frankreich', 221–2.

¹⁷³ Ponomarenko, 'Bor'ba sovetskogo naroda', 34.

moblize all forces of the Soviet population for a struggle against the Germans and to organize an all-embracing people's war in the enemy's rear.¹⁷⁴ Stalin in his broadcast speech of 3 July 1941 addressed a similar appeal to the nations of the Soviet Union. On 18 July 1941 the Central Committee of the Party passed a special resolution 'on the organization of the struggle in the rear of the German troops'. On the basis of these official Party declarations, the Party Central Committees of the Union Republics and their subordinate Party agencies at regional and district level issued a multitude of separate instructions taking account of local conditions. Thus an underground Party apparatus was to be set up speedily in the enemy-occupied areas, and the most experienced and reliable Party activists were to assume command of the partisan detachments and groups to be set up. Even in as yet unoccupied but threatened areas a start was made on the establishment of Party and Komsomol cells; after the arrival of the Germans they were to go underground. At the same time so-called 'destruction battalions' were beginning to be set up;¹⁷⁵ recruited mainly from the local population, they had the task of making the rear of the Red Army secure, fighting against the activity of enemy diversionists (evidently expected on a considerable scale), and destroying economic assets at the approach of the enemy. If necessary, however, they could also take up the struggle in the enemy's rear.

Largely because of past omissions, the development of the partisan movement ran into great difficulties from the start.¹⁷⁶ Neither the material nor the personnel, nor yet the leadership prerequisites, were present. Partisan detachments and groups could not be equipped on an adequate scale¹⁷⁷ because of a failure in the past to set up appropriate stores of weapons, explosives, mines, etc., and because there existed virtually no radio transmitters. Because of a shortage of trained leaders and specialists, and also of manpower, these deficiencies could not be eliminated. A particular disadvantage was the fact that no theoretical instructions for partisan activity in the conditions of a modern war had been worked out in peacetime. The authorities charged with the conduct of the partisan war had no precise ideas either on the tactics to be applied or on the most suitable forms of organization.¹⁷⁸ Initially this resulted in efforts to create the largest possible units and to control them on a strictly centralized pattern. But this deprived the partisans of their initiative. Not only did large units prove too cumbersome to control, but their appearance also made it easier for the enemy to take timely countermeasures. Questions concerning organization, material equipment, and co-operation with Red Army units, as well as the unified application of lessons learnt in combat, would have been best solved by the immediate establishment of an operational central control of the partisan movement. The fact that these matters were left to the Party organizations of the individual Union republics and to their

¹⁷⁸ Absaljamov and Andrianov, 'Organizacija partizanskich sil', 24.

corresponding administrative bodies resulted in a fragmentation of forces and delayed the unfolding of partisan warfare.¹⁷⁹ Eventually, after a few false starts, a Central Staff of the Partisan Movement in the Supreme Command Headquarters was established on 30 May 1942¹⁸⁰ under the chairmanship of Ponomarenko, Secretary of the Central Committee of the CP(B) of Belorussia, and including 'one well-known representative each of the People's Commissariat of the Interior (NKVD) and the Red Army General Staff. Under this Central Staff there soon sprang up Staffs of the Partisan Movement at republican, regional, and district level; these were represented on the War Councils of the individual fronts by tactical groups.

While Soviet military historiography on the whole tried to convey the impression that the 'heroic struggle of the Soviet people in the rear of the Fascist armies' had begun spontaneously and on a large scale at the very beginning of the war, some authors were forced to admit that during the first few months of the war the partisans scored only insignificant successes.¹⁸¹ Thus Colonel Neryanin, chief of the operations department of the Soviet Twentieth Army and future chief of the operations department in the command of the Russian Liberation Army, had been roving about the rear of the German troops for three weeks without observing the slightest evidence of partisan activity. He was later to state to the Germans that the Soviet leadership had been bitterly disappointed at the slight extent of the partisan struggle.¹⁸² However, the ineffectiveness of the partisan war¹⁸³ prior to the spring of 1942 was not, as is claimed, due only to poor command and organizational shortcomings. The main reason was that it lacked the prerequisite¹⁸⁴ which Friedrich Engels had described as indispensable for successful guerrilla warfare—reliable support by the local population. This lack is readily understood if one bears in mind the widespread public dissatisfaction with the Soviet regime, as well as the fact that the true aims of the Germans, posturing as liberators, were at first not realized. Wherever partisan groups appeared during the early period—in so far as these were not in fact scattered elements of the Red Army,¹⁸⁵ who were often afraid to return through the lines because of reprisals awaiting them—these usually met with uniform rejection and resistance on the part of the local population, whose main interest was in a return to normal conditions. Only gradually, and scarcely before the spring of 1942, did a favourable climate develop for a partisan war.

This was due largely to disappointment at the failure of the Germans to produce a constructive occupation programme, the preservation of the hated collective-farm system, the hardships of the population in the occupied terri-

tories, and some discriminatory measures by the occupying authorities. The inhumane conditions to which Soviet prisoners of war were subjected and the atrocities committed against the Jewish part of the population also left a deeper impression than the Germans suspected. The indiscriminate procedure of the security forces—who often did fail to differentiate between the peaceful population and partisans—reprisal executions, the shooting of hostages, and the burning of homes all helped to drive the population into the arms of the partisans. Initially these saw their main task as provoking further reprisals by repeated but still aimless attacks, in order to make the Germans hated among the local people. Purposeful propaganda,¹⁸⁶ hand in hand with ruthless terror against local officials and police,¹⁸⁷ was to remind the population of the ubiquity of Soviet power. Torn between the occupying power, which threatened Draconian punishment even for failure to report hostile activity, and the partisans, who threatened death for even the slightest support of the Germans, such as the enforced surrender of agricultural produce,¹⁸⁸ the population often saw no alternative to joining whichever side was stronger—which very soon, in some remote regions at least, meant the partisans. Not until 1942, when they had succeeded locally in winning support among the population, did the partisans begin to conduct systematic actions against German military targets.

The partisan war,¹⁸⁹ characterized as a rule by ambushes and raids, rarely by open attacks mounted by armed civilians, is presented in Soviet historiography as the 'justified manifestation of a lawful struggle by the people's masses against the Hitlerites', who had committed 'unheard-of crimes' and 'a serious breach of international law by their war of aggression'.¹⁹⁰ This attempt to justify partisan warfare by reference to the aggression and culpable behaviour of the adversary, however, ignores the fact that the Hague Convention invariably obliges both belligerents, regardless of the question of guilt, to observe the laws and usages of land warfare. In consequence, at least one of the judges of the Nuremberg Military Tribunal could not avoid describing the partisan war as a phenomenon incompatible with the spirit or the letter of international law. In point of fact, the Hague Land Warfare convention of 18 October 1907 requires unequivocally that for irregular fighting forces—'milices' or 'corps de volontaires'—not to come under the heading of irregulars, they have to meet the following conditions:¹⁹¹

1. They must be commanded by someone who is responsible for his subordinates.

¹⁹⁰ Byčkov, *Partizanskoe dvizhenie*, 12–13.

¹⁹¹ Laun, *Die Haager Landkriegsordnung*, 75.

2. They must wear an identifying badge recognizable from afar.
3. They must carry their weapons openly.
4. In their operations they must observe the laws and usages of war.

The partisans met only the first of these conditions. The manner in which they were accustomed to operating may be gauged from a directive of the Central Committee of the CP(B) of Belorussia, dated 1 July 1941.¹⁹² This directive—which is quoted here as only one of countless instances—instructs the partisans

to destroy all communications in the enemy's rear, blow up or damage bridges and roads, set fire to motor-fuel and food stores, motor-vehicles, and aircraft, arrange for railway disasters, annihilate enemies, giving them no respite day or night. Destroy them wherever they are caught, kill them with anything that comes to hand: axe, scythe, crowbar, pitchfork, knife. Link up with other partisan detachments, make surprise raids on enemy units and annihilate them . . . In annihilating the enemy do not shrink from using any means: strangle, chop up, burn, poison the Fascist scum. Let the enemy feel the ground burning under his feet.

On 1 October 1941 Kozlov, a captured partisan, reported a suggestion of Kazalapov, a member of the Central Committee of the Party from Kholm, that German soldiers or wounded be 'tortured by mutilation before execution'.¹⁹³ There is also ample evidence that partisans proceeded mercilessly not only against German servicemen but equally against disliked or even totally uninvolved local inhabitants. Thus members of the 'native' administration (mainly mayors and policemen) were invariably 'mercilessly' beaten to death, usually also the members of their families, including women and children. Another partisan principle was that all witnesses of a raid were to be killed if necessary—men, women, and children—to prevent a possible betrayal to the Germans.¹⁹⁴

Contrary to Soviet assertions,¹⁹⁵ partisan activity against the German occupying power did not develop on an appreciable scale until 1942, except in the Crimea, where more favourable conditions existed. The ever increasing scale of the partisan war also proves that the German-Soviet conflict was an ideological war of annihilation, in which little room was left for principles enshrined in international agreements. It was the Soviet side that unleashed the partisan war, which ran counter to international law. But the Germans similarly, in opposing the irregulars, did not shrink from the utmost ruthlessness or from employing any means that seemed to them suitable. It was the civilian population that suffered most from the barbaric methods of both belligerents.

8. THE REPULSE OF THE GERMAN AUTUMN OFFENSIVE AT LENINGRAD AND ROSTOV

Once the German command had decided not to capture Leningrad but to besiege it and starve it out, if only to avoid the need 'to feed that city of millions', the Soviet troops gained a breathing-space during which they were able to organize the defence of the city more efficiently. In accordance with the demand of the State Defence Committee that Lenin's city be transformed into an unconquerable fortress, the Leningrad Front, with support from Zhdanov and other Party and government officials, embarked on the development of a deeply echeloned system of defences. Included in the defence measures were the air force (Air Defence Corps and 7th Fighter Corps),¹⁹⁶ as well as the ships, batteries, and aircraft of the Red Banner Baltic Fleet.¹⁹⁷ For an offensive operation against the German siege artillery a special artillery group was formed under Major-General Sviridov and Rear-Admiral Gren.¹⁹⁸ A considerable burden of the defence effort, especially in the construction of positions and barricades, was borne by the civilian population of Leningrad, although they were exposed to increasing hardship owing to the shortage of foodstuffs and fuel. The food shortage became so acute in the course of the autumn that from 20 November 1941 the non-working population, including children, received only 125 g. of bread daily.¹⁹⁹ Soon, therefore, attempts were made to use the Ladoga flotilla to carry vital cargo, such as foodstuffs, weapons, and ammunitions, on at least a modest scale to the city, which by then could be reached only by way of Lake Ladoga, and simultaneously to evacuate such useles consumers as the wounded, women, and children.²⁰⁰ When Lake Ladoga froze over in November, on 19 November the Leningrad Front resolved to lay a supply-route, the so-called 'lifeline',²⁰¹ over the ice. During the winter of 1941-2 no less than 361,106 t. of vital goods reached the city in this way, and 514,000 persons were evacuated from the city to the east.

At the same time, measures were put in hand to burst through the blockade ring and restore free access to Leningrad. On 14 October 1941 Colonel-General Voronov, the Headquarters representative with the Leningrad Front, arrived with a directive from the Supreme Command Headquarters instructing the Neva Group, in conjunction with General Fedyuninskiy's Fifty-fourth Army operating east of the encirclement ring, to crush the enemy forces between Shlisselburg and Sinyavino, in the so-called 'bottleneck', and to open up a corridor to Leningrad. This action,²⁰² however, which upon Headquarters' urgings started on 20 October, did not succeed because it was anticipated by a rapidly advancing German attack towards Tikhvin and Volkhov, and because of shortcomings in the way it was directed. Although the Soviet Fifty-fourth Army managed to hold Volkhov, and although General Klykov's Fifty-

second Army contained the German thrust towards Malaya Vishera, the Soviet troops found themselves in difficulties and Tikhvin fell to the Germans on 8 November 1941. This meant the severance of the last railway line by which goods could be brought to the eastern shore of Lake Ladoga for shipping to Leningrad. Moreover, it gave rise to the real danger of a breakthrough into the rear of Army General Meretskov's Seventh Independent Army, which was facing the Finns on the Svir. Because of the total failure of General Yakovlev's Fourth Army, which retreated in disorganized units in various directions,²⁰³ Meretskov, by order of Headquarters, was temporarily put in command of Fourth Army as well. Meretskov, a former chief of the Red Army General Staff, now in command of all formations between the Svir front and the German penetration area near Tikhvin, began to assemble all available forces and go over to counter-attacks in the main directions.²⁰⁴ In consequence, the projecting German spearhead to the east was increasingly threatened from its flanks and, from 19 November 1941, also attacked at its point by the Fourth Army. Under Meretskov's vigorous leadership the initiative on this sector gradually passed to the Soviet troops. The German plan to cut Leningrad off completely from the rest of the world and to link up with the Finnish Karelian Army proved impracticable.

On the southern wing of the front too the Soviet forces eventually succeeded in halting the German offensive, which had resumed towards the end of September 1941. Prior to that success, however, they had been forced into extensive withdrawals. The German attack out of the bridgeheads at Dnepropetrovsk and Kakhovka had instantly got the Soviet Twelfth Army into difficulties and resulted in the encirclement and annihilation of elements of Lieutenant-General Smirnov's Eighteenth and Major-General Kharitonov's Ninth Armies. By 11 October 1941 Army Group South had taken 106,000 Soviet prisoners in the 'battle north of the Sea of Azov'. Countless others, including General Smirnov, GOC Eighteenth Army, had been killed in action. In a memorial article in 1968 Colonel-General Anisimov reported that the Germans, who still indulged in that kind of gesture during the initial months of the war, had buried him in a dignified manner in a separate grave. Attempts by Lieutenant-General Cherevichenko, the GOC Southern Front, to halt the enemy along improvised lines were unsuccessful.²⁰⁵ On 17 October Taganrog was abandoned. By the end of October the forces of the Southern Front had been thrown back as far as the approaches to Rostov. On 25 October the troops of the South-west Front under the command of Marshal Timoshenko (Major-General Tsyganov's Thirty-eighth and Major-General Malinovskiy's Sixth Armies) abandoned Kharkov after extensively mining the city,²⁰⁶ and manned a defensive line north of Izyum. No less critical was the situation in the Crimea, where on 18 October the German Eleventh Army opened its

²⁰⁶ *V srazhenijach za Pobedu*, 77-8.

attack for the seizure of the peninsula. Even before the start of this offensive, the Russians had begun to evacuate the troops of the Odessa defence district,²⁰⁷ who, under the command of Rear-Admiral Zhukov and the GOC Independent Coastal Army, Lieutenant-General Sofronov, had been tying down considerable Romanian and German forces over a period of two weeks.²⁰⁸ On 23 October the forces of the Odessa defence district, now transferred to the Crimea, and the troops of Lieutenant-General Batov's Independent Fifty-first Army were placed under the command of Vice-Admiral Levchenko, the commander of the Crimean troops, who was in charge of co-ordinating the defence of the land front with the actions of the Black Sea Fleet.²⁰⁹ Nevertheless, the Germans after a few days broke through the defensive positions near Ishun on the Perekop isthmus. The Independent Fifty-first Army was forced to retreat to Kerch, and on 16 November the Taman peninsula was evacuated. The Coastal Army withdrew to Sevastopol. At that point all land and air forces, as well as the ships and aircraft of the Black Sea Fleet, were placed under the command of Major-General Petrov, the commander of the Sevastopol defence zone; after 10 November they came under Vice-Admiral Oktyabrskiy, the capable commander of the Black Sea Fleet.²¹⁰ By dint of vigorous efforts the Sevastopol area, subdivided into several defence sectors and tightly encircled by the Germans, was, for the time being, held against all attacks.²¹¹

While Sevastopol was preparing for defence, there arose in the sector of the Southern Front, at and north of Rostov, first a crisis and then a turn for the better. On 5 November 1941 the German First Armoured Army had mounted an attack for the capture of Shakhty; this, however, did not succeed, even though Kharitonov's Ninth Army was pushed back towards the east. After the failure of this envelopment move the Germans on 17 November launched a direct thrust towards Rostov from a north-westerly direction; Rostov was regarded as the gate to the Caucasus and an objective of great strategic importance. After no more than a delaying defence by General Remezov's Independent Fifty-sixth Army, the city fell to the Germans a few days later.²¹² By that time, however, preparations had been completed on the Soviet side for a large-scale counter-attack against the flank and the rear of the German forces spearheaded towards Rostov. The idea, proposed by Major-General Bagramyan, won the support of Lieutenant-General Bodin, chief of staff of the South-western Direction, and, after some hesitation, also that of the GOC, Marshal Timoshenko.²¹³ Headquarters had likewise given its approval, but declared itself unable to provide reinforcements. In consequence, the command of the South-western Direction had to establish an assault group from the forces of the South-west Front and the Southern Front under its com-

mand. In accordance with a demand by Marshal Shaposhnikov, chief of the Red Army General Staff, the Southern Front had been reinforced at the expense of the South-west Front, and a new army, Thirty-seventh Army under Major-General Lopatin, had been established as the main attacking force. Simultaneously, some air units were made available from the Headquarters reserve. On 17 November this Thirty-seventh Army, composed of four rifle divisions, four armoured brigades, and several artillery, anti-tank, and mortar regiments, and supported by elements of General Kolpakchi's Eighteenth Army and above all by Ninth Army, opened its offensive in the general direction of Bolshekrepsinskaya-Taganrog. Although during the first few days the attack only slowly gained ground,²¹⁴ the German First Armoured Army, which had meanwhile broken through to Rostov, was compelled after 23 November to withdraw some forces in order to support its northern flank. The Independent Fifty-sixth Army, which had likewise gone over to the attack, striking from the east, thus saw its chance, in conjunction with the left wing of Ninth Army, to recapture Rostov on 29 November. The fact that the First Armoured Army was compelled, under the combined pressure of the Soviet Thirty-seventh, Ninth, and Fifty-sixth Armies, to withdraw to the Mius at the beginning of December, not only meant a stabilization of the German-Soviet front in this sector for some time to come, but was of major propaganda importance as the 'first great victory of the Red Army'. The Soviet troops had certainly scored a victory, but, contrary to Bagramyan's claims, they had not succeeded in achieving their real objective—the destruction of Kleist's armoured army.

9. THE REPULSE OF THE GERMAN ATTACK ON MOSCOW

Since the battle of Smolensk Stalin, Supreme Command Headquarters, and the Red Army General Staff had taken a variety of measures to safeguard the capital against a German assault in the event of a resumption of the German offensive.²¹⁵ In order to repel a possible attack from the west, three combined fronts (until 15 September 1941 under the command of Marshal Timoshenko's South-western Direction) had been assembled to face the German Army Group Centre.²¹⁶ These were the Western Front (since 12 September under the command of Colonel-General Konev) in the sector between Ostashkov and Yelnya; east of it, as second echelon in the Vyazma defensive line from Ostashkov to Selizharovo, the Reserve Front (commanded by Marshal Budennyi) with Major-General Rakutin's Twenty-fourth Army and Major-General Sobennikov's Forty-third Army west of Spas-Demensk and Kirov, but also in the foremost line; and finally the Bryansk Front (commanded by Colonel-General Yeremenko) with General Yermakov's tactical

²¹⁴ Ibid., No. 12, 66 ff. ²¹⁵ Vasilevskij, *Delo vsej žizni*, 150-1.

²¹⁶ Žukov, 'V bitve za stolicu', *VIZ* (1966), No. 8, 54.

group on the left wing, holding the sector from east of Kirov to Glukhov. There are divergent data in the Soviet literature on the actual strength of those three fronts, which, together with Yermakov's tactical group, embraced sixteen armies.²¹⁷ The figures range from a maximum of 1,250,000 men, 10,598 artillery pieces and mortars, 990 tanks, and 950 aircraft to a minimum of 800,000 men, 6,800 artillery pieces and mortars, 780 tanks, and 360-527 aircraft. In order to emphasize their own inferiority and to offer some excuse for the subsequent defeats of the Soviet troops,²¹⁸ the figures of Soviet effective strength are clearly being kept low, and the level of accuracy of the Soviet figures must inevitably remain in doubt. There is, however, no denying that in the double battle of Vyazma and Bryansk the Germans took 673,000 Red Army prisoners by 20 October, and listed 1,242 tanks and 5,412 artillery pieces as destroyed or captured; this suggests that Soviet strength must have been substantially greater than officially admitted.

Despite the general preparations for defence, the deployment of major forces, and the construction of a deeply echeloned defensive system outside Moscow, the Soviet leadership was nevertheless taken by surprise by the opening of the German offensive against the capital. The Soviet command had failed to identify the preparations in time and to foil German intentions. Not until 26 September 1941 did Stalin and the chief of the Red Army General Staff receive a report from the GOC Western Front, which, on the strength of reconnaissance data, predicted an attack against Moscow along the Vyazma-Moscow highway.²¹⁹ Thus, even Konev at that time expected only one operation on the relatively limited sector defended by Nineteenth, Sixteenth, and Twentieth Armies. And Headquarters still did nothing more than issue a belated directive the following day calling in general terms for 'stubborn resistance' and intensified construction of the system of positions. It failed to make any kind of preparations for co-ordinated operations by the three fronts actually involved, and it failed to clarify relations between the Western Front and the Reserve Front, two of whose armies were standing in the foremost line and were thus responsible for the safety of the left wing of the Western Front. It was soon to become obvious how important it would have been, even before the start of the German offensive, to subordinate both fronts to a single operations staff. As the Russians had failed to identify the points of main effort of the German attack,²²⁰ no measures had been taken to reinforce the threatened sectors or to concentrate reserves at those points—an omission which Marshal Zhukov in retrospect blamed not on Headquarters but on the commands of the Western and Reserve Fronts.²²¹ There is no doubt that the errors and omissions of the Soviet command were the main reason why Army Group

Centre was able to penetrate the defences at the crucial points so rapidly. This was facilitated also by the fact that, shortly before the opening of the German offensive, Soviet forces, misreading the situation and acting upon express orders from Stalin and Headquarters, had begun to carry out limited offensive operations—with the result that these officers and men were lost to a concentrated defence. The Soviet formations striking into the German attack, such as Major-General Sobennikov's Forty-third Army of the Reserve Front northwest of Roslavl and General Yermakov's tactical group at Glukhov, suffered considerable losses. On the very first day of the attack Armoured Group 2 tore apart the Bryansk Front at the boundary between Major-General Gorodnyanskiy's Thirteenth Army and Yermakov's tactical group, pushed beyond Sevsk in the direction of Orel and Tula, and at the same time wheeled some of its units north towards Karachev and Bryansk, thereby threatening the rear of Thirteenth Army as well as Major-General Kreyzer's Third Army. A counter-attack mounted against the German spearhead by Thirteenth Army from the north and by the Yermakov tactical group from the south was unsuccessful.²²² By 3 October 1941 Orel was lost because the garrison commander, Lieutenant-General Tyurin, had been incapable of organizing the city's defence.

Once Armoured Group 4 had driven a wedge between the Forty-third Army of the Reserve Front and Major-General Petrov's Fiftieth Army, and once Bryansk had been taken by the new Second Armoured Army on 6 October 1941, the bulk of the Bryansk Front was split up and cut off from its rear communications, and Major-General Kreyzer's Third Army, Major-General Gorodnyanskiy's Thirteenth Army, and elements of Major-General Petrov's Fiftieth Army were in the pocket. Colonel-General Yeremenko, who realized the disastrous situation of his troops and was scarcely by this stage in a position of command, had in vain asked Headquarters as far back as 4 October for permission to withdraw the entire front towards the east, in order at least to save its combat strength for the defence of Moscow.²²³ Not until 7 October, when the encirclement was complete and nothing but a break-out was possible, did Marshal Shaposhnikov, on behalf of Stalin, concur. He explained the fateful delay by communications trouble. On 8 October the three encircled armies began their attempt to break out; however, in the conditions prevailing until 23 October that attempt was made only in a disjointed manner. Only at the price of exceedingly high losses in personnel and material were the remnants of Fiftieth Army able to man a new defensive line on the Oka near Mtsensk, the remnants of Third Army a line between Zmievka and Ponyri, and those of Thirteenth Army a line between Fatezh and Makarovka.

As the Soviet command had failed to recognize the preparations for a general attack on Moscow and had, since 30 September 1941, been turning its attention to the speedily developing attack towards Orel and Tula, it did not

²²² Eremenko, *Na zapadnom napravlenii*, 102.

²²³ Id., 'Na jugo-zapadnykh podstupakh', 79.

realize that the principal danger threatening it was in the sector of the Reserve and Western Fronts. In consequence, the attack of Armoured Groups 3 and 4, directed on 2 October against the centre of the Western Front at the boundary of Lieutenant-General Lukin's Nineteenth Army and Major-General Khomenko's Thirtieth Army, and simultaneously against the positions of Major-General Sobennikov's Forty-third Army of the Reserve Front, made rapid progress without any reaction whatever from Headquarters.²²⁴ The northern spearhead, after the capture of Kholm Zhirkovskiy, was by 3 October threatening Vyazma from the north, while further south the main thrust directed against the Soviet Forty-third Army by Armoured Group 4 and Fourth Army simultaneously reached Spas Demensk and, wheeling northwards, likewise aimed at Vyazma. What was beginning to take shape during the first few days of October was the danger of an encirclement of the entire Soviet grouping of Western Front and Reserve Front forces in the Vyazma area. The price was now being paid for the lack of co-ordination between the two Fronts, whose armies now both found themselves deeply outflanked without being able to relieve one another.²²⁵ When hastily mounted and uncoordinated counter-attacks, e.g. by the newly established tactical group of Lieutenant-General Boldin at Vyazma, failed to achieve results, on 4 October Colonel-General Konev, GOC Western Front, asked Headquarters and the general staff for permission to withdraw to defensive positions near Gzhatsk, hoping like Yeremenko that the forces of his Front could thus be preserved for further operations in the defence of Moscow. Once more a decision was delayed. On 5 October the Supreme Command Headquarters still refused to believe that Armoured Group 4 had that day reached Yukhnov. Colonel Sbytov, commanding the air forces of the Moscow military district, who had submitted his reconnaissance findings on those lines, was threatened by the NKVD with prosecution for 'spreading panic'.²²⁶ Not until the afternoon of 5 October, when the correctness of his statement happened to be confirmed, was the order given for the withdrawal of Thirtieth, Nineteenth, Sixteenth, and Twentieth Armies. Belatedly, Major-General Dalmatov's Thirty-first Army and Major-General Vishnevskiy's Thirty-second Army were now placed under the Western Front in order to achieve a unified command. However, there was no time to accomplish the withdrawals—which were often associated with complicated regrouping operations—if only because of a total disorganization of the senior commands. Major Shabalin, chief of the Special NKVD Detachment of the Fiftieth Army, confided some remarkable impressions to his diary.²²⁷ 'The army is not what we have come to believe in the homeland. Enormous shortcomings!', he recorded as early as 6 September. 'We are surrounded!', he wrote on 4 October. 'The entire Front—this means

²²⁴ Konev, 'Nachalo moskovskoj bitvy', 62.

three armies—was trapped in the encirclement. And what are our generals doing? They “consider” . . . In our unit everyone, as usual, has lost their heads and is incapable of action.’ ‘The heads of the front staff lost command throughout the time of the German attack and, it seems, lost their heads,’ Shabalin wrote on 6 October 1941. On the following day he noted: ‘Such a thing as the defeat of the Bryansk Front has not been witnessed by history . . . The Front command had lost control from the first days of the German attack. It is said the idiots have skedaddled to Moscow.’

When, on the evening of 6 October 1941, Armoured Groups 3 and 4 linked up east of Vyazma, substantial forces of the Western Front west of the city were indeed surrounded.²²⁸ They were Lieutenant-General Lukin’s Nineteenth Army, Lieutenant-General Rokossovskiy’s Sixteenth Army (which had been absorbed into Lieutenant-General Yershakov’s Twentieth Army), Lieutenant-General Boldin’s tactical group, as well as Major-General Vishnevskiy’s Thirty-second Army and Major-General Rakutin’s Twenty-fourth Army, which both belonged to the Reserve Front.²²⁹ The encirclement of major forces of the Bryansk Front, and of the Western and the Reserve Fronts in the Bryansk and Vyazma area during the first few days of October, created great confusion among the Soviet leadership. With the principal task now being the speediest possible establishment of new defences outside Moscow, and with the GOCs of the Front evidently no longer enjoying confidence, plenipotentiaries were dispatched from the Supreme Command Headquarters and the State Defence Committee—Molotov, Mikoyan, Malenkov, Voroshilov, Vasilevskiy, and, independently from that group, Army General Zhukov—with special instructions for the threatened sectors. These representatives of the top leadership discovered disastrous conditions on the Western and Reserve Fronts, whose commands had lost any overall view of the situation and frequently also contact with their subordinate armies.²³⁰ It was essential to put an end at last to the fatal division of command bodies in the sector west of Moscow. On 10 October, in response to the reports from the special representatives, the troops of the Western and Reserve Fronts were amalgamated, Colonel-General Konev and Marshal Budennyi were relieved of their posts, and Army General Zhukov was appointed the new GOC Western Front.²³¹ Konev, for the time being still the nominal second-in-command to Zhukov, henceforward commanded the forces on the right wing of the Western Front at Kalinin; after the Germans captured the town on 14 October, thereby threatening the rear of the North-west Front as well as that of the Moscow defences, Konev on 17 October became GOC of the newly created Kalinin Front. This consisted of Major-General Vostrukhov’s Twenty-second Army, Major-General Maslennikov’s Twenty-ninth Army,

Major-General Yushkevich's Thirty-first Army, and Major-General Khomenko's Thirtieth Army. Twenty-ninth, Thirty-first, and Thirtieth Armies moved into a defensive line in a semicircle behind Kalinin,²³² while Twenty-second Army succeeded, in violent fighting, in maintaining its positions in the Torzhok area. Just as on the right wing, at Kalinin and Torzhok, the defenders of Moscow succeeded also on the left wing, in the sector of the Bryansk Front, in containing the advance of Second Armoured Army and Second Army in the course of October, albeit after heavy setbacks. Already during the first ten days of October Major-General Lelyushenko's 1st Guards Rifle Corps (directly subordinated to Headquarters) had stubbornly defended the town of Mtsensk and thereby gained time to prepare for the defence of Tula.²³³ It was not until 29 October that Second Armoured Army, whose task it was to envelop Moscow in a wide sweep from the south, reached the approaches of Tula. However, Major-General Yermakov's Fiftieth Army, reinforced by People's Guard detachments, repulsed the German attack and at the beginning of November, along with elements of Major-General Kreyzer's Third Army, even mounted counter-attacks against the flank of the German spearhead. At the end of the first phase of the general attack on the Soviet capital the situation at Tula, which, like Kalinin, represented a cornerstone of the defences outside Moscow, appeared temporarily stabilized.

What measures were taken after Zhukov's appointment on 19 October 1941 to reorganize the forces of the Western Front and to halt the German offensive in front of Moscow? Once the first line of defence, the Vyazma line, was pierced, the Soviet command turned its attention to a hurried preparation of a second line of defence, the Mozhaysk line, running from Volokolamsk to Kaluga. Those troops of the former Western and Reserve Fronts who had escaped being trapped in the Vyazma pocket were now assembled in that new, artificially consolidated, line. Headquarters moreover transferred to this defensive line forces from the North-west, Bryansk, and South-west Fronts, and also assembled in it units of the Moscow military district, as well as reinforcements arriving, from mid-October onwards, from the Caucasus, central Asia, and the Far East. By exhausting all capacities it proved possible, within a short time, to concentrate 11 rifle divisions, 16 armoured brigades, and over 40 artillery regiments—approximately 90,000 men—within the Mozhaysk defence line. The GOC Western Front created points of main defensive effort at the approach roads to Moscow, and at these points concentrated all available artillery and anti-tank forces.²³⁴ The Volokolamsk sector was defended by the newly established Sixteenth Army under Lieutenant-General Rokossovskiy; Mozhaysk was covered by Fifth Army under Major-General Lelyushenko; the Maloyaroslavets sector was manned by Forty-third Army under Major-General Golubev; the Kaluga area was defended by Forty-ninth Army under

Lieutenant-General Zakharkin. A short time later Thirty-third Army under Lieutenant-General Yefremov was inserted at Naro-Fominsk. To support these formations in preventing a German breakthrough to Moscow at all costs, the following air units were available in addition to the air forces of the Western Front: 6th Fighter Corps of Air Defence under Major-General Klimov, the air forces of the Moscow military district, a few divisions of long-range bombers, and four newly established air regiments.²³⁵ Attempts were going ahead at the same time to improve the shaken morale of the troops and to fight signs of defeatism by every available means.²³⁶ Order No. 0345, dated 13 October 1941 and issued by Zhukov and War Council member Bulganin, appealed to all Soviet servicemen, from top commanders down to the last Red Army private, to make an extreme effort. Cowards and panic-mongers, i.e. soldiers abandoning their positions without authorization, were to be 'shot on the spot' as traitors to the fatherland.

After the war the Marshals of the Soviet Union Zhukov, Konev, and Vasilevskiy,²³⁷ looking back to that period, all wrote that only by the perseverance of the armies encircled at Vyazma had the necessary time been gained for the strengthening of the Mozhaysk defensive line. But this alleged advantage, which is so greatly stressed by Soviet historians, had to be paid for by enormous losses in men and material. When resistance came to an end on 20 October 1941, five armies and Boldin's tactical group had ceased to exist. In this context one cannot without some reservation speak of the 'heroism of the Soviet warriors gallantly fighting at Vyazma' or about their 'undying glory', considering that by 20 October no fewer than 673,000 of them allowed themselves to be taken prisoner by the Germans, contrary to the terms of Soviet military penal law and to the unequivocal orders of the Soviet command. Among the prisoners of war was Lieutenant-General Yershakov (GOC Twentieth Army), Major-General Vishnevskiy (GOC Thirty-second Army), and Lieutenant-General Lukin (GOC Nineteenth Army), who had been charged with the command of the trapped formations. Indeed, Lukin, who was severely wounded, conveyed to the Germans a very negative impression of the morale of the Soviet troops encircled at Vyazma.²³⁸ According to him, the infantry in the pocket 'did not show the necessary will to fight their way out. The men preferred to go into captivity.' That was why they had been 'driven forward' and in the course of vain breakthrough attempts 'time and again' sacrificed in their tens of thousands. Major Kononov, the commander of 436th Rifle Regiment and future Major-General in the Russian Liberation Army, who had come over to the Germans with his units, painted a similar picture during his interrogation: 'A panicky mood is prevalent in the army... The

troops attack only under direct compulsion from the political officials.²³⁹ Lukin, one-time holder of the responsible position of commandant of the city of Moscow, lived in the Soviet Union after the war 'as a loyal son of the Communist Party', a man who 'dedicated his entire conscious life to boundless service to the fatherland, to the cause of the Communist Party'.²⁴⁰ In actual fact, Lukin's experiences at Vyazma had caused a deep rift in his attitude to Stalin. On 12 December 1941 he had spontaneously submitted a proposal to the Germans—which was brought to Hitler's notice—for the establishment of a 'Russian counter-government'. 'Peasants had been promised land, workers had been promised a share in industry,' he stated in justification of his attitude; 'peasants and workers were deceived... With hardships and terror reigning, and above all a joylessness in life, you will understand that these people must gratefully welcome their liberation from the Bolshevik yoke.' Realization of such a plan, he believed, would cause a deep split among the people and prove that one might well fight against Stalin and the 'hated Bolshevik system' without ceasing to be a Russian patriot. 'There are Russians on the side of the so-called enemy—hence it is no high treason to go over to them, but merely a turning away from a system; this will open up new hopes!' Contrary to the official version, this most prominent of army commanders in German captivity therefore sympathized with the liberation movement of his comrade-in-arms at Moscow, Lieutenant-General Vlasov, GOC Twentieth Army. Other generals too would have been entirely prepared 'to take up arms against Bolshevism', but they demanded 'first an official declaration by the German Reich government... When none was received, these former Soviet generals declined.'²⁴¹ Those who held such views evidently included Generals Muzychenko and Ponedelin, GOCs Sixth and Twelfth Armies, taken prisoner at Uman.²⁴² Lack of confidence in the intentions and capabilities of the Germans, as well as consideration for his family, eventually induced General Lukin to remain aloof from any anti-Soviet activity that might compromise him. On the other hand, Major-General Malyskin, Nineteenth Army chief of staff, Colonel Bushmanov, Thirty-second Army chief of staff, and Brigade Commissar Zhilenkov, member of the War Council of Thirty-second Army, did join the Vlasov movement.²⁴³ Colonel Vanyushin,

²³⁹ Interrogation of officers (deserters) Ivan Nikitovich Kononov, Major, commander of 436th Rifle Regiment... , AOK 4, IC/AO No. 549/41 geh., 6 Sept. 1941, BA-MA RH 22/271. The fact that Stalin and the Soviet command were conducting all operations 'under the inhuman slogan' that 'human lives must not be spared' is confirmed also by Gen. Grigorenko, *Erinnerungen*, 279.

²⁴³ The names of Vlasov and Malyskin were omitted from the 'List of commanders of fronts, armies, and corps in the battle of Moscow'; those of Zhilenkov and Bushmanov, on the other hand, are given—presumably in ignorance of their later activities: 'Moskovskaja bitva v cifrach: Period kontrnastuplenija', 99–100.

the commander of the air forces of Twentieth Army, also later took up a leading post in the air force of the Russian Liberation Army.

As for the encirclement of the six Soviet armies at Vyazma—for which Supreme Command Headquarters and the general staff bore the main responsibility—this can scarcely have enhanced the defence of Moscow, considering that the Mozhaysk line had been broken at several points as early as 13 October, at a time when resistance inside the pocket was still continuing. On that day Forty-ninth Army abandoned Kaluga; the Germans pushed ahead towards the Protva, threatening Maloyaroslavets from the rear, and by 16 October had reached Naro-Fominsk. Forty-third Army was compelled to retreat behind the Nara. Fifth Army was likewise unable to withstand the pressure of the Germans. Having defended the historic battlefield of Borodino,²⁴⁴ it had to give up Mozhaysk on 18 October. Matters were somewhat more favourable at Volokolamsk, which was initially held by Rokossovskiy, who made use of a deeply echeloned defence system; however, on 27 October it also fell to the Germans.²⁴⁵ The German penetration of the Mozhaysk line and, on the Naro-Fominsk sector, also of the third line of the Moscow defence zone, which ran from Klin in a wide arc to Serpukhov, created an immediate threat to the Soviet capital even before the end of the third week of October. Now that it seemed impossible to stem the onslaught of the enemy, alarming signs of demoralization appeared in spite of all propaganda efforts of the Party and in spite of all threats. When on 16 October most of the Party and governmental machine was evacuated to Kuybyshev, panic broke out among the population of Moscow and there were instances of looting. On 19 October the State Defence Committee found itself obliged to declare a state of siege throughout the Moscow region and to decree that any disturbance of public order would be punished by military tribunals. NKVD troops were ordered to 'shoot *provocateurs*, spies, and other agents of the enemy . . . on the spot'.²⁴⁶ Efforts were made simultaneously to reinforce the sectors of the Moscow defence zone by hurriedly levied People's Guard divisions, in all some 40,000 men, to set up tank obstacles and field fortifications, and to bring up new reserves.²⁴⁷ By the end of October it had proved possible to integrate into the front west of Moscow at least 13 rifle divisions and 5 armoured brigades from the interior of the country. As a result, the situation in the lines east of Volokolamsk along the Nara and Oka as far as Aleksin was temporarily stabilized. By mid-November 1941 Headquarters had provided the Western Front with a number of further rifle and cavalry divisions, as well as armoured brigades, totalling some 100,000 men, 300 tanks, 2,000 artillery pieces, and additional anti-tank guns,²⁴⁸ so that on 15 November

²⁴⁸ Zukov, 'Bitva pod Moskvoy', 1, 67.

1941 the Germans were eventually facing 84 divisions and 20 brigades, albeit weakened in their combat strength.²⁴⁹ From 1 October to 15 November the number of tanks of the Western Front had increased from 450 to 700. In addition, 1,138 aircraft, most of them of new types,²⁵⁰ were stationed at airfields around Moscow, ready to repulse the German attack. On 10 November the Fiftieth Army of the now dissolved Bryansk Front was placed under the command of the Western Front, while Third and Thirteenth Armies were assigned to the South-west Front.

The Soviet leadership expected the German offensive in the second half of November. Having until then focused its attention on reinforcing the two wings of the Western Front, it now tried to harass the Germans by swift counter-strikes. Against the opposition of Zhukov²⁵¹ and the army commanders, who were anxious not to fritter away their forces and to keep their scant reserves in readiness, on 13 November 1941 Stalin and the chief of the general staff insisted on the immediate execution of counter-attacks along the sector of Sixteenth and Forty-ninth Armies. The attack launched by Rokossovskiy against his own conviction and virtually without preparation, needless to say, did not improve the position of the Soviet forces but made it worse.²⁵² Sixteenth Army suffered considerable losses, and Major-General Dovator's 3rd Cavalry Corps barely escaped encirclement. An attack launched by Lieutenant-General Zakharkin with elements of Forty-ninth Army against Serpukov was repulsed with heavy losses, even though it caused some delay to the opening of the German Fourth Army's attack. On 15 November the Germans, on the right wing outside Moscow, struck at Major-General Khomenko's Thirtieth Army; the following day they struck heavily at the boundary of the Kalinin Front (Thirtieth Army) and the Western Front (Sixteenth Army). The reason why they made such rapid progress towards Klin and Solnechnogorsk was that, on orders from Headquarters, the last reserves had been switched to Volokolamsk to execute a counter-attack. In order to reorganize the confused command conditions among the disarrayed and retreating formations north-west of Moscow, Major-General Khomenko, GOC Thirtieth Army, was relieved of his command and replaced by Major-General Lelyushenko; in addition, on 17 November—by which time it was too late—Thirtieth Army was placed under the command of the Western Front.²⁵³ At this point a serious conflict occurred between Rokossovskiy and Zhukov, who rescinded an order endorsed by Marshal Shaposhnikov, chief of the Red Army General Staff, for a withdrawal to the Istra and instead categorically demanded a struggle 'to the last man',²⁵⁴ without in the end being able to prevent Klin and Solnechnogorsk from falling to the Germans on 23 November and Istra on 27 November. The

exceedingly critical situation on the right wing of the Western Front in the sector of Sixteenth and Thirtieth Armies forced the GOC to throw in all available forces, including the anti-aircraft artillery of the Moscow defences, at the threatened points. Headquarters, moreover, during the final days of November reinforced the Western Front with 8 rifle divisions, 7 cavalry divisions, 4 rifle brigades, 1 airborne corps, and independent armoured and other specialized units. But it was only with the intervention of the First Assault Army under Lieutenant-General Kuznetsov and of the Twentieth Army (formed only recently) under Major-General Vlasov, the defender of Kiev (whose name is omitted from Soviet accounts of the fighting for Moscow)—i.e. the intervention of reserve armies assembled in strictest secrecy as the second echelon east of Moscow³⁵⁵—that the exhausted German forces were halted at Yakhroma on the Moskva-Volga Canal and at Krasnaya Polyana north-west of Moscow at the beginning of December.

The purpose of the dissolution of the Bryansk Front on 10 November 1941—the subordination of Fiftieth Army to the Western Front and of Third and Thirteenth Armies to the South-west Front—was to simplify command structures for the impending defensive battle on the left wing of the Western Front, in the Tula sector. This step, however, was to prove a mistake,³⁵⁶ because the South-west Front possessed only an incomplete command apparatus and the two Front staffs were showing an understandable tendency to draw their newly acquired armies closer to their main forces. The result was a weakening of the boundary between the troops of the Western and of the South-west Fronts south of Tula, a boundary that was particularly threatened by the German Second Armoured Army. On 14 November 1941 Marshal Timoshenko, who feared with some justification that a German breakthrough at that spot would complicate the defence of Moscow as well as the situation of his own overstretched front, asked Stalin to create an independent front, the Orlov Front, from the armies of his northern wing and place it under the command of Lieutenant-General Kostenko.³⁵⁷ The decision, however, was delayed, and proposals by Zhukov along the same lines were not authorized either. As a result of the neglected command structure on the defence sector south of Tula, the German Second Armoured Army quickly succeeded on 18 November in achieving a breakthrough, bypassing Tula on the east and proceeding via Stalinogorsk in the direction of Venev. At first Headquarters had demanded that the widening gap be closed again by a 'concentric attack' of troops of the Western and South-west Fronts; because of the weakness of Fiftieth and Third Armies, however, this was asking for the impossible. Headquarters eventually had to bring up reinforcements as the German attack fanned out northwards towards Kashira and simultaneously eastwards in a general direction of the Oka and Ryazan, and as, in Zhukov's words, an

³⁵⁵ Vasilevskij, *Delo vsej žizni*, 159 ff.

³⁵⁶ Eremenko, 'Na jugo-zapadnykh podstupach', 86.

³⁵⁷ Bagramjan, *Tak načalas' vojna*, 431-2.

'exceptionally dangerous situation' was developing.²⁵⁸ Major-General Belov's 2nd Cavalry Corps was therefore hurriedly flung against the German spear-head driving against the rear of the Western Front at Kashira. On 26 November this formation, now renamed I Guards Cavalry Corps, succeeded—in co-operation with Colonel Getman's 112th Armoured Division, a further armoured brigade, and a regiment of multiple rocket mortars, as well as reinforced air units—in forcing the Germans back as far as the area of Mordves. A German attempt to outflank the city of Tula from the north failed in the face of counter-attacks by elements of Lieutenant-General Zakharkin's Forty-ninth Army and Lieutenant-General Boldin's Fiftieth Army. On 1 December 1941 Lieutenant-General Golikov's Tenth Army, assembled at Ryazan, was at Zhukov's request transferred from the Headquarters reserve to the Western Front in order to prevent a further advance of the enemy through Mihkaylov to the Oka.²⁵⁹

Faced with stiffening Soviet resistance, the German attack was gradually losing momentum, also in the sector of the South-west Front at the boundary between Major-General Kreyzer's Third Army (after 3 December under Lieutenant-General Pshennikov) and Major-General Gorodnyanskiy's Thirteenth Army west of Yelets. Thus, in the early days of December a threat to Moscow at the two wings of the Western Front had finally ceased to exist—even though this result was achieved only by the employment of Soviet strategic reserves originally assembled for the execution of a counter-offensive. In this situation the Soviet troops had but little difficulty in repulsing the last German breakthrough attempt towards the Soviet capital, made on 1 December 1941 at the centre of the Western Front, on both sides of Naro-Fominsk. Although the German Fourth Army succeeded in accomplishing a breach at the boundary between Lieutenant-General Govorov's Fifth Army and Lieutenant-General Yefremov's Thirty-third Army, and in advancing as far as Golitsyno along the Moscow railway line, this finally exhausted its strength. Reserves brought up to the Western Front and the main forces of the two armies first halted the Germans at Burtsevo and Kuznetsevo, and by 5 December had thrown them back to their starting-positions on the Nara.²⁶⁰ The German general offensive for the capture of Moscow had definitively failed.

10. THE RED ARMY'S COUNTER-OFFENSIVE AT MOSCOW, DECEMBER 1941

From the very beginning of the German offensive Red Army Supreme Command Headquarters and the general staff had focused their efforts not only on halting the enemy outside Moscow but also on depriving him of the strategic initiative and going over to the counter-attack.²⁶¹ At the same time as Army Group Centre seemed to be irresistibly advancing towards the nation's capital,

confronted by poorly trained and ill-equipped People's Army divisions, concentration began, under conditions of strictest secrecy, of a second strategic echelon of reserve armies along the Vytegra-Ryabinsk-Gorkiy-Saratov-Stalingrad-Astrakhan line.²⁶² By resolution of the State Defence Committee of 5 October 1941 the Tenth, Twenty-sixth, and Fifty-seventh Reserve Armies were formed from the second half of October onwards. The second half of November then witnessed the establishment of the First Assault Army and of the Twentieth, Twenty-eighth, Thirty-ninth, Fifty-eighth, Fifty-ninth, Sixtieth, and Sixty-first Armies.²⁶³ Since the beginning of the war, therefore, 291 divisions and 94 brigades had been incorporated in the field army: 70 divisions had come from military districts of the interior, 27 divisions from the Far East, central Asia, and Transcaucasia, and 194 divisions and 94 brigades had been newly raised. Although great difficulties were encountered in staffing the troops, especially with officers, in furnishing them with weapons, equipment, and transport, and in raising the standard of training to the requisite level,²⁶⁴ at the beginning of December 1941 Headquarters nevertheless had strong strategic reserves at its disposal. It was therefore possible substantially to reinforce the troops of the Kalinin Front, the Western Front, and the northern wing of the South-west Front; these had been earmarked for the counter-offensive at Moscow. Since the end of November Lieutenant-General Kuznetsov's First Assault Army and Major-General Vlasov's Twentieth Army had been engaged in defensive fighting at the immediate danger spots to the north-east of the capital. Twenty-fourth, Twenty-sixth, and Sixtieth Armies were moved forward into the Moscow area. Lieutenant-General Golikov's Tenth Army took over the sector west of Ryazan, at Mikhaylov; Colonel-General Kuznetsov's Sixty-first Army was concentrated at the boundary between the Western and South-west Fronts, between Ryazhsk and Raneburg. At the beginning of December 15 armies, 3 cavalry corps, and 1 airborne corps—in all 104 divisions—stood ready for attack. Even though the three actively involved fronts had been additionally reinforced by a large number of independent specialized units, such as artillery regiments, guards rocket-mortar battalions, air regiments, and engineering brigades, Soviet war historians used to describe the Soviet forces as still greatly inferior to the Germans.²⁶⁵ This assertion clearly ignores the well-known fact²⁶⁶ that the German divisions had meanwhile declined to half their normal strength and that their losses of weapons and tanks had been exceptionally high. The German-Soviet ratio of forces in the strategic direction west of Moscow at the opening of the counter-offensive is presented by Soviet authors as follows:²⁶⁷

(*maximum*) men 1,708,000:1,100,000, artillery pieces, mortars, and rocket mortars 13,500:7,652, tanks 1,170:774; (*minimum*) men 860,000:760,000, artillery pieces 10,400:5,615, tanks 1,000:670. Only for the air forces is a Soviet superiority conceded. Thus, approximately 600 German aircraft are said to have been confronted by 1,370 Soviet machines (according to some sources the latter figures is 1,000, or even as low as 762).²⁶⁸

The plan for the offensive, laid down in outline by Supreme Command Headquarters, or more accurately by the general staff under Marshal Shaposhnikov, since 20 November 1941,²⁶⁹ then worked out in detail and endorsed by the commands of the three fronts, envisaged simultaneous attacks by the right and left wings of the Western Front, in co-operation with the Kalinin Front and the right wing of the South-west Front. Its first, still limited, objective was the routing of the enemy's assault groupings threatening Moscow from the north and south. According to how the situation developed, an attempt was then to be made to force the enemy back frontally, and eventually to defeat him decisively.²⁷⁰ Accordingly, Major-General Lelyushenko's Thirtieth Army north of Moscow, Lieutenant-General Kuznetsov's First Assault Army, Major-General Vlasov's Twentieth Army, and Lieutenant-General Rokossovskiy's Sixteenth Army were instructed to attack via Klin and Solnechnogorsk, respectively, in the direction of Teryaeva Sloboda and Volokamsk. South of Moscow, Lieutenant-General Golikov's Tenth Army, in co-operation with Lieutenant-General Boldin's Fiftieth Army and Major-General Belov's I Guards Cavalry Corps, were to advance from the Tula-Mikhaylov sector via Stalinogorsk and Bogoroditsk, and then wheel towards Kaluga-Belev. The armies of the Western Front—Lieutenant-General Govorov's Fifth Army, Lieutenant-General Yefremov's Thirty-third Army, Major-General Golubev's Forty-third Army, and Lieutenant-General Zakharkin's Forty-ninth Army—were initially to conduct only holding attacks, while preparing for a general offensive.²⁷¹ In order to support the attack of the right wing of the Western Front, the Kalinin Front was ordered, with forces of Major-General Yushkevich's Thirty-first Army and Major-General Maslennikov's Twenty-ninth Army, to strike towards Turginovo and into the rear of Armoured Group 3 at Klin and, in co-operation with the First Assault Army of the Western Front, to annihilate the armoured group.²⁷² Simultaneously, Lieutenant-General Kostenko's mobile group, formed on the right wing of the South-west Front, was to strike at the forces of the German Second Army at Yelets-Livny and, in conjunction with Major-General Gorodnyanskiy's Thirteenth Army (which was attacking further to the north), to encircle and likewise annihilate them.²⁷³

During the preparations for the counter-offensive at Moscow a difference of opinion²⁷⁴ arose on 1 December 1941 between Lieutenant-General Vasilevskiy—who for a short time deputized for Marshal Shaposhnikov, chief of the Red Army General Staff—and Colonel-General Konev, the GOC Kalinin Front. Konev, instead of advancing towards Turginovo, intended an attack with a view to capturing Kalinin. On behalf of Stalin, Vasilevskiy demanded strict observance of the Supreme Command Headquarters directive, transmitted that day, which envisaged the employment of five battle-worthy divisions, one motorized brigade, the bulk of the artillery from the Headquarters reserve, and all rocket-mortars for an attack on Turginovo. Vasilevskiy dismissed Konev's argument that he was too weak; he demanded that the Kalinin Front, too, mobilize absolutely all available forces to support the offensive of the Western Front, which in any case would be launched under difficult conditions, instead of employing its forces on objectives of purely local importance.

The counter-offensive at Moscow was opened on 5 December 1941 by the two armies of the left wing of the Kalinin Front; on the following two days they were joined by the attacking armies of the right and left wings of the Western Front and of the right wing of the South-west Front. Although the Soviet assault formations, massively supported by the wings, succeeded in breaking into the German defences almost everywhere, the development of the attack did not at first fulfil Headquarters' expectations.²⁷⁵ The pace of the advance was generally slight, and the Soviet commanders still had little experience of executing offensive operations. Thus, until 13 December 1941, when Western Front command expressly prohibited that kind of operation,²⁷⁶ they would mostly attack frontally along the roads, failing to realize that what mattered was to bypass points of enemy resistance and to drive as deeply as possible into the enemy's flank and rear. Nevertheless, by the middle of the second week of December they had achieved some appreciable success at several points of the 500-kilometre front between Kalinin and Yelets. In the northern sector Thirty-first Army crossed the Kalinin-Turginovo road;²⁷⁷ on 9 December Thirtieth Army reached Klin;²⁷⁸ First Assault Army recaptured Yakhroma; Twentieth Army recaptured Krasnaya Polyana and on 10 December reached the approaches of Solnechnogorsk,²⁷⁹ while Sixteenth Army took Kryukovo.²⁸⁰ On the southern sector, where preparations for the offensive could not be completed in time,²⁸¹ Tenth Army succeeded at the first attempt in capturing Mikhaylov and Serebryanye Prudy, thereby cutting the Kashira-Pavelets rail-

way line; on 8 December I Guards Cavalry Corps²⁸² took Mordves and Veney; Thirteenth Army, attacking on both sides of Yelets in co-operation with General Kostenko's mobile group, succeeded in encircling the German forces in that area and in capturing Yelets on 9 December.²⁸³

Stalin and Marshal Shaposhnikov displayed considerable annoyance at the relatively slow advance of the Kalinin Front, more especially of its Twenty-ninth Army, whose leadership had in fact revealed substantial shortcomings. As recently as 1 December, Vasilevskiy, deputizing for the chief of the general staff, had blamed the GOC Kalinin Front for wishing to take Kalinin instead of striking at Turginovo further south. On 12 December he was reproved for not yet having taken Kalinin,²⁸⁴ which evidently, after all, was of more than mere local importance. Suddenly Colonel-General Konev, who tried in vain to justify himself, received strict orders from Headquarters to take the city as soon as possible. To that end, Major-General Shvetsov was put in command of Twenty-ninth Army, while Major-General Maslennikov took over command of Thirty-ninth Army, which after 22 December 1941 was inserted south-west of Torzhok. In point of fact, the forces of the Kalinin Front, reinforced by individual units, recaptured the city of Kalinin on 16 December 1941. During the final third of December the right wing of the Kalinin Front, with Major-General Vostrukhov's Twenty-second Army and with Thirty-ninth Army, also went over to the offensive, although at first this developed but slowly.²⁸⁵ By the beginning of the new year, however, the troops of the Kalinin Front had reached Staritsa and the approaches to Rzhev and Zubtsov. The attacking armies, some of whom had gained 150 kilometres of ground, were able by 7 January 1942 to envelop Rzhev from three sides and to threaten the flank of the German Ninth Army on the upper reaches of the Volga. Although the counter-offensive at Moscow was increasingly making progress, it soon became clear that Supreme Command Headquarters, as well as Western Front command, had entertained excessive expectations. Realization of the objective of the offensive, extended beyond the original intentions and since 9 December 1941 including 'the encirclement and annihilation of all enemy armies fighting against the Western Front', was soon put in doubt, largely because of weaknesses in command²⁸⁶ and because of the stiffening German resistance. Western Front command, which on 13 December 1941 in a categorical order assigned the task formulated on 9 December to its subordinate armies, which had held the army commanders personally responsible for reaching the jumping-off positions, and which in an appeal to the troops on the following day had demanded the 'ruthless liquidation' of all those who 'are slowing down our forward movement',²⁸⁷ soon found itself compelled to tone down its hopes. The point was that neither did the right wing of the Western

Front, as had been expected, rapidly reach Gzhatsk, nor did the left wing reach the area of Kozelsk.²⁸⁸ One objective within reach was Klin, enveloped from both sides by units of Major-General Lelyushenko's Thirtieth Army and of Lieutenant-General Kuznetsov's First Assault Army. The town was recaptured on 15 December after an airborne unit dropped in the German rear had vainly tried to cut off the garrison's line of retreat.²⁸⁹ Simultaneously, Major-General Vlasov's Twentieth Army along with Lieutenant-General Rokossovskiy's Sixteenth Army, covered in the south by Lieutenant-General Govorov's Fifth Army, took the town of Istra, crossed the Istra river, and occupied the area of the Istra reservoir.²⁹⁰ Teryaeva Sloboda fell on 18 December, and Volokolamsk on 20 December 1941. By 25 December, when the offensive came to a temporary halt, the armies of the right wing of the Western Front had forced back the opposing German troops as far as the Lama and Ruza rivers and inflicted heavy losses on them.²⁹¹ As Marshal of the Soviet Union Sokolovskiy, then Western Front chief of staff, observes, the threat to Moscow from the north-west had been eliminated.²⁹² What had not been accomplished, however, was the annihilation (planned in conjunction with the Kalinin Front) of the German forces confronting them or the development of the right prong into a pincer movement enveloping the main forces of Army Group Centre.

Operations on the left wing of the Western Front also made considerable progress in December, though again without achieving their real strategic objective. On 14 December 1941 Lieutenant-General Golikov's Tenth Army, attacking in a westerly direction together with I Guards Cavalry Corps, had reached the Dedilovo-Uzlovaya-Bogoroditsk line. Only the previous day this army, which indeed had a considerable number of shortcomings,²⁹³ had been accused by Western Front command of preventing the success of the operations plan and the encirclement of the German Second Armoured Army through its 'passivity and non-fulfilment of orders'. Simultaneously, while Lieutenant-General Boldin's Fiftieth Army was attacking in a southerly direction on both sides of Tula, Lieutenant-General Zakharkin's Forty-ninth Army, further to the north, advanced as far as the Oka and took Tarusa and Aleksin. In order to exploit that success and block the German troops' line of retreat, the forces of Fiftieth Army, on orders from Supreme Command Headquarters, now wheeled north and began to launch a frontal assault on the heavily defended transport centre of Shchekino. On 17 December 1941 the town was taken, but the Germans had meanwhile escaped across the Upa. Even though the encirclement of the German Second Armoured Army, which had been under attack from several sides, had not succeeded, the eccentric withdrawal of its units towards Kaluga and Orel nevertheless provided new opportunities. I Guards Cavalry Corps was now ordered to thrust into the gap

which had opened, to cross the Oka, and then to wheel north-west towards Yukhnov. Fiftieth Army, which for that purpose formed a mobile group under Major-General Popov, and Forty-ninth Army were instructed to capture Kaluga as soon as possible,²⁹⁴ while Tenth Army was to advance further in the direction of Belev-Kozelsk-Sukhinichi. Whereas I Guards Cavalry Corps had been making good progress since 19 December 1941, Fiftieth Army soon experienced a crisis: although its mobile Popov group managed to reach Kaluga, it found itself cut off from its rear communications and had to fight in a pocket. Not until 30 December, after ten days of fighting, was the city captured by Popov's group in co-operation with Fiftieth and Forty-ninth Armies. By that time the armies of the left wing of the Western Front had advanced as far as a line Aleshkino-Babynino-Meshchovsk-Kozelsk-Belev. At some points they succeeded in gaining even further ground before the operations came to a temporary halt on 7 January 1942, but the speed of their advance had noticeably diminished, and they were unable to capture the important transport junction of Sukhinichi.²⁹⁵ Thus the left prong of the pincer movement for the encirclement of Army Group Centre had also become bogged down.

As in the case of the left wing of the Western Front, so the right wing of the South-west Front, supporting it with its own attack, was able to score considerable success—at least in a tactical respect. The troops of Major-General Kreyzer's (from 13 December 1941 Lieutenant-General Pshennikov's) Third Army, of Major-General Gorodnyanskiy's Thirteenth Army, and of Major-General Kostenko's mobile group, having taken Yelets, by 16 December advanced to a line Gogol-Verkhnyaya Lyubovka-Livny. By an encircling manoeuvre in pursuit these formations succeeded in enveloping substantial elements of the German XXXIV Army Corps,²⁹⁶ but they were unable to annihilate the main forces of Second Army. The fact that the armies of the right wing of the South-west Front lacked an independent command, that they came under an already overstressed front command, now proved a major handicap. More than a month earlier Marshal Timoshenko had proposed just such an independent command, but in vain; now, on 18 December 1941, Supreme Command Headquarters decided to create once more a Bryansk Front from the armies of the right wing, and to place it under the command of Colonel-General Cherevichenko. This reconstituted Bryansk Front was composed of the mobile Kostenko group, of Thirteenth Army, and of the newly formed Sixty-first Army, whose command Lieutenant-General Popov had to take over a few days later from Colonel-General Kuznetsov, who at times was over-fond of alcohol.

The restoration of the Bryansk Front, along with the reinforcement of the Kalinin Front by two armies, was to create favourable conditions for the

²⁹⁴ *Boevoy put' sovetskikh vooruzhennykh sil*, 303.

²⁹⁵ *Istoriya Velikoy Otechestvennoy vojny*, ii, 293-4.

²⁹⁶ Moskalenko, *Na Yugo-Zapadnom napravlenii*, 119 ff.; Bagramjan, *Tak nazhinalas' vojna*, 503 ff.

encirclement of the main forces of Army Group Centre by means of a large-scale pincer movement—an objective which, on the strength of the current successes, Headquarters considered feasible.²⁹⁷ The armies of the Bryansk Front, attacking in a north-westerly direction from 18 December 1941, did in fact manage to gain further ground. However, after reaching the Belev-Mtsensk-Verkhovye line in the first days of January 1942, their strength was spent. The hoped-for routing of the German forces on the southern wing of Army Group Centre, planned in co-operation with the neighbouring Western Front, was not achieved.

Within the framework of the large-scale enveloping manoeuvre of the wings of the Western Front, along with the troops of the Kalinin and Bryansk Fronts, the four armies at the centre of the Western Front were now also ordered to go over to the attack in order to tie down and break up the enemy forces. However, Lieutenant-General Yefremov's Thirty-third Army and Major-General Golubev's Forty-third Army, both attacking south of the Moscow-Mozhaysk railway line, had not received the slightest reinforcements of personnel or material, and made only slow progress. Not until 26 December 1941 did Thirty-third Army take Naro-Fominsk, situated near the front line, and not until 2 January 1942 did Forty-third Army take Maloyaroslavets. On 4 January 1942 Thirty-third Army succeeded in breaking into the German defences at Bobruysk. Lieutenant-General Zakharkin's Forty-ninth Army, which had captured Tarusa, also gained ground and by the end of December 1941 advanced to a line from Maloyaroslavets to Kaluga. Altogether, by the beginning of January 1942 Soviet troops had thrown back the Germans along the Moscow front by between 100 and 250 kilometres and inflicted heavy losses on them. Yet despite the tactical breakthroughs at Rzhev and Kaluga they had failed to accomplish the grand strategic encirclement—a fact that has been skilfully concealed by Soviet historiography behind the conspicuous successes of the counter-offensive at Moscow.

II. THE RED ARMY'S COUNTER-ATTACKS AT Leningrad and in the Crimea

In much the same way as on the Moscow front, so Stalin, Supreme Command Headquarters, and the general staff also harboured unrealistic expectations concerning the strength and combat performance of the Soviet troops in the area south-east of Leningrad. Admittedly, the Soviet forces in the Tikhvin salient after late November and early December 1941 had definitively seized the initiative and, albeit with heavy losses, had gradually gained ground. Thus, Army General Meretskov's Fourth Army, attacking in two assault groups, occupied Tikhvin on 9 December; Army General Fedyuninskiy's Fifty-fourth Army, assigned to the Leningrad Front, overcame German resistance at

²⁹⁷ Sokolovskij, 'Velikaja bitva', 30-1.

Voybokalo in mid-December—with some delay due to weaknesses in its command and tactical mistakes; and Lieutenant-General Klykov's Fifty-second Army simultaneously reached the area of Bolshaya Vishera.²⁹⁸ Ignoring the fact that these operations had largely exhausted the attacking strength of the Soviet formations, Supreme Command Headquarters began to initiate a large-scale strategic operation also at Leningrad. Stalin, along with his closest advisers, Marshal Shaposhnikov and Lieutenant-General Vasilevskiy, blinded by the successes achieved so far, now aimed at nothing less than an operation to route the main forces of Army Group North. Urged on by Zhdanov, the Party Secretary of Leningrad, they intended to burst open the blockade of the great city, where conditions during the winter had become catastrophic. To this end Fourth Army (now taken over by Major-General Ivanov), Fifty-second Army, Major-General Galinin's Fifty-ninth Army (still being organized), and Major-General Sokolov's Twenty-sixth Army (after the end of December the Second Assault Army) were on 17 December combined into a Volkhov Front under the command of Army General Meretskov. The formations of this newly established front were ordered to annihilate the German grouping at Tikhvin, then to cross the Volkhov in a north-easterly direction and, in conjunction with the troops of General Khozin's Leningrad Front, now also going over to the attack (Forty-second, Fifty-fifth, Eighth, and Fifty-fourth Armies), to encircle and annihilate the German divisions at Leningrad, and thereby to open up a wide land-bridge into the beleaguered city.²⁹⁹ Starting not later than 24 December 1941, Eleventh Army of the North-west Front was to advance via Staraya Russa in the direction of Soltsy, in order, jointly with a southward-aiming spearhead of Fifty-second Army, to cut off the retreat of the German forces at Novgorod.

But with this operations plan Supreme Command Headquarters had lost touch with reality. Although Army General Meretskov, having reached the northern Volkhov, believed that a pause was urgently needed for the rehabilitation of his exhausted and battered troops and to allow time for the bringing up of units of Fifty-ninth Army and Second Assault Army,³⁰⁰ Headquarters persistently called for greater speed and, in a directive of 24 December 1941, categorically demanded the immediate continuation of the operation and the forcing of the Volkhov without a prior halt. However, the massive strategic operation planned south-east of Leningrad did not progress beyond its initial stages. It proved unrealizable. In the final analysis it did not even succeed in annihilating the German forces at Tikhvin,³⁰¹ let alone in routing the main forces of Army Group North. A few minor bridgeheads were, in a final effort, established at Gruziny, Kinshi, and elsewhere—but by then even Headquarters had to face realities and order the suspension of the operation.

Within the general framework of its counter-offensive at Moscow, Supreme

³⁰¹ Semenov, *Kratkij očerk*, 170.

Command Headquarters had ambitious plans not only on the northern wing, at Leningrad, but also on the southern wing of the front. Towards the end of November 1941, when the troops of the Sevastopol defence zone had, though not without difficulty, repulsed the first organized attack on the naval fortress, Headquarters conceived the idea of a landing on the Kerch peninsula.³⁰² This was to create the prerequisites for an immediate cleansing of the entire territory of the Crimea.³⁰³ In accordance with the operations plan endorsed on 7 December 1941, the troops of the Transcaucasus Front under Lieutenant-General Kozlov, in co-operation with naval units of the Black Sea Fleet under Vice-Admiral Oktyabrskiy and of the Azov Flotilla under Rear-Admiral Gorshkov, were to land at several points on the northern, eastern, and southern coast in the Kerch area, as well as at Feodosiya, annihilate the German forces in the peninsula, and subsequently thrust westwards into the interior of the Crimea. The main part in the operation was to be played by the Feodosiya landing party, which was part of Major-General Pervushin's Forty-fourth Army, while the landing party attacking on the east coast, formed mainly by part of Lieutenant-General Lvov's Fifty-first Army, was instructed to tie down the enemy forces while they were being encircled. The first serious difficulties arose during the preparations for the invasion, when the resumption of the German attack on Sevastopol on 17 December 1941 resulted in a postponement of the timetable and the transfer of urgently needed ground and naval forces.³⁰⁴ The landing operation eventually began, under unfavourable weather conditions, on 26 December 1941 at Kerch and on 29 December at Feodosiya; initially it did not proceed according to plan and only began to succeed during the next few days.³⁰⁵ Again the Germans managed to evade encirclement and were able to establish a solid line of defence at Kiet-Koktebel east of Feodosiya, blocking the Crimea. This German success was due to mistakes made by the command of the Transcaucasus Front, above all of Forty-fourth Army, which proved incapable of properly exploiting the success of the landing operation.³⁰⁶ The Soviet troops had succeeded in occupying the Kerch peninsula, but the annihilation of the German troops fighting there and the breakthrough to Sudak, Simferopol, and Dzhanskoy, into the deep interior of the Crimea³⁰⁷—as demanded by Supreme Command Headquarters on 2 January 1942, totally misreading the situation—had proved unrealizable.³⁰⁸

In the course of its counter-offensive in December 1941 the Red Army had inflicted a number of serious defeats on the German army in the east—in the approaches to Moscow, at Leningrad, and in the Crimea—and had regained considerable territory. The threat to the capital was definitively eliminated,

and the situation of Leningrad eased in the sense that foodstuffs and other commodities could now be carried by the northern railway almost as far as Mga and thence taken into the hard-pressed city on a considerable scale. Finally, the position of Sevastopol had been relieved as German siege forces had to be withdrawn in order to block off the Kerch peninsula. These successes, however, should not conceal the fact that Supreme Command Headquarters, Stalin himself, Marshal Shaposhnikov, chief of the general staff, and Lieutenant-General Vasilevskiy, his first assistant, had in fact set their sights at more far-reaching objectives. After the first Soviet successes they had called for a breakthrough to Vyazma, the encirclement and annihilation of the main forces of Army Group North, the lifting of the blockade of Leningrad, the relief of Sevastopol, and the reconquest of the entire territory of the Crimea. Considering the state of the Soviet troops and the standard of their leadership, these objectives were unrealistic from the outset and, in consequence, were nowhere near achieved. But even in their more limited form the successes of the Soviet armed forces were of considerable military and also political importance in that they greatly enhanced the international prestige of the Soviet Union. The Red Army had inflicted a heavy defeat—the first defeat of the war—on a Wehrmacht that was accustomed to victories. This circumstance provided Soviet war propaganda with effective arguments for a gradual stiffening of the morale of the Soviet troops, which had been gravely shaken by the retreats of the first few months of the war.

12. METHODS OF A WAR OF ANNIHILATION

When in 1941 the troops of the Wehrmacht and its allies invaded the territory of the Soviet Union and rapidly gained ground, the Soviet leadership was exceedingly anxious that all movable and immovable material assets be destroyed before falling into the enemy's hands. Acting in accordance with the directive of the Communist Party Central Committee and the Council of People's Commissars of 29 June, as well as with Stalin's broadcast address of 3 July 1941, Red Army troops, along with the specially created destruction battalions,³⁹⁹ whenever there was an opportunity during their retreats, had applied the 'tactics of scorched earth' and destroyed 'all valuable chattels' on the greatest possible scale without regard for the needs of the population. As a result of the Soviet counter-offensive in the winter of 1941, this was the first time that the German troops were forced to abandon a vast territory, and there is no reason to doubt that they applied the principle of destruction just as unscrupulously as the Red Army. The Soviet soldiers in the reconquered regions were frequently confronted with scenes which were methodically used by war propaganda to fan hatred against the German occupiers. In the grand framework of the German-Soviet conflict, which for the most part was con-

³⁹⁹ Bilenko, *Istrebitel'nye batal'ony*; Kirsanov, in *VIZ* (1970), No. 12, 94-5.

ducted with disregard of all formalities, individual occurrences probably play a subordinate role, and it may seem almost pointless to view them more closely. However, a few incidents in connection with the fighting for Moscow have acquired a strong symbolical significance and were traditionally quoted in the Soviet and Soviet-subservient literature as special instances of the 'bestialities and destructive fury of the Fascists'. A few explanatory observations are therefore not out of place. The accusation levelled at the German troops of having devastated the Tchaikovsky Museum in Klin was already refuted before the Nuremberg Military Tribunal by defending counsel Dr Latenser through the submission of documentary evidence.³¹⁰ The same is true of the alleged looting of Tolstoy's estate at Yasnaya Polyana, which had actually been shown undamaged in a Soviet film made in 1942, after its reoccupation. Colonel-General Guderian, GOC Second Armoured Army, who had established his command post at Yasnaya Polyana, emphatically points out in his memoirs that the German troops had spared this memorial right up to their withdrawal, but that the immediate surroundings of the author's grave had previously been mined by Soviet troops.³¹¹ As for the destruction in Istra of the Novo-Yerusalimskiy monastery, founded in 1654,³¹² blame on the part of the German troops can be neither confirmed nor denied. Soviet literature in this context never tires of emphasizing that, in contrast to the barbaric behaviour of the German troops, the Soviet regime had always devoted its particular care to the 'architectural monuments' of Russia's past by 'restoring and solicitously preserving' them. Yet those who accuse the German troops of systematic 'national-cultural genocide'³¹³ should remember the extent to which monasteries and churches, which once represented Russia's artistic wealth, had been desecrated or destroyed in the Soviet era. One instance of many is the Simonov monastery in Moscow, founded in 1370 and restored after the damage it suffered in the 1812 conflagration; this monastery was destroyed down to the last stone by a Red Army unit on 22 January 1930 in honour of the anniversary of Lenin's death.³¹⁴ In the opinion of expert observers³¹⁵ there was probably not a single city in the RSFSR, including Siberia, where 'either all or almost all' artistically or historically important buildings had not fallen victim to an ideologically motivated destruction mania.

Among the charges levelled at the 'Fascist criminals', accusations of atrocities committed against the peaceful civilian population occupy a prominent place. No one would deny that atrocities were in fact committed on a large

scale by the action squads of the security police and the SS security service. But the claim encountered in the literature on the subject, that the gallows found after the recapture of the town of Volokolamsk were a typical example of the atrocities committed by the German troops,³¹⁶ is poorly founded. The fact is that the ten who were hanged were not, as is misleadingly claimed, 'peaceful inhabitants'³¹⁷ of the town of Volokolamsk but—as is admitted elsewhere—partisans who had fulfilled an 'operational mission in the rear of the enemy'.³¹⁸ 'All eight were guerrillas', it was stated in *Soviet War News*, published by the Soviet Embassy in London, on 5 February 1942;³¹⁹ 'when the Germans approached the town these individuals went to the forest and began methodical operations against the occupation troops'. But armed civilians participating in the fighting came under the heading of irregulars according to the unambiguous terms of the Hague Convention on Land Warfare, as well as the common usage of war; they enjoyed no protection under international law. This applies also to Zoya Kosmodemyanskaya, executed by German troops on 29 November 1941 for arson; this young woman is presented as a shining example to the youth of the Soviet Union. 'By embarking on the road of partisan warfare'—this is how her activity is characterized—'she took a sacred oath to the fatherland to fight to her last breath against the Fascist conquerors.'³²⁰ Deplorable though the fate of the young Komsomol girl may have been, it should not be overlooked that it was inevitable under the merciless laws of war.

Atrocities of alarming magnitude have been committed in the ideological war of annihilation in eastern Europe—but it should be pointed out that, practically from the first day onward, both belligerents were equally involved in them. It almost seems as if the principles of international law and humanity must inevitably lose their validity in a warlike conflict between two totalitarian dictatorships, even though military leaders on both sides repeatedly tried to curb such excesses—if only in order to maintain discipline among their troops and preserve traditional forms as much as possible. As far as the violation of the norms of international law by the Germans is concerned—above all, the liquidation actions of the special squads of the security police and the SS security service, whose victims were racially or politically undesirable—these are treated very fully in the present volume of this work. Unless, however, the picture is to remain one-sided, there is a need for at least a brief discussion of actions on the Soviet side, actions similarly inspired by the idea of annihilating

the 'class enemy', i.e. a national and political opponent. A regime which, as Major-General Grigorenko confirms, even treats its own soldiers according to the 'inhuman slogan' that 'human lives must not be spared', is unlikely to show mercy to real or putative enemies. It should also be remembered from the outset that the Soviet leadership possessed an executive agency which closely corresponded to the special squads of the security police and the SS security service. These were the Special NKVD Detachments which *de facto* came under the People's Commissar of the Interior, Beriya; their duties included the administration of the eighty 'concentration-camp systems' then existing in the Soviet Union with hundreds of individual camps,³²¹ as well as guarding the political prisoners and the prisoners of war handed over to them by the military. From the first days of the war the NKVD troops had been charged with the execution of liquidation orders on a large scale. At the very start Stalin had ordered the immediate execution by firing-squad of all persons suspected of espionage³²² throughout the territory of the Soviet Union, as well as the speedy arrest of persons politically unreliable.³²³ It is thought that some two million people were affected by the latter measure. Political prisoners in the areas threatened by German and German-allied troops—i.e. initially in the Baltic States, eastern Poland, and eastern Romania, and before long also in Belorussia and in the Ukraine—were to be shot on Stalin's special orders³²⁴ before falling into enemy hands. In line with this instruction, mass shooting began in the first few days of the war in the overcrowded prisons and camps of the western regions; their victims were predominantly Baltic nationals, Poles, and Ukrainians. 'In every city in the western Ukraine', as stated by an investigating committee set up in 1954 by the United States Congress under the chairmanship of Representative Charles J. Kersten,³²⁵ 'in the first days of the war the NKVD and its agents shot all the political prisoners except a mere handful who were miraculously saved.' The corpses of those murdered, including women and children, were found in many localities of the western frontier region of the Ukraine, e.g. in Stanislaw, Chortkov, Tarnopol, Rovno, Lutsk, Sambor, Dubno, Sarny, Dobromil, and Drohobych. In Belorussia too, and everywhere in the Baltic republics, political prisoners were liquidated before the withdrawal of the NKVD troops. Such murders of prisoners took place in Brest, Minsk, Kaunas (Kovno), Vilnius, and Riga—to name but a few. However, mass shootings also occurred in the remote hinterland—in Smolensk, Berdichev, Uman, Stalino, Dnepropetrovsk, Kiev, Kharkov, Rostov, Odessa, Zaporozhye, Simferopol, Yalta, and elsewhere.³²⁶ According

to the findings of the Congressional committee of inquiry, 80,000–100,000 political prisoners were shot by NKVD agencies in the Ukraine alone before the arrival of the Germans and their allies.

An instructive example of the barbaric procedure of the security troops of both belligerents is provided by events in Lvov immediately after the beginning of the war in June–July 1941. As can be gleaned from the separate investigations of different bodies (the Wehrmacht-Untersuchungsstelle, the defence in the trials before the International Military Tribunal, the Select Committee on Communist Aggression (House of Representatives), the International Commission at The Hague) as well as from the specialized literature, particularly the works of Ukrainians in exile, NKVD agencies during the days up to 30 June 1941 murdered some 4,000 Ukrainian and Polish political prisoners and other civilians regardless of age or sex, as well as individual German prisoners of war, often after severe torture, in the prisons of the city of Lvov (the Brigidki, Zamarstynow, and NKVD prisons).³²⁷ After the occupation of the city the German military authorities at first continued to act against the spontaneous anti-Jewish pogroms; in July, however, there arrived Action Squad C of the security police and the SS security service, which by way of so-called 'reprisal for inhuman atrocities' murdered some 7,000 inhabitants of Lvov and surroundings, mostly of Jewish origin, who had no connection whatever with the earlier events. The behaviour of the two belligerents upon occupying a region scarcely differed at all. Immediately after capture or recapture the region in question was combed through by special detachments for hostile, unpopular, or undesirable persons or entire population groups. In the jargon of the NKVD this was called 'cleansing of the entire territory liberated from the German occupiers and especially of inhabited localities'.³²⁸ The victims of the security police and the SS security service were the Jews, initially also members of non-Russian minorities ('Asiatics'), as well as officials of the Communist Party; the victims of the Special NKVD Detachments were so-called 'agents of the enemy and other hostile elements', 'enemy elements and their helpers'. What such a 'cleansing' meant is revealed sufficiently by the practice of the Soviet security agencies: the shooting of all those Soviet citizens, regardless of age or sex, who had maintained even minimal relations with the German occupying power or their troops. Thus, while Kharkov was temporarily back in Soviet hands, the NKVD frontier troops, according to 'thorough' investigations, liquidated no less than 4 per cent of the remaining population, approximately 4,000 people, 'including girls who had gone with German soldiers'.³²⁹ In all, hundreds of thousands³³⁰ fell victim to the purges

of the NKVD agencies, which followed hard upon the heels of the regular troops of the Red Army.

Virtually from the first day of the war, Stalin and the Soviet leadership demonstrated by their measures that for them the armed conflict with Germany, compared with earlier 'European national wars', had a totally different character. 'The war with Fascist Germany must not be regarded as an ordinary war,' Stalin declared in his broadcast address on 3 July 1941;³³¹ 'it is not only a war between two armies. It is, at the same time, the war of the entire Soviet people against the Fascist German troops', a war 'that knows no compassion with the enemy'. The manner in which the leadership of the Soviet Union disregarded the norms of international law and human rights is shown not only by the mass liquidation of political opponents in the enemy-threatened regions, or by the directive of the Council of People's Commissars and the Communist Party Central Committee of 29 June 1941 with its subsequent orders, which unleashed unrestricted partisan warfare—i.e. virtual licence for any Soviet citizen to kill any soldier of the enemy army in any, even the most hideous, way—but also by another measure which proceeded less openly. On 28 August 1941 the USSR Supreme Soviet Praesidium issued a decree abolishing the Volga German Autonomous Republic,³³² the first in a series of similar actions whose subsequent victims were the Kalmyk, Chechen, Ingush, Kabardin, Balkar, and Crimean Tartar nations. Beginning in July 1941, the deportation and dispersal of the 400,000 Volga Germans, along with 140,000 Germans from the Ukraine, the Crimea, and the Caucasus, took place under inhuman conditions and involved the liquidation of their leading strata and the destruction of the highly developed cultural institutions of these ethnic groups. The extinction, on national and political grounds, of the German minority which had been settled in Russia for 200 years unquestionably represents the fact of the international crime of genocide,³³³ as defined in the 1948 Convention of the United Nations.

In the ideological war of annihilation in eastern Europe it was, owing to the special nature of their tasks, mainly the NKVD troops and the nascent partisan detachments and units that infringed valid international law and human rights. As for the role of the regular Red Army troops in this context, one has to consider the basic political attitude prevailing in the USSR. Lieutenant-General Vlasov, GOC Russian Liberation Army, who attended a conference in the Kremlin after the battle of Kiev, has conveyed an idea of that

³³¹ Rundfunkrede des Vorsitzenden des Staatskomitees für Verteidigung J. W. Stalin am 3. Juli 1941 [Broadcast address by I. V. Stalin, Chairman of the State Committee for Defence, 3 July 1941], leaflet, BA-MA RH 24-3/134; Stalin, *Großer Vaterländischer Krieg*, 10, 13.

attitude. He reports that Stalin had called upon People's Commissar Beriya to fan 'hatred, hatred, and again hatred' of all Germans.³³⁴ Along those lines, using the stereotyped slogan 'Death to the German occupiers!', the Soviet propaganda machine began to unleash a mass campaign which proceeded from the premiss that the German attack did not constitute a war in the conventional sense, but a criminal act. The soldiers of the enemy army, therefore, were to be viewed not as regular combatants but as criminals and bandits. Thus Marshal of the Soviet Union Budennyi, GOC Troops of the South-western Direction, in his order No. 5 of 16 July 1941,³³⁵ called the Germans the 'gangs of that man-eater Hitler', 'Fascist beasts', 'Fascist scum', 'Fascist carrion', a 'Fascist monster' which one 'crushes like a snake'.

The anti-German agitation which now developed with full force had its spokesman in the writer Ilya Ehrenburg, who published keynote articles in the press every few days from the beginning of the war. It is highly rewarding to cast at least a brief glance at Ehrenburg's propaganda products of 1941-2. His method was that of presenting allegedly real individuals as representative of the totality of Germans. In this way he fanned boundless hatred, not against the political enemy, 'Fascism', but against the German nation as such. Ehrenburg repeatedly expressed the sentiment that to him the Germans had ceased to be human beings. 'There is something terrible about the German himself,' he wrote. Even the ancient Germans had been barbarians, clothing themselves in the skins of wild animals. 'We hate every one of them . . . the fair-haired and the dark-haired.'³³⁶ His defamation of the German soldiers, whom he dehumanized by all conceivable kinds of insults and animal comparisons in order to suggest the need for their extermination,³³⁷ was to have serious consequences. Thus he described the field marshals as 'raging wolves', 'plague-carrying rats', the generals as 'cannibals', the officers as 'two-legged beasts'. Every single enemy soldier was a 'murderer' to him; the German soldiers were 'millions of murderers', and therefore 'undoubtedly like wild beasts', 'worse than wild beasts', 'beasts of prey', 'Aryan beasts', 'monsters', 'dying scorpions', 'starving rats'. 'We do not regard them as human beings.'³³⁸ The Geneva Convention had placed prisoners of war under the protection of the Red Cross—but that did not stop Ehrenburg from publicly insulting even those prisoners as 'beasts of prey', 'lousy curs', 'murderers', and 'bandits' from whom even the dogs turned away.³³⁹ His assertion that the people hated even dead Germans justified the destruction, ordered by Stalin, of the German military cemeteries in the regions reconquered by the Russians. Ehrenburg's pronouncements time and again reveal unmistakable pathological traits—for instance when, with joyous satisfaction, he reports seeing 'thousands and

³³⁷ *Ibid.* 14, 61, 80, 105, 257, 118, 49, 262, 248, 130, 258, 276, 55, 62, 75, 91, 210, 232, 265.

³³⁸ *Ibid.* 130, 97. ³³⁹ *Ibid.* 51, 109, 37, 273, 277, 14, 29, 52.

thousands' of mutilated German corpses,³⁴⁰ 'some shell-torn, some tank-squashed, others resembling waxwork figures', 'lumps of flesh resembling crushed machinery parts'. 'For us there is no sight more cheerful than German corpses,' he wrote in 1942;³⁴¹ and elsewhere: 'A colonel shows his old rat's yellow fangs.' The sorrow of the mothers and wives of those killed in action comes in only for sneers and mockery. He advises them: 'If you don't wish to weep, then dance, jest, pipe away.' 'In the spring the snow will melt and you will smell the stench of corpses.'³⁴²

Inciting articles of this kind did no more than serve the immediate objective of permanently whipping up the Red Army troops. In view of the intensity of political indoctrination in the Soviet forces, it is not surprising that these outpourings of hate affected the attitude of the troops. The feelings of hate fanned in them often resulted not only in an enhancement of their fighting zeal, but also in atrocities committed against enemy soldiers who had, by then helpless, fallen into their hands. A variety of records, of statements by prisoners of war and deserters, of intercepted radio messages, and of captured files of Soviet HQs unequivocally show that prisoners, especially wounded ones, were as a rule shot either immediately upon capture or after an initial interrogation.³⁴³ These instances of shooting or mutilation, which began 'in the same way and at the same time' in the most varied sectors of the front during the first few days, are unlikely to have been spontaneous excesses by Soviet soldiers. There is ample evidence that such actions were committed upon specific orders or with the connivance of unit commanders of various ranks, mainly at the level of company, battalion, or regimental commanders,³⁴⁴ though at times also involving senior staffs.³⁴⁵ Thus on 21 February 1941 a captured Soviet colonel reported the shooting of a German Luftwaffe officer in the presence of the army commander, Lieutenant-General Kuznetsov, and other top officers. An active role in this respect, however, was played by the political departments of the various units. Time and again there is evidence that individual or mass executions were carried out on the orders of the war commissars or political officials.³⁴⁶ Major incidents during the early phase of the war included the shooting of 180 German soldiers at Broniki on 30 June 1941, the shooting of 300-400 Romanian and a number of German soldiers on orders from Major Savclin, commanding 225th Rifle Regiment, at Storozhinets in the Bukovina on 2-3 July 1941, and the shooting of 80 German soldiers in the area of 26th Rifle Division on 13 July 1941.³⁴⁷ Altogether 'several

thousand reports' of shootings of prisoners of war, especially of wounded men left behind, were collected by the Wehrmacht Investigation Office for Breaches of International Law.³⁴⁸

This illegal practice, however, and the inhuman treatment of German prisoners of war, of whom 90-5 per cent perished in 1941-2,³⁴⁹ do not seem to have been in line with the intentions of the Red Army command. It appears that the People's Commissariat for Defence and the army commands were guided, as far as the treatment of prisoners of war was concerned, by a decree of the USSR Council of People's Commissars on the Position of Prisoners of War of 1 July 1941, which was entirely in line with the regulations of the Hague Convention, though it was not translated into reality³⁵⁰ any more than the above-mentioned Soviet note of 17 July 1941 (see sect. II.II.3 at n. 31). At least, Lieutenant-General Khrulev, the Red Army's chief administration official—acting in much the same way as his German opposite number, Major-General Wagner, quartermaster-general in the Army General Staff—in his Circular No. 017 of 3 July 1941³⁵¹ laid down entirely adequate food rations for prisoners of war. Major-General Utkin and Divisional Medical Officer Smirnov of the Red Army's Chief Military Health Directorate similarly, in a directive to the deputy chiefs of staff of the fronts, military districts, and armies, dated 29 July 1941,³⁵² recommended appropriate hospital treatment for wounded or sick prisoners of war. Marshal of the Soviet Union Shaposhnikov, chief of the Red Army General Staff, having learnt in August 1941 that 'individual enlisted personnel' in 'detachments and units' were in the habit of taking 'personal valuables, money, and documents' from prisoners of war, once more ordered the chiefs of the staffs of fronts and armies to ensure that prisoners of war were treated in accordance with the decree of the Council of People's Commissars of 1 July 1941.³⁵³ Major-General Gordov, the Twenty-first Army chief of staff, and Brigade Commissar Pogodin, the Twenty-first Army war commissar, likewise reminded their subordinate rifle corps of the government's order that 'prisoners [must not be] treated roughly'.³⁵⁴ The deplorable practice of looting, which 'disgraced the Red Army', had to be stopped.

The really serious aspect, however, was not so much the 'rough treatment' or even the looting of the prisoners' possessions, but the stark fact that they

were murdered. German troops captured a number of documents revealing that the command agencies of the Red Army endeavoured to put a halt to that barbaric practice—which merely confirms its existence. Thus Major-General Potapov, GOC Fifth Army, in Order No. 025 of 30 June 1941,³⁵⁵ also signed by War Council member Divisional Commissar Nikishev, and by Brigade Commissar Kalchenko, head of the political propaganda department, criticized the practice—not only in ‘individual cases’—of Red Army men and officers not taking enemy prisoners but shooting them on the spot. Unit commanders and heads of propaganda departments were ordered to draw their subordinates’ attention to the damage done by such actions. ‘I categorically forbid any shootings without authorization,’ Potapov’s order concludes. Similarly, Brigade Commissar Ivanchenko, head of the political propaganda department of XXXI Rifle Corps, in his order No. 020 of 14 July 1941³⁵⁶ described as a downright ‘criminal failure, the fact that during operations ‘Red Army men and commanders take no soldiers or officers prisoner’. It had become known ‘that they strangle prisoners or stab them to death’. Ivanchenko ordered that measures be taken ‘with all means of Party-political effort’ to put a stop to a ‘behaviour towards prisoners of war that is unworthy of the Red Army’. Major-General Alekseev, GOC VI Rifle Corps, in an order of 22 July 1941,³⁵⁷ also signed by his commissar, Brigade Commissar Shulikov, and by his chief of staff, Colonel Yereimin, similarly complained that ‘many units of the corps have so far shot their prisoners’. A ‘frankly outrageous case’ had been the shooting of a prisoner on 19 July 1941 at the instance of the head of the political propaganda department and the chief of the Special Detachment. Those guilty were reprimanded, and the divisional commander’s attention was drawn to such inadmissible treatment of prisoners of war.

Similar instances also became known to the Germans from the area of Fourteenth Army on the Murmansk front. An order issued on 8 September 1941 by Colonel Malitskiy, the deputy of the army’s chief of staff, jointly with Battalion Commissar Burylin, the deputy of the army commissar, criticized the fact that, although the units assembled prisoner transports, these were subsequently liquidated ‘*en route*’.³⁵⁸ The Soviet commands protested against such acts chiefly for military reasons: interrogation of prisoners was an import-

ant means of gaining intelligence about the enemy. Occasionally, however, the argument from political propaganda was adduced that this kind of treatment was making it impossible to destroy the enemy's morale. Brigade Commissar Ivanchenko reminded the heads of the political propaganda departments of yet another aspect: 'A German soldier who surrenders ceases to be an enemy.' Along with practical military reasoning, we observe here a humanitarian motivation of the kind that underlies the international conventions.

Efforts by the Red Army leaders to curb such excesses by Soviet troops and to ensure appropriate treatment for prisoners of war were encountering extraordinary difficulties—as is proved by the ceaseless repetition of similar orders. They became totally ineffective the moment they came into conflict with the new propaganda campaign launched towards the end of 1941. On 6 November 1941,³⁵⁹ at a festive session of the Moscow Soviet and of Party and social organizations, Stalin delivered a programmatic speech in which he stated:

From now on it will be our task, the task of the nations of the Soviet Union, the task of the fighters, the commanders, and the political functionaries of our army and our navy, to annihilate all Germans who have penetrated as occupiers into the territory of our homeland, down to the last man. [*Tumultuous applause, shouts of 'Hear, hear!', shouts of 'Hurray!'*] No mercy for the German occupiers! Death to the German occupiers! [*Tumultuous applause.*]

The contents of this speech, made by Stalin on the occasion of the 24th anniversary of the 'Great Socialist October Revolution', were very effectively brought to the notice of the Red Army by means of war propaganda and through the Army's political machine.³⁶⁰ Now Ehrenburg at last had an opportunity, long awaited, to put his own case. From November 1941 there is a striking repetition in his articles of turns of phrase in which he undisguisedly calls for the murder of all German soldiers without exception.³⁶¹ 'It will be five million . . . corpses that we will bury in our earth,' he observed on 2 December 1941. 'Now we are resolved to kill all Germans who have invaded our country,' he called out to the Red Army soldiers on 3 December 1941. 'We simply want to annihilate them. It has fallen to the lot of our people to carry out this humane mission. We are continuing the work of Pasteur, who discovered the serum against rabies. We are continuing the work of all the scientists who have discovered the means of destroying deadly microbes.' 'The Germans . . . must be driven into the earth. They must be destroyed one after the other,' he wrote on 22 December 1941. On 20 February 1942 it was: 'You've got to kill them—put them underground'; and on 13 March 1942: 'You must squeeze the Germans off the face of the the earth.' Yet some senior commands of the Red

Army in no way lagged behind Ehrenburg. Thus an order issued on 14 December 1941 by Army General Zhukov, GOC the Troops of the Western Front, and by Bulganin, member of the War Council of the Western Front and Deputy Chairman of the USSR Council of People's Commissars,³⁶² contained this passage: 'Not one Hitlerite bandit who invaded our country shall be allowed to get away alive . . . It is our sacred duty to take cruel revenge . . . and to wipe out all the German occupiers down to the last man.' On 1 January 1942 the War Council of the Leningrad Front³⁶³ addressed an appeal to the population in the German rear not to allow any enemy soldiers, referred to as 'Hitlerite dogs' and 'Fascist cannibals', to escape anywhere, 'except into the ground, into their graves'. In this 'merciless war of annihilation' any means was fair: 'rifle, grenade, axe, scythe, crowbar.' About the same time a leaflet of the Political Directorate of the North-west Front declared: 'Officers and soldiers in green greatcoats are not humans but wild beasts . . . Destroy German officers and soldiers as you would kill rabid dogs.'³⁶⁴

According to the findings of the German army high command, Stalin's appeal to the Red Army was universally 'understood and interpreted' in the sense that 'any member of the German Wehrmacht—whether fighting or wounded or taken prisoner—was to be killed'.³⁶⁵ It therefore represented the prelude to a new wave of murders whose victims during that period, as emerges from captured documents and from the interrogation of deserters and captured Red Army men, were the majority of German and German-allied prisoners of war.³⁶⁶ A few particularly shocking instances may be quoted here. Between 1 and 6 December 1941 a hundred German prisoners of war were murdered at Naro-Fominsk on orders from the commissar of '1 gmsd' (1st Motorized Guards Rifle Division) and several more by other units, such as 222nd Rifle Division.³⁶⁷ It has also been established that in January 1942 Brigade Commissar Vasilyev, the army commissar of Second Assault Army, issued an order for the shooting of prisoners of war.³⁶⁸ One direct result of Stalin's appeal was the murder of all German prisoners who fell into the hands

of the Soviet troops during the landing at Feodosiya at the end of December; this had been ordered by the political departments of various units, among them the commissar of IX Rifle Corps³⁶⁹—‘one of the worst atrocities of this terrible war’, in the words of Reginald (later Lord) Paget, the British defence counsel of Field Marshal von Manstein.³⁷⁰ Some 160 seriously wounded Germans left behind in the military hospitals of Feodosiya were seized by Soviet soldiers or Red Fleet sailors, thrown out of the windows, exposed to death by freezing through having water poured over them or by immersion in the sea, or killed by having their skulls smashed with blunt instruments, or brutally mutilated.

Such a degeneration of warfare was certainly not in the interests of the Red Army either; indeed it began seriously to worry the Soviet command authorities. Army General Zhukov, who on 14 December 1941 had come out entirely in favour of Stalin’s appeal, found himself compelled in the winter of 1941–2, jointly with War Council member Khokhlov, to address the following rather revealing order to ‘commanders and war council members’ of subordinate formations: ‘I declare that Comrade Stalin never mentioned the shooting of enemy soldiers once they have laid down their arms or have voluntarily come over to us.’ ‘The shooting of prisoners’ was to be specifically forbidden with immediate effect.³⁷¹ Stalin himself virtually countermanded his appeal of 6 November 1941 by stating, in Order No. 55 of 23 February 1942: ‘The Red Army takes German soldiers and officers prisoner when they surrender.’³⁷² As early as 2 December 1941 the staff of the Independent Coastal Army,³⁷³ in Order No. 0086, had, for military and political reasons, objected to the generally observed ‘rule’ of shooting prisoners of war without interrogation, instead of transferring them to the staffs. Similar orders are also known from other units. Thus Colonel Pankratov, the commander of 168th Cavalry Regiment of 41st Independent Cavalry Division, jointly with Senior Political Guide Kutuzov, complained on 28 December 1941³⁷⁴ that ‘captured German Fascists are not taken to the regimental staff but shot on the spot’. Major Kotik, the chief of staff of a Rifle Division (apparently the 65th), and its commissar, Battalion Commissar Kitsa, likewise criticized ‘do-it-yourself justice’ meted out to captured soldiers and officers, and, on behalf of the divisional commander, threatened the commander and commissar of 38th Rifle Regiment with severe punishment in the event of a repetition.³⁷⁵ Finally Major-General

Moskvin, the Sixty-second Army chief of staff, and Regimental Commissar Zaytsev, the war commissar of that army's staff, prohibited 'any shooting, of any number of prisoners whatsoever, on the battlefield'.³⁷⁶ In the event of infringement the relevant divisional commanders and other accessories were to be held 'seriously responsible'.

The Red Army commanders were well aware that inhuman methods of warfare as a rule only strengthened the enemy's determination to resist. Such documents as chanced to fall into German hands also show that, generally speaking, they were anxious to avoid the murder of prisoners of war and to ensure appropriate treatment for them. Unlike the NKVD troops, who had to carry out the annihilation orders of Stalin and the political leadership, and unlike the partisans who knew no scruples, the Red Army leaders appear only in exceptional cases to have been guilty of outright violations of international law. Yet their clear orders, both during the period here discussed and in the further course of the war, were, for whatever reasons, frequently disregarded. A striking illustration of this dates from the days of the battle of Stalingrad, when in February 1943 Soviet troops at Krasnoarmeyskoe and Grishino, at the behest of various authorities—it has been established that one of them was the political department of 14th Guards Armoured Brigade—shot or otherwise brutally murdered no fewer than 600 German, Italian, Romanian, and Hungarian prisoners of war and wounded, as well as civilian prisoners, including Red Cross nurses and female radio operators.³⁷⁷ It should also be borne in mind that atrocities such as those of Feodosiya and Krasnoarmeyskoe-Grishino were discovered only when—as happened rarely enough in the further course of the war—German troops happened to reconquer the scene of such massacres of prisoners.

13. THE RED ARMY'S GENERAL OFFENSIVE IN THE WINTER OF 1942

On the strength of the successes of December 1941 Stalin believed that the time had come to bring about the collapse of the entire German eastern front and to rout the main forces of the German army in the east by massive offensive operations from Lake Ladoga to the Black Sea. On 5 January 1942 he informed the members of the State Defence Committee, Supreme Command Headquarters, and the general staff of his intention to go over to the offensive simultaneously in all strategic directions, to encircle and annihilate the German Army Groups North and Centre, and to inflict a crushing defeat on Army Group South as well.³⁷⁸ Objections by Army General Zhukov, the GOC

Western Front, who argued in favour of transferring the available reserves—14 divisions and 7 brigades—to the Western Front, and of seeking a decision in that sector alone, rather than dissipating the forces, were rejected, even though Deputy People's Commissar Voznesenskiy supported the creation of such a point of main effort. Stalin, who had earlier consulted with Marshal Timoshenko and who, as usual, was supported by Marshal Shaposhnikov, chief of the general staff, as well as by Malenkov and Beriya, persisted in his decision.³⁷⁹ The Soviet command, therefore, was about to do what it had always accused its enemy of—pursue an adventurous and totally unrealistic operations plan. The underestimation of the German enemy reflected in that decision is the more striking as, according to data in the Soviet historical literature, the ratio of strength at that time was about equal, with only a slight superiority on the part of the Red Army. The armies of Germany and her allies, which, according to greatly exaggerated Soviet figures, on 1 January 1942 numbered 3,909,000 men, about 35,000 artillery pieces and mortars, and 1,500 tanks, were confronted by Soviet forces of allegedly only 4,199,000 men, 27,700 artillery pieces and mortars, and 1,784 tanks.³⁸⁰

The order for the attack of 7 January 1942 assigned to the troops of the Leningrad Front, the Volkhov Front, and the right wing of the North-west Front the task of routing the armies of the German Army Group North and lifting the siege of Leningrad. The formations of the left wing of the North-west Front, the Kalinin Front, the Western Front, and the Bryansk Front—which were to conduct the main strike at the centre—were to encircle and annihilate the bulk of Army Group Centre. The South-west and Southern Fronts, finally, were to rout Army Group South, while the Transcaucasus Front was to annihilate Eleventh Army and occupy the Crimea. A special directive from Headquarters, dated 10 January 1942, applied the lessons of past mistakes in offensive operations and demanded that front staffs in future create powerful assault groups for the purpose of bursting through the enemy's defences, that they employ armour and artillery at the points of main effort, and that they organize the co-operation of the different branches.³⁸¹

In view of the precarious situation of the city of Leningrad, Supreme Command Headquarters had fixed 7 January 1942 for the opening of the attack in a north-westerly direction, a date on which, in the opinion of Army General Meretskov—the GOC Volkhov Front, which was to strike the main blow—the troops would not yet be ready for attack. Although the three Soviet fronts on the northern wing had some slight superiority in men, artillery, and armour, the formations still lacked all kinds of personal weapons, transport, supply facilities, and other necessities. The troops, and above all the command staffs, were inadequately trained, and the Second Assault Army (until the end of December the Twenty-sixth Army) and Fifty-ninth Army, brought up for reinforcement, were not yet assembled in the deployment areas. The attack by

³⁷⁹ Zhukov, *Reminiscences*, 353.

³⁸⁰ *Istorija Velikoj Otechestvennoj vojny*, II, 317.

³⁸¹ *Direktivnoe pis'mo Stavki*, 10 Jan. 1942, *VIZ* (1974), No. 1, pp. 70–4.

Fourth and Fifty-second Armies, launched prematurely on 7 January 1942, ended—just as the front staff had predicted—in total failure. The attacking formations were soon thrown back to their jumping-off positions.³⁸² After a brief pause the two armies resumed their offensive on 13 January 1942; again it produced no results. On the other hand, Major-General Klykov's Second Assault Army, which likewise went over to the offensive, succeeded, in conjunction with the left wing of Major-General Galanin's Fifty-ninth Army, in breaking through the German defences on the Volkhov, albeit on a narrow strip east of Myasnoy Bor, and, in the course of January, in advancing to west of Lyuban. However, the planned encirclement of the German Eighteenth Army, or at least of its forces on the Volkhov, was not accomplished because the simultaneous pincer movement by Major-General Fedyuninskiy's Fifty-fourth Army of the Leningrad Front had got stuck at Podgostye.³⁸³ Even though, after the failure of the envelopment effort, Second Assault Army was now in an exceedingly exposed position, Supreme Command Headquarters clung to its original objective. On 28 February Headquarters issued orders to the Volkhov Front to create an assault force, to be further reinforced with armour, artillery, and air forces; in co-operation with Fifty-fourth Army of the Leningrad Front this was to force a breakthrough to Lyuban and encircle the enemy formations west of the Volkhov.³⁸⁴ Again the hoped-for success was not achieved, although Fifty-fourth Army managed to overcome the German defences at Kirishi and to work its way forward to within 30 kilometres of Lyuban. The reason for the failure of the encirclement operation was a gross underestimate of the enemy, who had been substantially reinforced in that sector, as well as shortcomings in the preparation and execution of the offensive, such as the lack of any co-ordination between the attacking armies and faulty employment of the air units. Suddenly, from the end of March 1942, Second Assault Army was in its turn threatened with encirclement. It was Supreme Command Headquarters, and by no means the new GOC, Lieutenant-General Vlasov,³⁸⁵ an experienced army commander who had proved his mettle at Kiev and Moscow, who had manoeuvred Second Assault Army into a situation which eventually ended in its annihilation.

In concert with the armies of the Volkhov Front, the troops of the right wing of the North-west Front under Lieutenant-General Kurochkin had gone over to the offensive on 7 January 1942, and those of the left wing on 9 January. The Soviet objectives in the sector south of Lake Ilmen were no less extensive than those in the neighbouring sector to the north, consisting as they did in the encirclement and annihilation of the entire forces of the German Sixteenth Army. Lieutenant-General Morozov's Eleventh Army had the task of penetrating deep into the German rear, via Staraya Russa in the direction of

Soltsy-Dno, and, in co-operation with elements of Fifty-second Army of the Volkhov Front, of routing the German grouping at Novgorod. General Berzarin's Thirty-fourth Army, originally earmarked only for pinning down the German forces at Demyansk, was now, under a modified plan, instructed to encircle and annihilate those forces,³⁸⁶ and subsequently, with the support of the right wing of Lieutenant-General Purkaev's Third Assault Army³⁸⁷ (until 25 December the Sixtieth Reserve Army), to fight its way through to Kholm. However, the development of the attack after 7 January 1942 did not entirely meet the exaggerated expectations of Supreme Command Headquarters. Because of some friction within its command, Eleventh Army was unable to meet even the minimum objective—demanded by Stalin in the form of an ultimatum—of taking the important transport junction of Staraya Russa by 11 January 1942. Thirty-fourth Army, which had fragmented its forces, initially also made but slight progress.

In view of the only marginal superiority of the Soviet troops, the North-west Front command tried to convince Supreme Command Headquarters that, instead of a deep thrust into the rear of Army Group North, the envisaged objective should be limited to the encirclement of the German forces at Demyansk. However, Stalin and Marshal Shaposhnikov would not hear of such a curtailment,³⁸⁸ though eventually they agreed to reinforce the North-west Front by transferring to it Lieutenant-General Kuznetsov's First Assault Army, as well as two Guards rifle corps from the Headquarters reserve. Throughout February the attacks on the flanks of the Demyansk grouping continued with undiminished violence; towards the end of the month they ended with Eleventh Army going over to the defence at Staraya Russa and on Lake Ilmen, with First Assault Army³⁸⁹ on the Kholynya river and Third Assault Army in the Kholm area doing likewise. As might have been predicted, no stunning success in a westerly direction had been achieved. Even so, Major-General Gryaznov's I Guards Rifle Corps, attacking east of the Lovat in a southerly direction, succeeded on 20 February in linking up at Zaluchye with elements of Third Assault Army attacking northwards and—by closing the inner ring—in encircling six German divisions on the Valday hills near Demyansk. Supreme Command Headquarters, hoping to achieve a conspicuous victory, ordered the speedy annihilation of the trapped forces before they had a chance to organize their defence.³⁹⁰ On the other hand, the attacks carried out on the orders of North-west Front command by elements of Thirty-fourth Army, I Guards Rifle Corps, and the right wing of Third Assault Army produced no results. More than that, in the spring of 1942 German relief forces succeeded at Ramushevo in opening up a narrow corridor to the trapped division, who thus escaped the fate of the Soviet Second Assault Army in a similar position.

³⁹⁰ Lisicyn, '1-ja Udarnaja nastupaet', 82 ff.

The offensive of the left wing of the North-west Front, the Kalinin Front, the Western Front, and the Bryansk Front, which began at the centre on 8 January 1942 and aimed at splitting and routing Army Group Centre, created a precarious situation for some of the German divisions but ultimately failed to attain its strategic objective. Formations of Lieutenant-General Purkaev's Third Assault Army (until then the Sixtieth Reserve Army) and of Lieutenant-General Yeremenko's Fourth Assault Army (until then Twenty-seventh Army), which at the beginning of the offensive still came under the North-west Front but from 22 January 1942, in order to simplify the chains of command, was placed under Colonel-General Konev's Kalinin Front, had been advancing rapidly in a south-westerly direction since 9 January 1942. While elements of Third Assault Army reached Kholm on 20 January and encircled the town, and on 2 February were already fighting at the approaches to Velikie Luki, Fourth Assault Army had taken Andreapol and Toropets and driven its spearheads in a new surge as far as the Usvyaty-Velizh-Demidov line; indeed, Major-General Tarasov's 249th Rifle Division even reached the area north-east of Vitebsk.³⁹¹ However, a further advance towards the important transport triangle Vitebsk-Smolensk-Orsha proved impossible because the forward movement of Third Assault Army had got stuck on the right wing and because Major-General Vostrukhov's Twenty-second Army of the Kalinin Front, operating on the left wing, was likewise unable to make any further progress once it had taken Olenino. Yeremenko's Fourth Assault Army, whose flanks were consequently exposed and whose attacking strength was exhausted, proved unable to exploit the success achieved at the boundary between Army Group North and Army Group Centre and was increasingly being forced on to the defensive.³⁹²

Rapid progress was initially made also by the Kalinin Front, which had been charged by Stalin's directive of 7 January 1942 first with detaching a combat group for the capture of Rzhev and then striking past that city towards the south, in the direction of Sychevka and Vyazma, cutting the vital Gzhatsk-Smolensk supply-line and, in co-operation with troops of the Western Front, 'taking prisoner or annihilating' the entire German grouping in the Mozhaysk-Gzhatsk area. Lieutenant-General Maslennikov's Thirty-ninth Army, which had opened the attack on 8 January, reached Sychevka almost on schedule on 15 January 1942, with support from Major-General Shvetsov's Twenty-ninth Army.³⁹³ Colonel Sokolov's XI Cavalry Corps, brought forward to deepen the penetration, succeeded in pushing further to the south and, on 26 January 1942, in cutting the Gzhatsk-Smolensk railway line west of Vyazma. The situation at the beginning of February 1942 was such that the assault formations of the Kalinin Front in co-operation with Twenty-second Army operating at Belyy had temporarily encircled seven German divisions at Olenino and driven a deep wedge into the rear of Ninth Army and Fourth

³⁹¹ Yeremenko, 'Nastuplenie'. ³⁹² Id., *Na zapadnom napravlenii*, 180.

³⁹³ Žukov, 'Bitva pod Moskvoy', 2, 48.

Armoured Army, but, owing to ceaseless and eventually successful German counter-attacks at the penetration point near Rzhev, found its own rearward lines under threat.

While the centre of the Western Front, in co-operation with the troops of the Kalinin Front, was intended to encircle the German forces in the wider neighbourhood of Gzhatsk, the armies of the right and left wings of the Western Front were to break up the enemy by simultaneous local attacks and thereby ensure flank cover for the main forces. The offensive thrusts on the right wing of the Western Front were opened on 10 January 1942³⁹⁴ by Lieutenant-General Vlasov's Twentieth Army, Lieutenant-General Kuznetsov's First Assault Army, and Major-General Pliev's II Guards Cavalry Corps with a penetration of the German defences at Volokolamsk. Once Lieutenant-General Rokossovskiy's Sixteenth Army and Lieutenant-General Govorov's Fifth Army had also gone over to the attack, these armies were soon rapidly advancing beyond the Shakhovka-Mozhaysk line. Their attacking strength was broken when First Assault Army and the command staff of Sixteenth Army were withdrawn on orders from Supreme Command Headquarters and inserted instead in the sector of the North-west Front and on the left wing.³⁹⁵ Stalin, grossly underrating the potential of the enemy, rejected all Zhukov's counter-proposals,³⁹⁶ with the result that it was no longer possible to approach Gzhatsk. After some initial success, the attack of Lieutenant-General Golikov's Tenth Army had also got bogged down on the left wing of the Western Front. Tenth Army, which had advanced its front to Bakhmutovo-Kirov-Zhizdra and whose command proved incapable of creating a point of main effort,³⁹⁷ was seized at its flanks from the south and was unable to prevent the Germans from once more relieving the encircled town of Sukhinichi. Not until the HQ of Rokossovskiy's Sixteenth Army had assumed command in this sector and Lieutenant-General Popov's Sixty-first Army of the Bryansk Front was subordinated to the Western Front was it possible to stabilize the situation at Sukhinichi to some degree.³⁹⁸ Golikov was relieved of his command.

The main thrust at the centre of the Western Front was characterized by a combined attack by Lieutenant-General Boldin's Fiftieth Army and Major-General Belov's I Guards Cavalry Corps; these advanced past Yukhnov in the south, while Major-General Golubev's Forty-third Army and Lieutenant-General Zakharkin's Forty-ninth Army bypassed that area in the north. Western Front command shortly expected to be able to smash the German forces at Yukhnov and to link up its armies with the assault formations of the Kalinin Front near Vyazma. Because of the stubborn German resistance, which completely tied down the troops of Fiftieth, Forty-ninth, and Forty-third Armies at Yukhnov, on 20 January 1942 Zhukov was induced to change the direction of thrust of Thirty-third Army (originally aimed at Gzhatsk) and to assign to

it the capture of Vyazma in conjunction with I Guards Cavalry Corps, which was wheeling round Yukhnov. However, the grand encirclement operation planned and called for by Supreme Command Headquarters ended in failure. Although XI Cavalry Corps of the Kalinin Front, as well as strong forces of the Western Front—I Guards Cavalry Corps, supported by airborne units hastily dropped at Znamenka,³⁹⁹ and Thirty-third Army—were approaching Vyazma from various directions, neither the capture of that important linchpin nor the link-up between the two fronts was accomplished. Instead, the advanced Soviet force for its part found itself in difficulties after it had been cut off from its rear communications by a German counter-thrust on both sides of Yukhnov on 2 February and when, simultaneously, Twenty-ninth Army of the Kalinin Front was encircled and both XI Cavalry Corps, and Thirty-ninth Army were more or less separated from the rest of the front. The situation of the exhausted Soviet troops was beginning to be threatening. The fact that Supreme Command Headquarters continued to cling stubbornly to its encirclement and annihilation plans reveals a complete misjudgement of the situation as well as of the real ratio of strength. On 1 February 1942 the Western Direction Command was reconstituted. Its GOC, Army General Zhukov, who simultaneously retained command of the Western Front, was instructed to take vigorous measures 'to solve as speedily as possible the main strategic task—the final routing of Army Group Centre'.⁴⁰⁰ On 16 February 1942, disregarding the increasingly complicated situation, Headquarters repeated its demand in a directive. The Kalinin Front was now promised the transfer of seven rifle divisions, and the Western Front of three rifle divisions as well as reinforcements of aircraft and armour from the Headquarters reserve—but these arrived too late. Simultaneously, the Western Front was instructed, in conjunction with the Kalinin Front, to annihilate the German forces in the Rzhev-Vyazma-Yukhnov area—i.e. the German Ninth Army, Fourth Armoured Army, and substantial elements of Fourth Army—and to advance to the Olenino-Dnieper-Yelnaya-Desna line by 5 March. The left wing of the Western Front had to smash the units of Fourth Army and Second Armoured Army east of Bryansk and to take the city itself. Zhukov, though well aware of the gradually waning strength of his troops, issued appropriate orders⁴⁰¹ on the basis of that directive, and thereby contributed to a hopeless dissipation of the Soviet offensive effort.

The final result of the Kalinin Front's offensive for the annihilation of the enemy forces at Olenino was that the last remnants of the encircled Twenty-ninth Army only just managed to fight their way through to Thirty-ninth Army, which in turn was about to be encircled. Although Forty-third, Forty-ninth, and Fiftieth Armies, after heavy fighting at the beginning of March 1942, succeeded in cutting off the Yukhnov salient and taking the town itself, they failed in their attempt to link up with the troops of Thirty-third Army, I

⁴⁰¹ Zhukov, 'Kontrnastuplenie', 83 ff.

Guards Cavalry Corps, and the airborne units (which had meanwhile been reinforced) trapped south-west of Vyazma. Supreme Command Headquarters, however, was not impressed by the failures of the increasingly weakening Soviet armies; Stalin remained convinced that success was bound to come, if not today then surely tomorrow. As late as 20 March 1942 he categorically demanded that the German armies fighting in the Olenino-Rzhev-Vyazma area be annihilated and the line Belyi-Dorogobuzh-Yelnya-south-west of Bryansk reached by 20 April.⁴⁰² Against their own better judgement, Zhukov and the Western Front HQ passed on these demands to the armies under their command and called for ceaseless attacks, which, as was later admitted, 'only cost pointless casualties'. This attitude of the Soviet leadership, however, is not mentioned in more recent publications.⁴⁰³ Not until 20 April 1942 were the armies of the Kalinin Front and the Western Front authorized to suspend the pointless attacks and to go over to the defensive in the regained sectors.

Whereas the unrealistic extent of the Soviet leadership's expectations was, up to a point, concealed in the northern and central sectors of the front by the considerable gain of ground actually achieved there, the disproportion between wishful thinking and actual capacity was more strikingly revealed in the southern sector, where the front line was shifted to the west only over a relatively narrow strip. Supreme Command Headquarters and the general staff had instructed the GOC South-western Direction, Marshal of the Soviet Union Timoshenko—whose own plans were even more ambitious—to tear open the front of Army Group South by a vigorous blow between Balakleya and Artemovsk, in order subsequently to envelop the German forces north and south of that penetration with two massive prongs and crush them.⁴⁰⁴ Next, the left wing of Lieutenant-General Kostenko's South-west Front with Major-General Maslov's Thirty-eighth Army, Major-General Gorodnyanskiy's Sixth Army, and Major-General Bychkovskiy's VI Cavalry Corps (after 12 February under Major-General Moskalenko) was to move via Krasnograd-Bogodukhov and wheel around Kharkov in a wide arc, enveloping substantial elements of the German Sixth Army. The right wing of Lieutenant-General Malinovskiy's Southern Front with Lieutenant-General Ryabyshev's Fifty-seventh Army, Lieutenant-General Lopatin's Thirty-seventh Army, and the newly brought-up I and V Cavalry Corps (the latter under Major-General Grechko), exploiting the expected success of Major-General Kharitonov's newly transferred Ninth Army and of II Cavalry Corps, would attack via Pavlograd in the direction of the Dnieper, gain the crossings at Dnepropetrovsk and Zaporozhye, and reach the Sea of Azov by way of Bolshoy Tokmak, in order to push the German Seventeenth Army and First Armoured Army to the coast.⁴⁰⁵ These far-ranging envelopment movements, which were launched despite the fact that, even according to Soviet estimates,

⁴⁰⁵ Ibid. 135.

the strength of the German Army Group South greatly exceeded that of the Soviet South-western Direction not only in men but also in artillery and armour, were doomed to failure from the start and did not proceed beyond some initial successes.

The attack of the left wing of the South-west Front and the right wing of the Southern Front, which opened on 18 January 1942, achieved major penetrations of the German defences only along the attacking sector of the Sixth and Fifty-seventh Armies. Balakleya and Slavyansk on both sides of the penetration were held by the Germans, and Thirty-eighth and Thirty-seventh Armies made only insignificant progress. Time and again the Soviet armies which had broken through to the west were compelled to hive off substantial forces to fight German nests of resistance and to deal with threats to their flanks. Soon they lost their offensive momentum. The cavalry corps, held back for the exploitation of the penetration, and especially Ninth Army, had to be used increasingly for flank cover, with the result that the offensive—after a slight widening of the penetration area and the capture of Lozovaya—ground to a halt. In the final analysis the Soviet Sixth, Ninth, and Fifty-seventh Armies in the 'Barvenkovo salient' west of Izyum were in a threatened position similar to that of the Second Assault Army south of Lyuban, Thirty-ninth Army and XI Cavalry Corps east of Belyy, and Thirty-third Army and I Guards Cavalry Corps at Dorogobuzh south-west of Vyazma. All these Soviet forces—now encircled or half-enveloped because of Headquarters' exaggerated offensive plans—were annihilated by the Germans in the spring of 1942.

The failure on the southern sector emerges even more clearly when one considers that neither the right wing of the South-west Front with the Bryansk Front on its northern side, nor the (Trans)-Caucasus Front, came anywhere near attaining their far-reaching objectives. The task of the Bryansk Front (Third and Thirteenth Armies) under the command of Colonel-General Cherevichenko and of the right wing of the South-west Front (Fortieth and Twenty-first Armies) had been the occupation, by means of two converging thrusts from a northerly and a southerly direction, of the important areas around Orel and Kursk—an enterprise which became bogged down from the start. The Caucasus Front under the command of Lieutenant-General Kozlov, according to an operations plan confirmed by Supreme Command Headquarters on 2 January, was to attack from the Kerch bridgehead in a north-westerly direction towards Perekop, in order to cut off the Germans' retreat from the Crimea. By a simultaneous attack on Simferopol it was, in conjunction with a landing operation of the Black Sea Fleet, to annihilate 'the entire' Eleventh Army and to occupy the Crimea. However, as a result of 'a series of gross mistakes' by the front's staff¹⁰⁶ the Germans pre-empted that offensive and on 15 January 1942 recaptured Feodosiya. Although the Russians' jumping-off position had substantially deteriorated as a result, Head-

¹⁰⁶ Semenov, *Kratkij očerok*, 174.

quarters on 28 January 1942 renewed its demands and ordered Kozlov's newly established Crimean Front to execute an attack in the direction of Karasubazar with a view to striking, in conjunction with the Black Sea Fleet, at the rear of the German forces besieging Sevastopol. This offensive, launched belatedly on 27 February 1942 and repeated several times, likewise remained unsuccessful.

With its winter offensive of 1942 the Soviet leadership had set itself the ambitious objective of routing the entire German army in the east. The operations plans of Supreme Command Headquarters and of the general staff lacked nothing in consistency or boldness; their weakness was simply that they were based on fundamentally incorrect assumptions regarding the relative strength of the two sides. An overrating of its own potential and an underestimate of the strength and capabilities of the Germans induced Headquarters to launch its offensive simultaneously in all directions—a strategy to which the Soviet leadership clung with remarkable obduracy. The result was a hopeless dissipation of the strategic reserves of Headquarters.⁴⁰⁷ Of nine armies which, in the course of the winter battle, were for the most part newly raised and moved into action, two went to the Volkhov Front, one to the North-west Front, one to the Kalinin Front, three to the Western Front, and one each to the Bryansk and South-west Fronts. If one considers the precarious situation in which the German Army Group Centre found itself as a result of the attacks, one realizes what opportunities the Soviet leadership had thrown away by its failure to concentrate on specific points of main effort. Even if one bears in mind the many mistakes made by the Soviet side, and generally the 'still maladroit Soviet command' even at the level of fronts, armies, and subordinate formations,⁴⁰⁸ the fact remains that genuine chances had been missed. What happened was that the mistakes of Supreme Command Headquarters were copied downward, by unit commanders simultaneously pursuing several objectives, failing to create points of main efforts at the tactical level, or yielding to their inclination to split up their armour and use it in support of infantry. From the beginning, Army General Zhukov had pleaded for the Headquarters reserves to be employed solely on the Western Front, so that a decision could be brought about in the Moscow sector. Stalin and the general staff headed by the ailing Marshal of the Soviet Union Shaposhnikov had dismissed that suggestion. Because of their lack of realism in the field of 'strategic planning and utilization of reserves' they bear the responsibility for the fact that the winter offensive of 1942, while achieving considerable success, failed to produce a decisive triumph. The strategic plans at any rate had failed.

14. THE ESTABLISHMENT OF THE ANTI-HITLER COALITION

For approximately two years the Soviet Union, though of course only from practical considerations, had been a valuable helper in the war effort of the

⁴⁰⁷ *Istorija Velikoj Otečestvennoj vojny*, II, 359.

⁴⁰⁸ Svetlišin, 'Ot soldata do maršala', 36.

German Reich. The German attack on 22 June 1941 cleared the Soviet Union of the odium of complicity with Hitler. This event, in which the Soviet Union itself had no hand and which was seen as 'a real godsend' by Joseph E. Davies,⁴⁰⁹ adviser of the President of the United States and former US Ambassador in Moscow, from the outset elevated the Soviet Union to the rank of an equal and valuable ally of Britain, the British Empire, and (though then still in the background) the United States of America. For the sake of the struggle against what was now the common enemy, the two sides instantly agreed to set aside existing differences and conflicts between them and emphasize only that which united them in the new phase of the war. In a spontaneous speech on 22 June 1941 Churchill declared that no one had been a 'more unconditional opponent of Communism' than he himself and that he would not retract any of his words on that subject.⁴¹⁰ Yet all that paled against the spectacle now unrolling in eastern Europe. The prime minister emphasized that Britain would stand by the side of the Soviet Union in its struggle against Germany and lend it all possible assistance. Now that it became vital to support the new ally, the matters that Britain until then had taken exception to were regarded as insignificant—'stabbing Poland in the back', a matter about which there had been 'moaning . . . in the press, the radio, in parliament, and from the pulpits', likewise the Soviet attack on Finland, which had triggered off an outright 'anti-Soviet storm' in England, or the annexation of the Baltic States, which the foreign secretary, Lord Halifax, had described to Soviet Ambassador Mayskiy as 'aggression with all the consequences arising therefrom'.⁴¹¹ And conversely, where the Soviet Union was concerned, there was no longer any talk of Britain being responsible for the beginning, the continuation, or the extension of the war, or of the fact that Moscow had called a war for the elimination of National Socialism a piece of 'criminal stupidity', or that it had accused the United States of fanning the flames of war in Europe under the 'hypocritical flag of neutrality' and of having become the supplier of arms for Britain and France.⁴¹²

⁴⁰⁹ Davies, *Mission to Moscow*, 311.

⁴¹⁰ What Churchill thought of his new ally emerges very strikingly from his book *The Aftermath* (vol. v of *The World Crisis*; London, 1929). In it, in explanation of his own attitude, he quotes a statistical study by Prof. Sarolea, according to which the Bolshevik 'dictators' by 1924 alone had murdered the following persons: '28 bishops, 1,219 priests, 6,000 professors and teachers, 9,000 doctors, 12,950 landowners, 54,000 officers, 70,000 policemen, 193,290 workmen, 260,000 soldiers, 355,250 intellectuals and professional men, and 815,000 peasants.' 'These figures', Churchill added, 'are endorsed by Mr. Hearnshaw, of Kings College, London, in his brilliant introduction to "A survey of Socialism". They do not, of course, include the vast abridgements of the Russian population which followed from famine.' As Churchill observes, 'in the cutting off of the lives of men and women no Asiatic conqueror, not Tamerlane, not Jenghiz Khan can match with [Lenin]', whom he also called a 'plague bacillus'. For Churchill, 'the frontiers of Asia and the conditions of the Dark Ages had advanced from the Urals to the Pripet marshes'; Russia was 'frozen in an indefinite winter of sub-human doctrine and superhuman tyranny'. As early as 1919 he had spoken of 'fighting against the foul baboonery of Bolshevism'. 'A dose of Communism', he says elsewhere, 'induces a desire in any population to welcome any other form—even the harshest—of civilized authority': Churchill, *Aftermath*, 74–5, 102, 163, 272, 276.

⁴¹¹ Maitski, *Memoiren*, 531–2, 622.

⁴¹² Molotov to the Supreme Soviet, 1 Aug. 1940, according to *Stalin und Hitler*, No. 296; Order

Measures for a co-ordination of efforts in an anti-Hitler coalition were taken soon after the beginning of the German-Soviet war. Yet regardless of its readiness to form an anti-Hitlerite coalition, the Soviet government never doubted that in this war Britain and the United States were concerned solely with the preservation and extension of their rule over 'colonies and semi-colonies' and with the elimination of their 'most dangerous competitors', Germany, Italy, and Japan.⁴¹³ It was generally accepted in Moscow that the Anglo-American powers were supporting the USSR only in order to place upon it the main burden of the struggle, in order thereby to weaken it so that in the end they might throw their own unreduced weight into the scales. This explains the Soviet Union's ever wakeful mistrust of its capitalist allies as well as Stalin's demand, first voiced on 18 July 1941 and repeated continually and with increasing urgency, that they should open a second front in France or Norway with a view to relieving the Soviet Union.⁴¹⁴ Although Britain rejected this demand firmly, and under ever new pretexts,⁴¹⁵ a first British-Soviet agreement was signed in Moscow on 12 July 1941 regarding mutual assistance and the obligation not to conclude an armistice or a peace treaty with Germany except by mutual consent.⁴¹⁶ The assistance provided for in the agreement could, in the prevailing circumstances, consist on the British side only of deliveries of commodities needed by the Soviet Union. As, however, both British and American experts—no different from their German colleagues—had only slight confidence in the USSR's power of resistance, and therefore expected the war to last no more than a few weeks, Britain and the United States initially displayed perceptible reserve in this respect as well. Only after Harry Hopkins, sent to Moscow as the American President's personal adviser gained a more positive impression of the Soviet Union's defence potential were steps taken to turn the offers of assistance into reality.⁴¹⁷

On 2 August 1941, immediately after Hopkins's return, the United States government, in spite of its formal neutrality, described the Soviet Union's military resistance as being in the interest of America's national defence and assured the Soviet government of all practicable economic support.⁴¹⁸ Deliveries of strategically important commodities and war material to the Soviet Union, at first slow to get into their stride, were based on an exchange of notes between Sumner Welles, the acting American Secretary of State, and Soviet Ambassador Umanskiy; this in turn was based on trade agreements concluded with Britain on 16 August 1941 and on an extended agreement signed on 1

October 1941 in Moscow by representatives of Britain, the United States, and the Soviet Union. Under it, Britain and the United States, extending the lend-lease agreement of 6 September and 7 November to the Soviet Union, undertook to supply each month, from October 1941 to June 1942, 400 aircraft (100 bombers and 300 fighters), 500 tanks, a further 5,250 fighting vehicles, 10,000 trucks, 152 anti-aircraft guns, 1,256 anti-tank guns, and vast quantities of vital non-ferrous metals and other valuable commodities; as for foodstuffs, they would supply a total of 1,800,000 t. of wheat and 620,000 t. of sugar.⁴¹⁹ Until the beginning of 1942, however, the amounts actually shipped fell considerably short of the undertakings. Thus, during the months from October to December 1941 the two powers delivered only 750 aircraft, 501 tanks, and 8 anti-aircraft guns.⁴²⁰ Moreover, the war material supplied was inferior in quality and was by no means appreciated by the men of the Red Army. Thus the British Hurricane fighters were crudely described by Stalin as 'rubbish'.⁴²¹ The tanks likewise did not even reach the combat performance of the older Soviet models. However, the slow start of Anglo-American material aid should not be allowed to obscure the fact that in the course of the war it eventually reached colossal proportions. Litvinov, the Soviet ambassador to the United States, by 1943 referred to the decisive effect of the deliveries on the Soviet Union's power of resistance.⁴²² This, however, applied not primarily to weapons, which Soviet industry was itself producing at a growing rate and, for the most part, of better quality, but rather to transport equipment indispensable to modern warfare. In the course of the war the USSR received 427,284 trucks, 1,966 railway engines, and 10,000 items of rolling-stock. Probably of even greater importance were the deliveries of foodstuffs, which assumed enormous scale, such as 4.5 million t. of tinned meat—sufficient to provide more than half a pound a day for every single Red Army man. Without American supplies of all kinds of food a large proportion of the Soviet population, following the loss of the black-earth regions, would have been doomed to certain starvation.⁴²³

The difficulties of assembling sufficient shipping space for the long and dangerous sea routes to Archangel, Murmansk, and Vladivostok induced the Soviet government in July 1941 to propose to the British government the establishment of direct transit through Iranian territory.⁴²⁴ The two powers began to apply massive pressure—the 'strongest possible'—on the Iranian government. On 25 August 1941, ten days after the signing of the Atlantic Charter, which condemned any violation of the sovereign rights of nations or aggressive actions, Soviet and British troops invaded Persia under the pretext of having to suppress the alleged activity by German agents, and occupied the country up to an agreed north-south demarcation-line. The Iranian army had,

at a few points, offered resistance to the two invaders, but that was halted after a few days. That this rape of a neutral country⁴²⁵ was simply the liquidation of a 'deployment area of Fascist Germany against the Soviet Union'⁴²⁶ had been very clearly stated by Churchill as early as 30 August 1941. 'Our objective in invading Persia', he wrote to Stalin, 'was not so much the protection of the oil wells as the establishment of a further line of communication to you, one that cannot be cut.'⁴²⁷ An agreement was forced upon the Iranian government, under which it had to make all its resources, especially oil, available to the Allies, and not only to tolerate but to promote the transit of military material across its territory by road, rail, or air.

As part of the creation of a coalition of states fighting against Germany, the Soviet government found itself compelled to revoke certain steps which for the sake of its partnership with Hitler it had taken in the past. It had to resume diplomatic relations with the governments of German-occupied countries, which, in the Soviet interpretation, had thereby lost their sovereignty. On 18 July 1941 it had no difficulty in recognizing the Czechoslovak government-in-exile in London or in signing an agreement on mutual aid and the establishment of Czechoslovak military units on Soviet territory. Nor did the resumption of diplomatic relations with the exile governments, all of them in London, of Norway, Belgium, Greece, and Yugoslavia in the summer of 1941 raise any particular problems, even though, in the case of Yugoslavia, the Soviet government by November 1941 refused to subordinate Josip Broz-Tito's Communist partisans, whom it supported—the future National Liberation Movement—to War Minister Draža Mihajlović of the Royal Yugoslav government-in-exile, which it had recognized. The Soviet government, which until 22 June 1941 had maintained diplomatic relations with the French government in Vichy, on 27 September 1941 recognized the 'Free France National Committee' under Brigade-General Charles de Gaulle as representing 'fighting France'. Exceedingly complicated, on the other hand, were the negotiations with the Polish exile government of Premier Władysław Sikorski, who naturally enough demanded restitution of the losses suffered as a result of the Soviet Union's aggression and, above all, recognition of the integrity of the Polish republic within the frontiers of the peace of Riga, frontiers originally delineated in free negotiation with the Soviet state and recognized by the Conference of Ambassadors of the Entente and by the United States.⁴²⁸ As the Soviet government refused to enter into discussion on these points, the matter was, under British pressure, officially passed over in silence.⁴²⁹ Premier

Sikorski, however, immediately made it clear that there must not even be a 'suggestion that the 1939 frontiers of the Polish state could ever be in question' or 'that Poland resigned anything'.⁴³⁰ The Polish-Soviet agreement concluded, with that reservation, on 30 July 1941 concerning the annulment of the Soviet-German treaties of 1939 and the resumption of diplomatic relations, as well as the military agreement of 14 August 1941 on the establishment of a Polish army on the territory of the USSR⁴³¹ only thinly concealed those differences of opinion. The Soviet Union now agreed to declare an 'amnesty' for the Polish prisoners of war in Soviet captivity and for Polish prisoners and deportees. As, however, disregarding Polish protests, it had forced Soviet citizenship upon the entire population of the annexed eastern Polish provinces,⁴³² it refused to recognize the Polish government's authority over millions of Polish citizens. The release of prisoners of war, detainees, and deportees also progressed unsatisfactorily. Lieutenant-General Anders, commander-in-chief of the Polish army on USSR territory and himself recently released from a Soviet prison, while setting up his army found that the 8,000 officers and 7,000 NCOs in Soviet prison camps, with whom communication had existed until the spring of 1940, had vanished without trace. Efforts by the Polish government to obtain information on the whereabouts of these military personnel—approximately fifty official enquiries were addressed to the Soviet government—were all unsuccessful. On 3 December 1941 in the Kremlin Premier Sikorski, in the presence of Ambassador Kot and General Anders, made this observation to Stalin concerning the missing men:⁴³³ 'It has been proven that not one of them is [in Poland], nor in any of our prisoner-of-war camps in Germany. These people are here. Not one of them has returned.' Stalin replied: 'That is impossible. They have escaped.' To General Anders's question 'Where, then, could they escape?' Stalin replied: 'Well, to Manchuria.' For nearly two years the Soviet government emphatically denied any knowledge of the vanished military personnel. But on 15 April 1943,⁴³⁴ two days after the Germans had reported the discovery of the mass graves of Katyn, it announced that the former Polish prisoners of war, engaged on construction work west of Smolensk in the summer of 1941, had fallen into the hands of the 'German Fascist hangmen'. When the Polish government decided to demand an investigation of the affair by the International Red Cross,⁴³⁵ the Soviet government broke off relations with the Polish government on the pretext that it was in secret communication with 'Hitler's government', that it was trying to please

'Hitler's tyranny', and that it had joined a Fascist campaign of defamation of the USSR.⁴³⁶

The general wartime alliance concluded between Britain and the Soviet Union on 12 July 1941 and between the United States and the Soviet Union on 2 August 1941 was given a kind of ideological buttressing on 14 August 1941, when Churchill and Roosevelt proclaimed their war aims in what has become known as the Atlantic Charter.⁴³⁷ A conference held in London on 24 September 1941 by representatives of Britain, the United States, the Soviet Union, and the governments-in-exile of Belgium, Greece, Yugoslavia, Luxemburg, the Netherlands, Norway, Poland, Czechoslovakia, and the Free France National Committee endorsed the principles of the Atlantic Declaration as the basis of the anti-Hitler coalition; however, the mere fact that the Soviet ambassador Mayskiy felt it necessary to make a supplementary declaration shows that the façade of unity was concealing a diversity of goals. Britain and the United States of America—apart from an extension of trade represented by the principle of the freedom of the high seas—were basically concerned with the restoration of the *status quo ante bellum* in Europe. The necessary prerequisite, the liquidation of National Socialism, was a demand which—contrary to its earlier attitude—the Soviet government now not only regarded as possible but as indispensable, placing it at the top of its own list of war aims. The germ of serious differences of opinion, however, was concealed in the simultaneously proclaimed principle that Britain and the United States would not recognize, or even tolerate, any territorial or other aggrandizements which 'were not in accord with the freely expressed wishes of the people concerned'. All nations 'which had been violently robbed of them' were to have their 'sovereign rights and self-administration returned to them'; and all nations were to be entitled 'themselves to choose the form of government under which they wished to live'. Although the official document and various commentaries, such as Churchill's in the House of Commons, only referred to aggression by the Axis powers, mainly to 'National Socialist tyranny', the principles of the Atlantic Charter might readily be invoked also for the acts of aggression and annexation carried out by the Soviet Union during its partnership with Hitler. The Soviet government, having in its supplementary declaration likewise proclaimed the principle of self-determination of nations, of the right to political independence and territorial integrity, found

⁴³⁶ Ibid., No. 313, p. 533. See the strange justification in Stečević, 'Sovetsko-pol'skie dogovory', 384. The success of that manoeuvre was observed even in Western countries, e.g. when W. Brandt, as late as 1945, commenting on 'Katyn', used the circumlocution 'that among the Polish troops and groups abroad Fascist elements were evidently able to cause mischief': Brandt, *Der Zweite Weltkrieg*, 42. Attempts to blame the Soviet-Polish rupture in April 1943 on manipulations by 'pro-Fascist-minded' members of the Polish government, and not on the mass shootings of Polish officers and NCOs 'by NKVD agencies of the USSR', were resumed after the declaration of martial law in Poland in 1982 under the heading 'Against bourgeois falsifiers of history': see Meritorious Scholar of the RSFSR, Prof. Dr of Historical Sciences Maj.-Gen. Monin, 'K istorii "Katynskogo dela"'.
⁴³⁷ Gwyer, *Grand Strategy*, iii, 118 ff.

itself in a very vulnerable position when it asserted that the incorporation of the eastern Polish and Finnish regions, of the Baltic republics, of the Bukovina, and of Bessarabia had been based on 'the freely expressed will of the people'. After all, everyone knew what so-called plebiscites meant under the stage management of the NKVD.⁴³¹ On the other hand, however, the Soviet government had a very convincing argument on its side. It could easily blunt the point of any Western insinuations by reminding them that 'colonial possessions' had been explicitly exempted from the provisions of the Atlantic Charter; thus Britain's title 'to her rule in the colonies of the Empire' was not affected and could not be called in question.⁴³²

It had been clear ever since the Soviet-Polish negotiations in July 1941 that the foremost obstacle to a consolidation of the anti-Hitlerite coalition would be the Soviet conquests since 1939. Britain had found itself compelled on 30 July 1941 to give an official assurance to the Polish exile government⁴⁴⁰ 'that His Majesty's Government do not recognize any territorial changes which have been effected in Poland since 1939'. Putting its faith in Britain, Poland concluded the agreement with the Soviet Union without any explicit recognition of Poland's pre-war frontiers. The British government initially also showed a firm attitude with regard to the Soviet Union's territorial acquisitions in Finland, Romania, and the Baltic. But when Eden, the British foreign secretary, went to Moscow in the second half of December, the envisaged signing of an extended treaty of alliance and of a treaty regulating postwar conditions suffered shipwreck because of Eden's refusal of the Soviet demand that the frontiers existing at the time of the German attack be recognized.⁴⁴¹ Britain was compelled to take that attitude, if only out of consideration for the United States, whose administration adopted a 'fiercely rejecting stand' in the matter of annexations and which would have regarded acceptance of the Soviet demand as a violation of the principles of the Atlantic Charter. But Churchill too voiced very similar sentiments. 'Stalin's demands about Finland, the Baltic states, and Romania', he wrote to the Lord Privy Seal on 20 December 1941, 'are directly contrary to the first, second, and third articles of the Atlantic Charter, to which Stalin has subscribed . . . The mere desire to have an agreement . . . should never lead us into making wrongful promises.'⁴⁴² The British government was careful formally to maintain its point of view during the subsequent period as well—which did not, however, prevent it from quietly coming to an arrangement with the Soviet Union at the expense of Poland and other affected countries.⁴⁴³

The beginning of such a policy can be traced back to September 1939, when the British government formally fulfilled its obligations as an ally of Poland but

in fact left that country to its fate.⁴⁴⁴ Britain and France, at any rate, then replied to the German attack on Poland by declaring war on Germany. Accordingly, the French foreign ministry on 7 September 1939 informed the United States ambassador in Paris, William C. Bullitt, that 'France and Britain would consider an attack of the Soviet Union on Poland an act of war against France and Britain.'⁴⁴⁵ When, however, an open and unprovoked violation of the non-aggression treaty had in fact been committed by Russia and when the Polish government 'solemnly' protested⁴⁴⁶ 'against the unilateral violation of the Non-Aggression Pact by Russia and against the invasion of Polish territory' by Soviet troops, Britain contented herself with a general declaration and a paper protest.⁴⁴⁷ The British government was able to point out that the stipulations of the Anglo-Polish mutual-aid agreement of 25 August 1939 were, according to the attached secret protocol, to come into effect only in the event of an attack by Germany but not by the Soviet Union. In the Polish view, however, Britain was under an obligation, in the event of a Soviet attack on Poland, to consult with the Polish government on measures to be taken jointly and, in future treaties of alliance, not to tolerate any violation of Poland's sovereignty or territorial inviolability.⁴⁴⁸ Not only was the stipulation on consultation disregarded, but, as the future was to show, also the undertaking to defend the sovereignty and territorial integrity of Poland. In 1940, when the British government was anxious to prise the Soviet Union away from Germany and to loosen Soviet-German relations, it proposed—in a curious interpretation of its obligations *vis-à-vis* Poland—to recognize *de facto* 'the sovereignty of the USSR in the Baltic, in Bessarabia, in the western Ukraine, and in western Belorussia', in other words, the annexation of more than half of Poland's state territory.⁴⁴⁹ On 14 December 1940 Poland, albeit in amicable terms, had objected to any measure by the British government that could be interpreted as recognition or approval of the annexation of Polish territory.⁴⁵⁰ The degree of importance attached by the British government to what was to Poland a vital frontier issue also emerged on 30 July 1941, the day of the signing of the Polish-Soviet agreement: while the British government officially declared that it would not recognize any territorial changes in Poland since August 1939, Foreign Secretary Eden immediately made it clear in the Commons that this did 'not involve any guarantee of frontiers by His Majesty's Government'.⁴⁵¹ As late as January 1942, when the influential British

ambassador in Moscow, Sir Stafford Cripps, 'out of profound conviction' supported recognition of the Soviet conquests in eastern Europe.⁴⁵² Premier Churchill grandly declared any surrender of the Baltic nations to be incompatible with Britain's honour. 'The 1941 frontiers of Russia . . . were acquired by acts of aggression in shameful collusion with Hitler,' he wrote to Foreign Secretary Eden on 8 January 1942.⁴⁵³ 'The transfer of the peoples of the Baltic States to Soviet Russia against their will would be contrary to all principles for which we are fighting this war and would dishonour our cause. This also applies to Bessarabia and to Northern Bukovina, and in a lesser degree to Finland.' At that moment, Churchill felt British 'sincerity to be involved in the maintenance of the principles of the Atlantic Charter'. Yet a few months later, in March 1942, he declared that he 'did not feel that this moral position could be physically maintained'.⁴⁵⁴ In a letter to President Roosevelt on 7 March 1942 he opposed an interpretation of the principles of the Atlantic Charter 'so as to deny Russia the frontiers she occupied when Germany attacked her', the more so, as he significantly added, as in his opinion the Russians had 'liquidated in one way or another' the hostile 'personalities and elements' in the Baltic countries,⁴⁵⁵ so that opposition by the nations concerned to incorporation in the Soviet Union was no longer to be expected. Within a few days the prime minister no doubt realized that his new policy was bound to meet with determined opposition from his Polish ally. In the presence of Eden and other important figures, Premier General Sikorski observed to Churchill on 11 March 1942⁴⁵⁶ that, on moral grounds and in accordance with her centuries-old tradition, Poland would take a stand against any surrender of the Baltic nations. Even though the issue of Poland's eastern frontier had been bracketed out of the British-Soviet negotiations, Poland would never accept the annexation of Lithuania or of the Bukovina and Bessarabia, because that would mean that Poland was encircled by the Soviet Union in the same way as she had been by Germany in the past. Sikorski emphatically told Churchill that he was not in a position 'to cast the Polish nation as a prey to the Soviets'. A British-Soviet agreement on the basis of the conditions and territorial claims of the Soviet Union, he added, would result in 'incalculable consequences on the European continent' and provide the Germans with a 'real foundation for calling a crusade against Russia'. Sikorski followed his statement by a warning which produced a perceptible reaction on the part of Eden and Churchill. He declared that, in the event of the conclusion of a British-Soviet treaty, he would no longer be able to conceal from the world public 'the monstrous barbaric treatment of the Polish population' by the Soviet Union, 'the unbe-

⁴⁵⁶ Extract from a conversation between Gen. Sikorski and Mr Churchill on the Soviet expansionist territorial claims made in the course of British-Soviet negotiations, 11 Mar. 1942, *Documents on Polish-Soviet Relations*, i, No. 191, pp. 295-9.

lievable brutality and refinement in the tortures inflicted by the Bolsheviks on many Poles', 'the real face of the Russians and their brutal imperialism'. On 24 March 1942⁴⁵⁷ Sikorski discussed with President Roosevelt the 'abandonment', evidently intended by the British government, 'of the principles of democracy proclaimed by the West'. Poland's opposition to a British-Soviet treaty on the basis of Soviet territorial demands assumed ever fiercer forms during the weeks to follow. The British government was repeatedly—e.g. on 27 March, 13 April, and 21 April—reminded 'with the utmost earnestness'⁴⁵⁸ that negotiations with the Soviet Union were touching directly or indirectly on Poland's 'vital interests' and were therefore not in accordance with the spirit—or, in the case of the annexation of Lithuania with the Polish city of Wilna (Vilnius), even the letter—of the Polish-British alliance of 25 August 1939. It was mainly due to the Polish government's inflexible attitude towards a 'second Munich' and to Sikorski's 'severe and serious words' opposing any 'concessions to Soviet imperialism'⁴⁵⁹ that Britain reluctantly exercised restraint in the matter of delineation of frontiers in eastern Europe.⁴⁶⁰ Added to this was American support for the Polish attitude. Neither President Roosevelt nor the State Department, especially under Secretary of State Cordell Hull, showed any inclination to take up the question of frontiers before the conclusion of the war, let alone to recognize the territorial claims of the Soviet Union.⁴⁶¹

The British government, anxious to conclude an early treaty with the Soviet Union, had meanwhile hit on other forms of compliance: on 6 December, in response to Soviet wishes, it declared war not only on Romania and Hungary, but also on democratic Finland, which but a year ago had been cheered and supported⁴⁶²—although that country, as Churchill himself admitted, was scarcely doing anything other than recover territory lost the previous year.⁴⁶³ Eden's resistance to the Soviet claims, at any rate, as Ambassador Mayskiy noted with satisfaction, had been weakening 'from one meeting to the next'.⁴⁶⁴ By the time Foreign Commissar Molotov, in response to a British invitation, visited London in May 1942 to discuss some contentious issues of the draft treaty, subsequently travelling to Washington, Britain's attitude on the frontier problem had once more stiffened out of consideration for her Polish ally and for the mood in the United States. But there could now be no doubt about the general trend, even though a text was eventually agreed that passed over the territorial issues in silence. The reassurance of the Poles, in consequence, was

of short duration.⁴⁶⁵ After nearly five months of negotiations, on 26 May 1942 Britain and the Soviet Union signed their agreement on a 'wartime alliance against Hitlerite Germany and its allies in Europe', and on 'co-operation and mutual aid' over the next 20 years. A supplementary agreement between the United States and the Soviet Union on the principles of mutual aid was concluded in Washington on 11 June 1942. As far back as 1 January 1942 a declaration of twenty-six states, the so-called Declaration of the United Nations, had been issued in Washington against the Tripartite Pact. In it the signatories, primarily Britain and the United States, jointly with Stalin's and Beriya's Soviet Union, undertook 'to preserve life, freedom, independence, and justice both in their own and in other countries'. This declaration and the new agreements in which the Western powers pledged political, military, and economic co-operation with the Soviet Union during and after the war were hailed in Moscow as a significant success of Soviet foreign policy. Even though the Soviet Union had not yet been able to obtain an open recognition of its territorial claims, it had become abundantly clear that the incorporation of foreign territories did not, for Britain or the United States, present an obstacle to close co-operation in all fields.

The United States', and even more so Britain's, increasingly compliant attitude towards the Soviet Union was due to the changed strategic situation following Japan's entry into the war on 7 December 1941. The great successes of the Japanese in the Philippines, the Dutch East Indies, and in Oceania, and the capture of Hong Kong and Singapore, had dealt a heavy blow to Anglo-American prestige and threatened British colonialism in India. An increase in the number of ships sunk by German U-boats in the battle of the Atlantic, the German naval squadron's breakthrough through the English Channel, the ground gained by the German-Italian counter-offensive in North Africa—all these had made the position of Britain and the United States seem alarming in the spring of 1942 and virtually produced a cabinet crisis in London.⁴⁶⁶ The British public was deeply impressed by the fact that this unfavourable development was taking place at the very time when the Red Army had seized the strategic initiative and gone over to decisive offensive operations in a westerly direction. As early as December Churchill had written the following about the 'magnificent Russian successes at Leningrad, on the Moscow front, at Kursk, and in the south': 'German armies largely on the defensive or in retreat, in addition the most terrible winter conditions and ever more violent Russian counter-attacks'.⁴⁶⁷ In a letter to Roosevelt on 1 April 1942 he admitted that 'all now depends upon the vast Russo-German struggle'.⁴⁶⁸ The fact that the only

successes at that time were recorded on the Soviet-German front so raised the international reputation of the Soviet Union that it now received moral recognition as well, and soon assumed the leading role in the anti-Hitlerite coalition.

III. Strategy and Policy in Northern Europe

GERD R. UEBERSCHÄR

I. GERMAN OPERATIONS IN THE 'FINLAND THEATRE'

On 22 June 1941 Mountain Corps Norway executed Operation Reindeer ('Renntier') and advanced unhindered from Norway into the area round Petsamo.¹ Its subsequent eastward deployment into the new assembly area on the Finnish-Soviet border was also completed without attempts at interference by Soviet forces. On 27 June 1941 Mountain Corps Norway handed over the task of defence and coastal defence in northern Norway to the newly established 'Sector Staff Northern Norway' (renamed Higher Command LXXXI) under Lieutenant-General Emmerich von Nagy, with 199th and 702nd Infantry Divisions being placed under his command.

Meanwhile, the mobilization of the Finnish units attached to Army Command Norway, and of the two divisions of the Finnish III Army Corps, had been completed.² The Finnish border units and the Ivalo Battalion had been placed under the command of Mountain Corps Norway on 22 June 1941. On 29 June German and Finnish troops of Mountain Corps Norway launched an attack towards Murmansk 'in closest brotherhood in arms . . . for the protection of Finland and to safeguard European culture'.³ It was followed on 1 July 1941 by the attack of Higher Command XXXVI (renamed XXXVI Mountain Corps from November 1941) in the central army sector towards Salla-Kandalaksha, and by the advance of the Finnish III Corps in the direction of Louchi-Kemi.⁴ (For the following description of operations see the Annexe Volume, Nos. 24 and 25.)

(a) Operation Platinum Fox ('Platinfuchs') against Murmansk

Mountain Corps Norway (Mountain Troop General Dietl), consisting of the strengthened 2nd and 3rd Divisions and subordinated Finnish border troops,

¹ On the planning of 'Reindeer' see sect. I.vi.3 at nn. 52 ff.

² Upon mobilization on 15 June 1941 the Finnish Fifth Army Corps was renamed Finnish Third Army Corps, consisting of 3rd and 6th Divisions. On the deployment of Army Command Norway see papers of Col.-Gen. von Falkenhorst, vol. iv, BA-MA N 300/4.

³ Army order of the day from Col.-Gen. von Falkenhorst, 26 June 1941, BA-MA, 20. Armee, 19070/2. See also KTB OKW i. 424 (30 June 1941). On the Finnish border units see war diary of the Finnish Ivalo Bn., 22 June 1941-31 Mar. 1942, BA-MA, 20. Armee, 23861.

⁴ On the operations of Army Command Norway see the records of Twentieth Army, BA-MA 19070/1-14, 35198/1-7, 20844/1-6, 25353/1-8, 58628/1-2, 35641. See also General Dietl, 218 ff.; Höltér, *Armee in der Arktis*, 11 ff.; Hess, *Eismeerfront*, 32 ff.; Ziemke, *German Northern Theater*, 139-87; Erfurth, *Finnischer Krieg*, 47-56; on the operations of Army Command Norway from the Finnish point of view see *Suomen Sota* 1941-1945, v. 81 ff.

planned to implement 'Platinum Fox' by concentrating its main effort in the offensive against Murmansk on Titovka and Zapadnaya Litsa. At the same time, only the relatively weak forces of 2nd Mountain Division (Major-General Ernst Schlemme) could be used to attack the Soviet troops on the flank of the Rybachiy Peninsula.⁵ However, it soon became apparent that these forces were not sufficient to capture the strongly fortified peninsula. As a result, at the beginning of July the army command agreed to switch to defence in that sector by taking up a fortified defensive position at the neck of the Rybachiy Peninsula. After an advance by 3rd Mountain Division (Major-General Hans Kreysing)⁶ towards Motovka had failed in impassable terrain, units of this division joined with 2nd Mountain Division⁷ in the advance across the river Titovka towards Zapadnaya Litsa. Despite initial success, the corps advanced only slowly in the trackless tundra east of the Titovka. Large elements of these forces frequently had to be diverted to tasks of road-building and the transport of supplies. On 6 July 1941, when Hitler's Armed Forces Adjutant, Colonel (General Staff) Schmundt, visited Mountain Corps Norway, its commanding officer General Dietl was already referring to the weakness of his forces and the serious shortage of supplies available to him for the attempt to achieve the operational objective of capturing Murmansk. As the offensive continued, the town of Zapadnaya Litsa was captured only after bitter fighting and heavy casualties. Further attacks were launched from 6 July 1941. However, due to determined Soviet counter-attacks and troop landings on the flank north of Litsa Bay, the corps failed to achieve the hoped-for breakthrough to the deeply echeloned enemy defensive line at the River Litsa. The decisive factor here was the lack of adequate reserves for Mountain Corps Norway, whose mountain divisions, in contrast to the three-unit infantry divisions, consisted of only two regiments.

After the unsuccessful and costly German attacks across the Litsa, the Soviet army launched a series of powerful counter-attacks on 18 July. The army command was forced to order a temporary halt to the offensive of Mountain Corps Norway, and to restructure its formations. The aim was to gain time for a reorganization of supply services and the establishment of lines of communication needed to set up a defensive position. A rapid breakthrough to the Kola peninsula was no longer considered possible.⁸ On 30 July

1941 Hitler finally acceded to the repeated requests of Colonel-General von Falkenhorst and General Dietl for another division to be made available. In his Directives No. 33 of 19 July and No. 34 of 30 July 1941 Hitler continued to demand that the attack on Murmansk and the Murmansk railway be maintained.⁹ To strengthen Mountain Corps Norway, the Wehrmacht High Command ordered the transfer of 6th Mountain Division (Major-General Ferdinand Schörner) from Greece. However, the transport of this newly assigned division across the North Sea along the Norwegian coast had to be halted in mid-September, when British naval formations appeared off the coast of northern Norway.¹⁰ Only at the end of September did it prove possible to transport these troops. Moreover, the Wehrmacht High Command suspected that British and Soviet troops might make landings in the rear of the corps at Petsamo or on the Rybachiy Peninsula. This uncertainty, coupled with Hitler's perpetual fear of a possible Allied landing in Norway, prevented the transfer of major formations from northern Norway.¹¹ Hitler finally agreed that Dietl's mountain corps should also be reinforced by individual infantry units from Norway, but only after Major-General Warlimont of the Wehrmacht Operations Staff had convinced himself of the inadequate strength of the corps during a visit on 11 August 1941.¹² In order to make effective use of the remaining summer period, it was intended that the mountain corps—reinforced by two infantry regiments from Norway—would renew its efforts to break through the Soviet positions on the Litsa even before the bulk of 6th Mountain Division reached Petsamo at the beginning of October. The Chief of the Wehrmacht Operations Staff, Artillery General Jodl, also visited the mountain corps on 5 September 1941 to investigate the possibilities of an advance on Murmansk, and to obtain a personal view of the difficulties being encountered by the corps.¹³ In order to strengthen the imminent offensive across the Litsa, a decision was taken to switch the main focus of the attack by Army Command Norway, and the Luftwaffe support, to Mountain Corps Norway. Although the attack across the Litsa from 8 September 1941 led to local territorial gains and the establishment of a bridgehead east of the river,

the situation, 24 July 1941, also Command Mountain Corps Norway to Army Command Norway/Headquarters Finland No. 70a/41 g.Kdos. Chfs., situation report of 28 July 1941; all BA-MA, 20. Armee, 58628/1. See also Halder, *Diaries*, 1139 (1 Aug. 1941).

¹³ On the issue of further efforts by the mountain corps, and the discussions with Gens. Jodl and Warlimont, see Ruef, *Gebirgsjäger*, 124-9.

the Soviet defensive lines again remained intact. On the Soviet side, the deployment of a newly arrived division was decisive. In this attack the Germans suffered heavy casualties and faced enormous problems of supply. These factors, combined with the first snowfalls, ensured that 3rd Mountain Division, deployed for a wide encirclement action on the right, had to be pulled back behind the Litsa on 19 September 1941.

The failure of these attacks across the Litsa, along with increasing difficulties of supply caused by the onset of winter and the inability of the German navy to prevent the blockade of supply-routes along the Norwegian Arctic coast, eventually forced the suspension of the offensive against Murmansk. The decision was approved by Hitler in his Directive No. 36 of 22 September 1941.¹⁴ At the same time, he had continued to demand the conquest of the western part of the Rybachiy Peninsula. However, this project had to be abandoned following protests by Army Command Norway and the command of the mountain corps, which regarded an attack as impracticable given the inadequate strength of the mountain divisions. Instead, the two exhausted divisions had sustained such heavy casualties that they were to be relieved as soon as possible by the newly arrived 6th Mountain Division, which was placed under the command of the mountain corps. On 10 October 1941 Hitler ordered that Army Command Norway as a whole should move over to defence and reorganization for the winter war, 'in view of the lateness of the season before the onset of winter'.¹⁵

Together with Finnish border units, the Mountain Corps adopted a defensive position at the Litsa and the Rybachiy Peninsula for what was now regarded as the 'most urgent task' of securing the nickel region of Petsamo on a shortened front line consisting of individual strong points. From mid-October, during bitter defensive fighting, 6th Mountain Division at last took over the positions held by 3rd Mountain Division on the west bank of the Litsa, and the bridgehead sector of 2nd Mountain Division at Litsa Bay.¹⁶ 3rd Mountain Division was detached from the command of Mountain Corps Norway in November 1941. It was temporarily placed directly under the army command in its new assembly area in southern Lapland, before being transported back to Germany from the middle of December. 2nd Mountain Division was withdrawn as corps reserve for rest and rehabilitation in the region Kirkenes/Northern Norway; its planned exchange with 5th or 7th Mountain

Divisions, whose re-equipment and reorganization in Germany were still incomplete, could not be effected on schedule.¹⁷ In its fixed defensive line the corps had to withstand bitter defensive fighting against Soviet Fourteenth Army units (52nd and 14th Rifle Divisions). Nevertheless, the winter positions were held on the Rybachiy Peninsula and on both sides of the Litsa.

Mountain Corps Norway had not succeeded in advancing to Murmansk and capturing the city, despite three attacks lasting from June to the end of October 1941. It had been thwarted by the strength of the enemy troops and their superiority in supplies and artillery. Instead, only half way to Murmansk after an attack about 40 km. east of the border, it had established a bridgehead on the Litsa. The Army General Staff was forced to conclude that further attacks on Murmansk offered 'not much chance of success'.¹⁸ Various reasons can be cited for the failure of the offensive: the insufficient number of German forces; the mistaken estimates of enemy strength and incorrect evaluation of geographical conditions in the battle area; the setting of over-ambitious objectives; the collapse of lines of supply.¹⁹ As a result of these unfavourable circumstances, the two mountain divisions of Mountain Corps Norway suffered the highest losses in percentage terms of any German unit on the entire eastern front up to winter 1941-2.²⁰

(b) *Operation Arctic Fox ('Polarfuchs') against the Murmansk Railway*

XXXVI Army Corps (Infantry General Hans Feige), operating in the centre of the army area, was given the objective of advancing from the region round Kemijärvi via Salla towards the Murmansk railway at Kandalaksha.²¹ The attack by 169th Infantry Division, the SS Division 'North', and the Finnish 6th Division—under the corps command—began on 1 July 1941. It rapidly be-

came apparent that the first frontal assault had been insufficient to drive the opposing Soviet troops from their well-fortified and deeply echeloned border fortifications. Since the ceding of the Salla region to the USSR in the Finnish-Soviet peace treaty of March 1940, the Soviets had constructed strong fortifications to protect the Murmansk railway and the new branch terminal line to the border at Salla.²² Although the stretch of line on the Finnish side, from Rovaniemi to the border, had not been completed by summer 1941, it still provided an important rear supply-line for XXXVI Army Corps. Supplies could therefore be moved to German troops in this sector more effectively than in the case of Mountain Corps Norway.

After crossing the border, 169th Infantry Division (Major-General Kurt Dittmar)²³ advanced on the northern flank of the corps. However, it did not succeed in taking Salla from the front in the first assault. SS Division North (SS Brigadeführer [Major-General] Karl Demelhuber), deployed to relieve the southern flank, failed in its attack owing to its woefully inadequate level of training and the incompetent leadership of its SS officers.²⁴ Indeed, after the first battles its troops streamed backwards in virtual headlong flight, and the division was thus unable to provide any support for 169th Infantry Division. In consequence, the attack over the border came to a halt before Salla. Although the commander of SS Division North quickly rallied his troops and regrouped them to secure the front, the failure of the SS division provoked a reaction in Berlin. When the divisional commander called for the replacement and withdrawal of his division from Finland on the grounds that it was 'no longer fully operational', his appeal was rejected by Hitler and Himmler. The request for time to improve the levels of equipment and training in the division, which had formerly been a purely police unit in Norway, was not granted. SS Division North remained at the front in northern Finland without the prospect of replacement, although it was not at first assigned further attacking objectives. Instead, in order to strengthen the offensive capability of the army corps, Hitler approved the request of Army Command Norway for units of 163rd Infantry Division, currently being transported by rail from Sweden to southern Finland, to be redirected to the Salla front and deployed there. This decision led to the fragmentation and weakening of 163rd Infantry Division, which was earmarked for operations on the Karelia front under Field Marshal

²² Rumjancev, *Razgrom*, 24.

²³ On the fighting involving 169th Inf. Div. see the division's files, BA-MA, 169. Inf. Div., 20291/1-2 and 17664/11-52, 20291/4-5; also the reports of the former commander: Dittmar, 'Schlacht um Salla'; id., "Flüstermarsch" der Kampfgruppe Behle'; id., 'Schlacht um Gora Lyssaja'.

²⁴ The 'SS Combat Group North' had been formed on 15 Mar. 1941 from two SS regiments in Norway, was renamed SS Division North on 23 June 1941, SS Mountain Division North in Jan. 1942, and 6th SS Mountain Division North from 1943. On the operation of the division as part of XXXVI Army Corps and its initial failure, see BA-MA RS 3-6/2-9, 23-4. The inadequacies of the SS division were recognized by the divisional commander and by XXXVI Army Corps even before it went into action, and had been reported both to the SS leadership and to Army Command Norway. See also Schreiber, *Nordlicht*, 36 ff., 42-59, 70-87; Halder, *Diaries*, 1045 (15 July 1941), 1226 (12 Sept. 1941).

Mannerheim. It was therefore bitterly criticized by the Army High Command. In Colonel-General Halder's view, the decision produced an unnecessary weakening of the German-Finnish attacking force at the critical point against Leningrad in the south. As such, it 'clearly shows up the dubiousness of this entire Murmansk operation, which serves only political ends and is open to the gravest censure from the operational point of view'.²⁵

Not until 7 July 1941 were the Soviet fortifications penetrated and the town of Salla captured after heavy fighting and high casualties. To achieve it, the attacking formations had been reorganized to include the Finnish 6th Division (Colonel Viikla), which also turned northwards to Salla, and greater air support from the dive-bomber units of Air Fleet 5. The corps immediately continued the offensive over the Salla massif towards Kandalaksha. However, the retreating Soviet troops succeeded in preventing a rapid advance of the German divisions by the skilful placing of obstructions in the difficult woodland and lakeland terrain. Army Command Norway noted impatiently that 169th Infantry Division and the Finnish 6th Division in the southern sector of the corps were constantly being compelled to make time-consuming and extensive enveloping movements. On the Soviet side, new troops were brought to the front on the Murmansk railway, making a rapid German breakthrough increasingly unlikely. Meanwhile, the Army Commander-in-Chief, Colonel-General von Falkenhorst, pressed the commanding general of XXXVI Army Corps, Infantry General Feige, to push on with the offensive on Kandalaksha 'as soon as possible and ruthlessly, setting aside any misgivings', despite the flagging strength of the corps as an attacking force.²⁶ However, the army command was unable to provide the forces demanded by the army corps for that purpose. Instead, at the end of July the bulk of SS Division North was placed under the command of the neighbouring Finnish III Army Corps, which appeared to have greater prospects of rapid success. The remnants of the divided SS division remained with Army Corps XXXVI as support group for 169th Infantry Division and the Finnish 6th Division.

At the end of August, after a new attack and the successful advance of Finnish troops, large parts of the opposing Soviet XXXXII Corps were destroyed in a battle of encirclement at Kairala on Lake Kuolo-Apa. The road to Alakurtti near the old Finnish-Soviet border was reached. After the capture of Alakurtti, however, the advance of 169th Infantry Division and the Finnish 6th Division ground to a halt in front of the massif of the Lysaya and Voyta. Meanwhile, the corps had been compelled to hand over the remaining units of SS Division North to support a promising attack by Finnish III Corps in the south, and to reinforce Mountain Corps Norway in the northern army sector.

²⁵ Halder, *Diaries*, 1007 (5 July 1941).

²⁶ Army Command Norway, Abt. Ia No. 325/41 g.Kdos. to Higher Command XXXVI, 4 July 1941, BA-MA, XXXVI, AK, 22102/11, and situation report of Army Command Norway Ia No. 46/41 g.Kdos. Chfcs., 28 July 1941, BA-MA, 20, Armeec, 10070/2. See also Halder, *Diaries*, 1135-40 (1 Aug. 1941).

Adequate combat strength and sufficient reserves were therefore lacking for a further advance along the railway line and the road to Kandalaksha. On 4 September 1941, in discussions with Artillery General Jodl, the army command urgently requested reinforcements for the advance on Kandalaksha. However, Hitler refused to transfer 163rd Infantry Division, now deployed on the Finnish southern front, while continuing to insist on the proposed reinforcement of Mountain Corps Norway. The strongly fortified massif of the Lysaya and Voyta was finally taken in September, only after difficult and exhausting encirclement operations. Once again, many of the Soviet units were able to withdraw and establish a new defensive line. In consequence, the two divisions of the corps were eventually left 'utterly exhausted' and 'battle-weary' in front of newly constructed Soviet defensive positions on the River Verman.²⁷ On 17 September 1941 the army command informed XXXVI Corps command that its successes could not be exploited because of the unavailability of reserves. The corps was directed to switch over to defence in static winter positions.

However, Hitler's Directive No. 36 of 22 September 1941 was issued shortly afterwards. This ordered XXXVI Army Corps to prepare for a resumption of the attack on Kandalaksha at the beginning of October, with 'the aim of at least cutting Murmansk off from its rail communications by the time winter sets in'. The attacks in the other two army sectors were to be halted for the present.²⁸ As requested on several occasions, XXXVI Army Corps was to be reinforced for this offensive by 163rd Infantry Division, previously deployed on the Finnish southern front, and by units of SS Division North, formerly attached to the Finnish III Corps. However, it was soon apparent that Hitler's plan to transfer 163rd Infantry Division could not be completed in time because of transport problems, that further reinforcements were unavailable because of Mannerheim's reluctance, and that the moment for tactical pursuit across the Verman sector had already been missed in mid-September during the enemy retreat. In consequence, the projected attack was eventually postponed.²⁹

The Wehrmacht High Command now responded to the demands of XXXVI Army Corps and Army Corps Norway. In accordance with Hitler's Directive No. 37 of 10 October 1941,³⁰ OKW abandoned the plan for a renewed attack on Kandalaksha by XXXVI Army Corps. Instead it proposed the relief of 169th and also 163rd Infantry Division, the main part of which—

as before—was to be transferred from the Svir front to Army Command Norway. OKW had concluded that further attacks in the Finnish theatre of operations were unnecessary because of German successes elsewhere on the eastern front. Army command was instructed to switch to defence 'in favourable, easily defended positions' to relieve and rehabilitate the exhausted and decimated units. The intention was to reach the Murmansk railway in the following year.³¹

Within the Wehrmacht High Command and Army Command Norway, plans for a renewed offensive by XXXVI Army Corps with the objective of capturing Kandalaksha were subsequently discussed. However, this proved impracticable because of the inadequate combat strength of the German and Finnish divisions. To enable it to undertake an operation of this kind in winter, the corps command demanded the provision of at least two new divisions, preferably fully mobile in winter conditions. Without them, 'a conclusive success in achieving the operational objective of Kandalaksha [did not appear] possible in any case'.³² The reinforcement of the corps with 7th Mountain Division, and its conversion to a fully equipped mountain corps, could not be achieved until mid-January 1942 because of the Finnish transport situation. Consequently, Army Command Norway was also forced to agree to Field Marshal Mannerheim's demand for the postponement of the attack until March 1942.³³ As part of the intended reorganization and reduction of the Finnish Army, Mannerheim had repeatedly requested that Finnish divisions should be removed from the control of Army Command Norway and attached to his own high command again. Following German-Finnish discussions in Rovaniemi on 13-14 December 1941,³⁴ OKW decided on 20 December that the Finnish 6th Division deployed with XXXVI Army Corps should be returned to Finnish control. On the other hand, SS Division North was to remain with the Finnish III Army Corps until the end of January, though the corps itself would be transferred to Finnish command as soon as possible.³⁵ The proposed attack on Kandalaksha by XXXVI Army Corps was finally abandoned. Instead, an advance by the Finnish Army on Belomorsk (Sorokka), proposed by Mannerheim and planned with German participation, was envisaged for March 1942.

By September 1941 XXXVI Army Corps had advanced approximately 60 km. and had reconquered the former Finnish border region. At the begin-

ning of winter, reduced in strength, the corps went over to defence in a reinforced 'permanent winter position' in the Verman sector, roughly on the latitude of the old Finnish-Soviet border.³⁶ This sector of the front remained largely unchanged until autumn 1944. It became apparent that XXXVI Army Corps did not possess sufficient strength to achieve its objective of severing the Murmansk railway at Kandalaksha.

Finnish III Corps, under the command of the Finnish Major-General Siilvarsuo,³⁷ was deployed in the southern army sector between Kuusamo and Suomussalmi. After it had handed over the Finnish 6th Division (Colonel Viikla) to XXXVI Army Corps, its remaining Finnish 3rd Division (Colonel Fagnäs) had been divided into two divisional groups—'J' (Lieutenant-Colonel Turtola) and 'F' (Colonel Fagnäs)—for the attack of 1 July 1941. The objective of the advance on Uhtua (Ukhta) and Kiestinki (Kestenga) was to reach the Murmansk railway and capture the towns of Louchi and Kemi (Kemi) on the White Sea and on the railway.³⁸ Against weak resistance from the opposing Soviet 54th Rifle Division, the Finnish troops were able to exploit their experience in woodland fighting and make swift progress by means of repeated pincer movements. Both Army Command Norway and Hitler, in his directive of 30 July 1944, considered that further attacks by Finnish III Army Corps might offer the best prospect for a rapid breakthrough to the Murmansk railway.³⁹ The southern divisional group, 'F', advanced on Uhtua. At the end of July Army Command Norway transferred elements of SS Division North, previously deployed with XXXVI Army Corps by Army Command Norway, to Division J for the attack towards Louchi.⁴⁰ On 8 August Finnish and German units captured the transport junction of Kiestinki on the terminal branch line to the Murmansk railway.

However, stiffening enemy resistance quickly brought the advance towards Louchi to a standstill. After the Soviets brought up 88th Rifle Division from Archangel to establish a new line of defence, General Siilvarsuo reported on 25 August 1941 that his forces were insufficient to achieve the breakthrough to the Murmansk railway; he urgently needed a new division, equipped and prepared for fighting in almost primeval forest conditions.⁴¹ All that Army

⁴¹ Operational HQ III Army Corps No. 1024 a/III geh., 'To commander of Army command Norway', 25 Aug. 1941, BA-MA, 20. Armee, 19070/2.

Command Norway could offer as reinforcement in this sector was the concentration of all SS units with Finnish III Army Corps, as demanded on several occasions by SS Division North. In addition, extensive air support by Air Fleet 5 was promised. As soon as conditions within XXXVI Army Corps allowed, part of the Finnish 6th Division would also be attached to Finnish III Army Corps. No other units were available. Although the corps went on the attack again on the southern flank before Uhtua, strong Soviet counter-attacks soon endangered its position at Kiestinki, where the exhausted Finnish formations and SS units were able to repulse enemy counter-thrusts only at the cost of heavy casualties.⁴² Army Command Norway then requested additional Finnish units as reinforcements for Finnish III Corps. However, Infantry General Erfurth, chief of liaison staff North at Finnish headquarters, considered the request inappropriate for political reasons.⁴³ Consequently, during Colonel-General von Falkenhorst's visit of 14 September 1941, Hitler eventually agreed to call a halt to the attack by Finnish III Army Corps and ordered a switch to the defensive.

At the end of the month, however, Army Command Norway advocated a fresh attack by Finnish III Army Corps towards Louchi. It was forced to rescind the order to attack when, on 8 October 1941, Wehrmacht High Command ordered a halt to all operations and their postponement 'for the winter'; the intended attack of Finnish III Army Corps was expressly forbidden.⁴⁴ When opposing Soviet formations withdrew to a newly constructed rear defensive position, Finnish III Army Corps nevertheless went back on the offensive at the beginning of November 1941, on the order of Army Command Norway. It succeeded in encircling and destroying part of the Soviet 88th Rifle Division. However, on 12 November 1941 Major-General Siilvasuo ordered a switch to a defensive position and explained that continued attacks would have no prospect of success given the enemy reserves and the insufficiency of the forces available to him. Yet Colonel-General von Falkenhorst, who still thought the operational objective of the Murmansk railway could be achieved in the sector occupied by Finnish III Army Corps, insisted that the attack be continued.

The divergent views of German and Finnish headquarters were the subject of discussions in Helsinki on 15 November 1941. The participants were Major-General Warlimont of the Wehrmacht Operations Staff, Major-General Buschenhagen, chief of the general staff of Army Command Norway, and Infantry General Erfurth of liaison staff North at Mannerheim's headquarters.⁴⁵ On the insistence of Mannerheim, Army Command Norway was forced to drop its plans for further offensive operations by Finnish III Army

Corps. The Wehrmacht High Command also declared its readiness to grant the requests of Field Marshal Mannerheim and return III Corps to the Finnish national high command for inclusion in the forthcoming reorganization and reduction of the Finnish army.⁴⁶ On 17 November 1941 Major-General Siilvasuo finally brought the operations of both Division J and SS Division North to an end, although both divisional commanders estimated that further offensive operations towards Louchi had some prospects of success.⁴⁷ Colonel-General von Falkenhorst finally accepted the halting of the attack, although he suspected that the conduct of Major-General Siilvasuo was due less to the military situation than to the diplomatic efforts to achieve a separate peace between Helsinki and Moscow, which had been initiated by the United States at that time.⁴⁸

Recently, the United States had warned the Finnish government of serious consequences if American deliveries of war materials to the USSR were disrupted by the advance of Finnish troops to the Murmansk railway. Helsinki was therefore unlikely to want the troops of Finnish III Army Corps, fighting under German command, to advance so far and so successfully that they posed the only serious threat to the Allied delivery of supplies to the Soviet Union along the Murmansk railway.⁴⁹ In the view of Army Command Norway and the German commanders, it was likely that Major-General Siilvasuo had been 'tipped off' by Helsinki and was no longer interested in continuing the attack.

The exchange of SS Division North with the Finnish 6th Division⁵⁰—previously deployed with XXXVI Army Corps—was ordered by Hitler on 10 October 1941 at the request of Mannerheim. However, it had not taken place by the end of 1941 because of powerful Soviet counter-attacks in the sector. Moreover, though the Wehrmacht High Command had intended the newly arrived XVIII Army Corps to take over the whole sector of the front occupied by Finnish Army Corps at the turn of the year, the plan could not be carried out because of the lack of German troops. Only in summer 1942 did new units of XVIII Army Corps (Mountain Troop General Franz Boehme) and 7th

Mountain Division take over the Kiestinki sector. In consequence, and in accordance with Mannerheim's wishes, there was a 'clean separation' into purely German and purely Finnish sectors of the front. This restored the Finnish commander's 'full freedom to make his own decisions'.⁵¹

During the positional battles of the winter, Army Command Norway and SS headquarters in Berlin discussed plans to withdraw SS Division North, which was no longer combat-ready,⁵² and to transport it home for rest and rehabilitation. However, 'the development of the situation in Norway' meant that this could not be achieved either.⁵³ The division was instead reorganized at the beginning of 1942 into the mobile SS Mountain Division North, and remained in the Kiestinki sector.

The attack by Finnish III Army Corps in the Kiestinki sector, advancing to within 30 km. of Louchi, had come closest to the Murmansk railway. The railway line itself, however, was not reached. After the bitter fighting of autumn 1941, this sector of the front also rigidified into trench warfare from November of that year. During the winter of 1941 Finnish III Army Corps mounted a successful defence of its often makeshift defensive positions against sporadic enemy attacks at Kiestinki and on the southern flank at Uhtua. There were no further major offensive and defensive operations.

(c) Problems of German Naval and Air Operations in the Far North

As a result of the operational direction of Army Command Norway, with its changing and simultaneous points of main effort, the Luftwaffe formations gathered within Air Fleet 5 under the 'special duty squad' were also fragmented. From 24 June 1941, even before the start of land operations, Murmansk and the Murmansk railway were subjected to several air raids by Luftwaffe formations operating from Finnish airfields.⁵⁴ Enemy air-bases within the range of German forces were attacked with some success in the first few days. Particularly after its attacks on the Soviet airfields in the Murmansk region, the Luftwaffe had achieved air superiority at the outset. However, the Soviet air forces could not be eliminated entirely, because the 'Air Leader Kirkenes' was quickly forced to divide his 'special duty squad' among several

sectors in support of the ground fighting. In July 1941 the main focus of Luftwaffe operations lay in supporting the advances of Mountain Corps Norway and XXXVI Army Corps. German Stuka formations played an important role in this process by destroying the Soviet fortifications in the battle for Salla. The dive-bomber Gruppe was also successfully deployed during the further advances of XXXVI Army Corps towards Kajala-Alakurtti, and of Finnish III Corps towards Louchi.

In accordance with the objectives of Air Fleet 5,⁵⁵ a number of air raids were also carried out on the ports and important railway stations of Murmansk and Archangel, regarded as the main bases of the Soviet Arctic Fleet. Though these attacks achieved some success, Murmansk remained the most important place of transshipment for supply traffic with the Western powers. In addition, the Luftwaffe flew repeated missions against the Murmansk railway and the line from Kandalaksha to Salla. Here too success was limited. There were insufficient forces to achieve either disruption over a longer period or the complete destruction of this vital Soviet supply-line.

With the onset of winter conditions, the Soviet air forces recovered rapidly from their early reverses in summer 1941. In places they regained local air superiority. This development can be attributed to three major factors: the deliveries of the Western Allies⁵⁶ and the Soviet success in transferring replacements to the front in the north; the rapid construction of field airstrips along the Murmansk railway; and an intensified defence by flak and fighters along the Murmansk railway. In contrast, the German formations received no significant reinforcement. Instead there was a perceptible reduction of Luftwaffe activity in the northern sector of operations, since the Luftwaffe forces available proved completely insufficient to achieve the extensive objectives they had been set.

When the onset of winter severely restricted Luftwaffe activity from September 1941 onwards, Air Fleet 5 indicated that it was 'no longer in a position to provide effective support for army operations'.⁵⁷ In view of temperatures as low as -50°C , the Air Fleet held that 'climatological conditions for flying' had made operations much more difficult, if not completely 'impossible'. On the other hand, Army Command Norway considered that continued attacks on the Murmansk railway were necessary to disrupt this enemy supply-line. In his directive of 10 October 1941 Hitler maintained that the Luftwaffe's role lay in providing air defence for northern Norway and northern Finland, air reconnaissance, and air attacks on Murmansk and the Murmansk railway. He also demanded measures 'in order to simplify the co-operation' of

⁵⁵ On these tasks see sect. I.vi. 4. at n. 121.

⁵⁶ From the middle of September 81st and 134th RAF Squadrons were stationed in the Murmansk region to protect the British convoys. The aircraft were later taken over by the Soviet air force. Seen Girbig, *Jagdgeschwader 5*, 25.

⁵⁷ Telex Army High Command Norway, Headquarters Finland, Abt. Ia No. 1173/41 g.Kdos. to OKW/WFSu/Abt. L (Wolfsschanze), 27 Aug. 1941, BA-MA, 20. Armee, 19070/2 (also for the following).

the three branches of the Wehrmacht. In consequence, at the end of October 1941 an attempt was made to create a more effective control of the Luftwaffe in the far north. This was to be achieved by uniting the formations operating from northern Norway and northern Finland under the newly established 'Air Leader North (East)' in Rovaniemi.* At the same time, the fighter formations were amalgamated in a 'fighter Gruppe for special duties' in Kirkenes/Petsamo. The 'General of Luftwaffe Northern Norway' also transferred his command staff to Kirkenes, with the aim of co-ordinating the attacks on enemy air and naval forces and on transport movements off the Finnish-north Norwegian coast and the Kola peninsula. Finally, from the beginning of 1942 the 'Air Leader North (West)', newly based in Bardufoss, was to be involved in reconnaissance and attacks on British convoys to Murmansk.

Despite these changes, the Luftwaffe achieved no significant successes in the winter of 1941-2. Due to a shortage of resources, the air formations were also unable to provide air transport for the vital supply of the army during the winter months.

The difficulties encountered in mounting Luftwaffe operations in the far north were due in part to the lack of adequate resources. However, a role was also played by the limited supply of war materials and provisions owing to the shortage of transport capacity and the inadequate development of communications. This situation was scarcely improved in autumn 1941 by the transfer of the Air Fleet 5 forward command staff to Kemi on the Gulf of Bothnia. Limited supplies, inadequate means of communication, and serious leadership problems continued to hamper the operational prospects of the Luftwaffe even when the weather began to improve in the spring of 1942.

Similarly, the German naval forces concentrated in northern Norway were too weak and inadequately armed to undertake major operations against the Soviet forces in the Arctic Ocean and the Barents Sea, either independently or in co-operation with the army and Luftwaffe. With good reason, the naval leadership had advised against war on more than one front as long as the 'main front' against Britain in the west continued to exist. From the point of view of the chiefs of naval operations, the war against the Soviet Union was therefore a secondary task. It soon became clear, however, that the forces available were scarcely sufficient even for 'secondary tasks'.

Problems had become apparent even on 6 June 1941, during discussions with the Finnish Commodore Sundman in Kiel on the question of joint German-Finnish naval operations. Naval Group Commander North, Admiral-General Carls, had complained that the submarines promised to him for the Arctic Ocean had been withdrawn after a protest from the Commander of U-boats, Admiral Dönitz. These were now earmarked for use in operations against Britain without Carls having rights of direction over these forces in the

North Atlantic should the need arise for a co-ordinated naval war effort in the Arctic Ocean.⁵⁹ No Finnish forces were stationed in the Arctic Ocean apart from the Petsamo naval detachment with three small patrol steamers. In consequence, the German navy faced the Soviet Arctic Fleet with only a minesweeper flotilla and approximately 15 captured and converted Norwegian torpedo-boats and outpost- and coastal-protection boats. Soviet naval forces comprised 8 destroyers, 7 coastal-protection ships, 2 minesweepers, 14 coastal-protection cutters, and 15 submarines; the navy air force had 116 aircraft.⁶⁰ The German naval command assumed that German troops would quickly capture Polyarnyy and Murmansk by land, thus depriving the Soviet Arctic Fleet of its bases; Soviet naval forces could then be eliminated indirectly. Early in July 1941 Naval Group Command North in Kiel had considered a major attack by German destroyers against Murmansk. In contrast, the Naval War Staff assigned German naval forces in the Arctic Ocean a much more limited tactical function of providing support to the army. It described this objective as 'Support of Group Dietl, attack on enemy, and protection of own sea routes'.⁶¹ On the order of the Naval War Staff, there were therefore no offensive operations against the Soviet Northern Fleet in the form of minelaying or destroyer attacks, as envisaged by Naval Group Command North at the beginning of Operation Barbarossa. The Naval War Staff saw no pressing need for a major deployment of the navy against the Soviet Union.⁶²

This decision allowed the Soviet Northern Fleet to mount minor landing operations and thereby intervene in the fighting involving Mountain Corps Norway. In addition, the Soviet fleet was able to inflict considerable damage on German supply transports off the Norwegian and Finnish coasts by deploying submarines and laying mine-barriers. To counteract such activity by the superior Soviet forces and to secure some protection—however limited—against possible operations by British naval forces off the Arctic coast, Hitler, in his directives of 19 and 23 July 1941, ordered five destroyers of the 6th destroyer flotilla to be transferred to Kirkenes and a number of U-boats to be dispatched to northern Norway. These were given several objectives: to oppose and damage the Soviet Northern Fleet by making attacks along the Norwegian coast towards Kola Bay; to provide tactical support for the land operations of Army Command Norway; and to safeguard German supplies and disrupt enemy transports of supplies and reinforcements. The aim was to

'reduce the temptation for England to intervene in the fighting along the Arctic coast'.⁶³ However, the destroyers' field of action was restricted by inadequate fuel supplies, allowing very few wide-ranging offensive operations to be undertaken against enemy targets. Combat activity therefore remained infrequent.

From August 1941 British naval forces—aircraft-carriers, cruisers, and destroyers—appeared off the north Norwegian coast; this was regarded as a serious threat. At the urging of the Soviets, London had launched an attack on Kirkenes on 30 July 1941 using an aircraft-carrier formation (two carriers, two heavy cruisers, and seven destroyers). However, the attack of the carrier aircraft was successfully beaten off and only minor damage was sustained. Nevertheless, the appearance off the north Norwegian coast of superior British naval forces and several British and Soviet submarines posed a serious threat to the small German naval forces and the supply-routes along the coast to northern Norway and northern Finland. British submarines, which were also operating from Murmansk, managed to inflict considerable damage on German supply-routes on several occasions and, from August 1941, to sink several German supply-ships. The German navy had insufficient anti-submarine forces at their disposal to combat these attacks effectively. At the same time, approximately eight Soviet submarines were operating off the Norwegian Arctic coast. Under these circumstances, Naval Group Command North had begun to consider that it would be a positive achievement if the German navy in the area of northern Norway at least 'succeeds in securing supplies for Norway to some degree'.⁶⁴ Equally, there could be no question of German naval forces off the Murmansk coast offering offensive support for the operations of Army Command Norway. The situation at sea would be improved only if Mountain Corps Norway succeeded in capturing the Soviet naval base of Murmansk. During the planning of Operation Barbarossa from the beginning of 1941, the Commander-in-Chief of the Navy, Grand Admiral Raeder, had confirmed that the occupation of Murmansk and Polyarnyy was a major demand. At the beginning of 1942 the navy continued to insist that the capture of Murmansk by land forces was essential.⁶⁵

From the end of September 1941 the first British convoys were able to transport their war material to Murmansk and Archangel largely unmolested. The Soviet leadership had urgently pressed the Allies to use this shorter and quicker transport route for delivering supplies to Murmansk in preference to routes via east Siberia or the Persian Gulf. The British convoys PQ1 to PQ6 completed their journeys in the second half of 1941, with QP1 to QP4 making the return to Britain/Iceland. At the outset these convoys were assembled

every four weeks, and later at intervals of ten days.⁶⁶ The powerful British escort ships returning from Murmansk also posed a considerable danger to the ill-defended German supply transports along the north Norwegian coast. Hitler's directive of 10 October 1941 thus ordered the navy 'to attack enemy supplies going by sea to Murmansk and to protect our own traffic in the Arctic Ocean within the limits of its forces'.⁶⁷ To achieve this, more U-boats, motor torpedo-boats, minesweepers, and outpost formations were transferred to northern Norway. Then, in December 1941, the destroyers of 6th Destroyer Flotilla were replaced by vessels of 8th Destroyer Flotilla. Only in that month did the navy command resolve to use the U-boats which had been transferred to northern Norway to attack the Allied convoys. At the end of the year German destroyers made a successful foray into the sea east of Murmansk. Early in 1942 the attempt was also made to lay mine-barriers in the straits to the White Sea in order to restrict the activity of the Soviet Northern Fleet. Nevertheless, even in 1942 the inadequate German naval forces were unable to achieve any decisive success against increasing Allied deliveries of supplies for the Soviet war effort. Enemy supplies on the convoy route through the Arctic Ocean were not halted. This objective could not be attained by a reorganization of the command structure as ordered by Hitler in his Directive No. 37 of 10 October 1941, although the establishment of the command area 'Admiral Arctic Ocean' (Vice-Admiral Hubert Schmund) in Kirkenes (which was also intended as an emergency naval base) promised better co-operation with the new 'Air Leader North (East)'.⁶⁸ Extra forces were desperately required to improve German prospects of success, but could not be supplied to the new navy commander in the Arctic Ocean.

Despite German operational discussions, the Soviet Fourteenth Army was able to rely on naval and air superiority during its defence of the area round Murmansk. It received effective support from the other Soviet services. Enemy naval and air superiority in the Arctic Ocean was expressed in several ways: by Soviet submarine operations; by the operations of British naval forces against Spitsbergen and to cut off German supply transports in the Arctic Ocean; and by the raids of British carrier aircraft on Kirkenes, Petsamo, and Linahamari. In his Directive No. 36 of 22 September 1941 Hitler was forced to admit that enemy disruption of German sea communications along the polar coast had 'still further reduced the likelihood' that the mountain corps could 'reach Murmansk this year'.⁶⁹ Repeated Soviet landings on the Rybachiy peninsula greatly endangered the supply-route for Mountain Corps Norway, so that individual army units had to be withdrawn from the front on numerous occasions to secure the open sea flank and the long supply-lines. At the end of

1941 the struggle on the Arctic front was increasingly being determined by problems of supply.

Supplies had to be brought in for approximately 200,000 men in the German army in northern Finland, for units of the Finnish III Army Corps promised to the Finns by the Wehrmacht High Command,⁷⁰ and for 163rd Infantry Division operating on the Svir front in the south. In each case the exceptional geographical and climatic features of the theatre of operations meant that supplies were largely dependent on the transport situation. The problem proved remarkably difficult to solve, due to the shortage of technical equipment and winter-proof supply-lines in Lapland, and the refusal of Sweden to accede to German transport requests.⁷¹

'Home Staff Overseas' in Berlin thus faced serious problems with land and sea transport from Germany to Finland.⁷² These were intensified, and had more direct effects on the conduct of operations by the army command at the front, from the middle of September 1941, when British and Soviet naval operations in the Arctic made it impossible to bring in supplies from depots in Norway by sea. Additional transports were organized through the southern Finnish railway network to bring about some relief in the supply of ammunition, provisions, clothing, and replacement parts. This temporary solution was made possible by the co-operation of the German transport officer with the military attaché in Helsinki. However, the capacity of the railway network was already over-stretched because of domestic transport needs, and could hardly be increased without German assistance.⁷³

Schemes for the building of a railway line parallel to the Arctic Ocean road from Rovaniemi to Petsamo, involving the 'ruthless employment of Russian prisoners of war' by the Todt Organization, had been mooted at the end of September 1941 and taken up by Hitler in his Directive No. 36 of 22 September 1941. However, a local inspection by Reich Minister Todt revealed the scheme to be impracticable due to a shortage of material and time.⁷⁴ The project was

⁷⁰ See e.g. Halder, *Diaries*, 1140-4 (30 July 1941); telex Army Command Norway, Headquarters Finland, Abt. Ia No. 1173/41 g.Kdos. to OKW/WFSt/Abt. L (Wolfsschanze), 27 Aug. 1941, BA-MA, 20. Armee, 19070/2, and army order of Army Command Norway, Headquarters Finland, Abt. Ia No. 79/41 g.Kdos. Chfs., 6 Oct. 1941, BA-MA, XXXVI. AK, 24307/2.

⁷¹ On the supply problems see Hess, *Eismeerfront*.

⁷² The 'Home Staff Overseas' had been created in summer 1941 from the 'Home Staff North' of the 'Wehrmacht Commander Norway' based in Berlin, to provide unified direction of the transport preparations; it was subordinate to OKW and was instructed to co-operate with 'Wehrmacht Transport Control Berlin' of BdE. It was also responsible for supply to the Mediterranean and North Africa. See *Hitler's Directives*, 80.

⁷³ See Home Staff Overseas of OKW, Abt. Ia B. No. 161/41 g.Kdos. Chfs., on transport planning on the basis of Directive No. 37, to OKW/WFSt, 11 Nov. 1941, BA-MA, 20. Armee, 58628/1. See also Halder, *Diaries*, 1322-4 (29 Nov. 1941), and the account of the former German transport officer in Helsinki: Erfurth, 'Transportdienststellen', 13-16, 17-19.

⁷⁴ *Hitler's Directives*, 100. See also Erfurth, *Finnischer Krieg*, 72 ff. In his letter to Mannerheim of 22 Sept. 1941 Keitel on Hitler's behalf requested the Finnish government's agreement to this railway building, commenting that 'it is a matter of course that this railway will later pass into Finnish ownership'; chief of OKW, WFSt/Abt. L No. 441580/41 g.Kdos. Chfs. to C-in-C. of the Finnish armed forces, FM Mannerheim, 22 Sept. 1941, BA-MA, 20. Armee, 58628/2.

abandoned after a report by Todt to Hitler. As a substitute, Hitler ordered the extension of the road from northern Norway through Karasjok-Inari to Ivalo.⁷⁵

In the winter of 1941-2 the Gulfs of Bothnia and Finland were frozen for months on end; sea transport along the north Norwegian coast to the North Cape was subjected to a virtual blockade by British naval operations after October 1941 and brought to a total standstill for a time. At this stage the army in Lapland faced a critical supply situation (see Diagram II.III.I.)⁷⁶ It could only be alleviated by increased recourse to the material reserves in the north Norwegian depots. Thereafter, from the beginning of 1942, the Wehrmacht High Command ordered advanced planning and stockpiling of the entire supply requirements of the German troops in Finland for almost a full year, in order to make them independent of supplies from home for longer periods.⁷⁷ At the same time the 'Finland Branch of Home Staff Overseas' and the post of 'German Transport Plenipotentiary in Finland' were established in Helsinki to ensure better co-ordination of the entire supply and transport needs of the Wehrmacht.⁷⁸ In autumn 1941 the Luftwaffe had already set up the 'Air Region Staff Finland' to make better use of the limited supply capacity. In general, the problem of supply and communications was severely restricting German operations in northern Finland.⁷⁹

(d) *Balance Sheet of Military Operations in Northern Finland to 1941-1942*

By the end of 1941, six months after the launching of German-Finnish operations in northern Finland, the units of High Command Norway had advanced between 30 and 75 km. into Soviet territory. In none of the three corps sectors, however, had they achieved the operational objective of capturing the Murmansk railway; nor had they managed to make a decisive breakthrough which would have improved prospects for its capture. By the end of July 1941 the heavy fighting and casualties of the first few weeks had already led the Wehrmacht High Command to discuss halting the attack on the front controlled by Army Command Norway 'until the progress of operations on the main front, with Army Group North, affects the situation in Finland'.⁸⁰ It

⁷⁵ Chief of OKW, WFS/Abt. L No. 441707/41 g.Kdos. Chefs. to C.-in-C. of Finnish armed forces, FM Baron Mannerheim, 13 Oct. 1941, BA-MA, 20. Armee, 58628/2.

⁷⁶ See the 'memorandum on the supply situation' of Army Command Norway, OQu/Qu I Br. No. 334/41 g.Kdos., 26 Nov. 1941, BA-MA RH 2/v. 428, and Falkenhorst's visit to Gen. Erfurth on 10 Nov. 1941, papers of Gen. Erfurth, diary, i. 228 ff., BA-MA N 257/1.

⁷⁷ In autumn 1940 Hitler had ordered that the German troops in northern Norway be supplied 'with provisions for 1 year, with ammunition for 6 equipments', but this had been possible only for three months. See Report on the transfer of the Mountain Corps to Northern Norway, 15 Aug.-15 Nov. 1940, 8, BA-MA, XIX. Geb.K., 23450, and *ibid.* RW 4/v. 769.

is possible that the attitude of Wehrmacht High Command was affected by the rejection of the operations plan from northern Finland by OKH, the Army High Command, which was also reluctant to send new army units as reinforcements for this front.

In his Directive No. 33 of 19 July 1941, however, Hitler repeated his former objectives for the attack by Army Command Norway, though the lack of reinforcements also led him to accept that 'operations may have to be temporarily delayed'.⁸¹ Subsequently, the two German corps in the northern and central sectors achieved much less success than had been anticipated, due to the skilled delaying tactics and defensive operations of the Soviet troops. The later starting-date of the offensive in Finland had given the Soviet forces more time to construct strong defensive positions. Consequently, Hitler's directive of 30 July 1941 ordered Army Command Norway to seek 'to cut the Murmansk railway, particularly towards Louchi', using III Finnish Army Corps.⁸² The aim was now to reach the Murmansk railway 'in one place at least', and to block it.⁸³ When this too was not achieved, an attempt was made to switch the main point of attack back to XXXVI Army Corps. However, there was no genuine concentration of forces involving a number of bigger formations under the command of one army corps. With no reserves available, Army Command Norway was forced to split the divisions at its disposal in order to improvise a concentration of operational control in one sector.⁸⁴ Hitler emphasized that the capture of Murmansk and the Murmansk railway was 'the ultimate aim of our operations in northern and central Finland',⁸⁵ and proposed a rapid resumption of the attack on Kandalaksha. Nevertheless, at the end of September 1941 he was forced to agree to the temporary halting of the attacks, as demanded by Army Command Norway.

Operation Silver Fox and the two attacks towards Murmansk (Operation Platinum Fox) and on the Murmansk railway (Operation Arctic Fox) had failed. This fact led to a number of debates. First, had it been correct to accept the seizure of the port of Murmansk as a main objective of operations, as demanded by Hitler and the navy? Second, there was the question of the reasons for the failure of the German offensive from Finnish Lapland: was the plan to reach and cut the Murmansk railway such a vital element in the war against the Soviet Union that it justified the deployment of an entire army in the far north? Was it possible that forces were being squandered in this theatre at the expense of the main front in the east?⁸⁶ The Army General Staff had

⁸⁵ *Hitler's Directives*, 99-101.

⁸⁶ On criticism of OKW operational planning for Army Command Norway and the reasons for its failures see papers of Col.-Gen. von Falkenhorst, iv. 55, BA-MA N 300/4; Hess, *Eismeerfront*, 111-18; Hölter, *Armee in der Arktis*, 17 ff.; Erfurth, 'Murmansk-Bahn', 281-95; also Seaton, *Der russisch-deutsche Krieg*, 118-19.

from the start been severely critical of the German attack from northern Finland because 'the whole undertaking is an expedition, not an operation'.⁸⁷ However, the Wehrmacht High Command took the view that the Murmansk railway was of such strategic significance as a supply-line for the delivery of vital war materials from the Western Allies that it was essential to deploy the German army in Norway on this most northerly front.⁸⁸ In addition, there were political reasons for this choice of operational objective. Hitler believed that the severance of the supply-line would have a powerful psychological effect in both London and Moscow, particularly since it had been extended in 1941 by the construction of a connecting line from Sorokka-Obozerskaya to the Archangel railway.⁸⁹ As a result, the prevailing opinion was that it was more important to cut off the Murmansk railway than to capture Murmansk, despite the demands of the navy. It is possible that, after a successful assault on Kandalaksha, an attack on Murmansk along the railway line from the south might have had more chance of success than a direct advance from Petsamo through pathless tundra to the east.⁹⁰ Further criticism was levelled at the decision to allow Mountain Corps Norway to launch a frontal attack through the broken tundra towards Murmansk without providing adequate reserves or strength in depth.⁹¹

It seems that Army Command Norway already faced an almost impossible task in trying to provide sufficient forces to attack both Murmansk and the Murmansk railway. A third operational objective, one of equal importance, the attack of Finnish III Corps through Kiestinki towards Louchi, was then added. This development tends to support the view that the attacking forces, already relatively small, were being needlessly dispersed. In these circumstances it is difficult to discount criticism both of the thinking of the supreme leadership and of the operational planning and objectives assigned to Army Command Norway. In retrospect, it is easy to 'blame' the Finnish High Command for its failure to concentrate its forces and provide them with sufficient strength. However, it is exceedingly doubtful that the Finns should have claimed that it was impossible to deploy and supply more than two divisions per sector at any one time, even given the low supply capacity available to them.⁹² An energetic advance by XXXVI Army Corps on

⁸⁷ On the assessment of the Army General Staff see Halder, *Diaries*, 919 (14 May 1941), and letter Asst. Chief of Staff IV, Maj.-Gen. Matzky, to Military Attaché Stockholm, Maj.-Gen. von Uthmann, 21 Sept. 1941, BA-MA III H 1001/19.

⁸⁸ See esp. Hölter, *Armee in der Arktis*, 19 ff., 79-80. The Murmansk railway, built during the First World War as a single-track line, was electrified along the Kandalaksha-Murmansk sector in 1941-2. Between 10 and 15 pairs of trains travelled along it each day in both directions.

⁸⁹ Halder, *Diaries*, 1005-8 (5 July 1941); also Polvinen, *Finland i stormaktspolitiken*, 30.

⁹⁰ See General Dietl, 228-9.

⁹¹ See letter from the former commander of 6th Mountain Div, Maj.-Gen. Schörner, to Maj.-Gen. Buschenhagen of Army Command Norway, parts of which are published in Ruef, *Odysee*, 156.

⁹² Ruef, *Zwischen Kreta und Murmansk*, 216. See also Hölter, *Armee in der Arktis*, 17, 19, which repeats the comments of Buschenhagen regarding the consultation by the Finnish side during operational planning.

Kandalaksha involving several divisions—as envisaged during the operational planning of ‘Silver Fox’—would undoubtedly have provided the main thrust of the offensive and a starting-point for subsequent operations against Murmansk.⁹³ However, the failure of SS Division North, along with the decision to leave 163rd Infantry Division in the Finnish sector of the front in the south, reduced the attacking forces in this army sector by half. Concentration of forces could be achieved only by a repeated splitting of the divisions. On 23 September 1941 General Dietl had complained to the Wehrmacht Operations Staff about the lack of adequate concentration.⁹⁴ The reply of General Jodl, Chief of the Wehrmacht Operations Staff, reveals that the Wehrmacht High Command was well aware that the forces deployed on this ‘secondary front’ on the Arctic Ocean were insufficient to achieve major success. Army Command Norway and General Dietl’s mountain corps had already noted that the artillery provision was inadequate. It appears that these failings were the result of the opinion of the supreme leadership that the German divisions in northern Finland were fighting in a less significant ‘secondary theatre of operations’, despite being assigned the strategic objectives of Murmansk and the Murmansk railway.⁹⁵

From July 1941, depending on local reports of success from Mountain Corps Norway, XXXVI Army Corps, and Finnish III Corps, the Wehrmacht High Command and Hitler repeatedly changed their minds about the future main focus of operations in the region. Finally, on 10 October 1941, Hitler ordered a halt to the offensive along the entire army front due to the failure of all three attacking thrusts.⁹⁶ At the end of October the reorganization and amalgamation of several German divisions were announced and demands were made for Finnish participation in yet another large-scale winter offensive on Kandalaksha. However, an operation of this type proved impracticable in winter 1941–2 due to the inadequate winter training of the German divisions and the need for additional Finnish reinforcements. Furthermore, it became apparent that army command’s assessment of Finnish military and political war aims had been incorrect in assuming that the cutting of the Murmansk railway link was ‘also of decisive significance for Finnish political and military objectives’. This led to the mistaken assumption that the Germans could always rely on the availability of Finnish divisions for an assault on Kandalaksha.⁹⁷

The fact was that the German offensive had nowhere achieved its objectives, while the Finns had achieved at least some successes. This not only created a sense of disappointment in Finland and an attitude of resignation and pessi-

mism among the German troops, but also led to German-Finnish ill feeling as a result of the persistent requests for Finnish reinforcements.⁹⁸ Differences of opinion over the prospects for the subsequent conduct of the war in the north could not be eliminated altogether. Personal talks involving Major-General Warlimont, Colonel-General von Falkenhorst, Infantry General Erfurth, and Field Marshal Mannerheim were held on 15-16 November and 13-14 December 1941 in Helsinki and Rovaniemi. Even then, there was no real agreement on a genuine coalition to wage the war.⁹⁹ Mannerheim in fact established a link between the conquest of Leningrad by the German army and a new offensive in northern Finland. He was thereby making Finnish participation in a further assault on Murmansk and the Murmansk railway conditional on the link-up of the German and Finnish armies on the Svir front and at Leningrad.¹⁰⁰

Apart from the failure to establish a focal point of attack and the resulting inadequacy of forces in all three army sectors, a number of other reasons played a part in the failure of Operation Silver Fox. These involved difficulties in obtaining supplies to satisfy the enormous requirements of the troops; exceptional climatic and geographical conditions in the theatre of operations; the perfunctory provision and inadequate allocation of reserves; the lack of a joint German-Finnish war effort under a unified command; inadequate air and naval support; inaccurate assessment of the forces and potential of the enemy and his familiarity with climatic and geographical conditions.¹⁰¹ Purely political factors also played a part in the failure of Army Command Norway. At the very beginning of the operation the staffs of the future port commanders of Murmansk and Archangel were set up prematurely in Norway—clear evidence that the Germans greatly underestimated the difficulty of the attacks on Murmansk and the Murmansk railway.¹⁰²

In his Directive No. 39 of 8 December 1941 Hitler called a halt to all major attacking operations. The decision was publicly confirmed in his proclamation to the soldiers of the army and the Waffen-SS on 19 December 1944. This directive, and the switch to defensive operations in manpower-saving positions, also affected the operations of Army Command Norway in northern

Finland.¹⁰³ In view of the serious position along the entire eastern front, in December 1940 the Army High Command even considered a withdrawal of troops from Finland to meet the manpower needs of the main front.¹⁰⁴ Ultimately, Hitler's plan for the 'resumption of the offensive struggle'¹⁰⁵ had to be postponed until spring 1942, in northern Finland as elsewhere. The projected winter offensive against Kandalaksha was abandoned. When Mannerheim proposed to launch an offensive against Sorokka in spring 1942, the Wehrmacht High Command agreed all the more readily because this was to be undertaken mainly by the Finnish Army.¹⁰⁶ Though it is doubtful that the attack on the Murmansk railway was 'dictated by strategic reasons', the unsuccessful course of the German-Finnish attack on Murmansk and the White Sea can certainly be described as 'one of the missed opportunities in the Second World War'.¹⁰⁷

(e) *New Strategic Deliberations after the Turn of 1941-1942*

At the turn of 1941-2, after German failure in the northernmost sector of operations against the Soviet Union, the United States entered the war. This event helped to provoke a fundamental change in the assessment of the position and tasks of German troops on the 'northern flank of the European eastern front' in northern Finland and northern Norway.¹⁰⁸ Even in autumn 1941, fears of a possible British landing near Murmansk or in northern Norway—exacerbated by the American occupation of Iceland in July—had led to Hitler's demand for the northern flank to be secured by strong naval forces and for further reinforcement of the Wehrmacht Commander in Norway by one or two highly mobile or armoured divisions.¹⁰⁹ These deliberations were given new impetus by the entry of the United States into the war on 7 December 1941, and by surprise British naval and landing operations at Vestvågøy (Vestfjord, Lofoten) and Måløy (north of Bergen on North Fjord). The new office of 'Admiral Arctic Ocean' (Admiral Schmund), established in mid-October 1941, took command of all naval operations in the Arctic Ocean. By taking control of the office of 'Admiral Polar Coast' in Tromsø, this office also became responsible for coastal defence. At the turn of the year 'Admiral Norway', Admiral-General Boehm, drew attention to the great danger of a

British attack on Norway.¹¹⁰ Hitler was now convinced that the entire theatre in the north had become 'more significant'; he even regarded the defence of northern Norway as 'of decisive importance for the war'.¹¹¹ However, Army Command Norway reported that an Anglo-American landing operation on the north Norwegian coast could not be prevented with the defensive forces available. The need, therefore, was to reinforce coastal defences and to improve fuel supplies; such steps were essential to safeguard northern Finland and northern Norway against Soviet attacks on the Gulf of Bothnia and northern Scandinavia, and against Allied landings and attacks on the north Swedish ore regions at Kiruna-Gällivare. New priority was to be given to overall 'protection of the front to the west... from Kirkenes to the Spanish border'. The position of Norway was deemed to be particularly exposed following American entry into the war: British-American action against the Norwegian and Finnish Arctic coasts was now considered possible and even 'likely' in co-ordination with Soviet land operations.¹¹² Such developments appeared more feasible since the attitude of Sweden was deemed to be uncertain.

Hitler and the Wehrmacht High Command calculated that a major Allied landing was possible in northern Norway in spring 1942.¹¹³ From the beginning of that year there were renewed efforts to improve Norway's defensive capability. In a discussion at his headquarters on 22 January 1942 Hitler ordered 'considerable reinforcement of army personnel and material' for units in Norway, the 'zone of destiny of this war'.¹¹⁴ As far as possible, the Luftwaffe was also to scrape some units together.¹¹⁵ The new basic 'operations directive for the defence of Norway' was issued by the Wehrmacht High Command on 18 January 1942.¹¹⁶ Accordingly, various reinforcements including fortification battalions were sent to the Wehrmacht Commander Norway to be assigned to Higher Commands LXX (under Mountain Troop General Valentin Feuerstein in southern Norway) and XXXIII (under Cavalry General Georg Brandt in central Norway), and to the sector staff (with Lieutenant-General Nagy as commander in the polar region). However, the army and Luftwaffe

found it impossible to assemble substantial defensive forces. In order to achieve at least a deterrent effect against possible Allied landings, while also facilitating the disruption of Allied convoys from Scotland to Murmansk and Archangel, Hitler ordered the transfer to Norway of the battleships *Tirpitz*, *Scharnhorst*, and *Gneisenau*, the heavy cruisers *Prinz Eugen* and *Admiral Scheer*, and additional destroyers, U-boats, and naval vessels.¹¹⁷ To that end, Hitler demanded that the *Scharnhorst*, *Gneisenau*, and *Prinz Eugen* should return from the Atlantic port of Brest and break through the Channel into home waters. This was achieved on 11–12 February 1942 as Operation Cerberus. By mid-May 1942 the heavy cruisers *Admiral Hipper* and *Lützow* had also entered the waters of northern Norway. In the same way, the Luftwaffe was instructed to concentrate torpedo Staffeln in the northern Arctic in order to launch effective and 'successful' attacks on enemy convoys and ports on the Murmansk coast. Hitler and the Wehrmacht Operations Staff were well aware that 'to strengthen the forces in the Arctic Ocean . . . it is necessary to accept a weakening of the deployment in other areas'. To this end, Hitler held that 'in particular, ocean reconnaissance over the Atlantic, the range of which was no longer sufficient for the U-boat operations there, [could] be considerably reduced'.¹¹⁸

Norway itself was therefore regarded by the German leaders as 'the key point of European defence in 1942' and a possible 'main theatre of war'. As such, it had to be defended by providing replacement formations and units from all branches of the armed forces in the west.¹¹⁹ Consequently, there was no prospect that new formations from Norway would be dispatched to the German forces operating in northern Finland or northern Russia. Instead, the army command in northern Finland was additionally instructed 'always to have sufficient reserves on the Arctic coast to deal with a major attack on the coast'.¹²⁰

Hitler frequently referred to the possibility and even likelihood of American-British action in Norway. These fears and prophecies clearly demonstrate that, within the framework of his overall continental strategy, he regarded an enemy invasion of Norway as potentially decisive for the entire course of the war. Given this background, it is no surprise that all three Wehrmacht services were ordered to transfer forces to the Norwegian region, despite the fact that

¹¹⁷ 'Memorandum' OKW/WFSt/Op. (M) No. 55598/42 g.Kdos.Chefs., 1 Apr. 1942, BA-MA RW 4/v. 639, and 'Führer Conferences', 260, 261, 246–9; Bidlingmaier, *Seegeltung*, 246–7; *Sea Power*, 555.

¹¹⁹ This was the assessment in Wehrmacht Commander in Norway, Ia No. 12/42 g.Kdos. Chefs., 'Directive for the defence of Norway', 27 Jan. 1942, and minutes of discussion with the commanding generals and divisional commanders on 28 Jan. 1942 in Oslo: both in BA-MA, 20. Arnee, 35641.

¹²⁰ 'Führer directive' No. 55493 g.Kdos.Chefs., 14 Mar. 1942 (see n. 118 above).

they could scarcely be dispensed with on the other fronts. The navy was most affected by this development. In this case, the switch to Hitler's assessment of the situation and the creation of a strategic concentration in Norway also suggested that the Atlantic battleship strategy of the Commander-in-Chief of the Navy, Grand Admiral Raeder, had to be regarded as having failed.¹²¹

At this stage a proposal emanating from Air Fleet 5, and based on earlier discussions within Army Command Norway in May 1941, was revived. This suggested that Spitsbergen should be occupied in spring 1942 in order to improve the prospects for destroying enemy naval transports and to enable early weather forecasts to be made for attacks on the convoys by air and sea. The proposal was opposed by the Wehrmacht Operations Staff on the grounds that it would involve 'considerable new burdens in a wide variety of areas when conditions are already difficult in the Arctic'.¹²² In particular, there seemed no prospect of providing stocks of supplies adequate to cope with the extensive requirements of a Luftwaffe base. The Wehrmacht Operations Staff reported:

According to the proposal, the occupation of Spitsbergen is designed to improve our attacking potential. However, it is highly probable that a situation would be created in which we could not exploit the new position due to the lack of secure sea routes, and would instead be forced to commit valuable transport capacity and fighting forces at sea and in the air, which could otherwise have been used to attack from Norway, to the defence of the base [Spitsbergen].

Since the value of a base on Spitsbergen 'would bear no relation to the expense necessary to acquire and maintain it', Hitler decided on 22 March 1942 'that an occupation of Spitsbergen should not be undertaken'.¹²³ The decision not to attempt the capture of Spitsbergen demonstrates that German forces and potential were inadequate to establish the air and sea superiority necessary for the conduct of the war in this region. Wehrmacht High Command regarded the military situation, especially at sea, as so greatly strained 'even now' that any improvement of the German strategic position had to be abandoned in favour of the 'scraping together' of forces to repel an expected Allied landing on the Norwegian coast. On the other hand, the proposals reflected the positively Utopian wishful thinking of the operations staffs of the army and Luftwaffe. In reality, the navy was unable to mount any offensive operations against Allied convoy vessels in the Arctic Ocean because of a lack of air support. In spring 1942, according to information from Naval Group Com-

¹²¹ Salewski, *Seekriegsleitung*, ii. 16, refers to a '180-degree about-face'.

mand North, the 'grotesque picture' had developed in which the enemy 'is chasing [the German navy] out of the coastal approaches while he himself puts to sea there unmolested'.¹²⁴

The changed assessment of the military situation in Norway also influenced Hitler's decision of 7 November 1941 to divide the command of German troops in Norway and northern Finland. The plan was to establish a new army command for the Finnish theatre—first projected as 'Army Northland'.¹²⁵ On 27 December 1941 Colonel-General von Falkenhorst was recalled to Oslo in his function as 'Wehrmacht Commander Norway'. In place of the former 'Headquarters Finland' of Army Command Norway, an 'Army Command Lapland' was established and took over the sector of the front in northern Finland on 14 January 1942. Despite Falkenhorst's plea that the defence of the whole of Norway should be kept under unified command,¹²⁶ the new 'Army Command Lapland' also became involved in the task of defending Norway when Mountain Corps Norway, under its new commanding general, Lieutenant-General Schörner, was instructed to take over coastal defence in the Varanger area west of Kirkenes as far as Tana Fjord.¹²⁷ Moreover, for purposes of political administration the area continued to come under the control of the Reich Commissioner for Norway, Gauleiter Josef Terboven. The change of command demonstrated that the recalled Colonel-General von Falkenhorst was being held responsible for the failure of the offensive. By appointing Dietl, a personal favourite who was also respected in Finland, Hitler was apparently hoping to regain the confidence of Finnish headquarters in the German conduct of the war, and to avoid further differences with Mannerheim concerning the conduct of operations in northern Finland.¹²⁸

Plans for the creation of a joint high command for the German-Finnish front as part of this reorganization also came under discussion for a short time. These schemes, which would have subordinated Dietl and 'Army Command Lapland' to the Finnish commander-in-chief, were not realized.¹²⁹ A proposal along those lines by the Wehrmacht High Command to the Finnish High Command, and to Infantry General Heinrichs on his visit to the Führer's headquarters on 6 January 1942, was not accepted. Instead, Wehrmacht

2. FINNISH ARMY OPERATIONS

(a) *Recovery of the Former Finnish Territories in Ladoga-Karelia and on the Karelian Isthmus*

At the German-Finnish military discussions of June 1941 the Finnish High Command had agreed to launch an attack more or less where the Germans requested, either west or east of Lake Ladoga. After Army Group North had made a successful advance starting on 22 June 1941, the Army High Command demanded 'that Finland must make all preparations for starting offensive operations east of Lake Ladoga' in order to carry out the most wide-ranging encirclement manoeuvre possible. However, the operational objective was not jointly agreed.¹³¹ Field Marshal Mannerheim accepted this demand in his headquarters in Mikkeli only after long discussions and deliberations with General Erfurth of the 'Liaison Staff North'.¹³² On 10 July 1941 Mannerheim opened the main attack on the Soviet Union in the wide-ranging manner requested by the German general staff. The 'Karelian Army' (6 divisions) under Lieutenant-General Heinrichs was ordered to advance towards Olonec (Aunus)-Lodeynoe Pole (Lotinapelto) on the Svir, east of Lake Ladoga.¹³³ Nevertheless, every one of the Finnish army's objectives was in Ladoga-Karelia, within the former border of 1939. It appears that Mannerheim was exercising some caution in his acceptance of the German proposals.¹³⁴ To reinforce the main point of attack east of Lake Ladoga, elements of the German 163rd Infantry Division, moving on the transport route through Sweden and originally intended for the attack on Hanko, were placed directly under the command of the Finnish Commander-in-Chief. With the agreement of the Army High Command, these were now to act as

reserves for the 'Karelian Army'.¹³⁵ In his order of the day on 7 July 1941 Mannerheim referred to the 'ancient and firm brotherhood-in-arms' of Finnish and German soldiers in the common struggle against 'Bolshevism and the Soviet Union'. This, it was claimed, was the guarantee of victory and a successful future for both countries.¹³⁶

Within a few days, 5th and 11th Divisions of VI Corps (Major-General Paavo Talvela) and the mobile rifle brigades of 'Group Oinonen' (Major-General Waldemar Oinonen) had advanced rapidly to the north-east shore of Lake Ladoga at Koirinoja.¹³⁷ The Soviet formations at Sortavala were cut off. Here the Finns were helped by the fact that the Soviet command had already transferred its reserves to the German eastern front in the south. The VI Corps advanced further south along the northern shore of Lake Ladoga and, after seizing the town of Mansila on 22 July 1941, came to a halt on the former Finnish-Soviet border. Meanwhile, the advance of the German 163rd Infantry Division¹³⁸ and Finnish 1st Division towards Suojärvi (Lake Suo)—Suvilahhti, and the independent operations of the Finnish 14th Division, secured the north-eastern flank of the 'Karelian Army' by linking up with Army Command Norway. A first attempt by 163rd Infantry Division to attack Suojärvi, however, had to be broken off.

At the end of July the second phase of the Finnish attack began. The VII Corps (Major-General Waldemar Hägglund), with 19th and 7th Divisions, and II Corps (Major-General Taavetti Laatikainen), based in the northern sector on the Karelian isthmus with 2nd, 15th, and 18th Divisions, advanced on the north-west shore of Lake Ladoga at Sortavala and Hiitola. Hiitola was captured on 11 August 1944. VII Corps was then relieved by the newly established I Corps (Major-General Einar Mäkinen). With 7th, 19th, and 2nd Divisions, I Corps succeeded in driving the Soviet troops from Sortavala in mid-August and taking the town on 16 August 1941. The II Corps took the town of Käkisalmi (Kexholm) on the western shore of Lake Ladoga shortly afterwards. Despite the rapid Finnish advances, which had cut off many Soviet troops to the north-west of Lake Ladoga, the Soviet leadership was still able to bring a large proportion of its troops across the water to safety. Neither the

¹³⁸ On 16 July 1941 163rd Inf. Div. had been placed by Mannerheim under the C.-in-C. of the 'Karelian Army', Lt.-Gen. Heinrichs. For the operations involving the division see the divisional records, BA-MA 16260/16-24.

weak Finnish air force nor the German Luftwaffe were able to prevent this development. After the conclusion of operations around Lake Ladoga, Field Marshal Mannerheim considered that the starting-point for an offensive on the Karelian isthmus had been established. In consequence, he initially rejected the demand of Army High Command for a further rapid advance to the River Svir. Instead, on 22 August 1941 Mannerheim launched an attack in the southern sector of the Karelian isthmus towards Viipuri (Viborg) with 4th, 8th, and 12th Divisions of IV Corps (Lieutenant-General Karl Lemart Oesch).¹³⁹ Though this offensive offered some prospect of relieving the German troops south of the Gulf of Finland, it carried little threat to the Soviet troops in the rear of Leningrad. Colonel-General Halder of Army High Command regarded this latter objective, to be achieved by an advance to the Svir, as much more important. The attacks of IV Corps were successful in combination with the advance of II Corps in the eastern part of the Karelian Isthmus. On 30 August 1941 the town of Viipuri was captured, and on 2 September 1941 Koivisto fell.¹⁴⁰ At the beginning of September 1941, after a campaign lasting four weeks, the Finns had reached the former Finnish-Soviet border along the entire width of the Karelian isthmus.

After a regrouping operation east of Lake Ladoga, troops of the freshly arrived VII Corps went into action with 'Group Engelbrecht', assembled from the German 163rd Division and 2nd Rifle Brigade. From the middle of August these troops launched an attack on the left flank of the 'Karelian Army' in the region round Lake Suo. Here too the Soviet troops were driven back across the old Finnish-Soviet border as far as Lake Syam (Säämäjärvi). However, the German 163rd Division, which participated in the attack, suffered heavy casualties. It became apparent that the division was not properly equipped for forest fighting, in which it had little experience. Moreover, by transferring a third of its units to XXXVI Army Corps on the Salla Front, it had suffered a significant loss in combat strength.¹⁴¹ Following these battles, the division was moved again at the end of August; 163rd Division was held in reserve behind the 'Karelian Army' in the Salmi region on the eastern shore of Lake Ladoga. The Finnish 14th Division, maintaining the link with III Finnish Army Corps sector in the north, had captured Repola (Reboly) on 8 July 1941 and then advanced eastwards to Rukajärvi (Rugozero). There, on the orders of Mannerheim, it went over to defence in the middle of September.¹⁴²

At the end of August and beginning of September the successful Finnish offensive tapered off at the old border. It thus became certain—as General Erfurth of 'Liaison Staff North' had realized in mid-July—that Mannerheim's objectives were limited. He was interested neither in a wide-ranging advance

east of Lake Ladoga deep into Soviet territory beyond the River Svir, which would have cut Leningrad off from its eastern supply-lines and linked up with German units south of the Svir, nor in an advance on Leningrad from the Karelian isthmus.¹⁴³ Although Mannerheim used his liaison officer at Army High Command, Lieutenant-General Oehquist, to offer reassuring explanations of his conduct,¹⁴⁴ he had already promised President Ryti that 'under no circumstances' would he undertake an attack against Leningrad.¹⁴⁵

In his Directives No. 33 of 19 July 1941 and No. 34 of 30 July 1941, as well as in his supplements to Directive No. 34,¹⁴⁶ Hitler had maintained his commitment to the plan for joint action by the Finnish Army and Army Group North. Consequently, in an exchange of letters with Field Marshal Mannerheim on 22 and 26 August 1941, Field Marshal Keitel sought to clarify Finland's military aims and obtain acceptance of German ideas for the next operational objectives of the Finnish Army.¹⁴⁷ The failure to make any binding agreement about joint conduct of the war before it began was now proving to be a serious disadvantage.¹⁴⁸ In his reply Mannerheim made it clear that German requests were going far beyond the content of military discussions before the outbreak of the war.¹⁴⁹ Though he was willing to resume the attack east of Lake Ladoga through Olonec (Aunus) to the River Svir, and to contain Soviet forces by means of Finnish operations on the Karelian isthmus, Mannerheim, in agreement with President Ryti and the Finnish government, rejected the German demands. His decision was based on political reasons as well as the lack of adequate forces and the high level of casualties already sustained by the Finns. Mannerheim did not believe that the Finns could launch two simultaneous attacks, firstly on the Karelian isthmus over the old border towards Leningrad, and secondly east of Lake Ladoga over the Svir in order to link up with German troops south of the lake. He also regarded a Finnish attack on Hanko, requested by OKH, as impracticable without extensive German air and artillery support. This could not be undertaken before the conclusion of operations in the east.¹⁵⁰

¹⁴⁹ Similar views were expressed by Lt.-Gen. Heinrichs to Lt.-Gen. Engelbrecht, commander of 163rd Inf. Div.: 'The comments of Lt.-Gen. Heinrichs make it clear that on the Finnish side the German demand for the extension of operations with Finnish forces beyond the Svir was regarded as very far-reaching.' See 163rd Inf. Div., war diary 31 Aug. 1941, BA-MA 16260/16.

¹⁵⁰ On the discussion of the political and military reasons for Mannerheim's hesitation over proceeding with the Finnish attack see Jägerskiöld, *Marssalken av Finland*, 142 ff.

The Chief of the Finnish general staff, Lieutenant-General Edvard Fritjof Hanell, told General Erfurth of 'Liaison Staff North' that Mannerheim's caution was due to a fear that the German Army Group North might 'halt at the Volkhov and leave him with the task of advancing with the Karelian Army to the Volkhov'.¹⁵¹ Moreover, the government in Helsinki had not given its unanimous consent to major incursions over the old border, and had only agreed to operations east of Lake Ladoga to the River Svir. Not until 1 September 1941 did it also give permission for a limited advance on the Karelian isthmus to straighten the front on the far side of the former border. Even this was to be done only 'to gain tactically favourable and manpower-saving positions'.¹⁵² There was no consent for direct participation in the siege of Leningrad. Despite Jodl's discussions with the Finnish commander-in-chief at the Finnish headquarters at Mikkeli on 4 September 1941, the Finnish decision was not altered.¹⁵³

(b) *Conquest of East Karelia and Advance to the River Svir*

At the beginning of September, therefore, the decision was taken to accede to German demands and resume the offensive east of Lake Ladoga towards the Svir and Lake Onega. Helsinki's previous thesis of a 'defensive struggle' against Moscow was thus undermined: Finland's war was now revealed as one of conquest. The Finnish government sought to justify the invasion of east Karelia on the grounds that it was necessary to eliminate the enemy's strategic bases of attack and favourable supply-lines in east Karelia on the far side of the old Karelian border.

On 4 September 1941 the 'Karelian Army' east of Lake Ladoga resumed the offensive.¹⁵⁴ On the left flank 'Group Oinonen' advanced with two brigades north of Lake Syam eastwards towards Lake Onega. In the centre VII Army Corps with 1st and 11th Divisions went on the attack between Lake Syam and Lake Vedlo towards Petrozavodsk (Äänislinna), capital of the Karelo-Finnish Soviet Republic. In the southern army sector VI Corps with three divisions (5th, 7th, and 17th) and one brigade attacked along Lake Ladoga and through Olonec towards the River Svir. By 7 September VI Corps had already reached the Svir opposite Lodeynoe Pole. Next day, the Murmansk railway was cut off at the Svir. The great success of the Finnish offensive was crowned with the

capture of Petrozavodsk and the western coast of Lake Onega on 1 October 1941. The bulk of the 'Karelian Army'—including the German 163rd Infantry Division—then took up defensive positions along the Svir. However, units of 'Group Oinonen' and the newly arrived II Corps (4th and 8th Divisions, 2nd Rifle Brigade) north of Petrozavodsk advanced along the Murmansk railway to Medvezhyegorsk (Medvez'haa Gora, Karhumäki) during October. But with the onset of winter, the advance became increasingly difficult and slow. Nevertheless, the troops of II Corps under Major-General Laatikainen succeeded in capturing the railway station of Medvezhyegorsk on 5 December 1941, and Povenets (Poventska) on the Stalin Canal on 6 December. Thereafter the units north of the so-called 'Maaselkä ridge' (Mazelskaya), the isthmus between Lake Seg (Seesjärvi) and Lake Onega, went on the defensive.

German troops captured Reval at the end of August and were now approaching the suburbs of Leningrad. In consequence, the issue of a co-ordinated operation by Finnish and German units, and their linking up at Lake Ladoga, again became acute. Army Group North reached the Neva on 8 September 1941 and took Shlisselburg on Lake Ladoga, largely cutting Leningrad off from its land supply-routes. It seemed that the German forces still had a chance to link up with the Finnish Army. While the Soviet troops made enormous efforts to break through the ring enclosing Leningrad, Hitler decided that the objective of the operation had been achieved; further battles for the city, and the struggle to link up with the Finns, would now form a 'subsidiary theatre' of operations.¹⁵⁵ At the same time, armoured formations essential to its mobile attacking force (Armoured Group 4, LVII Armoured Corps) were detached from Army Group North for the attack on Moscow.

On 6 September 1941, however, Hitler's Directive No. 35 had also demanded that Leningrad should be more tightly encircled in conjunction with the Finnish units on the Karelian isthmus; 'forces of Army Group North will move north across the Neva sector as soon as possible' in order to forge the 'link-up with the Karelian Army on the Svir'.¹⁵⁶

Army Group North was thus faced with two conflicting demands. It was to transfer several large formations, but was still expected to link up with the Finnish Army. The Wehrmacht High Command hoped to find a way out of this dilemma by involving the Finns more directly in the encirclement of Leningrad and demanding that the Finns should link the two armies by attacking across the Svir. On 13 and 22 September Field Marshal Keitel asked Field Marshal Mannerheim to order the 'Karelian Army' with 163rd Infantry Division to attack across the Svir towards Novaya Ladoga at the mouth of the Volkhov, there to link up with Army Group North. Since the first objective of Army Group North would be to tighten the ring round Leningrad, German troops could not initially carry out any attacks over the Neva to the north or across the lower Volkhov. In addition, Keitel led the Finnish commander-in-

¹⁵⁵ Halder, *Diaries*, 1217 (5 Sept. 1941).

¹⁵⁶ *Hitler's Directives*, 98.

chief to understand that the German leadership intended to starve Leningrad out rather than occupy it.¹⁵⁷ It had been decided that the city could 'have no more right to exist in the future reorganization of Europe'; it was consequently doomed to 'total destruction' and would be razed to the ground.¹⁵⁸ The region north of the Neva would then be handed over to Finland.

The Germans were thus asking Mannerheim to establish the link with Army Group North, and to participate directly in the siege of Leningrad. Demands were being made which the Finnish High Command had rejected as impracticable for political reasons since the start of the first German-Finnish discussions. Mannerheim's reply on 25 September 1941¹⁵⁹ was a clear rejection of all the German operational objectives. The Finnish High Command was neither willing to resume the attack on the Karelian isthmus towards Leningrad, nor to advance across the Svir. Equally, it was not prepared to abandon the planned offensive northwards to Medvezhyegorsk on the Murmansk railway as the new 'main objective of the Finnish army'. Furthermore, Mannerheim announced a reduction and reorganization of the Finnish army into brigades. It became clear that 'before winter, no further Finnish operations' would take place. Mannerheim also made it perfectly clear 'that the German troops of Army Group North [would have to] seek to link up with the Finns towards Lodeynoe Pole [on the Svir]', and that the capture of Leningrad was a German task.¹⁶⁰ Only then could new and more offensive Finnish operations be contemplated.

Despite this bold and forthright refusal, the Germans maintained their demand for Finnish accommodation. Apparently unaware of Mannerheim's attitude, Colonel-General Halder contacted the Finnish liaison officer, Lieutenant-General Oehquist, with a request 'if possible to attack on the Karelian isthmus' to contain the Soviet forces there.¹⁶¹ The commander-in-chief of

¹⁵⁷ On the discussion of the attack on Leningrad see Abt. L No. 002099/41 g.Kdos. (I Op.), explanations of situation map for foreign ministry, 19 Sept. 1941, PA Handakten Etzdorf, betr. Rußland, and Abt. L No. 02119/41 g.Kdos. (I Op.), 'Memorandum Leningrad', 21 Sept. 1941, BA-MA RW 4/v. 578; Leeb, *Tagebuchaufzeichnungen*, 358 (17 Sept. 1941), 373-5 (12 Oct. 1941); Engel, *Heeresadjutant bei Hitler*, 108; Irving, *Hitler's War*, 303, 313; Domarus, *Hitler*, ii. 1755-6.

¹⁵⁸ Thus Keitel in his letter to Mannerheim: chief of OKW, WFSU/Abt. L, No. 44580/41, g.Kdos. Chfs. to commander-in-chief of Finnish armed forces, FM Mannerheim, 22 Sept. 1941, BA-MA, 20. Armee, 58628/2. See also 'Memorandum Leningrad', 22 Sept. 1941 (as n. 157 above). At the beginning of October Hitler decided once again 'that a capitulation by Leningrad or later by Moscow [should] not be accepted', according to Gen. Jodl in his letter to the C.-in-C. of the army (Ops. Dept.) on 7 Oct. 1941, No. 123-C, IMT xxxiv. 426. See also Army Group North, war diary, 12 Oct. 1941, BA-MA RH 19 III/168. In contrast, Army Group North initially wanted a military occupation of the city; see war diary of 15 and 17 Sept., 24 and 27 Oct. 1941, *ibid.* RH 19 III/167, 168; also Leeb, *Tagebuchaufzeichnungen*, 349 (5 Sept. 1941). On the economic reasons for Hitler's decision see sect. II.vi. 4 (b) at n. 350 (Müller).

¹⁶¹ Halder, *Diaries*, 1259 (26 Sept. 1941), 1275 (5 Oct. 1941).

Army Group North, Field Marshal Ritter von Leeb, was permitted to liaise with General Erfurth and Finnish headquarters only on 9 September 1941. Meanwhile, he too had made several requests for the Finnish army to remain 'on the attack' on the Karelian isthmus, and to create a bridgehead on the Svir to draw stronger enemy forces towards it.¹⁶² Leeb argued that Soviet resistance at Leningrad was increasing constantly as more forces were transferred from the Finnish front. Heavy German casualties were the result. He argued:

If the Finnish Army were to continue its attack on Leningrad, the battle of Leningrad would be decided in a few days in favour of the joint armies, and the region round Leningrad, and thus the success of Finn[ish] operations so far, would be safeguarded. A rapid cleaning up at Leningrad would also help the establishment of a link towards the Svir. Only if stronger infantry forces can be released at Leningrad in the near future can the removal of the enemy from the area west of the Volkhov be contemplated and the foundation be laid for an advance towards the Svir.¹⁶³

On the other hand, Army Group North would face a critical situation if the Finnish advance were halted. From 16 October 1941 Army Group North attempted to advance with XXXIX Army Corps through Tikhvin towards Lodeynoe Pole to the River Svir, without any Finnish promise of a simultaneous assault by Finnish troops on the Svir. The attempt failed.¹⁶⁴ Tikhvin was captured on 8 November 1941 but had to be evacuated the next day after heavy fighting. The attack developed into a near catastrophe. Disaster was averted only with great difficulty at the end of December, by means of a timely withdrawal behind the Volkhov. In the meantime, the command of the 'Karelian Army' and German 163rd Infantry Division had become convinced that, owing to a reduction of combat strength, the division and Finnish VI Corps both lacked adequate forces to hold a bridgehead once the Svir had been crossed.¹⁶⁵ Mannerheim therefore refused to undertake a limited 'demonstrative action' on the Svir front to relieve the German advance on Tikhvin. Even an attack solely by 163rd Infantry Division, as requested by the Wehrmacht High Command, was refused.¹⁶⁶ Preparations for such an attack, which had already begun, were dropped at the end of October 1941.¹⁶⁷

The Finnish High Command was unsettled by the withdrawal of German troops from Tikhvin and the retreat behind the Volkhov, which had been forced by constant enemy penetrations.¹⁶⁸ Within the framework of Mannerheim's proposed reduction of the Finnish Army, the sectors on the Svir front were reorganized from November 1941 and a defensive position was established. After the beginning of December 1941 no further major operations were launched by the Finns in any sector of the front.

Even the occupation of the port of Hanko on 3 December 1941 was due less to direct German or Finnish operations than to the withdrawal of Soviet troops from the naval base for strategic and supply reasons.¹⁶⁹ Nevertheless, the 'recapture of Hanko' was greatly celebrated by Hitler and Ribbentrop in their message of congratulation, where it was described as 'a further great success in the Finnish people's historic struggle for freedom'.¹⁷⁰

(c) *Military Result of Operations in Southern Finland and the Problem of Joint Military Planning*

After the retreat of German troops behind the Volkhov, if not earlier, the Finnish High Command was forced to accept the prospect of a prolonged war. The first doubts about German victory emerged. Field Marshal Mannerheim believed that a 'serious setback' was possible on the Karelian isthmus and the Svir front.¹⁷¹ At the very least, it was clear that Helsinki and Berlin had been fundamentally mistaken in expecting a lightning war against the Soviet Union; their belief at the outset that the war would be won in a matter of weeks, and by autumn 1941 at the latest, was fatally flawed. When the Germans did recognize that the war was likely to last considerably longer, they conspicuously failed to correct the Finnish assumption that victory would be achieved 'in a few weeks'. Major-General Warlimont had argued that a more realistic corrective view was necessary in the middle of August 1941, after his visit to Finland.¹⁷²

At the beginning of the war, the Finnish government had organized the total exploitation of the economic and manpower resources of the country. For example, no less than 16 per cent of the population had been conscripted. This situation could not long be sustained without serious consequences and disruption of the war economy. Hitler too was convinced that Finland could not

'tolerate much blood-letting'.¹⁷³ Admittedly, German arms deliveries since summer 1940 had ensured high levels of equipment in some sectors of munitions and the war economy.¹⁷⁴ However, the effects of the Finnish-Soviet Winter War of 1939-40 had not been fully overcome. There was still a serious lack of balanced armaments production capacity and suitable war-economy reserves. Many shortages of ammunition, motor-vehicles, supply equipment, heavy weapons, and air-force equipment were apparent.

After a reorganization in 1940-1, the Finnish air force was able to provide successful support for ground fighting conducted by its own army units. However, it remained dependent on German assistance in questions of supply, air defence against Soviet air raids on Finnish cities, strategic operations against the Murmansk railway, and the movement of enemy shipping on Lake Ladoga, the Stalin Canal, and the White Sea ports.¹⁷⁵ Such support was repeatedly requested by Mannerheim, but it could be provided only infrequently: the formations of Air Fleet 5 were concentrated on northern Finland and the support of Army Command Norway, while Air Fleet 1 in the south was primarily engaged in providing relief for the operations of Army Group North. It was highly unfortunate that Mannerheim's first request for German air support, during the Finnish army's attack of 10 July 1941, had been turned down. The Luftwaffe could provide only a 'psychological effect' in support of the Finnish advance.¹⁷⁶ This led to numerous complaints from the Finnish High Command that the promised assistance had failed to materialize.¹⁷⁷

In autumn 1941—partly due to German transport demands—a major crisis developed throughout the Finnish transport system. Additional German deliveries of lorries and captured Soviet railway engines and wagons were therefore requested by Mannerheim, in his letter to Keitel on 12 November 1941, and by President Ryti from the German envoy.¹⁷⁸ The request could not be granted until summer 1942. Until the end of 1941 the Finns received only minor deliveries of captured Estonian railway stock.¹⁷⁹ In addition, casualty rates in the Finnish army increased as the war dragged on, leading to a more realistic assessment of Finnish prospects. This new attitude was partly responsible for

Army Command Norway supported the Finnish requests: see telex Army Command Norway, Headquarters Finland, Abt. Ia No. 101/41, g.Kdos. Chfs. to OKW/WFStSt/Abt. L, 4 Nov. 1941, BA-MA, 20. Armee, 58628/1.

¹⁷⁹ See the restrained reply of FM Keitel in his letter to Mannerheim, Chief of OKW No. 441979/41, g.Kdos. Chfs. WFSt/Abt. L (1 Op) to HE FM Baron von Mannerheim, 21 Nov. 1941, BA-MA, 20. Armee, 58628/2. The desired railway materials had to have the Russian gauge, and could not therefore be taken from regular German production.

Mannerheim's rejection of the ambitious German operational objectives. From the end of 1941 the Finnish High Command reorganized and regrouped the army from divisions into 16 brigades. By spring 1942 its strength had been reduced from approximately 500,000 to 150,000 men.¹⁸⁰ In December 1941 the Finnish commander-in-chief had made his position crystal clear to the Wehrmacht High Command: it was of 'vital significance' for all future operations on the German-Finnish front that the situation at Leningrad be resolved by German troops, who would also have to effect a link-up with the 'Karelian Army' on the Svir.¹⁸¹ Only after these two problems were solved would the Finnish Army be able to respond to German requests and deploy the troops thus released for an attack towards Sorokka (Belomorsk) on the Murmansk railway and northern Russia. As a result, at the end of December 1941 Mannerheim rejected Army High Command's proposal for a feinted Finnish attack. He had no wish needlessly to provoke the Soviet troops on the Finnish front into great activity.¹⁸² For the Finns, as General Heinrichs stated on his visit to Wehrmacht High Command on 6 January 1942, a new and successful German attack on Leningrad was the 'key to the entire German-Finnish front'.¹⁸³

By the end of 1941 the underlying military objectives of the two national high commands had become clear. It was sadly apparent that there was no joint conduct of operations, nor any co-ordination of partial and ultimate objectives within the framework of an agreed plan of action. No unified command under a single central high command had emerged. The Finns were now determined not to commit themselves to any new, extensive operational objectives beyond the front line they had already established. Their attitude was the result of several factors: the first doubts about German victory; the heavy losses already sustained; the regime's uncertain political war aims in domestic affairs; and the fear of foreign-policy difficulties with the United States and involvement in the war between the great powers. Accordingly, the strategic decisions of the Finnish High Command were determined by consideration of the country's position in domestic and foreign affairs.¹⁸⁴ The impression of joint Finnish-German conduct of the war was given only in the early stages of the conflict against the Soviet Union, when the military objectives of the two countries appeared to coincide. When victory was not forthcoming and expectations were disappointed, it became clear that Helsinki would not pursue strategic objectives which went beyond its own interests—

such as reunification with the former Finnish territories in Ladoga-Karelia and on the Karelian isthmus, and the capture of territory inhabited by the ethnically related population of east Karelia.¹⁸⁵ A further Finnish advance into northern Russia, to the coast of the White Sea, or Finnish participation in the siege of Leningrad, would inevitably have begun a struggle for the very existence of Finland. It would thus have demanded the deployment of all the reserves and resources of the state, and meant an almost total dependence on German deliveries of arms and industrial items.

The two high commands consequently conducted military actions in their areas of operation largely independently and in pursuit of their own plans. There was no effective or extensive co-ordination of German and Finnish operations. In addition, Hitler deliberately attempted to maintain secrecy; his aim was to leave the states involved in the war in the east in the dark about his operational objectives in Operation Barbarossa, and to retain all decision-making in his own hands. These factors further discouraged any discussion of joint military operations in an atmosphere of trust, and may even have made it impossible.¹⁸⁶

On the other hand, the situation was not without advantages for Helsinki. The Finns were able to conduct their own military operations against the Soviet Union without fear of the military predominance of Berlin, which would have been unavoidable if the war aims had been co-ordinated within the framework of a coalition. The coincidence of Finnish and German military objectives was thus reduced to a common intention and military plan to defeat and destroy the USSR in a lightning war lasting a few weeks. This aim could not be achieved. Subsequently, at the beginning of 1942, State President Ryti and the Finnish commander-in-chief, Field Marshal Mannerheim, both concluded that the entry of the United States into the war had made Germany's military position 'alarming' if not catastrophic.¹⁸⁷ Helsinki was greatly worried about the increasing possibility of a British-American landing to attack German positions in northern Scandinavia.

3. POLITICAL BALANCE SHEET OF GERMAN-FINNISH 'BROTHERHOOD-IN-ARMS' TO THE WINTER OF 1941-1942

Even during the first months of war, helped by the lack of a formal wartime alliance with the Third Reich, the Finnish government portrayed its participation in Operation Barbarossa as a specific and independent struggle against the Soviet Union. On 26 June 1941 President Ryti justified Finland's entry into the war by referring to Moscow's 'innermost intention' to destroy the independence of Finland. He described the attack on the Soviet Union as the consequence of a persistent Soviet policy of aggression and as a renewed

¹⁸⁵ See Mannerheim, *Memoirs*, 416.

'defensive struggle' following the Finnish-Soviet Winter War of 1939-40.¹⁸⁸ It became clear that Finland intended to pursue a 'separate' war against the Soviet Union, detached from German war aims and the European war of the great powers. This struggle was waged side by side with Hitler's war in the east 'operationally' but not 'genetically'; the Finnish population regarded it as the 'continuation' of the Winter War of 1939-40.¹⁸⁹ The 'separate war' theory also implied that Finland would wage a 'normal European national war' against the neighbouring Soviet Union.¹⁹⁰ As an 'event of pure power politics', it was thus in stark contrast to Hitler's own plans for the conquest of 'living-space'. The Finnish position was determined by considerations of domestic and foreign policy, with the government emphasizing on numerous occasions that the 'separate war' was a form of 'self-defence' against Soviet attacks. The argument was supported by the fact that it had been the Soviet Union that had opened hostilities against Finland.¹⁹¹

Shortly after Finland entered the war, Foreign Minister Witting told the German minister von Blücher that 'Finland had entered a new phase of her policy'.¹⁹² Nevertheless, the Finnish government tried to avoid becoming dependent on Germany in foreign policy; it hoped to maintain existing relations with the Western powers and the United States in order to demonstrate its theory of 'separate war'. From June 1941 the British government had stopped trade and begun economic reprisals against Finland because of the German invasion of the Soviet Union and the waging of war from Finnish territory.¹⁹³ Nevertheless, Helsinki was reluctant to accede to Ribbentrop's demand for diplomatic relations with Britain to be broken off.¹⁹⁴ The Finnish government also avoided taking any foreign-policy action against the United States on the grounds that this would be 'unpopular among broad circles'.¹⁹⁵

The Finnish government finally responded to German pressure and broke

off diplomatic relations with Britain, but only after a treaty of alliance had been signed between Britain and the Soviet Union on 12 July 1941, and British carrier aircraft had launched air raids on Kirkenes and Linahamari in the Petsamo region. Even then, Helsinki was anxious that neither the Germans nor the press should interpret this conduct as signifying Finnish entry into the war against Britain.¹⁹⁶ Helsinki had no desire to aggravate relations with London and Washington during the following months. Two incidents served to make its attitude apparent. The first of these occurred in September 1941, when the British government, at the request of the Soviet Union, warned Helsinki not to continue its attack into 'purely Russian territory' beyond the line of the old Finnish-Soviet border.¹⁹⁷ The second incident came in October-November 1941, when the American government tried to persuade Finland to halt hostilities against the USSR and withdraw to the old Finnish-Soviet border.¹⁹⁸ Though the Finnish government rejected the accusation that it was waging aggressive war, it also slowed its advance and stopped the attack of Finnish III Army Corps on the Murmansk railway.

In August 1941 Reich Foreign Minister von Ribbentrop had opposed a Japanese proposal for Finland to join the anti-Comintern pact or Tripartite Pact.¹⁹⁹ When war broke out Finland therefore had no treaty with Germany which could have offered a platform for the waging of a unified military and political war against the Soviet Union under Hitler's leadership. However, in November 1941 Berlin urged Helsinki to join Denmark, Bulgaria, Croatia, Nanking-China, Romania, and Slovakia in the anti-Comintern pact. With great reluctance, the Finnish government decided to comply. The country was dependent on German support and deliveries of food-stuffs; moreover, the Germans were virtually promising to reward Finnish accession by delivering another 75,000 t. of grain for the six months of winter 1941-2.²⁰⁰

In this context the Germans also skilfully exploited Molotov's earlier demands for the inclusion of Finland in the Soviet sphere of influence.²⁰¹ Finland declared its entry into the anti-Comintern pact on 25 November 1941, the

occasion of its fifth anniversary and extension.²⁰² Nevertheless, the decision was described as an expression of Finland's 'principled anti-Communist attitude' and its readiness to combat Communism in the ideological sphere, and not as the manifestation of a military alliance with Hitler.²⁰³ In his proclamation at the ceremony in Berlin Foreign Minister Witting stressed, in addition to the tasks of military defence, the need for action against the Communist menace 'with the means of the spirit'.²⁰⁴

In the spirit of 'separate war', Helsinki informed the Western powers that Finland was pursuing specifically Finnish goals in the struggle against the Soviet Union, and was merely 'a co-belligerent with Germany'.²⁰⁵ Nevertheless, it soon transpired that Finland's discussions concerning political war aims had been influenced by the country's war on the side of the Third Reich during its early successes in the east. The Finns eventually accepted ideas akin to National Socialism on the 'gaining of new living-space in the east' and on the 'European crusade to destroy Bolshevik rule'.²⁰⁶

For the National Socialist leadership, the description of the war in the east as a 'European crusade against Bolshevism' was merely a propaganda device to disguise its real intentions.²⁰⁷ Yet this notion of an anti-Bolshevik crusade offered the Finnish government an integrating image of the enemy, rooted in the anti-Communism of the Finnish population which had been latent since the war of independence. Helsinki constantly described its participation in Operation Barbarossa as a contribution to the common defence of Western culture against the east; it was clear that the aim was to join Berlin and win the war by destroying the Bolshevik system 'for all time'.²⁰⁸ In the first weeks of war the orders of the day, appeals, and proclamations of the Finnish High Command and the government repeatedly called for a 'holy war' against the 'eternal threat from the east', for a 'final struggle' against the

'European plague threat', and for a 'crusade' against 'Finland's traditional enemy'.²⁰⁹ Significantly, Helsinki was interested in the idea of the 'anti-Bolshevik crusade' mainly because of its integrating function in domestic politics. It did not mean that Finland sympathized with Hitler's ideological war of annihilation against the Soviet Union. The Finnish government did not accept the idea of a ruthless 'struggle of two world-views'. Equally, it was not committed to any racial-ideological or anti-Semitic programme, nor to any plan to conquer new 'living-space' in the east by decimating the population of the Soviet Union. Though the Germans laid great emphasis on solidarity in the 'struggle against Bolshevism until its final destruction',²¹⁰ the Finnish war against the Soviet Union was different in nature from the war Hitler intended to wage. The two countries had no common ideological foundation for a war based on political and racial theory, nor for anti-Semitic measures and practice in Finland itself. Jews served as soldiers and officers in the Finnish army throughout the war.²¹¹

At the beginning of the war Finnish war aims had been informal. However, these aims, consisting of the recovery of the territories ceded to the Soviet Union in the Peace of Moscow of 1940, were quickly made official. They were associated with the hope of a revision of the Moscow peace treaty, and the expectation of appropriate reward in Hitler's territorial and economic reorganization of Europe after the war.²¹² Desire for an 'increase in territory' also coincided with Hitler's own intention to expand Finnish territory, which he had announced before launching the war in the east. When the initial successes of the German and Finnish armies in the summer of 1941 made a rapid victory seem within reach, Finnish territorial expectations grew. There was also an increase in the small number of advocates of a 'Greater Finland'.²¹³ Demands for a 'secure border' were thus expanded to include plans to regain east Karelia and shift the border well to the east in order to guarantee the 'security of the country'. Such schemes played an increasing part in discus-

sions within Finland itself.²¹⁴ Field Marshal Mannerheim, in his order of the day on 10 July 1941, called for the 'fulfilment' of an earlier promise to 'liberate' east Karelia and create a 'Greater Finland'.²¹⁵ The issue of territorial claims and 'political' war aims was given particular impetus in September 1941, when the government yielded to German pressure and ordered the Finnish army to cross the 1939 border.²¹⁶ Even the Finnish government was apparently becoming convinced of the 'need for a Greater Finland'.²¹⁷

In September 1941, as the British and American governments waged a diplomatic campaign to persuade the Finnish government to announce a cease-fire with the Soviet Union, numerous newspaper articles made the claim that Finland was 'war-weary'. The Finnish government felt compelled to inform the Germans publicly that such speculations were groundless. The minister of commerce and chairman of the Social Democratic Party, Väinö Tanner, made it clear in a speech in Vaasa on 14 September 1941 that Finland was determined to continue the war.²¹⁸ Tanner also revealed that the Finnish government preferred not to be forced into a public discussion of the country's war aims at present. He stressed:

Finland is still the same democratic, freedom-loving people, defending its independence, that it was during the Winter War . . . If events have made us loyal brothers-in-arms with Germany, there is still no doubt that our war is with Russia and Russia alone. We have no part in the current war between the great powers, and we have no desire to be drawn into the competition of the great powers . . . For us this is no more than a defensive war to create secure borders and a durable peace for ourselves.

Tanner was realistic enough to acknowledge that no one could say 'where the war will end and where anything at all will end'. Significantly, however, he also felt bound to make concessions to the triumphalist mood by responding to the demand for territorial conquest. He therefore argued that the recovery of the former Finnish lands had achieved Finland's war aims 'to a certain extent' only; by crossing the former border of 1913, Finland had done no more than 'regain the extra interest belonging to it'. It seems unlikely that this 'interest' was intended to be returned voluntarily to the Soviet Union at a later date. As the Finnish Social Democrats were unwilling to associate themselves publicly

²¹⁸ Speech by the chairman of the Finnish Social Democrats and Finnish Minister of Trade Tanner in Vaasa, 19 Sept. 1941, in *Monatshefte für auswärtige Politik*, 8 (1941), 10867-72 (also for the following quotations); on the German assessment of the speech see *ibid.* 851-2, and telegram No. 953, Minister von Blücher to foreign ministry, 15 Sept. 1941, PA, Büro St.S., Finnland, vol. iii; also *FRUS* (1941), i, 66 ff.

with proposals for conquest, the 'Greater Finland' plans did not become a programme supported by all the political parties. Nevertheless, they acquired a quasi-official character in September and October 1941, when President Ryti told Berlin that the line Neva-Lake Ladoga-Svir-Lake Onega-White Sea 'with glaciis' would become the Finnish border. The Finns also demanded the 'disappearance' of Leningrad as a great industrial city.²¹⁹ These territorial demands involved not only 'White Sea Karelia' or 'Far Karelia' situated beyond east Karelia, 'but also the Kola peninsula'.²²⁰ Additionally, the Finnish government hoped that Germany would annex the region round Archangel and the northern Dvina to the east as a 'forest colonial area', since it would be better for Finland not to border on Russia in future.²²¹

Berlin agreed to these plans, except for the claim to the Kola peninsula. Hitler, who intended to seize this area for Germany, had already made Gauleiter Terboven responsible for its exploitation.²²² It was clear that ambitious Finnish schemes would tie the country more closely to Germany. Moreover, political war aims of this kind would turn the war between Finland and the Soviet Union into a life-and-death struggle for both sides, a development which Field Marshal Mannerheim had previously tried to avoid. Finnish commitment to an expansionist programme ruled out a political solution in the form of a separate peace between Finland and the Soviet Union. Hitler was willing 'to be generous [to Helsinki] in regard to territorial questions'. However, he wanted to discuss the 'special case' of the Kola peninsula with a Finnish plenipotentiary.²²³ Foreign Minister von Ribbentrop was especially pleased that Finnish demands 'now also extend to former Russian territory'.²²⁴ By making extensive plans for the conquest of territory, and demanding a border 'that guarantees its people security against a new Russian attack for generations to come',²²⁵ the Finns were close to adopting German notions of conquest. Not surprisingly, plans were made for the resettlement of several

million people of related origin from other parts of Russia in the 'settlement area' of 'Western culture' in east and White Sea Karelia and the region round Archangel. The Finns also showed an interest in the ethnically related populations of occupied Estonia and Ingermanland, and in the political future of these regions.²²⁶ Significantly, Finnish propaganda now began to claim that the Finnish people had Nordic racial characteristics. This literature demanded the extension of living-space through the acquisition of Finland's 'natural eastern marches' with the Kola peninsula and east and White Sea Karelia, plus the 'removal of the Russians settled there'.²²⁷

After November 1941 military developments produced a more sober Finnish assessment both of the prospects for victory and of appropriate political objectives.²²⁸ In these circumstances it was Hitler, on the occasion of Witting's signing of the anti-Comintern pact in Berlin on 25 November 1941, who spoke of Finland's desire for territorial conquests as far as the White Sea. He was now prepared to give the Kola peninsula to Finland. Hitler emphasized that Finland's resolution of its problems with the Soviet Union must be of 'truly historical dimensions'.²²⁹ Expansionist war aims of this kind, however, far exceeded anything the Finns could hope to justify as a 'guarantee of territorial security' against the Soviet Union.²³⁰

On 6 December 1941 Finland unilaterally nullified the Peace of Moscow and proclaimed the reincorporation of the reconquered regions of Karelia, Salla, and Hanko.²³¹ Simultaneously, the British government declared war on Finland in response to pressure from the Soviet Union. The British view that Finland was supporting Hitler's policy was also shared by the Dominions and the United States. It became obvious that Helsinki could not completely separate itself from German conduct of the war, nor wage a national struggle independent of the European conflict as a whole and without regard for the

²³⁰ Regarding the conflict between the limited goal of a guarantee of territorial security and the political war aim of the conquest of a new 'settlement area', see the speech in parliament by Premier Rangell on 29 Nov. 1941, quoted in telegram No. 1418, Blücher to foreign ministry, 30 Nov. 1944, PA, Büro St.S., Finland, vol. iv, and papers of Gen. Erfurth, diary, i. 267-8, BA-MA N 257/1. The striving for territorial expansion out of 'national-romantic motives' is also reported by Polvinen, *Finland i stormaktspolitiken*, 49.

²³¹ On the correspondence between Churchill and Mannerheim, and the British ultimatum to Helsinki on 27 Nov. 1941 as a result of Soviet pressure, see PRO, Premier 3/170/1: Prime Minister's Personal Telegram to FM Mannerheim No. T 892, 28-9 Nov. 1941, and Mannerheim to Prime Minister Churchill, No. T 920, 2 Dec. 1941 (contact was via the US legation); also Jägerskiöld, *Marshallen av Finland*, 211-12; Polvinen, *Finland i stormaktspolitiken*, 80 ff.; Mannerheim, *Memoirs*, 435-8; *DGFP* D xiii, Nos. 533, 540; *FRUS* (1941), i. 85, 113 ff.

policy of the Third Reich. Japan's attack on Pearl Harbor on 7 December 1941, and Hitler's declaration of war on the United States four days later, led the Finns to fear that the Americans would follow the British example, inevitably drawing Finland into the global conflict between the great powers. The Finns therefore began to respond to political reactions in Washington. From the beginning of 1942 these new considerations undoubtedly had a major effect on the military operations of the Finnish army against the Murmansk railway; the Finns had no wish to give the United States grounds for a deterioration in political relations.

At the turn of 1941-2 Berlin and Helsinki had still failed to reach clear agreement on the political objectives of the war against the Soviet Union. Their long-term ideas regarding the Soviet Union coincided only to a limited extent. The two countries differed fundamentally about aims and objectives. There was no unity of political interest which might have encouraged military co-operation and led to the creation of a genuine wartime coalition.³³² On one hand, its determination to sustain the theory of a 'separate war' made Helsinki anxious to avoid supporting many German political requests and demands, and to prevent a joint conduct of the war. On the other hand, Hitler's desire for a free hand after the war made him unwilling to enter into political agreements or hold discussions about his war aims. In making such an analysis, the sheer megalomaniac extent of Hitler's political goals must never be forgotten. According to a minute from Bormann dated 16 July 1941, these even included the 'annexation of Finland as a federal state' at some later date.³³³ Given these underlying attitudes, Hitler was not prepared to keep the Finns fully informed either of his political ideas for a New Order in the east or of his operational and strategic views.

Genuine partnership was not the aim of German policy. This fact is also demonstrated by German economic plans for the extension of German-Finnish trade relations, and by the ideas of German firms regarding Finland. Owing to the serious decline in its industrial and agricultural production, Finland had become greatly dependent on Germany in the economic sphere and in the munitions sector. Even after the recovery of the former Karelian territories, economic resources were scarcely any greater than before the war because the region had been largely destroyed and there was no prospect of rapid reconstruction. Helsinki therefore hoped to obtain economic deliveries from the western territories of the Soviet Union which had been conquered by German troops.³³⁴ The collapse of the Finnish economy in the second half of

Wehrmachtpropaganda, RW 4/v. 325; and letter from the Finnish minister, Kivmäki, 26 Aug. 1941, PA, Büro St.S., Finnland, vol. iii.

1941 was avoided only by large-scale deliveries of German foodstuffs, raw materials, and military equipment.³³⁵ Hitler and Göring themselves intervened to promise the Finnish government supplies of foodstuffs which could only be achieved 'at the expense of the supply situation of the German people'.³³⁶ A 'German War Economy Officer in Finland' was appointed in mid-December 1941 'to unify all the war-economic work of the German Wehrmacht that is necessary in Finland', and to organize the extensive German deliveries to that country. This office also liaised with the war-economy and armaments office in Helsinki.³³⁷ Almost inevitably, Helsinki became vulnerable to German pressure in establishing its claim to hegemony and leadership in 'reorganizing' raw-material distribution in northern Europe. This process was also regarded as one of Germany's 'main points of economic penetration and political influence'.³³⁸

Almost immediately, Berlin and IG-Farben repeated the demands for rights to the nickel-ore deposits at Petsamo that they had previously addressed to Moscow. During the German-Finnish economic discussions of October-November 1941 an attempt was made to persuade the Finns to expropriate the British-Canadian concession-holders in favour of a German-Finnish society dominated by German firms.³³⁹ Following its entry into the war, the Finnish government had already taken over the custodianship of the concession through the Petsamo Nikkeli OY company, and had agreed to increase German supplies to 90 per cent of the development. However, the Finns refused to regulate the concession rights and conditions of ownership while hostilities lasted.³⁴⁰ For the time being, German plans could not be put into practice.

³⁴⁰ See DGFP D xiii, No. 469; Blücher, *Gesandter*, 258, and BA-MA RW 45/16 (report of 26 Feb. 1942). The opposition stemmed largely from the attitude of Minister of Trade Tanner: see letter

In view of Berlin's plans for hegemony, the prospects for genuine coalition with the Third Reich, or for co-determination on the part of its allies or co-belligerents, were non-existent. This was true on economic and commercial as well as political grounds. Close military and political co-operation was out of the question. It was made impossible by Hitler's leadership claims, as well as his desire to take sole responsibility for the war in the east in order to fulfil 'his' mission.²⁴¹ Even after the entry of Finland into the war, Hitler was not interested in forging a stable and enduring political alliance as the foundation for long-term trusting co-operation. It was hoped that the difficulty of co-ordinating such different political ideas could be overcome by the achievement of a 'blitzkrieg' victory. In consequence, the two states' conduct of the war against the Soviet Union was based on a momentary understanding between their political leaders, and on occasional military discussions at high-command level and among local commanders.²⁴² Unified leadership was lacking, a situation which was partly responsible for the inadequacies of the war waged by Berlin and Helsinki. In the last analysis, there was only a limited community of interest in the German-Finnish 'brotherhood-in-arms', to use Helsinki's description of the war against the Soviet Union.²⁴³ This community of interest was based on a common anti-Soviet attitude, and on a struggle which was fought simultaneously but independently in both military and political terms. It was not the result of any military or political interests uniting Berlin and Helsinki in the pursuit of identical objectives. To this extent, the basis of the common struggle against the Soviet Union was a loose political relationship held together largely by the common enemy. In consequence, the war waged by Germany and Finland in the northernmost theatre is a paradigm for the entire conduct of the Second World War by the Axis powers and the governments which were allied with or friendly to them.

4. THE ATTITUDE OF SWEDEN FOLLOWING THE GERMAN INVASION OF THE SOVIET UNION

After the launching of Operation Barbarossa, Berlin expected Sweden to support the German war effort against the Soviet Union, in line with the declarations of intent made at the end of June 1941. However, these hopes for active participation in the 'anti-Bolshevik crusade' against Moscow were quickly disappointed. By the end of the year the Germans had been forced into a more sober assessment. As a Baltic state, Sweden naturally followed German

intentions and political measures in east central Europe with great interest. This attention was even more essential after the outbreak of war, when Sweden assumed the role of Poland's diplomatic protecting power in Berlin; in the summer of 1941 it took on the same role for the Soviet Union.²⁴⁴

It was in this capacity that on 19 July 1941 Stockholm informed the German foreign ministry of the Soviet offer to apply the regulations of the Hague Land Warfare Convention of 1907 'on condition of reciprocity' in dealing with each other's prisoners of war.²⁴⁵ This note undoubtedly occasioned considerable irritation and insecurity on the German side. Until then the Soviet Union had not been party to the Geneva convention of 1929 regarding prisoners of war; there was also some doubt whether, as the successor to the Tsarist state, it had regarded itself as committed to the less detailed agreements of the Hague Land Warfare Convention. In its message via the Swedes Moscow was announcing its recognition of the simple rules of the Land Warfare Convention and attempting to force the hand of the German government. However, Hitler and the Wehrmacht High Command were not interested in any agreement. The issuing of Hitler's 'criminal orders' had already created situations wholly incompatible with these regulations. Moreover, in those first weeks after the outbreak of war Hitler's attitude was based on a certainty of victory and the desire for a free hand to achieve his racial and ideological objectives in the east. In September 1941 he decided 'that no legal agreement may be reached with the Soviet Union on the question of the treatment of prisoners of war'. Hitler even intervened personally to stiffen the German reply to the Swedish government, making it virtually impossible for the Soviet government to use this method for further initiatives. His over-confident assessment of the German position appears to have led him to squander an opportunity which had been created with Swedish help, and which offered 'the most important and promising chance to base the treatment of each other's prisoners on the principles of humanity'.

It was very difficult for Sweden, as protecting power for the Soviet Union, to participate either covertly or indirectly in Germany's self-proclaimed struggle of European culture against 'Bolshevik barbarism'. In the first weeks

²⁴⁴ Akerrén, 'Schweden als Schutzmacht'.

²⁴⁵ On this subject see the study by Streit, *Keine Kameraden*, 224 ff., and Streim, *Die Behandlung sowjetischer Kriegsgefangener*, 33-4; also the documents from military sources in BA-MA RW 5/v. 506 and 6/v. 279 (also for the following quotations). On the other hand, Roschmann, *Gutachten*, 3-4, is not to the point. In view of the published documents in DGFP D xiii, Nos. 173, 389 (also ADAP E i, No. 51: Ribbentrop memorandum for Hitler, 22 Dec. 1941), attempts have been made (as in this volume, sect. II.11.3 at n. 31 (Hoffmann)) to cast doubt on Streit's arguments and documentary evidence by arguing that they are not wholly in accordance with the facts and are the result of misinterpretation and a denial of actual events. As regards Hitler's basic attitude, and his fear that an agreement with the USSR might create the impression on the eastern front that German prisoners would be treated according to the convention by the Russians, while the list of names which the Germans would have to hand over to the Soviet government would enable it to discover 'that not all Russian soldiers fallen into German hands are alive', see ADAP E i, No. 106.

after the attack on the USSR the early successes of the Wehrmacht led the Germans to expect a swift victory. Their hopes for Swedish accommodation were correspondingly great. For example, Berlin expected Stockholm to provide the Germans with detailed intelligence information through the Swedish legation in Moscow. These optimistic expectations were soon modified, however. In July 1941 it became clear that there was no chance of Sweden joining the Tripartite Pact. Ribbentrop also regarded the creation of a special bilateral alliance as out of the question.²⁴⁶ In consequence, he noted, 'we shall ignore her in the future'.²⁴⁷

Nevertheless, in June 1941 military circles round the Swedish commander-in-chief, General Thörnell, did provide some arguments in favour of action to support Germany in its struggle with the Soviet Union. Admittedly, the action under consideration was relatively minor, involving the occupation of the Finnish Åland islands by Swedish troops, for example. This would offer indirect support to Germany and make the task of the German navy in the Baltic easier. Such attitudes were strengthened after Finland entered the war on the German side. A sense of solidarity with Finland made the defeat of the Soviet Union and of Communism appear very desirable, particularly as it would result in a shift of the Finnish-Soviet border to the east, further from the border with Sweden. These circles also believed that Sweden would be treated with greater respect in the subsequent peace negotiations if it had participated actively in the victory over the Soviet Union, and that it might then have a part to play in the reorganization of Europe by the Third Reich.

However, the official view of the Swedish government differed from that being discussed in pro-German military circles. The government's primary interest lay in ending its commercial and political isolation in the Baltic. From July 1941, with the permission of Berlin and London, Sweden resumed its maritime trade between Göteborg and abroad, which had been halted in March of that year.²⁴⁸ The 'Göteborg trade' was subjected to British and German control in each country's areas of naval operations. Nevertheless, its resumption was significant as a symbol of Swedish attempts to preserve free foreign trade. Virtually as a quid pro quo, the Third Reich expected the Swedes to agree to the transit of another German division through Swedish territory (6th Mountain Division, envisaged as reinforcement for the Arctic Front). However, Stockholm turned down this request on 1 August 1941. On the other hand, transports of material to Norway and Finland, and the overflying of Swedish territory for German hospital and courier aircraft, continued as they had before the war in the east. These were restricted only by the limitations of Swedish capacity.

²⁴⁶ See DGFP D xiii, Nos. 77, 79; Halder, *Diaries*, 1020 (9 July 1941); Carlgren, *Svensk utrikespolitik*, 315; also Wilhelmus, 'Beziehungen zwischen dem faschistischen Deutschland und Schweden', 687-99.

²⁴⁷ Halder, *Diaries*, 1076 (26 July 1941).

²⁴⁸ See DGFP D xiii, No. 91; also Rockberger, *Göteborgstrafiken*.

At the beginning of November and again in mid-December, however, Stockholm refused to accept Wehrmacht troop requests exceeding the level previously agreed. In this case, the Swedish government under Premier Hansson referred to the country's policy of strict neutrality and to the availability of other options—sea routes, land routes through Finland, and the use of Swedish territorial waters along the Baltic coast to the north.²⁴⁹ At the end of February Minister Schnurre, special emissary of the German foreign ministry, reported that Stockholm was still adhering 'stubbornly and rigidly' to this position.²⁵⁰

German bitterness at the various refusals was intensified by increasing dissatisfaction with the general attitude of Sweden. In particular, its co-operation with 'the struggle of Europe against Bolshevism' was regarded as inadequate.²⁵¹ In the first weeks after the launching of Operation Barbarossa, circles within the Swedish army had viewed the destruction of Bolshevism in Russia as highly desirable not only for military and foreign-policy reasons, but also because of its effect on internal conflicts with the Swedish Communists. In general, these elements hoped that the removal of the Soviet Union from the Baltic Sea area would have positive effects on domestic affairs within Sweden. On several occasions the leadership of the Swedish forces supported demands for a ban on Communist activity and for effective government measures against Communism in Sweden. They were even prepared to accept a deterioration in relations with the Western powers, if favourable and positive relations with a victorious Germany and Finland could be attained. However, this initial enthusiasm for the German 'struggle against Bolshevism' had 'completely subsided' by the middle of August; by this stage the Swedish press was openly reporting the 'purely imperialistic plans of Hitler'.²⁵² This encouraged the general line of the Swedish government to 'keep all possibilities open',²⁵³ and to stay out of the conflict. Berlin reproached the Swedish government for continuing to tolerate the actions of the Communist Party and refusing to ban it.²⁵⁴ In addition, Berlin had not been able to persuade Sweden to join the anti-Comintern pact with Finland and Denmark in November 1941. King Gustav V Adolf's confidential message to Hitler on 28 October

1941, congratulating him on the triumphs of the Wehrmacht and thanking him for averting the danger of Bolshevism in Europe, was scant consolation.²⁵⁵ In his reply of 7 December 1941 Hitler referred to the anti-German sentiments of certain circles in Sweden and demanded greater interest in the 'unique historic action' being undertaken by Germany.²⁵⁶ Nevertheless, Sweden rejected new demands from Berlin in December.

At the outset, the Germans had hoped that Sweden might serve as a 'war-economy reservoir' and a 'supply hinterland for the Finnish theatre of war'.²⁵⁷ In reality, Swedish support for Germany and Finland in their conduct of war in the far north fell far below the economic and financial expectations of Berlin.²⁵⁸ The Swedish government did approve deliveries of supplies for the German troops in Finland and Norway; however, despite repeated German requests it refused to sell larger amounts of urgently needed winter equipment to German formations deployed in northern Finland.²⁵⁹ After Sweden had delivered 500 lorries to Finland in July 1941, both the Finnish and German sides made further requests for the delivery of lorries and personnel-carriers, hutments, and tents in September. Stockholm granted these requests only in part, as a 'once and for all' measure, by offering to sell another 800 motor-vehicles, without rubber tyres, against extra deliveries of nickel from Petsamo. The Stockholm government cleverly justified its decision by pointing out that German deliveries of coal and coke had been incomplete, and that Sweden therefore needed adequate means of transport to guarantee fuel supplies in the form of increased domestic deliveries of wood.²⁶⁰ Berlin was unable to refute this argument, in view of the fact that it had broken its agreement on coal exports. Finnish requests for credit, war material, and foodstuffs were generally treated more sympathetically by the Swedes. However, even these were fulfilled only if they evoked no protests from and commercial difficulties with Britain.²⁶¹

Tension in German-Swedish relations was also created by the rivalry between Berlin and London over the Norwegian merchant ships which had been impounded in the Swedish port of Göteborg. Initially the Swedes had proposed to deliver these to England according to the demands of the Norwegian

government-in-exile in London. However, on 26 September 1941 Ribbentrop told the Swedish chargé d'affaires in Berlin that Sweden would be committing 'an unfriendly act' towards Germany if it allowed a single Norwegian ship to leave Göteborg.²⁶² During his conversation with the Swedish diplomat the German foreign minister complained bitterly about the Swedish attitude during the 'gigantic struggle' against Bolshevism. Ribbentrop also criticized the refusal of the Swedish government to allow Swedish volunteers to take part in the war against the Soviet Union on the German side. (They were permitted only to serve as volunteers in the Finnish Army.²⁶³) Instead of active participation in the struggle, the Swedes were offering only 'ever new instances of unfriendliness and insults'. On several occasions the foreign minister expressed his regret that Sweden 'had excluded herself from co-operation in the battle against Bolshevism'. As regards the release of the Norwegian ships, the country was taking a position 'which not only did not help Germany and her allies, but practically amounted to a stab in the back'. His words had the desired effect. Though the Swedish government strongly repudiated Ribbentrop's criticism,²⁶⁴ it then decided—despite angry protests from London—to detain the Norwegian merchant ships in Göteborg for the time being.

For the Swedish government, the nature of German occupation policy in Norway was also a crucial factor in determining its approach to Berlin. The Swedish foreign minister, Günther, repeatedly emphasized in parliament that Sweden took a special interest in political developments there. The Swedish government publicly opposed any permanent German occupation of Norway. On 29 October 1941 Günther made an important declaration on his country's foreign policy: Sweden, he noted, 'could not remotely contemplate a future of the north which does not involve this region regaining its freedom in its entirety'.²⁶⁵ Swedish declarations about German occupation measures in Norway eventually led to considerable ill feeling in Berlin. In May 1942 Ribbentrop instructed the German legation in Stockholm 'from now on, to ignore any communications from the Swedish side relating to the situation and events in Norway'.²⁶⁶ The German foreign minister angrily denied that the

Swedish government had any 'active right' to 'make Norwegian affairs the subject of communications to the German legation'.

Sweden remained an important trading partner of the Third Reich. During German-Swedish economic negotiations in September 1941, the German foreign ministry's trade department reported that economic relations with Sweden had developed 'satisfactorily'. In comparison with the period before the war, Sweden had 'maintained increased deliveries to Germany', even though Germany had 'delivered only part' of the coal supplies it was due to provide in both 1940 and 1941.²⁶⁷ In particular, the Germans considered that deliveries of timber and iron ore were being maintained 'at a very significant level'. Sweden was also forced to make commercial concessions to Germany in the second half of 1941, reflecting the fact that the country had become commercially dependent on the Third Reich after its invasion of the Soviet Union and Swedish isolation on the Baltic. In December 1941 Sweden joined the German-Scandinavian 'forestry agreement' alongside Denmark and Finland and was forced to adapt to German economic plans for forestry and timber.²⁶⁸ On 19 December 1941 the existing German-Swedish economic agreements were renewed for 1942. Owing largely to German difficulties over deliveries and payment, and to rising Wehrmacht transport costs, Germany had become increasingly indebted to Sweden by the end of 1941. The consequence was a gradual decline in Swedish deliveries of iron ore to Germany. In order to guarantee the export of iron ore at its previous levels, Stockholm therefore granted a bigger state export credit for deliveries to Germany as part of the new economic agreement. An attempt was made to settle the balance of payment and trade by arranging new Swedish purchases of war equipment in Germany.²⁶⁹ Berlin also wanted German firms to gain a decisive influence over Swedish companies by means of the export of capital or supply contracts. These last plans, however, could not be fully implemented.²⁷⁰

The Germans, convinced that Britain would be eliminated from the Continent after the defeat of the Soviet Union, also revived general ideas for the 'economic reorganization of Europe' at this time. Following the German attack on the USSR, these plans included schemes for the incorporation of northern Europe in the new economic order. The German foreign ministry informed the Swedish legation in Berlin that it expected Swedish participation in the 'work of reconstruction in the east'.²⁷¹ It is important to remember the

constraints on the states of northern Europe at this time. As regards their own future trade with Germany, they had to assume that in future Germany would satisfy many of her economic needs from the conquered territories of the USSR rather than from them. There was clearly some justification for their fears. In one of his 'table talks' at the end of 1941 Hitler remarked that he intended to supply Europe with iron from the conquered eastern territories. He added: 'If one day Sweden declines to supply any more iron, that's all right. We'll get it from Russia.'²⁷²

Apart from the ease and rapidity of their adjustment, it is therefore scarcely surprising that Swedish industrial and agricultural circles showed great interest in German ideas for the participation of the north European economy in the exploitation of the economic potential of the occupied eastern territories. These schemes appeared almost as a replacement for the expected shift of trade policy from central Europe to the east. In autumn 1941 the foreign ministry and Reich ministry for economic affairs held their first discussions about the participation and involvement of other states in the proposed economic development of the occupied Soviet territories. At this stage the governments of several allied, friendly, and neutral countries had expressed an interest in German plans. Sweden was one of the governments to make an enquiry. It had expressed an interest in 'obtaining raw materials from the eastern territories by supplying industrial products';²⁷³ in addition, it showed 'direct interest in an active co-operation in the solution of economic tasks in the new eastern territories, for example by taking over businesses, obtaining concessions, and also by settlement'.

On 21 November 1941 a discussion was held in the Reich ministry for economic affairs 'on the participation of foreign countries in the economic development of the eastern territories'. Here the representatives of the various German authorities concluded 'that the development of the eastern territories is not a purely German matter but a European affair, Europe should therefore be engaged in the eastern territories'.²⁷⁴ Such an involvement of other states was to be recommended on principle, since Germany 'alone [could] not, in the near future, supply the necessary workforce and investments for the economic utilization of the occupied territories'.²⁷⁵ In addition, the native population was 'in part unsuited, in part unwanted' for the task.

Despite this apparent willingness to co-operate with other states, there was no change to the principle of undiminished German economic dominance in

Lage in den besetzten Ostgebieten [situation in the occupied eastern territories] (also for the following), see also Groehler and Schumann, 'Bündnisbeziehungen', 636ff.

these territories. German interests were not to be damaged under any circumstances. Various possibilities for the involvement of other states were considered: (1) conclusion of merchandise compensation agreements with the interested states; (2) involvement of individual foreigners as managers and workers in specific branches of the economy and industry; (3) granting of economic concessions to foreign groups of firms; and (4) settlement of foreigners in the occupied Soviet territories. The 'guiding' economic-political objective in the occupied territories was 'in the first instance, to gain agricultural surpluses and obtain sources of raw materials'.²⁷⁶ The German ministries and departments saw 'no room' for a further 'policy of construction' in the industrial sphere, similar to that in western Europe.

Sweden was among the countries regarded by Berlin as most suitable for this task. This was made clear by a 'memorandum on the current state of preparations to involve the European states in the economic development of the occupied Russian territories', produced by the trade department of the foreign ministry on 23 November 1941.²⁷⁷ It indicated that Berlin was particularly interested in Swedish co-operation in the reconstruction of the Soviet ferrous industry, in the expansion of water power and electricity, and in forestry and agriculture. However, Swedish requests for the return of former possessions, and particularly of former investments in the Baltic States, were rejected.

The Swedes evaded demands for direct participation in the 'Germanization of the east' planned by Berlin. None the less, in February 1942 the German special emissary, Schnurre, continued to discuss 'the new agrarian order created by Germany in the Ukraine' with members of the Swedish government. These discussions reveal that the Swedes were showing considerable interest in such proposals and plans for participation.²⁷⁸ Significantly, the ministry for the east under Rosenberg advocated an immediate transformation of Swedish interest in this economic branch into an active 'Swedish co-operation in the exploitation of the occupied eastern territories'. Yet this was a step which the Swedish government had no desire to take in the spring of 1942, when there was considerable friction and even a deterioration in relations between Stockholm and Berlin over the Swedish refusal to make additional military concessions. Besides, after the entry of the United States into the war and the failure of the German 'blitzkrieg' strategy in the fighting near Moscow, the Swedes too were becoming increasingly doubtful that German

plans for a New Order in Europe could ever be realized. The wisdom of Swedish economic dependence on Germany was being assessed more cautiously at the beginning of 1942, and in places was already being rejected. From early 1942 German irritation at repeated Swedish refusals to co-operate led to a deterioration in relations between the two countries and to increasing tension.²⁷⁹

After Britain declared war on Finland on 6 December 1941, Swedish neutrality appeared even more gravely threatened by possible British military intervention in northern Scandinavia and a preventive strike by Berlin. In late 1941 and early 1942 the Swedish government was alarmed by rumours of a possible military move against Sweden by the Third Reich. The government in Stockholm was aware of the reinforcement of the German troops in Norway which Hitler had ordered from the beginning of 1942. Although the Germans had not planned any action against Sweden, the Swedes thought that British-American landings or new German military action might be undertaken with the aim of occupying Sweden in the spring of 1942.²⁸⁰ Preparatory mobilization measures were implemented to increase the strength of the Swedish army to around 300,000 men. At the same time the king of Sweden sent Hitler official reassurance from the government 'that Sweden would never tolerate Anglo-American designs on northern Scandinavia involving a march through Sweden. He was absolutely determined to prevent the penetration of Anglo-American troops into Sweden by force of arms.'²⁸¹ Hitler himself wanted to stabilize the political situation in Scandinavia; he was anxious to avoid new conflicts to the rear of the planned German spring offensive in the east and the westward-facing defensive line in Norway. On 13 March 1942 he therefore informed Sweden's king and government that 'for its part Germany would take no step which would violate the neutrality of Sweden'.²⁸² As a result, political relations between the two countries became less strained.

In many areas Sweden did help to supply the German and Finnish troops in Norway and in the Finnish theatre. However, it never deployed its military forces directly against the Soviet Union, as Berlin had wanted, and did not participate militarily in the war in the east. Despite ensuring 'important relief' at certain points, Swedish deliveries were not of decisive significance to the German war effort in the far north.²⁸³

Goebbels's diary entries typify the irritation within the National Socialist leadership over the attitude of Sweden in the spring of 1942, particularly regarding the German demand for greater support or involvement in the war

against the Soviet Union. In January 1942 the Reich minister of propaganda still thought that Sweden 'had done more for the German war effort than is generally assumed';²⁸⁴ in particular, the Swedes had provided 'considerable support' in the war against the Soviet Union. Though the country was guarding its neutrality, it was interpreting it very much to the benefit of Berlin. However, as regards the German-Finnish war effort against the USSR in the north, Goebbels regarded Swedish support as 'meagre'. He was especially critical of the lack of support by the Swedish press, whose attitude was more 'provocative and insolent'. For the time being, however, the Germans would have to be satisfied with what they had.

By 15 April 1942 Goebbels had changed his mind, maintaining that the Swedish attitude towards Germany had deteriorated. He now argued that it would 'have been better if we had broken Sweden too' when Norway was occupied in the spring of 1940, since Sweden 'has no right to national existence anyway'. Advocates of the 'idea of the greater Germanic empire', or the 'north Germanic community of destiny on the Baltic', were bound to be disappointed by Sweden's sober attitude towards German propaganda for the 'struggle of Europe against barbarism'. However, this did not lead to a more realistic German policy towards Sweden; there was little attempt to give due weight to practical political possibilities in foreign policy or to the country's democratic political system. Political and military thinking regarding Sweden remained thoroughly unrealistic at the beginning of 1942; there was still a strong assumption that, whatever its reluctance, Sweden would allow itself to be drawn into the German sphere of influence within the framework of a 'greater economic area' controlled by Berlin. In fact, the aim of Swedish foreign policy was to keep out of the war of the great powers and to protect the independence of the country. The Swedish government was therefore anxious to strengthen its own defensive power with all the means at its disposal. Potential aggressors were to be deterred by the prospect of sustaining heavy casualties and making huge sacrifices. The foreign ministry in Berlin described the Swedish attitude at the beginning of 1942 as a 'line of armed neutrality'.²⁸⁵ With the political climate greatly changed by the entry of the United States into the war against the Axis, Berlin had no chance of drawing Sweden into the war on the side of Germany.

5. THE REACTION OF OCCUPIED DENMARK AND NORWAY TO HITLER'S ATTACK ON THE SOVIET UNION

It is clear from previous descriptions of military and political events that northern Europe was profoundly affected by the preparations for Operation

²⁸⁴ Goebbels, *Diaries*, 19-20 (28 Jan. 1941), 122 (15 Apr. 1941) (also for the following quotations).

Barbarossa, and by the military operations against northern Russia after the German invasion of the Soviet Union. Alongside Sweden and Finland, the other north European countries of Denmark and Norway also had a specific role to play in the German war effort against the Soviet Union. The nature and implications of this role extended beyond purely military factors and, in different ways, affected the diplomatic, ideological, and economic spheres. With the German invasion of the Soviet Union on 22 June 1941 these factors—together with German expectations concerning the conduct of occupied Denmark and Norway—had a deep impact on domestic affairs in the states concerned.

After the German invasion of the Soviet Union, discussions immediately began in Berlin over the form in which occupied Denmark should and could be involved in the war.²⁸⁶ Almost as a matter of course, the Germans expected police measures to be taken against the Soviet legation and its staff in Denmark. They also demanded that the Danish police arrest former Tsarist Russian citizens and foreign Communists. The Danish government, under Premier Thorvald Stauning, acceded to this unequivocal demand: approximately 300 people were arrested. As the German plenipotentiary, Cecil von Renthe-Fink, reported with satisfaction to Berlin on 22 June 1941, these measures had been ordered 'without delay' on that day.²⁸⁷ Only two days later the Danish foreign minister, Scavenius, told the German minister that Copenhagen was recalling its minister from Moscow and breaking off diplomatic relations with the USSR as an expression of 'solidarity with Germany and Finland in the struggle against the Soviet Union'.²⁸⁸ In its declaration of 26 June 1941²⁸⁹ the Danish government welcomed the war of Germany and Finland against the Soviet Union as decisive for the whole of Europe. Copenhagen's official announcement emphasized the 'common European interest' in this conflict, but maintained the country's status as a non-belligerent state. Nevertheless, the Germans welcomed the Danish decision to enter 'morally into the European front against the Soviet Union'. It was noted that, with the consent of the Danish government departments, Danish volunteers could be recruited for the Waffen-SS as well as the Finnish army.²⁹⁰ Communist activity was stopped on 22 June. Finally, after repeated German requests and demands from the Danish National Socialists under their leader Frits Clausen, the

Danish Communist Party was banned by law on 22 August 1941.²⁹¹ The law was passed unanimously in the Folketing.

At this stage, however, Danish public opinion was largely preoccupied with the issue of Iceland. The island, which belonged to Denmark, was occupied by the United States on 7 July 1941 in response to the fact that British troops, who had landed there in May 1940, were now urgently needed in other theatres. On 17 May 1941 the Icelandic parliament decided unilaterally to dissolve the treaty of union with Denmark and declare Iceland a republic. For Danish citizens and politicians the loss of constitutional sovereignty over the North Atlantic island was a bigger talking-point in the summer of 1941 than the German invasion of the Soviet Union.

The German foreign ministry was anxious to avoid open interference in the domestic political and ideological affairs of Denmark. It therefore refused to support the illegal attempts of the Dansk National Socialistisk Arbejderparti (DNSAP: Danish National Socialist Workers' Party) to secure a share in government. Consequently, despite individual financial contributions from Germany, the Danish National Socialists received little German support for their efforts to force greater Danish participation in the war against Bolshevism. In order to obtain voluntary co-operation and participation from the Danish government, and to prevent internal unrest, the Germans had ruled out the use of force. The unique nature of occupation rule in Denmark, presented as the 'showcase' of a just and restrained 'supervisory administration' by the foreign ministry, was not to be threatened. With the New Order in Europe in mind, the aim was to retain the legal appearance of the German presence in Denmark for as long as possible. At the beginning of November 1941 the situation was summarized by the foreign ministry in a detailed political report for Ribbentrop on 'Denmark's attitude towards Germany'. Given that the Danish government and people were unsympathetic to the ideology of National Socialist Germany, the report emphasized the political achievement of ensuring that none of the countries occupied by Germany 'is as peaceful and offers such close and virtually trouble-free co-operation as Denmark'.²⁹² In its requests and demands for Danish agreement and co-operation the German leadership therefore concentrated on actual areas of practical political activity rather than on issues of the political future. The government in Copenhagen adopted a very cautious approach to the question of Danish participation in the 'construction of the new Europe'; ultimately this would involve tasks intended for the Danish people, which would have to be

²⁹¹ See the exchange of telegrams between the Reich plenipotentiary, Minister von Renthe-Fink, and the foreign ministry in July and Aug. 1941, PA, Büro St.S., Dänemark, vol. ii. On the DNSAP in general see Poulsen, *Besættelsesmagten*.

²⁹² Memorandum by Minister von Grundherr for Ribbentrop: Denmark's attitude towards Germany, 4 Nov. 1941, DGFP D xiii, No. 447; an amended version can be found in PA, Büro St.S., Dänemark, vol. ii (also for the following quotations). On 'showpiece Denmark' see Rings, *Leben*, 48 ff.

carried out 'according to Danish custom'. The attitude of the Danish people towards the DNSAP and its leader Clausen was overwhelmingly negative: the DNSAP had about 30,000 members. The Germans were aware that 'a real inner conversion of the Danish people . . . [could] only be expected after the final German victory'.

Guided by this assessment of the political situation, in mid-November 1941 Ribbentrop obtained Hitler's agreement to the maintenance of existing policy for the future development of German-Danish relations.²⁹³ Of decisive importance here was the fact that 'only a small number of German military forces [were required] to secure calm in the country' as a result of the close co-operation of German and Danish governmental and administrative authorities in Denmark. It was also very significant that the production of Danish industry was being largely turned over to German armaments purposes. Such developments could be regarded as an important Danish contribution to the war against the Soviet Union. Hitler therefore agreed that there should be no 'acceleration of the tempo by means of an increased activation of the National Socialist movement in this country', and that the foreign ministry should 'cautiously' maintain its previous line.

On the issue of Danish entry into the anti-Comintern pact, however, such 'caution' clearly had its limits. On 20 November 1941, with renewal of the treaty imminent, the German minister in Denmark made a demand for Danish accession to the pact. The demand was rejected by the Danish cabinet due to 'fear of English reprisals, and of a demand for a military contribution in the struggle against the Soviet Union'.²⁹⁴ The Danes offered to make a unilateral declaration of sympathy with the terms of the anti-Comintern pact, but the proposal was rejected as inadequate by the Germans. The government in Berlin offered reassurances of its own: joining the pact would not commit Denmark outside its borders, and did not imply any military contribution to the war in the east. However, Danish doubts and hesitations were not allayed. At this stage Ribbentrop intervened to put direct and massive pressure on the Danish government. On 23 November he issued an ultimatum. If Denmark was not prepared to join the anti-Comintern pact, the government would be 'placing itself in the Bolsheviks' camp and ruling itself out of European co-operation'; moreover, Germany would no longer feel bound by the constitutional promises of 9 April 1940 regarding the sovereignty of Denmark.²⁹⁵ This was nothing other than a naked threat to change the status of the occupation. In these circumstances the government and King Christian X agreed that same day to join the anti-Comintern pact. On the next day the Danish delegation under Foreign Minister Scavenius was

²⁹³ 'Memorandum for the Führer' from Ribbentrop, 11 Nov. 1941, and report from the Reich foreign minister's office to State Secretary von Weizsäcker, 17 Nov. 1941, both in FA, Büro St.S., Dänemark, vol. II.

forced to travel to Berlin to complete the formalities of entry on 25 November 1941.

The Danish government tried to qualify its position in a special minute containing its continuing reservations. Nevertheless, Berlin had achieved its political objective of obtaining the accession of more European states in order to inflate the value of the pact in propaganda and political terms. Ribbentrop exploited the opportunity in his speech to celebrate the signing of the pact in Berlin on 26 November 1941. He described the voluntary enlistment of men from many European countries 'for the struggle against the common Bolshevik enemy', and the inclusion of the 'majority of European states' in the treaty, as a 'significant development' and a 'milestone on the road to the amalgamation and shaping of the new Europe'. Europe was now moving to combat the threat of the 'Jewish-Bolshevik steel roller', and uniting to fight against 'perpetual enslavement by Jewish Bolshevism'.²⁹⁶ In similar vein, in his reception of Foreign Minister Scavenius on 27 November 1941 Hitler judged the entry of several more states to the anti-Comintern pact to be 'the demonstration of a new Europe slowly taking form'.²⁹⁷ Ribbentrop promised his co-signatories that German triumphs in the east meant that the economic resources of occupied European Russia would now be available to satisfy fully the economic needs of all Europe. Soviet war industries seized there would be 'utilized for the war economy of Germany and her allies'.²⁹⁸ The 'organization of this gigantic expanse' was already 'fully under way'. These promises were not merely propaganda announcements for public consumption. Behind the words of the German foreign minister lay the unspoken intention of the National Socialist leadership to involve other, mainly 'Germanic', states in the exploitation of the occupied eastern territories. Hitler had already made this intention clear to his inner circle in August 1941. There he argued that the greatest future task of National Socialism, within the framework of a planned racial policy, was not to 'allow any more Germans to emigrate to America'.²⁹⁹ The Norwegians, Swedes, Danes, and Dutch would all have to be 'attracted' into the newly conquered eastern territories, there to become 'members of the German Reich'. On 11 September 1941 Hitler expressed similar views to the new Danish minister, Mohr, when he referred to the need for other states to participate in the economic exploitation of the new territories in the east.³⁰⁰ He was somewhat more restrained in his conversation with Scavenius. On that occasion Hitler stressed that the conquered east must be mobilized with the co-operation of the European states not *against* but *for* Europe, in order 'to make Europe autarkic'. Hitler was glad that Denmark would 'be there' when it

was done.³⁰¹ He intended 'calling together' various senior economic figures from the states whose co-operation was being envisaged—including the specialists at the head of Danish industry—in order to provide central information and tours of inspection in the east. These tours would give them an overall view of the great economic possibilities, and win them over for the work of construction in the conquered eastern territories.³⁰²

German proposals and ideas evoked a positive response from the government in Copenhagen. In view of the great military successes of the German Reich, the Danes saw the prospect of resuming their former economic interests and connections in the Baltic territories of the new Reich Commissariat Ostland. By the end of October 1941 Reich Plenipotentiary von Renthe-Fink was reporting that Danish economic circles and businessmen were showing a 'growing interest' in the east. He was also able to report the imminent creation of a working committee of 'financially powerful', 'substantial Danish economists'. This came together at the suggestion of the minister for public works, Gunnar Larsen, and was intended 'to operate in accordance with the Führer's wishes in Russia'.³⁰³ The Stauning government informed Berlin that it would follow Hitler's proposals 'willingly'. During the visit of Gauleiter Lohse to Denmark (he was also leader of the Nordic Society) Danish circles also expressed interest in the Reich Commissariat Ostland, of which Lohse had been appointed Reich commissioner. This 'area of operations' would accommodate Danish agricultural circles. After winning concessions in forestry and agriculture and obtaining mineral rights, these men were developing the first plans for economic co-operation with the former Baltic States, with the aim of obtaining extra animal feed there. Minister Larsen confirmed Danish ideas for the country's participation in the economic utilization of the conquered eastern territories during his visit to Reich Minister Rosenberg at the end of October 1941. Rosenberg's ministry for the east then expanded its own activity. He saw this task as a new field of activity for the Nordic Society of which he was patron,³⁰⁴ and which he hoped to use as a link between the various Danish and German departments. On 21 November 1941 an important discussion was held at the Reich ministry for economic affairs on the issue of participation by foreign countries in the economic exploitation of the eastern territories. The meeting, attended by representatives of various ministries and national authorities, concluded that Danish involvement was desirable and should be encouraged.³⁰⁵ There was particular interest in the work of

the Danish cement-machine industry, in structural and civil engineering, and in the recruitment of agricultural specialists in animal husbandry. Negotiations for commercial and economic agreements were to take place through the relevant government agencies.

These earlier proposals gained a new impetus with the comments made by Hitler and Ribbentrop when Denmark joined the anti-Comintern pact. Under discussion was the co-operation of 'Germanic' experts for tasks of economic leadership in the east, and the founding of new factories by foreign industry. However, there were also plans for the settlement of the east by 'Germanic people', particularly Danes and Dutchmen, as Hitler had proposed in his table talks months before. At the beginning of December 1941 the first meeting of the 'working committee to promote Danish initiative in east and south-east Europe' took place in Copenhagen under the Danish economic director, Juncker. This body had been founded beforehand on a private basis, though with government participation.³⁰⁶ At this stage the material interests of those Danish firms which had previously been active in the east came blatantly to the fore.

By mid-January 1942 the co-operation of other countries in the economic reconstruction of the conquered Soviet territories had not progressed beyond the stage of plans and preliminary discussions. According to information from the foreign ministry, these were currently limited 'to the deployment of a number of specialists, in particular Dutch farmers',³⁰⁷ despite the fact that requests had been received from Sweden and the Danish 'working committee' for involvement in the work of economic construction in the east. Progress was hindered partly by the struggle for power among the German authorities (for example, over who should lead the negotiations—the ministry for the east, the Nordic Society, the Reich Commissariat Ostland, or the foreign ministry). However, other interests of the German participants also proved to be serious obstacles to the development of a large-scale planned participation of foreign business circles and capital in the economic exploitation of the occupied Soviet territories. Some preliminary activity did take place: there was a tour of inspection by a commission composed of representatives of the German ministry for the east and the ministry for economic affairs in March 1942, and a visit by Minister Larsen and the chairman of the Danish committee for the east, Juncker, to Reich Commissioner Lohse in April and May 1942.³⁰⁸ However, during these tours it became clear that the German economic agencies

³⁰⁸ Telegram No. 114 from von Renthe-Fink to foreign ministry, 12 May 1942, and press communiqué: 'Discussions with Denmark on co-operation in the eastern territories', published in *Völkischer Beobachter* (13 May 1942); memorandum from von Weizsäcker, St.S. No. 323 for Ribbentrop, 13 May 1942: all in PA, Büro St.S., Dänemark, vol. ii. See also Eichholtz, 'Expansionsrichtung Nordeuropa', 29; Thomsen, *Besatzungspolitik*, 91-2.

and businessmen in the Ostland were not interested in an independent participation by Denmark in the economic exploitation of the east. The Danish economic experts were forced to realize that, as private individuals, they would be given few opportunities. Subsequently, at the beginning of June 1942, the government in Copenhagen appointed an official 'office for the east' within the Danish foreign ministry. Despite this official commitment by the government, Danish plans and ideas met with scant success, particularly as new financial problems had begun to hamper plans for activity in the east. Apart from the construction of a cement factory, Denmark did not participate in the exploitation of the occupied Soviet territories before early summer 1942.

Schemes to involve other countries in the east had been particularly encouraged by Alfred Rosenberg. He had certainly hoped to increase his own political power and prestige on the basis of new commercial and business ties, and even to establish his claims in the domain of the foreign ministry. However, in two discussions with Hitler in February and May 1942 Rosenberg discovered that the Führer would allow other countries only limited tasks and rights in the east for as long as the war continued.³⁰⁹ To that extent, the failure of the 'blitzkrieg concept' in the battle for Moscow acted as a significant brake on developments. Only after final victory, in the position of sole victor, was Hitler prepared to allocate particular tasks to the other European countries in the economic exploitation of the east. It is possible that, in the first half of 1942, the Danes were disappointed by the obvious lack of interest that had followed the generous offers of autumn 1941, or at least by the delaying tactics adopted by German agencies in implementing them.³¹⁰ German conduct involved the virtual withdrawal of the offer of equal partnership that had already been made. Of course, there is some doubt whether Danish willingness to co-operate in the east reflected genuine interest in the opportunities there. It may have been little more than a non-committal promise which could be made at little cost as a concession to meet the wishes of the occupying power.

Danish government agencies and entrepreneurs thus attempted to gain acceptance as economic partners of Germany. At the same time, in another aspect of foreign policy, the Danish government was being confronted with the evidence of its status as an occupied country and of the restrictions on its sovereignty. A few days after Germany declared war on the United States, the German foreign ministry demanded that the American legation be expelled from Copenhagen. The precise form of this move was generously left to the Danes. However, the Germans made it clear that this was regarded as an opportunity for Denmark 'to demonstrate its support for the new Europe'.³¹¹

³⁰⁹ See Myllyniemi, *Neuordnung*, 173.

³¹¹ See telegram No. 1549, Weizsäcker (foreign ministry) to German legation Copenhagen, 16 Dec. 1941; No. 1627, Minister von Renthe-Fink to foreign ministry, 17 Dec. 1941; No. 1561, Weizsäcker (foreign ministry) to German legation Copenhagen, 19 Dec. 1941; all in PA, Büro St.S., Dänemark, vol. II, parts of which are published in *ADAP* B i, No. 21, p. 26 and n. 5.

Foreign Minister Scavenius hastened to confirm that the Danes would 'of course make sure that the US legation leaves Denmark'; he was 'thankful that the choice of form has been left to the Danish government'.³¹² On 24 January 1942 the United States was forced to close its legation and withdraw its diplomats from Copenhagen.

The Danish and foreign press—and the Danish public—now began to express their fears, either openly or indirectly, about the possible extent of collaboration with the Germans. It seemed that the government might be only too willing to collaborate with the occupying power in other areas, even to the extent of making a direct military contribution to the war against the Soviet Union. In his talks with the German plenipotentiary, Foreign Minister Scavenius tried to rebut such rumours. He explained that if the Germans broached the Jewish question by pressing or forcing Denmark to introduce anti-Semitic laws, any chance of maintaining the 'policy of Danish orientation towards Germany' would be 'destroyed'.³¹³ The Germans decided not to press the point at that stage. Nevertheless, they were convinced that Denmark would eventually have to agree 'to a European settlement of the Jewish question by the end of the war if not sooner'. The occupying power could not extend its political pressure on Copenhagen without endangering the fiction of Danish sovereignty. This fact was clearly revealed in the diplomatic arena. After the German occupation in April 1940, and in some instances very soon after, the Danish ministers in the United States, Great Britain, Argentina (simultaneously accredited in Chile, Bolivia, and Uruguay), Mexico (simultaneously accredited in seven other Central and South American countries), Iran, and Iraq had renounced their obligations to the existing Danish government. They accused it of being too accommodating to the Germans and later, when Denmark joined the anti-Comintern pact, of collaborating too closely with the occupying power.³¹⁴ Attempts by the Danish government to counteract such claims met with little success. For example, when Denmark acceded to the pact on 25 November 1941 Foreign Minister Scavenius declared publicly in Berlin that his country was not one of the belligerent states despite its commitment to the 'common fight against Bolshevism'.³¹⁵ The Danish government subsequently claimed that accession to the anti-Comintern pact was merely 'a confirmation of the government's policy with regard to

Communism', and was 'actually nothing new'.³¹⁶ However, rumours that Denmark might soon be compelled to take an active part in the war against the Soviet Union continued to circulate.

The Stauning government recognized that the country's forced membership of the anti-Comintern pact had produced 'severe stress' in domestic affairs.³¹⁷ This fact led the German foreign ministry to reject demands by the DNSAP leader Frits Clausen for the dismissal of some Danish ministers and the transformation of the former Stauning government to satisfy the wishes of the Danish National Socialists. It was thought that such an intervention would lead to 'serious excitement in the country', and to domestic unrest. Berlin also recognized that the Danish government had tried hard to satisfy German military, domestic, and foreign-policy demands since 9 April 1940. This was particularly apparent in the war against the Soviet Union, where Denmark had supplied large quantities of war material and essential foodstuffs to the German and Finnish troops in Scandinavia.³¹⁸

Looking back at the beginning of 1942, the German agencies were satisfied that 'the optimum had been obtained from Denmark' for the German war effort and food economy, without the need for additional military forces to be stationed there.³¹⁹ In foreign affairs the Danish government had 'joined the European front led by Germany as far as was possible under the current circumstances and given its tenacious efforts to stay out of the war'. On the other hand, in August 1941, at a time when the Danish government wanted to increase the size of its army, it had refused German demands for a regular Danish infantry regiment to fight against the Soviet Union. The Danish ministry of war had preferred instead to abandon the plan to strengthen its armed forces.³²⁰

Even after the death of Premier Stauning on 3 May 1942 and the appointment by King Christian X of a new government a few days later, the Germans could safely assume that Denmark would maintain continuity in policy; it would continue to show a loyal attitude towards the German occupying power and co-operate with the Third Reich. Such co-operation included, in addition to 'the protection of German military interests', the 'common European interest in the struggle against Bolshevism' and Denmark's continued adherence to the anti-Comintern pact. In response to a specific German request, Premier Buhl emphasized this approach in his official government procla-

mation.³²¹ Buhl also promised 'to do the optimum for Germany in the economic sphere', and stressed his government's interest 'in reconstruction in the east'. From the beginning of 1942, however, anti-German opinion was hardening among the Danish population; the threat of a permanent German occupation appeared much more real than the danger of becoming 'the spoils of Bolshevism'. The Germans attributed the increase in such sentiments to the stalemate in the east and the entry of the United States into the war. They were therefore confident that fresh military triumphs on the eastern front, which they expected from the offensives in spring and early summer 1942, would improve Danish attitudes towards the struggle against Bolshevism and strengthen the promised moral solidarity of June 1941.

In international law, the government in Copenhagen was a valid partner of Germany in its efforts to wage the 'common European struggle against Bolshevism'. The German government could therefore hope to win over the Danes to some form of indirect participation by exerting appropriate political pressure. In Norway the situation was different. After the flight into exile in Britain of King Haakon VII and the legal Nygaardsvold government, and the establishment of the provisional 'Administration Council' on 16 April 1940, there was no legally valid negotiating partner³²² for the Germans in their efforts to encourage Norwegian participation in the war against the Soviet Union. Significantly, on 10 July 1940 Reich Foreign Minister von Ribbentrop ordered the withdrawal of the diplomatic representation of friendly states from Oslo. In agreement with the occupying power, the Supreme Court in Oslo had called the 'Administration Council' into being. Though this could not be regarded solely as the executive authority of the German war effort and German interests, neither was it an equal and legally valid partner. Even after Gauleiter Terboven took office as 'Reich commissioner for the occupied Norwegian territories', the council at first remained in existence. In the summer of 1940, in order to permit the establishment of a functioning government, Gauleiter Terboven entered into negotiations with Norwegian representatives of various political committees and parties. The subject of these talks was the deposition of King Haakon VII and the replacement of the government-in-exile in London, which was finding it difficult to gain acceptance as the recognized partner of the Western powers.

However, after his meeting with Vidkun Quisling on 17 August 1940, Hitler ordered the abandonment of discussions concerning the appointment of a new legal Norwegian government in the form of a 'National Council'. He had again decided to support the *fører* of the Norwegian National Socialist Party,

³²¹ Report by von Renthe-Fink in telegram No. 636 to foreign ministry, 5 May 1942, PA, Nachlaß Renthe-Fink, No. 2/6; similarly *ADAP* E II, No. 181, pp. 303-4, No. 218, pp. 374-5, No. 235, pp. 401 ff. (also for the following quotation).

the Nasjonal Samling, as the protagonist of National Socialist development and renewal in Norway. By now it was apparent that the war would last longer than had been anticipated. In these circumstances the anti-Bolshevik 'leader' of the Norwegian National Socialists had again become a useful tool of German policy in Scandinavia and had thus regained the favour of the German dictator. In part this development was a response to Reichsleiter Rosenberg's intervention on behalf of the Norwegian party leader, and to Hitler's memory of Quisling's loyalty during the occupation of Norway. However, it was undoubtedly also connected with Hitler's recent decision to prepare for war against the Soviet Union. Reich Commissioner Terboven nevertheless rejected Quisling's request to be appointed head of a new Norwegian government of ministers chosen from his Nasjonal Samling. Terboven, who needed to bear in mind the opposition of the Norwegian population to such a solution, also wanted to retain control over decisions about the composition of any 'National Council'. He also saw Quisling as his rival for political power in occupied Norway. It was Hitler who eventually decided that Quisling's supporters should be included in a new government. On 25 September 1940, when the Norwegian Storting refused to bow to German demands, Reich Commissioner Terboven appointed 'provisional state councillors' to carry out government business. There were thirteen of them, including eight members of Quisling's party. The Nasjonal Samling was declared to be the sole party of state; the others were banned. Quisling delivered a speech celebrating this measure as the end of the party-political system in Norway, and as a 'liberation from the yoke of capitalism'.³²³

During the implementation of German occupation decrees by the 'provisional government' there were numerous conflicts with the Supreme Court and other Norwegian institutions and associations. Despite his personal sense of mission for Norway, Quisling failed to win the support of the Norwegian population either for himself or for a mass National Socialist party. His plans to regain the sovereignty and integrity of the country within the framework of a conditional independence from Germany were clearly unrealistic.³²⁴ After the entry of members of the Nasjonal Samling into the 'provisional government', Quisling attempted to achieve a preferential position for Norway as a 'Nordic land' within the German sphere of influence; at the very least, he was anxious to ensure that the country was not reduced to 'protectorate' status in any future New Order in Europe. Quisling aimed to achieve independence for a Norway led by himself within a 'Greater Germanic empire'.³²⁵ In a memorandum of 25 October 1940 he advocated the creation of a 'Greater Germanic confederation of states' within which Norway would occupy a special position by virtue of its relations with the German Reich. For himself he laid claim to

the position of a 'regent' of Norway. In this plan a German command would act as the supreme federal body in the 'Greater Nordic confederation of states', while a Norwegian national army would take over the defence of Norway as part of the overall organization of the confederation's fighting forces.³²⁶ When Quisling visited him in December 1940, however, Hitler would not commit himself to plans of this kind.

For Quisling, the opportunity to control Norwegian military forces played an important part in his efforts to regain Norwegian autonomy and demonstrate it to the outside world. In order to approach this objective, he had already suggested in August 1940 that volunteers should be recruited in Norway to fight on the German side.³²⁷ On 13 January 1941 he made a public appeal to his countrymen to volunteer for service in the SS-Standarte 'Nordland'. The response was minimal. Six months later only about 300 Norwegian volunteers were serving in the Waffen-SS instead of the 3,000 hoped for.³²⁸ Quisling's objectives could not be achieved in this way.

As the first Norwegian volunteers were reporting to the Waffen-SS, the government-in-exile in London reached an agreement with the British government for the establishment of Free Norwegian forces on the basis of obligatory military service for Norwegians living outside the country. The government-in-exile thereby regained its freedom of manoeuvre in foreign policy. By achieving this diplomatic success, and with the help of British radio broadcasts, it was able to provide effective support for the establishment of secret resistance organizations within Norway. The Nasjonal Samling's appeal for volunteers to serve the occupying power was thus bound to discredit Quisling's party in Norwegian eyes, and did much to isolate it in the country. The events of spring 1941, when many Norwegians welcomed the British landings at Svolvær on the Lofoten Islands and a partial state of siege had to be imposed in northern Norway, were also a defeat for the efforts of the Nasjonal Samling.³²⁹ Most of the Norwegian population was hostile towards the German occupying power and towards National Socialism in general, whether of German or Norwegian stamp.³³⁰

Quisling's hopes of being appointed by Hitler as head of an autonomous government were further disappointed in the first half of 1941. Thereafter, the war against the Soviet Union gave him the chance to remind Hitler of his old role as an anti-Communist follower, and to assure him of his co-operation in the new 'struggle against Bolshevism'. After 22 June 1941 participation in the

war in the east at Hitler's side could only help him to achieve his main objective. For the Norwegian National Socialists, the development assisted their efforts to persuade the population that the Soviet Union rather than Britain was now the main enemy of Germany. When Reich Commissioner Terboven announced the establishment of a volunteer 'Norwegian Legion' on 29 June 1941, this shift in emphasis was manifest: 'From now on the question is no longer first and foremost: England or Germany, but it is, beyond all domestic variations of opinion and differences, simply, clearly, and imperiously: European Nordic culture or Asiatic Bolshevism.'³³¹ He emphasized that Norway must and would 'take part' in 'this conflict of unique historical significance'. However, German observers noted that the Norwegian population was not enthusiastic. As before, only a minority could be described as pro-German or pro-Nazi. Hostility towards the Nasjonal Samling had 'scarcely altered'.³³² National Socialist propaganda about the imminent threat of a Soviet 'assault against the Nordic states and their culture' was not accepted. Much of the population wanted 'an end to the war at any price'.

With this 'development of the foreign-policy situation', the German attack on the Soviet Union ensured that the war had 'entered a decisive phase' for Norway. It also had implications for Norwegian domestic affairs. Reich Commissioner Terboven issued a new decree imposing a civil state of emergency over the entire country, to prevent any 'occurrences of an exceptional kind which touch on the public life of Norway'.³³³ This decree gave the higher SS and police leader in Norway the 'extraordinary authority to depart from legal regulations that are in force' and to impose martial law, including the death penalty. In an effort to counter British radio propaganda, all radio receivers in much of western Norway had to be handed over to the authorities; the manufacture, purchase, and sale of radio equipment were forbidden. For the Norwegian population, the new war against the Soviet Union brought further restrictions to everyday life under occupation. In consequence, virtually no new groups could be persuaded to support the German war effort in the east.

The German occupation authorities intended to make use of the Norwegian economy and industry to meet Germany's war-economy and armaments needs. Thus in the summer of 1940 the share capital of Norway's biggest industrial enterprise, the 'Norsk-Hydro-Elektrisk-Kvaelstof A/S', was increased; the aim was to allow the German company IG-Farben to increase its influence and to eliminate the French majority interest. A few weeks later

³³¹ Radio announcement by Terboven, 29 June 1941, published according to DNB report in *Monatshefte für auswärtige Politik*, 8 (1941), 3/675-6; see also PA, Büro St.S., Norwegen No. 12/65 (also for the following quotation).

³³³ The decree is reproduced in DNB—Uncensored press material No. 214, 2 Aug. 1941, 20-1, Büro St.S., Norwegen No. 12/65 (also for the following material).

Reich Commissioner Terboven founded a 'working group for the development of electricity in Norway' in order to achieve greater utilization of Norwegian energy output by encouraging German capital participation. Like the extensive investment projects in the Norwegian aluminium industry, these measures should be seen in the larger context of German plans for a 'New Order' in northern Europe. IG-Farben, for example, produced its 'Norway proposals' for peacetime planning on 15 September 1941; these called for an increased use of Norwegian industrial capacity for the 'establishment of a New Order of the continental European economic space' under German leadership.³³⁴ With the German invasion of the Soviet Union, the whole of Norway was regarded more or less as a powerful rear supply area for the German front in northern Russia and on the Arctic Circle. Its economic capacity was to be exploited to the full on behalf of the German war effort.³³⁵ Earlier deliberations on the long-term integration of the Norwegian economy into the coming 'reorganization of the greater economic sphere' now receded into the background. They were superseded by demands for a direct Norwegian economic contribution to the German war effort, particularly in view of the increased military difficulties that would be encountered in carrying out the blitzkrieg concept in the east.³³⁶

With the deterioration of the military situation after the battle of Moscow in December 1941, the ambitious investment plans for the industry and economy of Norway were scaled down. Norwegian industry and its workers began to be exploited for the benefit of German armaments production. Exploitation of Norwegian energy sources was now an important task of German occupation rule under Reich Commissioner Terboven. However, this also led to occasional friction with Quisling and his supporters.³³⁷ Confronted by the hostile mood of the Norwegian population, and aware of the danger to Norway's own economic supplies by the end of 1941, not even Quisling's men were always eager to meet German demands.³³⁸

As the Germans grew more determined to use and operate Norwegian economic capacity, Norwegian industrial firms and entrepreneurs were also considered as possible participants in the economic exploitation of the occupied territories of the Soviet Union. As in the case of Sweden and Denmark, Hitler's first comments on the participation of other countries and allied states

in the 'new task' in the east were followed by the attempt of German economic agencies to develop plans for Norwegian involvement.³³⁹ Norwegian co-operation in the occupied Soviet territories appeared most desirable in the case of the metallurgical industry; a memorandum from the foreign ministry noted its potential use for smelting Soviet ores. However, the lack of a Norwegian government was a significant obstacle, since no genuine partner was available. The administrative executive of provisional state councillors under Reich Commissioner Terboven could play only a limited role as a link with Norwegian businessmen. Reich Commissioner Terboven was prematurely appointed representative for the exploitation of the Kola peninsula by Hitler and Göring on 16 July (when it had yet to be conquered), thus signalling apparent acceptance of the aim of Norwegian participation in the exploitation of the occupied Soviet territories.³⁴⁰ However, it soon became clear that this would also 'boost' Norwegian claims to northern Finnish territory and to the Kola peninsula itself, which Hitler planned to offer to the Finns. The decision was therefore changed. Similar reasoning underpinned the refusal of Colonel-General von Falkenhorst, commander-in-chief of Army Command Norway in northern Finland, to send the Norwegian Volunteer Legion into action in the region.³⁴¹

On 1 February 1942 Quisling's long struggle to have himself appointed Norwegian head of government was at last rewarded. Hitler appointed the *fører* of the Nasjonal Samling as Norwegian 'premier'. As the ostensible 'responsible head of government business', Quisling would take over the functions of the Storting and the king. Ministers were appointed to replace the provisional state councillors, whose role was now belatedly described as a 'constitutional interim phase'.³⁴² However, Quisling was still subordinate to Reich Commissioner Terboven as the 'representative of the Führer', and to his directives. His cabinet was a puppet government from the outset. Quisling's hopes for a separate peace treaty were also dashed. During his 'state visit' to Berlin on 13 February, he attempted once again to win Hitler's support for this political objective, but the German dictator rejected it. His request to set up his own Norwegian fighting forces was also refused. Hitler and Goebbels regarded Quisling's ideas as 'naïve' and 'somewhat grotesque', while the Reich propaganda minister doubted that he possessed any statesmanlike qualities.³⁴³ The foreign ministry also rejected the detailed

memorandum³⁴⁴ Quisling had handed to Hitler in Berlin, in which he outlined proposals for an immediate peace treaty and the 're-establishment of the independence of Norway' within the framework of a 'Greater Germanic confederation'. The foreign ministry was not convinced by Quisling's arguments for a 'Norwegian national army' and the enlargement of the Norwegian Volunteer Legion. State Secretary von Weizsäcker felt it reasonable to wonder at whom these troops would actually fire. Quisling's promise to join both the anti-Comintern pact and the Tripartite Pact after the conclusion of a peace treaty was more welcome to the Germans. For the time being, however, his wishes were dismissed as 'premature'; Hitler did not intend to conclude a peace treaty in the form suggested by Quisling. His appointment as premier was not accompanied by any concrete or new proposals for a Norwegian contribution to the war. In general terms, Norway was expected to be ready for 'active co-operation in the execution of joint tasks', including those involved in the 'struggle against Bolshevism'.³⁴⁵ The German occupation authorities reported that the Norwegians remained 'unchanged in their rejection' of the German war effort; real improvements in the internal situation would be brought about mainly by German military victories in the east.³⁴⁶ However, the domestic political atmosphere was clearly being damaged by the Quisling government's decision to take hostages and pass death sentences under the state of emergency. In the spring of 1942 these measures were an additional burden on Berlin's relations both with the Norwegian population and with the governments and peoples of Sweden and Denmark.³⁴⁷

There was no uniform reaction in northern Europe to Hitler's war against the Soviet Union. Despite his almost unchallenged power in Europe in the summer of 1941, Hitler was compelled to treat the Scandinavian states differently in an attempt to persuade them to fall into line or even take part on his side. Their differences remained apparent even during the extension and renewal of the anti-Comintern pact in Berlin in November 1941, which was the most effective German propaganda device proclaiming the united struggle of Europe against Bolshevism. Even then, the states of northern Europe expressed their reservations about the German war effort. Berlin could neither brush these aside nor leave them out of account in shaping its political and economic relations with Finland, Sweden, Denmark, and Norway. During these months, Hitler and Ribbentrop received several European politicians

and statesmen at state receptions in Berlin. Yet there was no discussion of any concept which might have served to transform Fascist ideas on Europe and to act as a European counterpart to the Atlantic Charter of the Allies.

By December 1941 it was apparent that the German Wehrmacht could not defeat the Soviet Union in the first assault. Berlin had misjudged the military potential of the Soviet Union, and the United States had entered the struggle against National Socialist Germany after the Japanese attack on Pearl Harbor and Hitler's declaration of war against the Americans. In consequence, by the beginning of 1942 German prospects of final victory were already being viewed with scepticism by the countries of northern Europe. A growing political restraint was gradually becoming perceptible in the unoccupied states of Finland and Sweden, alongside a decline in willingness to collaborate among the Danes and Norwegians under German occupation. Furthermore, Hitler had no interest in finding a genuine political solution to encourage closer co-operation with the countries of northern Europe during the war.

IV. The Decisions of the Tripartite Pact States

JÜRGEN FÖRSTER

I. THE COMMITTED ALLIES

(a) *Romania*

Although Romania took an active part in Hitler's war on the Soviet Union from 22 June 1941, the two armies involved (Third and Fourth) did not join the major offensive with the German Eleventh Army until 2 July. General Ion Antonescu, the head of state, had assumed nominal command over 'Army Front Romania' and transferred the business of government to his deputy in the council of ministers, Mihai Antonescu. The deputy chief of the general staff, Brigadier Tătăranu, was appointed as liaison officer to Eleventh Army HQ. The head of the German Army Mission, Major-General Hauff, acted as liaison officer between the commander-in-chief of Eleventh Army, Colonel-General Ritter von Schobert, and Romanian headquarters. Hauffe and the German officers seconded to the lower Romanian commands and formations became an important element in the German-Romanian war effort on the southern flank of the eastern front. The dual tasks of the German liaison officers—advisers to the Romanian leadership and representatives of the German leaders—inevitably led to friction during tactical crises, when the Romanian commanders felt that they were being supervised and tended to perceive German advice as instruction. The Army Mission regarded the 'German liaison command' as a 'valuable means of leadership for the implementation of orders given, and for objective reporting';¹ they expected the liaison officers to conduct themselves as 'representatives of the Greater German Reich and as representatives of the best of German soldiering'.² Though Major-General Hauffe succeeded in gaining the confidence of Antonescu and becoming his 'tactical and operational adviser in all questions of the Romanian as well as the joint war effort',³ it was apparent that Romanian sensibilities could easily be offended.

The delay before the launch of a general offensive had created some nervousness in the Romanian Army and in the high command. In part, this was

⁴ Comment by Head of German Army Mission on the military problems in Romania, 11 Jan. 1942, *ibid.* v. 94.

because some units had sustained heavy casualties even in the first days of the war, during the establishment of bridgeheads across the Pruth. While the Romanian Third Army advanced alongside German Eleventh Army, the Romanian Fourth Army was forced to make the Pruth crossing alone. Even this limited tactical objective was undertaken against the judgement of the German Army Mission, which had advised against the allocation of independent attacking objectives to Romanian formations, and had warned that 'the standard of German leadership' should not be applied to them.⁵ Major-General Hauffe felt that his assessment of the fighting strength of the Romanian Army had been confirmed when General Antonescu was forced to request a German corps to support Fourth Army for the recapture of Kishinev. The decision of Eleventh Army HQ on 22 July 1942 to ask Antonescu to undertake 'the seizure of Odessa' is thus all the more astonishing.⁶ The Romanian Fourth Army was given this objective because of the operational restrictions placed on Eleventh Army by the battle of Uman, the underestimation of the Soviet forces' will to resist at Odessa, and Antonescu's declared aim of seizing the territory between the Dnestr and Bug for Romania. For that reason the Romanian head of state did not object to this new goal. He may even have thought, as the Red Army retreated, that the operation would be more akin to a surprise occupation than a difficult offensive operation. However, his optimistic belief that he could capture the naval fortress without German help was supported by the head of the German Army Mission.

On 27 July 1941 Hitler used the reconquest of Bessarabia and the northern Bukovina as an opportunity to thank Antonescu for choosing 'to fight this struggle at the side of the German Reich to the bitter end'.⁷ His praise for the achievements of the Romanian Army was combined with a highly political request for Antonescu 'to advance in the region south-west of the Bug and thus to take over security tasks in this territory also'. The Romanian head of state responded effusively to his ally's praise for the Romanian soldiers. Antonescu was aware that Romania owed the recapture of Bessarabia and the northern Bukovina '80 or even 90 per cent to the Führer and the German Army'.⁸ In his reply to Hitler he confirmed his desire to share in the campaign against 'Russian Bolshevism, the arch-enemy of European civilization and of my country . . . to the final goal'.⁹ For that reason he agreed to fulfil the tasks allotted to Romania. In so doing he was hoping not merely to extend Romania 'beyond the Dnestr', but also to 'satisfy the requirements of civilization'. On 7 August 1941 Hitler recognized Antonescu's important role in ensuring the

⁹ Letter from Antonescu to Hitler, 30 July 1941, *DGFP* D xiii, No. 167.

Romanian contribution to the war effort by awarding him the Knight's Cross and the Iron Cross first and second class.¹⁰ On this occasion Antonescu explained that he wanted his army group 'to occupy not just Odessa but also Sevastopol and the Crimea, in order to gain control of the Russian air-bases'. Since 23 June 1941 the Soviet air force had launched repeated attacks on Ploesti, Giurgiu, and Constanța in an attempt to disrupt the oil production which was 'vital' to the German war effort.¹¹

Antonescu's anti-Bolshevik sentiments were not the only reason for his decision to order the Romanian Army to advance even beyond Bessarabia, a decision which was controversial in Romania itself. He was also pursuing solid interests in the sphere of power politics. On the one hand, as mentioned above, he wanted to seize the territory east of the Dnestr as far as the old border of the former Russian republic of Moldavia. In order to gain Hitler's agreement to this, he was anxious to discover what territorial claims Germany's other main ally, Finland, was making against the Soviet Union.¹² On the other hand, the Romanian government had informed Berlin that it was anxious to see a 'new ordering' of the USSR; Mihai Antonescu had advocated an incorporation of Galicia into the Government-General and a reduction in the territory of the Ukraine. Behind these schemes lay Romania's interest in achieving a common border with the Third Reich, and its fear of the emergence of a 'greater Slavic empire', free of Bolshevism, in the north.¹³ Romanian wishes ran parallel with similar German ideas, which were put into practice at the beginning of August.¹⁴

Antonescu's decision to deploy Romanian troops over the Dnestr was determined by a second, even more important, motive. He was striving for a revision in Romania's favour of the second Vienna Award of 30 August 1940. For that reason, in his verbal reply to Hitler's letter of 27 July Antonescu emphasized that he, 'the general', would march to the end, without making conditions, because he had 'every confidence in the justice of the Führer'.¹⁵ A few days later he told Minister Clodius in blunt terms that he had resolved 'to march against Hungary when the next opportunity offers itself'.¹⁶ Given the German desire to guarantee the Balkan status quo until the end of the war, this comment may be regarded as an empty threat. Nevertheless, it is symptomatic of the relationship between Hungary and Romania, who were allies against

¹⁰ Ibid., No. 188. See Hitler, *Monologe*, 75 (27-8 Sept., 9 Oct. 1941): 'By race certainly not Romanian, but Germanic, Antonescu is a born soldier. His misfortune that he has Romanians under him!'

Bolshevism but still deeply hostile to one another. According to the German-Italian commission of investigation, it was precisely at that time—late July and early August 1941—that Hungarian units were provoking serious incidents on the disputed border in Transylvania.¹⁷

With Odessa only just surrounded on the landward side by the Romanian Fourth Army, and Third Army still engaged in occupying the territory between the Dnestr and the Bug, Hitler asked Antonescu to take over security responsibilities in the territory between Bug and Dnieper. He even requested Romanian troops for the operations of Army Group South east of the Dnieper.¹⁸

Antonescu, appointed Marshal of Romania by King Michael I on 23 August 1941, again announced that he was 'happy to be able to contribute with Romanian troops to the consummation of the victory beyond the Dnieper and to the saving of civilization, justice, and liberty among the nations'.¹⁹ However, he insisted on a directive from Hitler formally transferring to Romania the 'rights and responsibilities with regard to the administration and economic exploitation between the Dnestr and the Bug', as well as the tasks of security in the whole region between the Dnestr and the Dnieper. Convinced that the Red Army would soon be destroyed along the entire line, Antonescu was ready to accommodate German military wishes as much as possible. However, his prestige as head of state and commander-in-chief was threatened when the attack on Odessa by Fourth Army was unsuccessful. Despite the arrival of Romanian reinforcements, Antonescu was forced to accept German assistance.²⁰ Shortly before a final German-Romanian attack, the Soviet Union voluntarily surrendered Odessa. With the expected political repercussions, Romanian propaganda interpreted the evacuation as a victory.²¹ However, the battle for this well-fortified naval base had been fought at the cost of much Romanian blood. Fourth Army had lost 106,561 men, a fifth of whom had been killed.²²

After the seizure of Odessa, the Romanian Army was reorganized and new formations established. The two army commands (Third and Fourth) were withdrawn from the front. Under German command, a number of formations took part in the continued advance, or were employed on security tasks in the rear of Army Sector South or in the Reich Commissariat Ukraine. These were the mountain corps with three brigades, the cavalry corps with three brigades, and VI Army Corps with three infantry divisions and two motorized regi-

ments. From autumn 1941 the German Army Mission was again dispatched to train the home-based forces in Romania, which also formed the reservoir of recruits for security and operational troops. In two detailed reports on the deployment of the Romanian army in the middle of January 1942, Major-General Hauße concluded that the Romanian formations had 'fulfilled the—sometimes difficult—tasks allotted to them, though with many difficulties and a great deal of friction'.²³ The Third Army, Hauße stated, had received preferential treatment in terms of men and equipment. The level of supply had consistently been inadequate for the requirements of 'the troops, in themselves undemanding'; this fact should be seen as the reason for much 'unpermitted requisitioning'. Hauße stressed his belief that 'all available means' must be used 'to leave responsibility to the Romanians or to force them to assume it, but that they must still—skilfully and inconspicuously—be supervised'.²⁴ The issue was first to lead, only then to manage.

The Romanian goal of extending the state territory beyond the recapture of Bessarabia and the northern Bukovina was achieved on 30 August 1941, exactly a year after the signing of the 'Vienna diktat'. In the treaty of Tighina the territory between the Dnestr and the Bug (Transnistria) was relinquished to Romania 'for purposes of security, administration, and economic utilization'.²⁵ In the Bug-Dnieper region, however, executive authority was divided: while Bucharest was to be responsible for security, the 'administration and economic utilization' of the area remained in German hands. Romanian control of the iron-ore deposits of Krivoy Rog and the manganese deposits of Nikopol, much feared by the war economy and armaments office, was thus averted.²⁶ In addition, Germany had ensured her share of Transnistrian resources in the interests of supplying Army Group South.

Even before this region was fully conquered, Antonescu appointed the university professor Georg Alexianu as governor of the new province on 19 August 1941.²⁷ In October Alexianu transferred the seat of office from Tiraspol to Odessa. He was assigned a senior German military administration official 'for advice and support'.

Romania made it clear to both Berlin and Washington that it did not regard the conquest of this territory as compensation for the loss of northern Transylvania. At the beginning of September 1941, in discussions with the

²⁶ OKW/WiRüAmt/Stab Ia, No. 3320/41, 23 Aug. 1941, BA-MA Wi/I F 5.2748. In the middle of November the Bug-Dnieper territory was added to Reich Commissariat Ukraine.

²⁷ Copy of Antonescu decree, Eleventh Army Command, OQu/Qu 2 Br. B. No. 560/41, 28 Aug. 1941, app. 2, BA-MA RH 20-11/381.

American secretary of state, the Romanian chargé d'affaires used the argument of the 'Red menace' to justify his country's participation in Hitler's war against the Soviet Union. Secretary Hull agreed that the spread of the Communist system was a genuine problem; his government, however, regarded 'Hitlerism' as the greatest enemy at the current time.²⁸

Antonescu's political position had become closely linked with German victory over the Soviet Union. His personal prestige was therefore weakened by the continued resistance of the Red Army, the deployment of Romanian troops east of the Dnestr, the high casualties sustained thereby, and the economic effects of the war on the population. Serious domestic political tensions began to re-emerge in Romania, and the smouldering conflict with the 'Legion of the Archangel Michael' (see sect. I.v.1 at n. 5) broke out anew. In July 1941, despite the intervention of the German minister, Antonescu had eight Iron Guard members shot. After declaring that every sacrifice must be made for the army since it was vital for the existence of the Romanian nation, the Marshal, in early November 1941, again resorted to a plebiscite to confirm his dictatorship. Germany's representatives in Romania were well aware that Antonescu's position was unstable. However, they regarded him as the protagonist of German interests and sought to strengthen his position. Both the minister, von Killinger, and Hauffe repeatedly pressed for a halt to the uncontrolled bulk buying of goods by the German armed forces, since this was undermining the price structure, currency, and even economy of Romania. Neubacher proposed that, as a 'friendly gesture' towards the Antonescu regime, Berlin should present Romania with 300 tractors worth RM1m.; after all, the oil-for-weapons pact had brought Germany a profit of RM80m.²⁹ The minister and the head of the Army Mission warned against Germany being led, 'by misunderstanding our own interests, to do the work of our enemies';³⁰ Germany must take care to avoid becoming the cause of Romania's 'financial and economic collapse'.³¹ It was in the German interest to strengthen the country's potential 'in order to have a valuable ally rather than a lead weight'.³² When the Romanian central bank refused to make more money available to the Wehrmacht because German debts were undermining the currency, their Romanian suppliers faced bankruptcy.³³ The German leadership considered that a reduction in the number of German troops in Romania—in mid-November there were around 63,000 men, including 45,000 in the Luftwaffe—offered a first step towards improving the economic situation.³⁴ Despite this

³⁴ See memoranda on visit to Romania by OKW Chief of Staff, 10 Nov. 1941, and OKW/WFS/Abt. I (IV/Qu) No. 003051/41, 16 Dec. 1941, BA-MA Wi/I 345. At the end of Jan. 1942 the strength of the Wehrmacht in Romania was reduced to approximately 40,000 men. From the

development, Berlin pressed for an increase in oil production and a reduction in Romanian consumption in order to satisfy the growing requirements of the Axis. However, Bucharest was not inclined to accommodate these unbacked German demands to the extent deemed necessary by the German economic authorities. Minister Neubacher proposed the appointment of a Romanian general as 'oil dictator' to supervise the central direction of the Romanian petroleum industry.³⁵ In the middle of November 1941 the war economy and armaments office was even arguing that matters were in such an appalling state that 'one day we will have to take everything into our own hands'.³⁶ On the other hand, the Reich ministry for economic affairs advocated political concessions at Hungary's expense in order to persuade Antonescu to curb Romanian domestic oil consumption.³⁷ In a discussion with the deputy premier, Mihai Antonescu, on 26 November 1941 Göring explained bluntly that, 'after the blood of its soldiers, the most valuable contribution Romania could make to the common cause was its petroleum'.³⁸ Though Hitler had vaguely promised not to 'pump Romania completely dry' in the two years which was the longest he expected the war to last,³⁹ Antonescu had only an agreement promising to involve Romania in the exploitation of the oilfields in the Caucasus.⁴⁰ But these regions had not even been conquered! Yet in 1941 Romania more than doubled its 1940 deliveries of mineral oil to Germany (3,055,094 t. as against 1,374,447).⁴¹ Though there were repeated attacks by the Soviet air force on Ploesti, Constanța and Giurgiu until mid-October 1941, these achieved 'no significant disruption or destruction of the oil production which is vital for the German leadership'. This fact, along with the shooting down of 81 Soviet aircraft, was claimed as a major success by the German Luftwaffe Mission.⁴²

In 1942 the German leadership was forced to demand an increased military contribution from its ally, because of the enormous losses of men and machines sustained by the Wehrmacht in 1941, and in the light of Hitler's eccentric operational objectives for 1942. Hitler was insistent on continuing the war of annihilation against the Soviet Union which, in the view of the Wehrmacht High Command, involved 'not only the fate of Germany, but also

the existence or non-existence of the other European nations'.⁴³ On 29 December 1941 he therefore pressed for increased Romanian participation in the summer campaign of 1942.⁴⁴ Antonescu was convinced that victory over the Red Army was 'a 100 per cent certainty',⁴⁵ and therefore agreed to a massive reinforcement of the Romanian formations on the eastern front. However, this commitment to the 'final reckoning with the Slavs'⁴⁶ was to depend on the fulfilment of two basic conditions: first, that Hungary should also make an increased military contribution; and second, that neither Hungary nor Bulgaria would attack Romania after the war. Hitler agreed to both conditions.⁴⁷ Marshal Antonescu's decision was not universally welcomed in Romania. The chief of the general staff, General Iacobici, resigned, and the chairmen of the National Peasants' Party, Iuliu Maniu, and the National Liberal Party, C. I. C. Brătianu, sent memorandums protesting against the obligations entered into by their head of state. They were unable to make Antonescu change his mind. His own calculations, and the political ambitions of his allies, did not allow for a Romanian return to non-belligerence.⁴⁸ On 12 December 1941, after the European war became a world war, Marshal Antonescu described his policy as follows: 'I am the ally of the Reich against Russia. I am neutral between Great Britain and Germany. I am for the Americans against the Japanese.'⁴⁹ But was there any real hope that Britain and the United States would understand the Romanian position? Was not all hope destroyed once Britain, under pressure from the Soviet Union, declared war on Romania on 7 December 1941, and Romania, under pressure from Germany, declared war on the United States five days later?

(b) *Hungary*

Hungary had declared war on the Soviet Union on 27 June 1941. The first hostilities consisted of an air raid against the city of Stanislav east of the Carpathians, which was declared to be a 'reprisal measure'. Next day, Horthy wrote to tell Hitler that his army would fight 'shoulder to shoulder with the famed and victorious German army in the crusade for the elimination of the Communist menace, and for the protection of our culture'.⁵⁰ On 1 July 1941 Hitler thanked the Hungarian regent for Hungarian participation in the war against the Soviet Union, which had been decided 'on [Horthy's] own initiative'.⁵¹ The other co-belligerents had also made their decision of their own free

will. Now the aim was for Hungarian forces to advance towards and beyond the Kolomyia–Stanislav line as soon as possible. In this way, the Soviet troops retreating on both sides of Lvov to the east and south-east would be prevented from making an orderly withdrawal.

From 1 July 1941 the 'Carpathian group' under Lieutenant-General Ferenc Szombathelyi, the general commanding VIII Army Corps, took part in the campaign against the Soviet Union. It also included corps troops from the 'Mobile Corps' under Major-General Béla von Miklós with two motorized infantry brigades and one cavalry brigade, one mountain brigade and one border-patrol brigade. The Hungarian army group had a strength of approximately 45,000 men; it was not placed under the command of Army Group South. Tactical requests for the deployment of Hungarian troops, which were sent directly to the 'Carpathian Group', were regarded as having been approved by Hitler. Horthy gave instructions that these requests should be granted 'in the interests of a united and streamlined leadership'. In the co-ordination of the movements of Seventeenth and Eleventh Army, the German leadership was anxious to avoid 'at all costs' any contact between the Romanian, Hungarian, and Slovak troops under the command of the two armies.⁵² What Martin Brozsat has called the 'inner paradox' of the 'Hitler coalition' thus exerted its effect on the operational leadership of Army Group South. Moreover, the German leadership was also eager to ensure that the petroleum region round Drogobych was not occupied first by Hungarian troops.⁵³

Only a few days after the appearance of the 'Carpathian Group', it was disbanded as a big formation. The 'mobile corps', the most modern operational formation in the Hungarian Army (24,000 men),⁵⁴ was placed directly under the command of Army Group South from 9 July, and took part in the continuing advance. The two less mobile brigades initially remained in Galicia. There they were assigned to security tasks and, in response to a special request by the Hungarians, to bringing in the harvest.⁵⁵ After Galicia had been incorporated into the Government-General, the reduced 'Carpathian Group' was placed under the command of the commander of Rear Army Area South on 13 August 1941, and was moved to the east. After the creation of the Reich Commissariat Ukraine, it was subordinated to the appropriate Wehrmacht commander.

The beginning of August 1941 saw the revival of tensions within the Hungarian leadership, and between government and opposition, over Hungary's participation in the war against the Soviet Union. The chief of the general staff, Colonel-General Werth, was ready to offer the Germans more troops for offensive operations or for security tasks.⁵⁶ In contrast, the chairman of the

small Farmers' Party, Endre Bajczy-Zsilinszky, wrote a letter to Premier Bárdossy advocating an end to military co-operation with Hitler in the east,⁵⁷ which he believed was based '50 per cent on the situation and 50 per cent on crude coercion'. Even the crusade for Europe and civilization was no more than a 'cheap phrase'. Since Hitler would be unable to create a New Order in Europe, the Hungarians should 'extricate themselves in good time from this débâcle, which would occur as certainly as 2×2 makes 4'. Every day that passed without the Hungarian government acting 'to strengthen inner resistance and effect our withdrawal from the Russian war' involved 'terrible dangers' for the Hungarian nation. No record of Bárdossy's answer has survived. Colonel-General Werth, however, took the opposite approach. In a lengthy memorandum to the head of government, the chief of the general staff argued that the Hungarian troops on the eastern front should be strengthened immediately by at least four or five army corps, on a voluntary basis. Werth claimed that despite its traditional anti-Bolshevik stance, the government had provided only weak forces to join the German attack on the Soviet Union. Increased participation in the war should be offered to Berlin at the political level and linked with four demands: the recovery of Hungary's thousand-year-old frontiers, the resettlement of the Slav and Romanian minorities, the expulsion of the Jews, and participation in the exploitation of Soviet raw materials.⁵⁸ Bárdossy submitted Werth's memorandum to Horthy a week later and linked it with a vote of confidence in himself. He argued that it was better to wait for a request from Germany before offering any reinforcement of Hungarian troops on the eastern front. A contribution of the kind proposed by Werth would, Bárdossy thought, weaken the existing political system as well as the army and the economy.⁵⁹

On 6 September 1941 Horthy decided to support Bárdossy in the argument over Hungary's attitude in the war against the Soviet Union. Werth was dismissed. The new chief of the general staff was the former commanding general of the 'Carpathian Group', Lieutenant-General Szombathelyi. Major-General László, chief of the operations department, remained in office.

Szombathelyi may have been appointed because of a situation report he had been allowed to submit to the regent on the recommendation of Horthy's son. Here Szombathelyi had concluded that hopes for a rapid victory over the Soviet Union would be disappointed: 'The war will last for a long time, we must prepare for that and not for a lightning war. Great-power politics and the waging of war, those we must leave to the great powers, we must keep under cover close to the wall.'⁶⁰

The change of military command did not bring any radical turn in

Hungarian policy. A few days after his appointment, it was Szombathelyi who told Jodl of Hungarian designs on Galician territory. Although the territory claimed by Budapest had already been assigned to the Government-General, Berlin did not reject Hungarian designs out of hand.⁶¹ Budapest advocated the withdrawal of the 'mobile corps' from the beginning of September. However, this request did not signify any change of policy; the aim was only to replace it and provide for its rehabilitation in Hungary. Both 1st Armoured Group, then in command of the Hungarian formation, and Army Group South emphasized their interest in keeping the 'Mobile Corps', especially as it could scarcely be replaced by better forces. It had proved itself able to offer 'efficient assistance', and was actually in a better condition than the German mobile formations.⁶²

On 7 September 1941, at Hitler's invitation, Horthy travelled to 'Führer headquarters' at Vinnits with his new chief of the general staff, Szombathelyi, and Premier Bárdossy. During the ensuing discussions, the Hungarian leaders pressed strongly for the rapid withdrawal of the Mobile Corps, which had sustained heavy casualties. In the opinion of the German chief of the Army General Staff, the request concealed a 'self-centred' desire⁶³ to use this modern and battle-hardened formation as the nucleus for the creation of an armoured division equipped with German war material. Hitler rejected the request, but promised to provide German equipment to make the corps 'capable of mobility' for further operations, and to supply the equipment for an armoured division.⁶⁴ Understandably, the Hungarian side hoped for a more rapid delivery of the promised equipment than was envisaged by the German agencies.

The Hungarians linked a new appeal for the relief of the Mobile Corps and the two brigades of the 'Carpathian Group' with an offer to replace them with four brigades for occupation purposes.⁶⁵ Berlin turned down the first part of the Hungarian proposal, but immediately accepted the second. At the beginning of October 1941, when the chief of the Hungarian general staff asked the German military attaché 'what is expected of Hungary in the next year',⁶⁶ the Wehrmacht High Command passed on a request for another two security brigades for the rear area.⁶⁷ Szombathelyi had already been assuming 'that

Hungary would gradually have to fight the war with all its forces at the side of Germany'.⁶⁸ At the beginning of November 1941 the Hungarian government agreed to provide the two brigades for security tasks, and OKW assented to the Hungarian request for the relief of the Mobile Corps. Though the latter left Seventeenth Army's area of command on 20 November 1941, it was not finally moved until the end of December because of transport problems. By that time Hungarian casualties amounted to approximately 4,500 men in total.⁶⁹ At the end of 1941 the reinforcement of the security brigades was also completed (the 102nd, 105th, 108th, 121st, and 124th, and two bicycle battalions), amalgamated under the command of the 'Hungarian Occupation Group' (around 38,000 men). This group was divided at the end of January 1942, with the Dnieper as the dividing-line. Hungary had finally been permitted to withdraw the Mobile Corps, but had been forced to find replacements for it. In purely numerical terms, the Hungarian contribution to the war against the Soviet Union was only marginally smaller in the winter of 1941-2 than in the summer of 1941, although the type of formations being deployed had changed.

The war against the Red Army had aroused no enthusiasm among the Hungarian soldiers. On 23 August 1941 the war diary of the Mobile Corps noted that the men of 12th Bicycle Battalion were all wondering when they would be able to return home. 'In this context, the officer corps cannot find any tangible arguments to influence the people in the opposite direction.'⁷⁰ Though the majority of active officers and some reserve officers supported the war against the Soviet Union for political and even ideological reasons, an assessment made at the end of 1941 argued that most conscripted soldiers and many of the reserve officers lacked any 'awareness that the adjacency of the Soviet Union [presents] an offensive threat to the country'.⁷¹ In contrast, the infantry brigades deployed for security tasks in the rear area showed few scruples in their actions against partisans.⁷²

On 29 December 1941 Hitler informed Horthy as well as Antonescu of his decision to continue the war of annihilation against the Soviet Union.⁷³ He requested an intensified and timely participation by Hungary in a conflict which would decide 'the existence or non-existence of all of us'. Unlike Antonescu, Horthy was not deliberately flattered by a proposal to place the Hungarian formations under their own Army High Command. However,

⁷² For example, members of 105th Inf. Brig. shot a '90-strong Jewish gang' for supplying food to partisans; for the period from the beginning of Nov. 1941 to the middle of Jan. 1942, the division reported that approximately 1,800 partisans had been rendered 'harmless': extract from the operations diary (22 Dec. 1941 and 10 Jan. 1942), BA-MA RH 22/182.

⁷³ *ADAP* E I, No. 64.

Hitler did promise material support for the equipment of the Hungarian formations which would participate in the summer offensive.

The aim of the Wehrmacht High Command was 'to deploy at least half the Hungarian and half the Romanian army' in the east.⁷⁴ Account was taken of Hungarian-Romanian hostility over the question of persuading Germany's allies to make increased military and economic commitments. At the beginning of January 1942 Ribbentrop travelled to Budapest. As 'tactics' for the discussions with Horthy and Bárdossy, the Wehrmacht High Command had urged him to press for the full deployment of Hungary's military strength in the approaching decisive battle in the east.⁷⁵ He was to indicate that Romania would 'likewise' be sending an army. Within his intimate circle, Hider commented that the Hungarians would be useful 'as padding'.⁷⁶

The Hungarian political leaders promised to take part in the summer offensive to a much greater extent than in 1941. Nevertheless, they refused to make the Hungarian army available '100 per cent for the campaign in the east', indicating that the revisionist policy of Romania made this impossible. Ribbentrop did manage to obtain a promise from Horthy 'that Hungary would not undertake anything against Romania'.⁷⁷ In addition, the Hungarian government agreed to make 20,000 'ethnic Germans' available for the Armed SS.⁷⁸ The details of Hungarian military participation in 1942 were to be worked out between the Wehrmacht High Command chief of staff and Szombathelyi.

In his answer to Hitler in mid-January, Horthy claimed that Hungary was eager 'to take part in the decisive struggle with enthusiasm, not only because of our traditional, loyal brotherhood-in-arms, but also out of egoism'.⁷⁹ Yet there were other factors which Hungary could not afford to ignore. His country, Horthy argued, lived 'with gates open to the Balkans, surrounded by those peoples whose hatred is directed first and foremost against us'. Besides, if the Balkans were overrun by Bolshevism, only Hungary would be left as a 'factor of order'. Hungary could provide troops for the spring offensive only to the extent permitted by 'armaments, time, and the enemies surrounding us'.

In view of this attitude, it is not surprising that Keitel's discussions with Defence Minister Bartha and Chief of the General Staff Szombathelyi, from 20 to 22 January 1942, were 'not very smooth'.⁸⁰ Since the declared aim of the Wehrmacht High Command was to deploy half the Hungarian army on the

eastern front, they could scarcely be otherwise: Keitel's demand for the sending of the Mobile Corps, fifteen infantry divisions, and seven occupying brigades was rejected as impracticable by the Hungarian military leadership. The Hungarian leadership shifted its position only after the Wehrmacht High Command chief of staff promised extensive German material support to Hungarian formations in order to bring their levels up to that of German units. The Hungarians subsequently declared themselves willing to provide an army with three corps commands, nine light infantry divisions, and one armoured division for the 'struggle against Bolshevism'.⁸¹ In addition, the Hungarian 'Occupation Group' was to be strengthened to seven brigades. Hungary was thus making a good third of its land forces available for the campaign in the east.

An important motive for the Hungarian promise to provide an entire army for the war against the Soviet Union was the fear 'that if Hungary stood aside in the campaign in 1942, this would cause Germany to give complete support to Romania in the clash over Transylvania'.⁸² After all, Antonescu had declared his willingness to send two armies to the eastern front. But there were also domestic political reasons for the Hungarian decision. Horthy and Bárdossy hoped that this increased military contribution would appease the right-wing opposition under Imrédy and the Fascist 'Iron Cross' movement under Szálasi, which was advocating the absolute co-ordination of Hungarian with German interests in the struggle against Bolshevism.

(c) *Slovakia*

Unlike Hungary, Slovakia had announced its readiness for military co-operation with Germany on 22 June 1941, and had broken off diplomatic relations with the Soviet Union. In fact, on mobilization the Slovak military leadership went further than had been proposed by the German Army Mission under Infantry General Otto. According to the old mobilization plan, based on Czech foundations, around 90,000 men were called up by the beginning of July. This was many more than were needed to bring the peacetime army from two divisions including army troops (around 28,000 men) to war strength. In the view of the Army Mission, this excessive zeal was due to an 'inappropriate craving for prestige and an overestimation of strength'.⁸³ Continuing tension with Hungary had also played a part. Slovakia provided an army group under the command of General Čatloš for deployment on the eastern front. This consisted of two infantry divisions, an advance party, and army troops (around 41,000 men). The advance party, an almost fully motorized formation, con-

tained two anti-tank companies, two self-propelled anti-tank gun companies, an artillery battery, an infantry battalion, and a bicycle squadron. It was composed predominantly of regular soldiers. General Otto had advised the establishment of this mobile formation for political reasons, since he wanted to give the Slovaks the opportunity to fight in the front line. It was placed under the command of Colonel Pilfousek, and had a strength of around 4,800 men. The advance party was ready for action by 24 June 1941, and took part in the advance of Seventeenth Army. However, Army Group South warned Seventeenth Army 'not to expose [the Slovak unit] to individual beatings'.⁸⁴ The remainder of the Army Group under General Čatloš was also placed under the command of Seventeenth Army on 1 July 1941. This Slovak formation consisted of some 36,000 men, 60 per cent of whom were inadequately trained and poorly equipped reservists, and was assigned by Seventeenth Army to covering and security tasks. In the judgement of the Army Mission, the structure of the Army Group had to be consolidated before it could be brought into action, perhaps behind the right flank of Seventeenth Army. Ten days later the Army Group was placed under the commander of the Rear Army Area South. General von Roques ensured that it was given only security tasks 'capable of being fulfilled', such as military security and pacification of the oilfield area round Drogobych. At the same time, he gave it the opportunity for further training.⁸⁵ The military value of the Army Group had now fallen below that of the peacetime army. In the view of the Army Mission and the German military attaché, it was not 'fully fit for duty', and would even be 'a danger' in the event of deployment at the front line.⁸⁶ Nevertheless, General Čatloš urged that his two infantry divisions should be moved to the front as soon as possible.⁸⁷ In contrast, the Slovak government argued that the burdens imposed by the war should be kept to a minimum. At the beginning of July 1941 they obtained leave for 15,000 agricultural workers from the replacement formations so that the harvest could be brought in.⁸⁸ Moreover, it soon became clear that the Slovak army group, apart from the 'Mobile Brigade Pilfousek', was not capable of carrying out the tasks assigned to it. At the end of July 1941 the Slovak government also realized that deployment in self-contained formations was not feasible because of the inadequate levels of Slovak training and equipment. To give the Slovaks the opportunity to improve their fighting skills, and to relieve the strains on the Slovak economy, the army group was reorganized.⁸⁹

⁸⁸ German legation Bratislava, military attaché, No. 315/41, 9 July 1941, *ibid.*

⁸⁹ See High Command of Slovak Armed Forces, III Dept. No. 107278, 25 July 1941 (BA-MA RH 31-IV/v. 15); Halder, *Diaries*, 1078 (27 July 1941); German Army Mission Slovakia, Abt. Z

The majority of reservists were released; a mobile division was created from the regular troops, with the brigade under Colonel Pilfousek at its heart; the remainder of the regular soldiers were amalgamated into a security division. The strength of the Slovak armed forces was fixed at around 32,000 men. General Čatloš transferred command of the Slovak troops on the eastern front to Colonel Pulanich. Colonel Turanec took over the Mobile Division (8,500 men), and Colonel Malar was appointed commander of the security division (8,000 men). In addition, the Slovak air force deployed two reconnaissance Staffeln, two fighter Staffeln, and flak units—1,500 men in all.

At Lipovets, near Vinnitsa, the Mobile Division was involved in clashes with Soviet units for the first time while participating in the advance of the German XXXIX Army Corps on 22 June 1941. It was unable to achieve the objectives assigned by the corps command, which the German liaison officers had also regarded as too difficult. The Germans described the conduct of the artillery detachment and the anti-tank company as good. However, the infantry officers were regarded as 'impossible'; they had such a 'bad spirit' that they had no influence over their troops.⁹⁰ The German liaison officer was highly critical of the inappropriate use of the term 'mobile brigade' and of the 'completely impossible' working methods of the Slovak staff. He also expressed profound gratitude that he had not been wounded, since the medical facilities dated back to the era of the empress Maria Theresa.⁹¹ By the middle of August Slovak casualties numbered 320 men, a third of whom had been killed.

In a report of early October 1941, the German Army Mission in Slovakia concluded that the Mobile Division was not equal to a German division despite the training it had been given. Instead it was suitable 'for military objectives of a not too difficult character'. This was also revealed by its deployment at Kiev. General Otto praised the 'willing acceptance' of German proposals by the Slovak officers and NCOs.⁹² The German leadership also gave a positive assessment of the security division. The tasks laid down had been carried out willingly and with care. In general the 'human material' was good. 'The young unit is particularly suitable for patrol duty and for action against partisans.'⁹³ The Slovak soldiers had generally behaved bravely, though

No. 66/41, 5 Aug. 1941 (BA-MA Wt/I F 3.130); commander Rear Army Area South, Ia, report of 12 Aug. 1941 (BA-MA RH 22/6); OKH/GenStdH/GenQu/Abt. Heeresversorgung/Qu 1/I No. I/20171/41, 6 Sept. 1941 (BA-MA RH 22/7). This reorganization is wrongly interpreted by Dress, *Slovakia*, 334, as evidence that the Slovak government had been forced to withdraw 35,623 men because of opposition, passive resistance, and unreliability. The German military sources present a completely different picture, though they too state that there was no enthusiasm for the war in Slovakia.

⁹⁰ See the reports and situation reports of Maj. von Lengerke and Lt.-Col. Schwarzhaupt, 24, 25, 27 July 1941, BA-MA RH 31-IV/v. 15.

⁹¹ Report of Lengerke, 2 Aug. 1941, *ibid.*

⁹² German Army Mission Slovakia, Ia No. 244/41, 10 Oct. 1941, BA-MA Wt/I F 3.130, and signal from First Armoured Army, 22 Oct. 1941, *ibid.* RH 19 1/75.

⁹³ Wehrmacht Commander Ukraine, Abt. Ia No. 570/41, 26 Oct. 1941, *ibid.* RH 19 1/75.

the mass of the officer corps could be given 'no good report'.⁹⁴ General Otto expected the older officers' spirit to be stiffened by action and by German example in the field. The Germans had long ceased to worry about possible Slovak unwillingness to fight Soviet soldiers on grounds of ethnic solidarity.

At the beginning of 1942 the Slovak government requested the withdrawal of the two Slovak divisions from the eastern front. The Wehrmacht High Command refused, but yielded to pressure from Bratislava for the units to be better equipped, as Hitler had promised at the end of November.⁹⁵ On the invitation of the Slovak premier Tuka, the Wehrmacht High Command chief of staff discussed this matter personally with the Slovak political and military leadership. President Tiso made it clear that, 'after the disposal of the Bolsheviks', the Slovak army would have to be equipped with modern, i.e. German, material, because Slovakia had no 'friends, but [only] neighbours' who could not be trusted. Field Marshal Keitel renewed Germany's full guarantee of the Slovak frontiers against Hungarian demands. In response, Premier Tuka observed that Slovakia 'valued the protection promised by Germany, but the protection [should] not be that of the sheepdog for a flock of sheep'.⁹⁶ In view of the German defeats in the east and Berlin's desire to leave both Slovak divisions in the area of operations, the Slovak leadership was able to demonstrate a degree of self-confidence. In the spring of 1942, on its own initiative, it offered to establish another regiment in order to reorganize the Slovak security division into a combat unit. Its massive need for security forces persuaded the Army High Command to accept this 'assistance'.

(d) Italy

Italy and Japan, Hitler's actual partners in the Tripartite Pact, were officially informed of his decision to attack the Soviet Union only on 22 June 1941. The global political triangle of Berlin, Tokyo, and Rome was again revealed to be an empty geometric design, despite the fact that the struggle against Bolshevism had been the original *raison d'être* of the pact.⁹⁷ In the war against the Soviet Union, consequently, a shift in alliances took place. Though Hitler thought he could do without Italy and Japan, Romania and Finland became welcome comrades-in-arms.

Hitler told Mussolini about the 'hardest decision' of his life only at the last moment, hoping to present him with a *fait accompli*. Although this conduct contradicted both the letter and the spirit of the 'Pact of Steel' of May

⁹⁴ Report by Otto, 10 Oct. 1941 (see n. 92 above). 1939,⁹⁸ Italy was far from surprised by the German attack on the Soviet Union. Since the beginning of 1941, Hitler and Ribbentrop had frequently referred to the deterioration in German-Soviet relations; moreover, the Italian military attachés in Berlin, Moscow, and Bucharest had reported the military build-up by both sides. Mussolini had concluded that he must prepare for active Italian participation in a German-Soviet conflict, which now appeared inevitable.⁹⁹ On 30 May 1941 he instructed the chief of the Italian general staff, General Ugo Cavallero, to set up a special army corps in the Lubljana-Zagreb region.¹⁰⁰ Mussolini justified his decision on the grounds that he was calculating on the possibility of a conflict between Germany and the Soviet Union, and that Italy could not stand aside in this case 'because it would be a matter of the struggle against Communism'. On 3 January 1940, influenced by German policy during the Soviet-Finnish War, Mussolini had already told Hitler that the struggle against Bolshevism must be given priority over the war against the Western democracies.¹⁰¹ In his discussion with Hitler on 2 June 1941 he urged a 'final solution of the Russian question'.¹⁰² When Hitler ruled out the possibility of a military alliance with the Soviet Union, and explained that the outbreak of war was only a question of time, Mussolini pushed ahead with preparations for Italian involvement in the war. It appears that after a discussion with Cavallero on 15 June 1941, he instructed his military attaché in Berlin, Efsio Marras, to offer the Wehrmacht High Command an army corps for action on the eastern front. By 19 June 1941 it was clear that the 'Corpo d'Armata Autotrasportabile' under General Francesco Zingales would consist of two motorized infantry divisions and one mobile division, with corps troops and air-force formations.¹⁰³ Hitler accepted the Italian offer of military assistance for the campaign in the east 'with a heart filled with gratitude' on 21 June 1941. However, he also informed Mussolini that there was no need for the immediate dispatch of an army corps.¹⁰⁴ He emphasized instead, 'in a burst of malice and realism',¹⁰⁵ that the best help that Italy could provide for the common war effort lay in reinforcing the Italian army in North Africa and intensifying the air and submarine war in the Mediterranean. State Secretary von Weizsäcker regarded the plan to send an Italian contingent to the eastern front as an 'acte de présence',¹⁰⁶ the Romanian general staff as a 'symbol, nothing more'.¹⁰⁷ In contrast, in his reply on 23 June 1941 Mussolini offered thanks for the acceptance of Italy's offer and stressed the ideological dimen-

sion to his decision. Italy could not stand aside in such a war. The German attack on the Soviet Union had met with 'enthusiastic approval... especially among the old guard of the Party'.¹⁰⁸ The Italian press was instructed to portray Italian participation as an 'anti-Bolshevik crusade', with emphasis laid on European solidarity in the struggle against Communism.¹⁰⁹ Alongside ideological considerations, Italy's claim to be recognized as a great power also played a part. Mussolini wanted to be involved in the defeat of the Soviet Union, even though Italian war aims lay in the Mediterranean and the Balkans rather than in the east. Furthermore, he regarded Britain as the main enemy, and the destruction of British positions in the Mediterranean as the key to Axis victory.¹¹⁰

On 30 June 1941 Hitler thanked Mussolini for his offer. Echoing Mussolini's letter of 3 January 1940, he claimed that their march together against the 'Bolshevik world enemy' would be 'a symbol of the war of liberation' being waged by them.¹¹¹ This bombastic profession of a mutual anti-Bolshevism only revealed once again its 'opportunistic usefulness'.¹¹² On the one hand, it accommodated Mussolini's craving for prestige and also disguised the fact that Hitler regarded his ally as of very little value since the Italian military catastrophe of the winter of 1940-1. On the other hand, Mussolini was anxious not to lag behind Germany's other allies or to lose the claim to a say in the New Order in Europe. 'We cannot allow ourselves to be put in the shadows by Slovakia, we owe it to our German ally.'¹¹³ For that reason, on 14 July 1941 he instructed Cavallero to prepare a second army corps for the eastern front. In addition, the use of anti-Bolshevik terminology, particularly by the Italian government, was designed to gain the moral support of the Pope.¹¹⁴ However, Mussolini's calculations proved to be based on illusion. Hitler had already made disparaging references about Italy's role in the Europe of the future at the end of May. He regarded the fate of the Latin race as sealed, and did not intend to have any regard for Italy once the Soviet Union was defeated.¹¹⁵ Privately, Hitler even regarded the imminent appearance of Italian troops on the eastern front with mistrust. Experience of the war in the west had convinced him that they were no more than 'harvest hands', who 'must in no case be allowed in the Crimea',¹¹⁶ which was to be incorporated into the German

empire. The Eleventh Army was instructed to deploy the Italian corps on its left flank rather than near the Black Sea.¹¹⁷

On 9 July 1941 the Italian formation was renamed the 'Corpo di Spedizione Italiano in Russia' (CSIR: Italian Expeditionary Corps in Russia). A few days later, Corps General Giovanni Messe took command in place of Zingales, who had fallen ill.¹¹⁸ The Italian leaders considered it essential that the army corps should be well equipped in both men and material, not only on grounds of operational effectiveness, but also to enable it to stand comparison with the other non-German formations. The transporting of the CSIR from Italy to Romania took almost a month. At the end of August 1941 the Expeditionary Corps was placed under the command of Army Group South. The corps consisted of 2 infantry divisions (Pasubio, Torino), each with 2 infantry and 1 artillery regiment, and the 3rd Mobile Division (PADA). This latter contained 1 Bersaglieri regiment, 2 cavalry regiments, 1 artillery regiment, and 1 armoured battalion with 40 light tanks. Directly attached to the corps, alongside the usual corps troops, were big engineer and supply units, 1 reconnaissance and 1 fighter group of the air force (83 aircraft), 3 battalions of the Fascist militia ('Blackshirts'), and 12 detachments of Carabinieri. In total, the CSIR numbered 62,000 men. Since the expeditionary corps had only enough vehicles to transport one division, and only the three Bersaglieri battalions were motorized, the formation was unsuitable for rapid and wide-ranging operations. In mid-September 1941 the Italian ambassador in Berlin, Dino Alfieri, contacted Ribbentrop as a 'private person' to make an 'absolutely confidential and strictly personal' suggestion that Mussolini be awarded the Knight's Cross.¹¹⁹

On several occasions Mussolini informed the German leadership that he was ready to strengthen the CSIR by at least one army corps. Under the slogan 'Fewer workers, more soldiers' he wanted to increase Italian participation in the German military operations against the Soviet Union.¹²⁰ Although Hitler informed the Italian head of government at the end of October 1941 that he regarded the campaign in the east as 'in the main brought to a decisive conclusion',¹²¹ Mussolini intensified his efforts. The time for 'partial, semi-symbolical participation' was over.¹²² Italy had the duty and the right to increase its operational efforts during 1942. Mussolini saw this offer as the best way to combat speculation about possible Italian willingness to conclude a

¹¹⁷ Army Group South, war diary, 12 July 1941, BA-MA RH 19 I/71. At the end of June 1941 Eleventh Army was instructed to insert the Italian formations between the Hungarian and Romanian troops.

separate peace with the Soviet Union. The idea of reinforcing the CSIR to compensate for the transfer of German forces to Sicily may also have played a part. The commanding general of the CSIR, General Messe, was not alone in his opposition to the sending of further troops to the eastern front. At the end of November 1941 Hitler told Ciano, the Italian foreign minister, that Italy should concentrate on holding North Africa.¹²³ However, he thought that Italy might make a 'useful contribution' to the coming summer offensive by providing 'Alpine troops' for the conquest of the Caucasus and further advance into the Middle East. Mussolini received this request 'with pleasure', and was eager to send an army corps of Alpini and mountain troops.¹²⁴ At the end of 1941, however, the German leadership changed its policy towards Italy. In view of the enormous losses suffered by the German army, the value of the Italian formations increased. In a personal letter to Mussolini on 29 November, Hitler justified the need for increased and timely participation by Italy in the summer offensive of 1942.¹²⁵ He accommodated Mussolini's craving for prestige by suggesting the subordination of all Italian troops under one Italian Army Command. In negotiations between the Comando Supremo and the Wehrmacht High Command it was decided that the expeditionary corps should be reinforced by a corps command with three infantry divisions and a corps command with three Alpini divisions.¹²⁶ The CSIR had lost approximately 8,700 men by the end of 1941, roughly one in twelve of whom had been killed.¹²⁷

2. THE RELUCTANT ALLIES

(a) Bulgaria

Among the European states allied with Germany, Bulgaria occupied a special position.¹²⁸ Even after 22 June 1941, Sofia maintained diplomatic relations with Moscow and acted as representative of German, Hungarian, and Romanian interests there. At the end of July 1941 the German foreign ministry requested that Bulgarian-Soviet relations be broken off, but hoped that this step could be linked with the fall of Leningrad and Moscow.¹²⁹ The problem dragged on until the summer of 1944: Moscow refused to accept Bulgaria's declaration of neutrality on 23 August 1944 and declared war on Bulgaria on 5 September.

Bulgarian sympathy for Russia had deep roots, dating back to 1878. Hitler's

war against the Soviet Union was therefore unpopular among the Bulgarian population. The authoritarian regime of Emperor Boris III did not offer troops for the eastern front, and volunteers failed to come forward. In fact, the German leadership itself opposed the involvement of Bulgarian troops in Operation Barbarossa for two reasons. First, the Germans hoped that the Bulgarian army would secure the south-eastern flank of Europe against Turkey, thereby providing relief for the German war effort by taking over police functions in the Balkans. Second, Hitler and the Wehrmacht High Command feared that any operations by Bulgarian troops on the eastern front might lead to 'fraternization between Bolshevik and Slav'.¹³⁰ Only in mid-December 1942, under the impact of the unexpected successes of the Red Army, did the foreign ministry discuss the creation of a Bulgarian legion within the Waffen-SS. The German minister opposed this plan, since the volunteers would be drawn from opposition circles and this would inevitably arouse distrust of German intentions within the Bulgarian government.¹³¹ In mid-July 1941, however, the Bulgarian minister of war, Teodori Daskalov, agreed with Field Marshal Keitel that the Bulgarian army should be expanded to enable it to deal with its functions in the Balkans.¹³² Bulgaria's involvement in the German-Soviet war was limited to providing a complete military hospital and 2,000 beds for the recuperation of German soldiers in Bulgarian health resorts. Not even Soviet air raids on several Bulgarian cities on 23 July and 11 August 1941, and open Soviet support of the partisans in Bulgaria, could persuade the government in Sofia to change its attitude. For tactical reasons, the pro-German premier, Bogdan Filov, wanted the Soviet Union to be the one to break off diplomatic relations.¹³³ Under German pressure, however, Bulgaria joined the anti-Comintern pact on 25 November 1941. Hitler took this opportunity to inform the Bulgarian king that nobody could change the course of the war, 'neither England nor America, nor any other coalition'.¹³⁴ Sofia declared war on these two states on 13 December 1941. In March 1942 Boris III opposed a new request from Hitler for the severing of diplomatic relations with Moscow.¹³⁵

The Bulgarian king sought to maintain a degree of national sovereignty by making domestic political concessions to National Socialist Germany 'so as not to lag behind Romania in proclaiming loyalty to Hitler'.¹³⁶ The passing of the first anti-Jewish laws in January 1941 was followed by the introduction of further professional restrictions for Bulgarian Jews in October.¹³⁷ Yet though

the withdrawal of Jewish rights was accelerated by the 'Wannsee conference', widespread protests among the population ensured that less severe supplementary regulations were introduced. In trade affairs too, Bulgaria was ready to accommodate German wishes. The original German credit balance of RM17m. at the beginning of 1941 had become a German debt of RM105m. by 31 December.¹³⁸ In order to reduce the labour shortage in the German armaments industry, the Bulgarian government had supplied 12,500 Bulgarian workers by the end of 1941, a move which also served to reduce unemployment in Bulgaria. After 22 June 1941 the government in Sofia made efforts to deflect German reproaches about its misguided tolerance of the Communists; these criticisms had been made for some years, but had been encouraged by Bulgarian government policy since the German-Soviet agreement of summer 1939. A total of 3,000 Communists were interned, and a screening process weeded out others from the reservists who had been called up. On 22 November 1941 Bulgaria also agreed to align her propaganda and base it on the German model.¹³⁹ The intention was to counter the prevailing pro-Russian sympathies of the Bulgarian public, and to counteract the expression of sentiments friendly to the West.

With Turkey remaining neutral despite German pressure and Turkish enthusiasm for German successes against the Red Army, Bulgaria remained Germany's only ally in the Balkans.

(b) *Japan*

Outside Europe the Third Reich had one more ally, Japan. Tokyo was officially informed of the German attack on the Soviet Union only on 21 June 1941.¹⁴⁰ Some weeks before, however, Hitler and Ribbentrop had disclosed to the Japanese ambassador in Berlin, General Hiroshi Oshima, that a German-Soviet war could be expected in the near future. They had left the Japanese to decide whether to join Germany, but had made it clear that they hoped for the co-operation of the Japanese army to bring about the defeat of the Soviet Union. In the report of his discussions with Hitler and Ribbentrop on 3 and 4 June 1941, Oshima had emphasized German strategic calculations: it was believed 'that an overwhelming German victory over the Soviet Union might lead America to abandon any idea of entering the war in favour of Britain' and persuade it to restrict itself to the American continent.¹⁴¹ The Germans were thus claiming that a German-Soviet war would provide Japan with the freedom it needed to achieve its aims in South-East Asia. The outcome had been a new discussion of strategy within the Japanese leadership. By 22 June 1941 this, however, had not been completed.

Hitler had hoped for German-Japanese military co-operation since the

beginning of 1941. His aim was to persuade Japan to seek expansion towards the south at the earliest possible moment:

The earlier Japan attacks, the easier will be the military conditions it will find. It must get possession of Singapore and all the raw-material territories it requires to continue the war, especially if America intervenes. The longer Japan delays, the stronger America will become and the weaker Japan's position will be... All those military operations which Germany wants to see in the interests of its struggle against Britain, and perhaps against America, should be defined.¹⁴²

The Germans wanted a Japanese drive for expansion which would threaten the United States from the Pacific flank, thereby preventing American intervention in the European war by creating the spectre of a potential war in two oceans. It was hoped that the Japanese task would be made easier by the German offer of a dual guarantee against the Soviet Union and the United States. On 4 April Hitler had spoken to Matsuoka, the Japanese foreign minister: 'If Japan is drawn into a conflict with the United States, Germany would accept the consequences... It would not hesitate for a moment to reply immediately to any extension of the war, whether by Russia or by America.'¹⁴³ Grandiose over-optimism regarding his own prospects had persuaded Hitler to sign this blank cheque, even though the coincidence of German and Japanese interests was limited to South-East Asia. Both Japan and Germany were pursuing a policy of 'sacro egoismo'; each regarded its ally as an instrument with a specific function within its own overall strategy. Germany thus hoped to use Japan as a political counterweight against the United States, taking account of the effects of Operation Barbarossa on Japanese expansion southwards against the British position in East Asia. For its part, despite its endeavours to establish a 'Greater East Asian Co-Prosperity Sphere', Japan was interested in securing peace in the Pacific and sought secret negotiations to reach a settlement with the United States. To achieve this objective, the Japanese government was prepared to accept a *de facto* annulment of the 'preventive defensive' Tripartite Pact of 27 September 1940, which was directed against the United States.¹⁴⁴

After 22 June 1941, Ribbentrop was the main protagonist of attempts to encourage Japanese military action against the Soviet Union. In an instruction to the German ambassador in Tokyo, Major-General (ret.) Eugen Ott, he pointed out that the German-Soviet war 'would have as its consequence the final solution of the Russian question as a whole'. Referring to the anticipated rapidity of the operations, he urged Japan to 'reach its decision for military

(Rahn).

action against Soviet Russia without hesitation'.¹⁴⁵ Ott was instructed to persuade the Japanese government to opt for 'active intervention against the Soviet Union' as quickly as possible.¹⁴⁶ A few days later, Ribbentrop made a personal appeal to the Japanese foreign minister, Matsuoka. In his view, the 'need of the hour' was for the Japanese army to occupy Vladivostok 'as soon as possible', and to advance westwards as far as it was able. The German and Japanese troops would 'meet half-way'. Japan would then be able to direct all its power towards expansion to the south. The political weight of Germany and Japan after victory over the Soviet Union would deter the United States from entering the war.¹⁴⁷ German hopes for Japanese participation in the German-Soviet war were boosted by Germany's recognition of the Chinese government of Wang Tzing-wei, a Japanese puppet, in Nanking.

These efforts ended in failure, because they were supported in Japan only by Matsuoka. At the liaison conference of civilian and military leaders on 30 June, he withdrew his agreement to a Japanese move against South-East Asia and proposed an immediate attack on the Soviet Union. However, Matsuoka was vigorously opposed by the chiefs of staffs of the army and navy, supported by Premier Konoye, who advocated the conquest of southern Indo-China and then the Dutch East Indies in order to satisfy Japan's urgent need for raw materials. They were prepared to accept the danger of a war against the Anglo-Saxon maritime powers in order to achieve this objective.¹⁴⁸ On 2 July 1941, at the imperial conference chaired by Emperor Hirohito in Tokyo, the die was cast. The Japanese decided to realize the 'Greater East Asian Co-Prosperity Sphere' which had been proclaimed a year before. In other words, they committed themselves to the attempt to create an autarkic, heavily armed Japan, prepared for war-against all comers and surrounded by a chain of satellite states and dependent raw-material areas, without taking account of the interests of Germany or the Anglo-Saxon naval powers. Japan thus abandoned 'any chance of evading the aggressive counter-pressure of the United States after July 1941 other than by flight into war'.¹⁴⁹ Specifically, on 2 July 1941 the Japanese regime decided not to enter the German-Soviet war for the present; the alliance with Germany was to be maintained, but Japanese efforts were to be directed at establishing control over the whole of Indo-China. Priority was thus given to expansion towards the south. Expansion to the north was not completely ruled out, but was made conditional on the successful development of Operation Barbarossa. On 19 July, therefore, the order was given for the Japanese advance into French Indo-China. Though the army in Manchuria was reinforced to bring it to a strength of 700,000 men, it was withdrawn from the Japanese-Soviet border. After the imperial conference,

the army concentrated on the conquest of Malaya, Java, Borneo, New Guinea, the Philippines, and the Bismarck Islands, while the navy planned its surprise attack on the American fleet at Pearl Harbor.

From the point of view of the Germans, the Japanese leadership had taken the wrong decision.¹⁵⁰ Nevertheless, Hitler and Ribbentrop did not change their calculations regarding Japan. In mid-July 1941, with victory over the Soviet Union apparently assured, Hitler took the initiative. In a conversation with General Oshima, he defined the 'destruction of Russia' as the 'political life's work of Germany and Japan'. It would 'be our eternal enemy'.¹⁵¹ Though Hitler did not wish to give the impression that he needed the Japanese army, he pressed for joint military action against the Soviet Union. Moreover, the dictator turned his previous defensive strategy against the United States into an offensive one, offering Japan a comprehensive alliance for its 'destruction'. Italy was not mentioned at all.

The United States and Britain', Hitler declared,

will always be our opponents. This realization must become the foundation of our state policy. After long consideration, this has become my holy conviction, the basis of our political understanding. America and Britain will always turn against whomever they believe to be isolated. Today there are only two states which have no possibility of conflict with one another, these being Germany and Japan. In its new imperialistic spirit, America presses sometimes against the European living-space, sometimes against the Asiatic. From our point of view, Russia threatens in the east and America in the west; for Japan, Russia threatens in the west and America in the east. I am therefore of the opinion that we must destroy them together. There are tasks in the lives of peoples that are hard. One cannot solve these tasks by ignoring them or leaving them to a later date.'

Hitler did not tell Oshima of his speculation that the victorious campaign in the east would bring about a political upheaval in Britain and lead to the fall of Churchill. In that case, he expected the new British government to join 'Europe's struggle against America' as a 'junior partner' of Germany.¹⁵²

Hitler had still hoped to persuade Japan that 'its great moment against Russia had come'.¹⁵³ In this he was disappointed. But because he had scarcely expected a rapid Japanese attack in Manchuria (i.e. before the end of 1941), by the end of July 1941 he was already expressing concern that Japan's inactivity might call into doubt the 'collapse of the Soviet system'. Yet this, in his view, was necessary, 'since Russia could not be conquered'.¹⁵⁴ Hitler believed that a

double onslaught from Germany and Japan would precipitate the collapse of the Stalinist system. The air raids on Moscow, which were carried out at this time, were also undertaken with this objective in mind. At the beginning of August the secretary of state in the foreign ministry, Ernst von Weizsäcker, also wished 'that the Japanese too would lend a hand with the Russians in the east'.¹⁵⁵ At the same time, the Japanese general staff informed the Germans that the army and government were determined to intervene in the war against the Soviet Union at the earliest possible moment.¹⁵⁶ However, the German side failed to understand Japan's view of the obstacles to such an operation.¹⁵⁷ At the end of August 1941 Hitler was convinced that Japan would attack Vladivostok as soon as the assembly of forces was completed.¹⁵⁸ The wish was father to the thought. Despite German recognition that the stubborn resistance of the Red Army had made 'aid from Japan more necessary than previously thought',¹⁵⁹ the Japanese had long since abandoned any plan to solve the 'northern problem' during 1941.

The trade embargo imposed by the United States, Britain, and the Dutch East Indies, in anticipation of the planned Japanese occupation of south Indo-China, had also produced a change in Japan's attitude towards the United States.¹⁶⁰ Japan had to choose between giving way or making war. The Japanese government did not decide at once, although the rapid decline in its stocks of oil and bauxite, and the increasing rate of American armament, called for a rapid decision. Readiness for war was now increasing in the navy; at a conference with the army leadership the decision was taken to intensify preparations for a conflict. Though Premier Konoye sought a meeting with Roosevelt, his initiative for a Japanese-American summit collapsed owing to reluctance in Washington. Independently of this, on 3 September the Japanese authorities took the decision 'to open hostilities against the United States, Great Britain, and The Netherlands' if Japanese demands—an end to the war with China without hindrance from the United States and Britain, and the lifting of the economic boycott—were not achieved by mid-October in the coming diplomatic negotiations.¹⁶¹ This decision was confirmed by the imperial conference on 7 September 1941. At the same time, Hitler decided not to intensify the pressure on Japan to join the war against the Soviet Union in case this was regarded as a sign of weakness.¹⁶² Subsequently the initial successes of Operation 'Typhoon' revived Hitler's hopes of defeating the Soviet Union unaided. Indeed,

Japanese intervention would be an obstacle to a subsequent 'settlement peace' with Britain.¹⁶³

Just as Hitler had left Tokyo in the dark about his plans to attack in the east, Tokyo kept the surprise attack on Pearl Harbor secret from the Germans. The plan was approved by the chief of staff of the navy on 3 November. Only days before Operation Hawaii, which Emperor Hirohito approved on 1 December, Tokyo made sure that Germany (and Italy) would join Japan in the event of war against the United States according to the terms of the Tripartite Pact. Hitler's attitude to the Japanese attack on the United States was ambivalent. On one hand, he saw it as a 'turning-point of unimaginable proportions',¹⁶⁴ because the United States would now be tied up in the Pacific and its defeat would be 'no more than a question of iron endurance' by the Reich.¹⁶⁵ Hitler also thought that Japan's entry into the war would have positive effects on the war against Britain, which would now be fearful for the existence of its Empire, especially India. This assessment was shared by Luftwaffe General von Richthofen: 'With Japan, all British, American, and Russian hopes swim away for the coming years. Would be a hell of a coup! Then local setbacks (as long as they remain local) can be accepted here or in Africa.'¹⁶⁶ On the other hand, Hitler regretted that 'the white race would disappear from this area' as a consequence of the Japanese action: 'I did not want that!'¹⁶⁷ He then returned to the hopes expressed in July 1941 for a possible German-British partnership at world-power level after the elimination of the Soviet Union: 'East Asia could have been held, if all the white states had built a coalition. Japan would not have been able to move against it!'¹⁶⁸ If Britain changed course now, it could save at least some of its Empire. It was Hitler's 'most sacred conviction'¹⁶⁹ that the conquest of Singapore by Japanese troops would lead to the dismissal of Churchill and a British change of course in favour of Germany. It was soon apparent that this belief was an illusion. In December 1941 the German and Japanese strategies against the Anglo-Saxon maritime powers converged, with both resolved to fight jointly until victory and not to conclude a separate armistice or peace. Yet in the months before, Tokyo and Berlin had been marching separately. 'Four years later they were defeated separately.'¹⁷⁰

V. Volunteers for the 'European Crusade against Bolshevism'

I. THE 'CRUSADE' ASPECT

JÜRGEN FÖRSTER

EVEN today, the brutal war of conquest and annihilation waged against the Soviet Union is sometimes misinterpreted as a crusade by the civilized Christian West against Bolshevism. After 22 June 1941 National Socialist propaganda certainly presented Operation Barbarossa as a 'European crusade against Bolshevism' and as a 'pan-European war of liberation',¹ in the hope of gaining sympathy in Europe for the German action against the Soviet Union. Hitler himself ordered that every offer from foreign states to participate in this crusade was to be accepted with 'enthusiasm'.² Behind this decision lay the intention to involve other states in his own attack against the Soviet Union, and thereby to give his war of annihilation a European legitimacy. Propaganda for joint European action against the 'world enemy' was designed to manipulate opinion by dividing Europe into two groups—people of culture and the opponents of all civilization. To a large extent, the propaganda attempted to exploit feelings of being under threat, the desire for revenge, ethnic prejudices, and ideological resentments; its aim was to rouse Europe into emotional and military action against the Soviet Union. Yet as early as 1927 the German foreign minister, Stresemann, had told his Belgian, British, French, Italian, and Japanese colleagues that the current idea of a 'crusade against Russia' was foolish and insane. It would only weld Russia together and weaken Europe.³ In 1941 the German press, following the line taken by Hitler when the war began, was instructed to revert to the image of 'Jewish Bolshevism' it had used before the German-Soviet pact. Wehrmacht propagandists were instructed to concentrate on the 'Jewish-Bolshevik Soviet government with its functionaries' and the CPSU as the enemies of Germany.⁴ The aim of National Socialist propaganda efforts, based solely on the 'anti' complex of anti-Bolshevism and anti-Semitism, was to disguise the real objective of 'breaking the Soviet Union apart' and conquering 'living-space'. At the end of May 1941 Artillery General

Jodl had realized that the concept of a 'crusade against Bolshevism'—as expressed to the Finns—was no more than a figure of speech.⁵ Similarly Alfred Rosenberg, in a speech to his closest colleagues on 20 June 1941, declared that Germany was not waging a 'crusade' against Bolshevism in order to save 'the poor Russians', but 'to pursue German world policy and to safeguard the German Reich'.⁶ After the start of operations, the secretary of state in the foreign ministry, Ernst von Weizsäcker, commented that those who expected to witness the certain 'death of Bolshevism' would almost all be mistaken. 'For our plan is not to re-establish former conditions in the territory to be conquered. The scheme is instead to put these lands and their mineral resources into service for us fully and promptly.'⁷ When Hitler thought the war in the east was won, he made it clear that the propaganda thesis of a 'pan-European war of liberation' did not mean that Germany was waging war on behalf of Europe. The beneficiaries of this war were to 'be the Germans alone'.⁸

How well Hitler used the propaganda weapon can be seen from his many comments from those days. 'The happy thing in an unhappy time', he told the Croatian deputy head of state, Slavko Kvaternik, on 21 July 1941, 'is that the struggle against Bolshevism has united all Europe. There are things which do more than anything else to lead nations to a common goal.'⁹ In his opinion, the unity of the European nations was now prevented only by the Jews still living there, whom he described to Kvaternik as the 'focus of bacilli for new decomposition'. In his order of the day at the start of Operation 'Typhoon' on 2 October 1941, Hitler again glorified the war against the Soviet Union as a pan-European act. The struggle against 'Jewish Bolshevism' was 'regarded by all the nations of Europe—perhaps for the first time—as a common action to save the most valuable continent of culture'.¹⁰ For Hitler, however, Europe was 'not a geographical, but a blood-conditioned term'.¹¹ For that reason he believed that German rule over the European continent was most threatened by its racial enemy, the Jews. After the failure of the 'rapid campaign', and once the real nature of German objectives became glaringly apparent, German propaganda declarations acquired an imploring character. In February 1942 Hitler explained to the Croatian minister in Berlin, Mile Budak, that it was Germany's great task to 'organize' the occupied Soviet territories 'not as previously against Europe, but for it'. The struggle against Bolshevism, 'the bestial degeneration of humanity . . . is a crusade such as previously took place only against the Huns and against the Turks. This struggle must bring to-

gether and unite the European peoples.'¹² Yet even at the start of the war against the Soviet Union, clear-sighted allies regarded the German slogan of a 'European crusade against Bolshevism' as an 'empty phrase' or mere propaganda.¹³ At the end of October 1941 Weizsäcker too was sceptical that anything like a 'European solidarity' could emerge 'so long as we regard the occupied European territories simply as tools to prolong our powers of resistance'.¹⁴

The Germans had certainly hoped for the response that 22 June 1941 and its propaganda justifications evoked among the anti-Communist forces in Europe. Nevertheless, the offers of service and the applications from volunteers found the foreign ministry, its representatives abroad, and the Wehrmacht leadership unprepared. The associated political, legal, and organizational problems had not been clarified. Not until 30 June 1941 was a discussion held between the foreign ministry, Wehrmacht High Command's foreign department, SS main office, and the NSDAP foreign political department to work out general guidelines for the treatment of 'volunteer registrations in foreign countries for the struggle against the Soviet Union'.¹⁵ Ambassador Ritter demanded a positive approach to the volunteer question, 'both for the current struggle against Soviet Russia and with regard to the future political development of Europe'. Among the initiated, of course, there was no talk of a crusade.

At this discussion it was decided that only self-contained volunteer units would be accepted into the Wehrmacht or the Waffen-SS. The volunteers would wear German uniforms with nationality badges in order to identify them as regular combatants, but naturalization would not be necessary. The issue of the oath of allegiance and of payments remained unresolved. It was also decided that Czech and Russian *émigré* volunteers would not be accepted. A few days later, Wehrmacht High Command issued its 'Guidelines for the employment of foreign volunteers in the struggle against the Soviet Union'.¹⁶ Significantly, they were to take the oath to Adolf Hitler for the 'fight against Bolshevism'. Like German soldiers, they were to receive service pay, front-line allowance, and incidental expenses.

National Socialist racial policy led to the classification of the volunteers as 'Germanic' or 'non-Germanic'. While 'Germanic' volunteers—Danes, Finns (*sic*), Flemings, Dutchmen, Norwegians, and Swedes—were incorporated

into the Waffen-SS, the 'non-Germanics'—Frenchmen, Croats, Spaniards, and Walloons—fought in Wehrmacht units. However, SS propaganda appeals for foreign volunteers were not based on the war against the Soviet Union. Their roots lay in the ideology of the SS and its rivalry with the Wehrmacht in the recruitment of able-bodied men for replacement formations and new units.¹⁷ As early as the beginning of November 1938, Himmler had announced his intention of 'getting Germanic blood from the whole world, robbing and stealing it' wherever he could.¹⁸ The SS Standarte 'Germania' did not bear its name 'in vain'. In less than two years, he claimed, it would be filled with 'non-German Germanics' (*nichtdeutsche Germanen*). The occupation of Denmark, Norway, the Netherlands, and Belgium subsequently opened the way for the activities of the SS. Though the newly established Standarte 'Nordland' and 'Westland' had attracted only a few hundred Danish, Norwegian, Dutch, and Belgian volunteers in 1940–1,¹⁹ from 22 June 1941 the SS was able to use propaganda of a 'European crusade against Bolshevism' as an additional aid to mobilization. Its ideological framework was not the German national state, but the racial community, the 'Greater Germanic empire'.

At the end of 1941 12,000 'Germanic volunteers of non-German nationality' were fighting in the Waffen-SS: 2,399 Danes, 1,180 Finns, 1,571 Flemings, 4,814 Dutchmen, 1,883 Norwegians, 39 Swedes, 135 Swiss and Liechtensteiners. There were also 6,200 'ethnic German' volunteers from Alsace, Lorraine, Luxembourg, Romania, Serbia, Slovakia, and Hungary. In addition, 24,000 Frenchmen, Croats, Spaniards, and Walloons were serving in the Wehrmacht.²⁰ Overall, therefore, some 43,000 'foreign volunteers' were wearing German uniform in 1941. Alongside the ideological motives and idealism of recruits, a role was also played by opportunism, the lust for adventure, and the desire to escape domestic restrictions or oppressive daily life under occupation. Additionally, some Spaniards had nursed a strong personal desire for revenge since the civil war. For the commanders, some sections of the officer corps, and the political groups and military élites who supported the units, there were important domestic political motives. Within the Walloon battalion and the French regiment, for example, these led to power-struggles which destroyed the internal structures and endangered political calculations. All the volunteers appear to have expected that the Red Army would collapse very quickly, allowing them to return home as celebrated heroes. This belief was an illusion. As a result of the enormous losses of men in the German army by the end of December 1941, the German leadership began to value both its allies and the volunteer units much more highly than

before. However unsatisfactory the performance of some, it was now considered not merely 'desirable', but 'even necessary', that they be strengthened.²¹ Hitler and the Wehrmacht High Command held that the war against the Soviet Union involved 'the existence or non-existence of the other European nations'.²² Nevertheless, it was much easier to force Romania, Hungary, and Italy to increase their contingents of troops in 1942, and to bring 'ethnic Germans' into the Waffen-SS, than to use defeat in the east to produce large numbers of volunteers for the 'struggle against Bolshevism'.

2. VOLUNTEERS FROM WESTERN AND SOUTHERN EUROPE

JÜRGEN FÖRSTER

In 1941 the largest unit was provided by Spain, although as a proportion of the population the biggest contingent came from the Netherlands. On 22 June 1941 Ramón Serrano Suñer, chairman of the Falange's Junta Política and Spanish foreign minister, obtained Francisco Franco's agreement for his offer to the German ambassador, Eberhard von Storrer, that a number of Falange volunteer units should take part in the war against the Soviet Union as a 'gesture of solidarity'.²³ Madrid did not intend to make a formal declaration of war, although that was what the Germans wanted. Hitler accepted the offer because he hoped to tie Spain more closely to Germany. He urged the rapid dispatch of the volunteers. Most of all, Serrano Suñer expected the offer to improve German-Spanish relations, which had been strained since the 'dilatatory rejection' of joint conquest of the British rock fortress of Gibraltar. He also hoped to buttress his own position in Spanish domestic politics. The announcement of the offer in Spain, and recruitment among the Falangist youth, led to a power-struggle between supporters and opponents of the Falange Junta chairman. The battle-lines ran between Serrano Suñer, the army, and the old Falangists. For its part, the army wanted to prevent the Falange from becoming the sole beneficiary of the expected increase in power and prestige, actually arguing for the dispatch of a full army corps to Russia. At the same time, many old Falangists—disappointed by the Caudillo's 'new state'—chose to 'emigrate' to the front.²⁴ The volunteer units offered by the passionately anti-Communist Serrano Suñer were not merely a contribution to the struggle against Communism and a gesture of political gratitude for the deployment of the Condor Legion during the civil war; they also had a domestic political motive. Franco resolved the power-struggle with a compromise which also accommodated Wehrmacht High Command's preference for

a united Spanish volunteer force rather than separate army and Falange units. The infantry division to be dispatched would be a national unit of volunteer regular soldiers and Falangists under good leadership, thus enabling it to fulfil its purpose and be worthy of the Spanish military tradition. From first lieutenant upwards, the officer corps was recruited only from regular officers. Two-thirds of the second lieutenants and NCOs were also drawn from the army, and only a third from the Falangist militia. The ranks were recruited from the civilian population by local branches of the Falange and the army, with preference given to veterans of the civil war. All soldiers were screened for political and social reliability.²⁵ As commander Franco appointed General Augustin Muñoz Grandes, a battle-hardened officer, acceptable to both the army and the Falange. The Spanish volunteer division, *División Española de Voluntarios* (DEV), was soon to become known as the 'Blue Division' (*División Azul*) because of the blue shirts worn by the Falangists. In line with the will of the general staff, it was to be recruited from all eight military regions as well as Morocco. The division was to consist of four infantry regiments and an artillery regiment, with a strength of 640 officers, 2,272 NCOs, and 14,780 men.²⁶ The decision was followed by a rush to volunteer. Only in Military Region IV (Barcelona) was the target figure not reached. Soldiers there had to be 'persuaded' to volunteer, and some vacant posts were filled by volunteers from Valencia.

The Falangists were convinced anti-Communists who accepted the German justification for the attack. For them, the 'European crusade against Bolshevism' was more than an empty phrase. But they were also convinced that their place in the new Spain, and its weight in the reorganization of Europe, depended on their willingness to risk their lives against the common enemy. Among the officers, these ideological motives were bolstered by concern for their careers. Months spent on the eastern front counted double for promotion, and any decorations brought additional plus-points over colleagues at home.

As the training of the volunteers began in barracks throughout Spain, a commission was sent to Berlin, where it was confronted with German demands for men and material. The commission discovered that the Germans were expecting the strength of the division to be 526 officers, 2,813 NCOs, and 14,397 men with 300 lorries and 400 motor-cycles.²⁷ This meant that the DEV had an excess of officers and men and a shortage of NCOs. The level of mobility demanded also exceeded Spanish capacity. After the intervention of various agencies, the German demands were dropped for political reasons—not least, out of regard for Spanish domestic politics.

On 13 July 1941 Serrano Suñer bade farewell to the DEV at Madrid's north station at a ceremony attended by the military leadership and the diplomatic

²⁵ Kleinfeld and Tambs, *Spanish Legion*, 6 ff.

corps. Two days previously a corrida in honour of the volunteers had been held in the presence of General José Valera, the minister of war. In his speech Serrano Suñer again stressed the motives which had led him and the soldiers to this step: revenge for the Soviet intervention in the civil war; gratitude for German and Italian assistance during it; defence of civilization against the inhuman, barbaric, and criminal system of Bolshevism; and struggle for the glory of Spain. The Spanish volunteer division, 17,909 men, was transported to the troop training-ground at Grafenwöhr near Nuremberg. There it was to be reorganized according to the German model, re-equipped, and trained. The volunteers took the oath of allegiance on 31 July 1941. The reorganization of the DEV into the 250th Infantry Division, consisting of three infantry regiments and an artillery regiment, facilitated the establishment of a divisional reserve, the 'mobile 250 Reserve Battalion' consisting mainly of veterans and foreign legionaries. Less satisfying was the division's low level of motorization and the switch to drawing the guns by horses. General Muñoz Grandes pressed successfully for a reduction in the training period, which the Germans had set at three months. This decision meant that the men had insufficient practice in handling the horses, which was to have an adverse effect on marching discipline, equipment, and the animals themselves. The Germans doubted the political reliability of the division, partly because of the low proportion of Falangists (about 30 per cent). In contrast to Serrano Suñer, the Spanish army was careful to ensure that the division was not regarded as a Falangist unit. It became clear to the Germans that sympathies for the Falange must inevitably damage the other pillar of the Franco regime, the army.

Even before the departure of 250th Infantry Division to the eastern front, to Army Group Centre's area of operations from 21 August 1941, the German command was told of the Spanish government's request for the division to be sent into action 'at the focal point of the struggle'.²⁸ A few days before, however, the army group had gone over to the defensive on the order of Hitler. The Spaniards knew nothing of the crisis between him and the general staff. Hitler received a courtesy visit from General Muñoz Grandes on 1 September, while the Spanish soldiers marched from the unloading area at Grodno towards Minsk. The week-long march to their final operations zone brought the division its first encounter with German views of organization and marching discipline, their assessment of their allies, and the treatment of Slavs and Jews in the east. The commander of Fourth Army, Field Marshal von Kluge, refused to deploy the Spaniards in his area of operations, apparently under the impression that they were more like gypsies than soldiers. The reports of the German liaison officer to the Spanish division had a 'refreshing' effect on the commander of Army Group Centre, Field Marshal Fedor von Bock. In his war diary he noted the appearance of the division, 'unfamiliar to German soldiers', the poor condition of the horses, and the fact that the Spaniards

²⁸ Army Group Centre, Ia, war diary, 20 Aug. 1941, BA-MA RH 19 II/119.

regarded all women as fair game and 'held orgies' even with Jewish women in Grodno.²⁹ On 24 September 1941 Hitler decided that 250th Infantry Division should reinforce Army Group North. At the beginning of September this army group had been forced to hive off troops to Army Group Centre for the attack on Moscow. Instead of attacking, the Spaniards were now expected to march on, from Smolensk to Vitebsk, before completing their journey by train. On 10 October 1941 the division was placed under the command of the von Roques Group in Sixteenth Army's sector, relieving 18th Infantry Division and part of 126th Infantry Division. The position ran through Novgorod north of Lake Ilmen along the Volkhov.

The 250th Infantry Division was assessed as incapable of offensive operations, and the condition of its horses and lorries as alarming.³⁰ The Germans regarded the troops as rather odd, but General Muñoz Grandes was seen as an energetic commander with a deep interest in German battle experiences. Obvious differences in mentality and conduct at the front led the Germans to underestimate the fighting spirit of the Spaniards. Within a short time the division proved itself well able to hold its sector of the front against fierce attacks by the Red Army. The *élan* and personal courage of the individual soldiers remained unbroken by the rigours of the winter and inadequate levels of equipment. Muñoz Grandes vigorously rejected the hasty judgement of the new corps commander, Infantry General Friedrich-Wilhelm von Chappuis, that the division was the greatest problem facing XXXVIII Army Corps and would be unable to resist increased Soviet pressure. Chappuis stuck to his opinion, urging Sixteenth Army HQ to agree to the relief of the Spaniards. Muñoz Grandes and his division were determined to repel this attack on their military honour, with its possible repercussions on German-Spanish relations, by holding their sector of the front intact. He ordered that the positions were to be defended as if Spain itself was at stake. The fierce fighting that followed, which included atrocities by both sides, led to heavy casualties among the Spaniards. In two and a half months the division lost almost 3,000 men.³¹ Since the Spaniards had held their positions, Muñoz Grandes felt able to agree to a shortening of its sector of the front without losing face. At the beginning of January 1942 he was awarded the Iron Cross First Class. Hitler too was under the impression that, as troops, the Spaniards were a 'dilapidated formation' and that the relations between officers and men were 'miserable'. But at the same time he praised the fact that the division had abandoned 'not a metre' of ground. 'One cannot imagine pluckier people. They take no cover, they let themselves be killed. Yes, our men are happy when they have the Spaniards in the adjoining sector of the front.'³²

³¹ Kleinfeld and Tambs, *Spanish Legion*, 168 ff. In Mar. 1942 the division had a strength of 13,766 men.

³² Hitler, *Monologe*, 178 (4-5 Jan. 1942).

Disputes between the Spanish and German leadership, and between the Falange and the army, broke out anew over the form of rehabilitation and reorganization of the division. Franco wanted to withdraw the division from the front to enable it to be replenished for the spring offensive; he was proposing a fixed rotation of personnel—2,000–2,500 soldiers every three or four months. Serrano Suñer, on the other hand, wanted an exchange of the Falangists. Both suggestions were rejected by the German leadership. Though they too wanted Spanish losses to be made good, the military difficulties on the Volkhov led them to oppose the transfer of the division to the rear. At the end of 1941 Franco was forced to accept that the unexpected powers of resistance displayed by the Red Army meant that the 'European crusade against Bolshevism' would continue for some time. The spread of the European war into a world war made Spain's entry into the conflict on the side of the Tripartite Pact even less likely. Nevertheless, Franco kept 250th Infantry Division fighting on the eastern front.

The willingness of the Spanish government to establish a volunteer formation for the 'struggle against Bolshevism' led the German minister in Lisbon, Oswald Baron von Hoyningen-Huene, to explore the attitude of Portugal to the war against the Soviet Union. On 1 July 1941 the Portuguese premier and foreign minister, Salazar, emphasized 'Portugal's deathly enmity towards Bolshevism . . . in these days of the decisive struggle' at a public rally of the anti-Bolshevik Legion. Unlike the Spaniards, however, he saw no need to repay any debt of gratitude for German help.³³ The foreign ministry in Berlin welcomed Salazar's attitude, but thought it did not go far enough. The secretary of state informed the minister of Germany's political interest in the participation of a Portuguese unit—however small—in Operation Barbarossa. This would demonstrate the unity of Europe in the struggle against Bolshevism, and would also have a beneficial 'effect on opinion in Brazil'.³⁴ Huene was not successful. Out of regard for Britain, Salazar would not permit the establishment of a volunteer unit, even though 'pro-German Portuguese officers' had been placed in the ministry of war for that purpose.³⁵

In France, news of the German attack on the Soviet Union came through on the first anniversary of the Franco-German armistice. The domestic political situation was very different from that of Spain. Three-fifths of France was occupied by German troops, with the remainder under the authoritarian rule of the Vichy regime; the country was suffering the psychological, personal, and material consequences of defeat and the 'reality of the armistice'.³⁶ The official German version of a preventive war to safeguard Europe from Bolshevism

served to intensify and accentuate several very different trends in France—resistance, 'wait and see', and willingness to collaborate.³⁷ After the collapse of the German-Soviet alliance of 1939, the French Communists were also able to join the resistance and provoke the occupying power to disastrous over-reaction by attacking German soldiers. Equally, the events of 22 June 1941 offered the leaders of politically organized collaboration an unexpected political opportunity to unite the policy of total collaboration with Germany with that of anti-Communism. Participation in the 'European crusade against Bolshevism' appeared to give them the chance to win German consent to their struggle for the 'national rebirth' of France. However, the supporters of collaboration were utterly divided as to the desired political shape of this new France. They were united only in their rejection of the 'reactionary' Vichy regime, of parliamentary government, and of Communism. Many of them also demonstrated a militant anti-Semitism. Jacques Doriot, the leader of the 'Parti Populaire Français' (PPF), responded to the news of the German attack in the east with the words: 'If there is a war to which I am sympathetic, it is this.'³⁸ He publicly demanded the establishment of a volunteer legion and declared that he himself would report for service. His domestic political rivals, Marcel Déat of the 'Rassemblement National Populaire' (RNP) and Eugène Deloncle of the 'Mouvement Social Revolutionnaire' (MSR), also wanted to participate in the anti-Bolshevik crusade. The idea of a legion was further encouraged by the German ambassador, Otto Abetz.³⁹

On 1 July 1941 Secretary of State von Weizsäcker informed the German ambassador that the government was ready to find a place in the Wehrmacht for Frenchmen who volunteered for 'the struggle against the Soviet Union'. Only self-contained units wearing German uniform would be considered. 'Berlin had no interest in the prominent appearance of Russian *émigrés*.'⁴⁰ Abetz reported that there were some 3,000 volunteers, including 80 fighter pilots, and asked for further instructions. Once the Wehrmacht defence department had indicated that it was not considering the use of French and Walloon volunteers, Minister Ernst Eisenlohr appealed to the foreign minister, Ribbentrop.⁴¹ On 5 July 1941 Ambassador Ritter informed Paris that the Germans had decided in favour of a French volunteer formation. There were constraints, however. The number of volunteers was not to exceed 10,000, and 'support for such enrolment on the part of the French government was not wanted'.⁴² The initiative for the founding of the legion was thus to come from the political groups of occupied France, since Hitler was determined to ensure

³⁷ Ibid. 180.

⁴⁰ PA, Handakten Ritter, No. 55. Abetz had reported on information from these circles on 23 June.

⁴¹ Telex to Ambassador Ritter, 3 July 1941, *ibid*.

⁴² DGFP D xiii, No. 78; Abetz situation report, 23 July 1942, PA, Büro St.S., Frankreich, vol. 9.

that the creation of a French volunteer formation did not leave him with any obligation to Vichy. The Vichy government had broken off diplomatic relations with Moscow on 30 June. Petain, who had consented to the creation of a legion, had to rescind the law forbidding French soldiers to serve outside the French army.

Once permission was received from Berlin, Abetz named Doriot, Déat, and two other representatives of smaller groups, Marcel Bucard of 'Francisme' and Pierre Constantini of the 'Ligue Française', to work from the embassy. The French representatives decided jointly to set up a 'Légion des Volontaires Français contre le Bolchevisme' (LVF). On 8 July a joint appeal appeared in the *Cri du Peuple*. This described the aims of the Legion: participation in the crusade against Bolshevism, French representation on the eastern front, and the defence of European civilization. It also stressed the agreement of Pétain and Hitler.⁴³ Three other party leaders thereupon declared their willingness to take part in the undertaking: Jean Boissel (Front Franc), Pierre Clémenti (Parti Français National Collectiviste), and Eugène Deloncle (MSR). A central committee was established under the chairmanship of Deloncle and given the task of setting up the Legion. In the unoccupied zone an action committee was to set to work under Simon Sabiani, the PPF representative from Marseilles. The recruitment campaign was opened by Doriot and Déat with separate rallies on 6 July 1941. Appropriately enough, Abetz offered the use of the offices of the 'Intourist' Soviet travel agency to assist the central committee. At this stage important issues such as the oath, the uniform, and payment had still to be clarified. The military commander, Infantry General Otto von Stülpnagel, agreed to a first joint meeting by the pro-German parties on condition that Bastille Day passed off quietly on 14 July. The meeting took place on 18 July 1941 in the 'Vélodrome d'Hiver'. Only after Wehrmacht High Command 'Guidelines for the service of foreign volunteers in the struggle against the Soviet Union' had arrived in Paris, and the military commander's staff had worked out 'Instructions for entry into the French Volunteer Legion for the struggle against Bolshevism', were the necessary questions of organization discussed between the German military and diplomatic authorities.⁴⁴ The military commander was represented by Colonel (General Staff) Dr Hans Speidel and Major (General Staff) Hans Crome. They reported the disappointment of the German embassy representatives, Dr Ludger Westrick and Dr Liebe, at the 'excessively narrow' procedure laid down by OKW for the recruitment of volunteers. Though individual issues remained unresolved in July 1941, it was now clear that the French would take their oath to Hitler and would receive pay plus supplements like those of the German troops. Only Frenchmen of Aryan descent aged between 18 and 40 (officers up to 50) were to be accepted as volunteers. The issue of uniform had still to be finalized; the

⁴³ Davey, *La Légion*, 13.

⁴⁴ Military commander in France, HQ Staff Ic/VODB, No. 973/41, 15 July 1941, with instructions.

instructions stated that the volunteers would 'probably' wear French uniform with German badges of rank. Uniforms and equipment were to be provided. These regulations were passed to the central committee by the German embassy and published in amended form in the *Cri du Peuple* on 18 July 1941.⁴⁵ The recruitment campaign could now begin in earnest. However, it soon became apparent that the numbers volunteering for service were much smaller than the target figures.

There were many reasons for this. They included a general French reluctance to regard participation in the 'crusade against Bolshevism' as an opportunity for the national rebirth of France, as Doriot had hoped; Hitler's decision not to allow French prisoners of war to opt for the Legion; and the inadequate support provided by the German leadership. This last point was linked with Hitler's refusal to make the necessary political concessions to the French government, which he considered tantamount to dissolving the armistice regime. First of all he wanted to solve the 'Russian problem'. Until then, France was to be handled in a dilatory manner.⁴⁶

The formation of the Legion was overshadowed by a political attack. The first official call-up ceremony for the Legion was held on 27 August 1941 at the Borgnis-Desbordes barracks in Versailles, and attended by the leading figures of collaboration—Pierre Laval, Count Fernand de Brinon, Doriot, Déat, Deloncle, and Constantini. (Ambassador Abetz and the commander of the Legion, Colonel Roger Labonne, were absent.) During the formalities, one of the legionnaires fired his machine-gun at the assembled dignitaries and wounded Laval and Déat. This episode was the first public manifestation of the political struggle within the pro-German groups, which ultimately brought about the collapse of the LVF.

On 6 September 1941 the first contingent of the Legion, 25 officers and 803 NCOs and men, arrived at Dęba training camp in Poland.⁴⁷ It became the basis of 1st Battalion of 638th Infantry Regiment. Already it was apparent that there would be no French formation with its own uniform, fighting with the Wehrmacht in the struggle against Bolshevism; instead, 638th Infantry Regiment would be a German regiment in which French was spoken. The establishment and training of the unit were the responsibility of Military District VIII (Breslau). Major Hammerschmidt was appointed chief of the German training staff. On 17 September Ambassador Abetz arrived for an ostensibly private visit to the camp after the departure of Colonel Labonne for discussions with the military commander in Paris. Abetz, who had come from the Führer's headquarters, had no wish to observe the training of the legionaries; he had come to exchange political views with Doriot. The subject of the

conversation was the decline in the number of volunteers registering for service. It was to be counteracted in three ways: by increased German propaganda, by the creation of a French honorary committee of prominent figures, and by the exchange of 2,000 PPF members in North Africa for 2,000 members of the colonial army currently in southern France. The honorary committee, which was designed to 'make the Legion socially acceptable in France, contained men from the government, academic life, and the press, as well as the rector of the Catholic Institute in Paris, Cardinal Alfred Baudrillart. The visit also revealed to the German officers the influence wielded by Doriot within the LVF, despite his relatively junior rank of lieutenant. On 20 September 1941 a second contingent of 127 officers and 659 NCOs and men arrived in D  ba, followed by another 11 officers a few days later. Colonel Labonne used the opportunity to make the new arrivals aware of his view of the aims of the LVF. He also wanted to explain why they should wear German uniform, 'as the sign of a loyal, unconditional, and complete reconciliation between France and Germany'. He was striving for co-operation between the two great nations for a healthy Europe, free 'from the yoke of the ghettos, the lodges, Bolshevism, and British gold. We are taking to the field against this vast Bolshevik-capitalist coalition, which dares to give itself ideological airs.' Labonne drew attention to the expansionist tendency of Bolshevism and recalled that many Frenchmen had demanded a crusade against it during the Soviet-Finnish war of 1939-40. Though the legion was small, it—not the men in the pay of the British Foreign Office—represented the true France. On 5 October the legionaries in D  ba were sworn in by Infantry General Hans Halm, commander of Military District VIII. Both he and Labonne used the occasion to stress that Germany was fighting for civilization and a new Europe alongside those who recognized the danger in the east. In fact, this interpretation of the struggle against Bolshevism bore no resemblance to Hitler's own. In mid-July 1941 he had described as insolence the view of one Vichy newspaper that the war against the Soviet Union was Europe's war.⁴⁸ Hitler was not prepared to share the fruits of victory with his foreign 'brothers-in-arms', apart from agreeing to some territorial acquisitions for Finland and Romania. The French oath to Hitler for the struggle against Bolshevism was thus based on entirely mistaken assumptions about German intentions.

On 12 October another contingent of 21 officers and 623 NCOs and men arrived in D  ba. Labonne's speech at their swearing-in ceremony revealed that the ideological element had been intensified since his earlier speeches. He described his legionaries as successors of Godfrey de Bouillon, while emphasizing the Asiatic and bestial character of the Red Army and calling Stalin 'Attila, the scourge of God'.⁴⁹ On 25 October Brinon came inspect to the Legion in D  ba, where he was welcomed by Labonne as the champion of

future German-French co-operation. For his part, Brinon praised the legion's willingness to assist the German struggle to save civilization in Europe. On this occasion Labonne handed over a message for Marshal Pétain, which was published in *Cri du Peuple* on 5 November along with Pétain's positive reply. The Marshal referred here not only to the anti-Bolshevik crusade under German leadership, but also to the Legion's service for France. This, however, was far from being Hitler's intention. On 19 October 1941 the Army High Command informed Army Group North that it should not expect the transfer of the LVF: 'the Führer wants the question of the Legion to be handled in a dilatory manner for political reasons.'⁵⁰ Nevertheless, only three days later Army Group Centre was told by Army High Command that (French) 638th Infantry Regiment would be dispatched to Smolensk. The army group was to place the regiment—comprising regimental staff, signals platoon, motor-cycle dispatch platoon, band, two infantry battalions, each with three rifle companies and a machine-gun company, and each with one anti-tank gun company and one infantry gun company—under the command of a suitable division.⁵¹ The regiment was entrained at the end of October. *En route* to the eastern front, Colonel Labonne was received for short discussions by Field Marshal von Brauchitsch and, at his personal request, by Goebbels. On 4 November Labonne and Doriot reported to the commander of Army Group Centre, Field Marshal von Bock. The latter described Labonne as an 'older man, who knows half the world, no old campaigner, also no adventurer, but apparently a great idealist'; as regards Doriot, he remarked only that 'the adjutant is a reserve officer and professional politician'.⁵² After the regiment assembled in Smolensk, the march to the front began on 9 November. Since Bock regarded 638th Infantry Regiment as more of a free corps than a disciplined unit, 'initiation personnel' from 7th Infantry Division were attached to it. These were 'first to assist it, and second to ensure that no acts of indiscipline occur which damage our reputation, since the French are wearing German uniforms'.⁵³ A few days later the German liaison officer, Captain Winneberger, informed the army group that the regiment was already totally exhausted by an average march of 8–10 kilometres per day on good roads. In his view this state of affairs was due to the failings of the officers, inadequate care of the horses, complete ignorance of marching discipline, and inadequate training of the men. It also appeared that the troops had not received regular rations. With the agreement of Labonne, the army group ordered shorter marches and more frequent rest-days, to get the regiment 'at least up to behind the front line'.⁵⁴

On 19 November the French regiment was placed under the command of 7th Infantry Division within VII Army Corps. The 7th Division was then engaged in the fighting to open the isthmus of Kubinka, approximately 100 kilometres west of Moscow. I Battalion 638th Infantry Regiment was sent to the front line on 24 November, and II Battalion on 3 December, where they relieved elements of the division. However, the division assessed 13th and 14th companies as being 'not yet ready to be employed'. The ration strength of the regiment was set at 1,366 men, 605 of them still on the march.

Barely six weeks after the Spanish division, the French division was sent into action on the eastern front. Only a few days later, however, it had to be withdrawn from the line, having suffered casualties of 60 dead and wounded and 150 with frostbite. What reasons were given for the decision to withdraw it? When the intelligence officer of 7th Infantry Division submitted an initial report on the operation of the French Legion (I and II/638), he made all the arguments which were to be repeated in subsequent reports:

In part the Legion had already become separated during the advance. Some units have still not arrived. During moving off, more signs of disintegration became apparent. The men are generally willing but inadequately trained, the NCOs good in part but unable to develop because guidance from above is lacking. The officers are incapable, selected on political grounds. There is a lack of organizational talent, German thoroughness, understanding of the care of weapons, equipment, and horses. Redress can be found only by providing another leadership corps and longer training.⁵⁵

The German liaison officer divided the legionaries into three categories: the 'pure idealists', who recognized Bolshevism as a danger and had volunteered from conviction, were 'unfortunately' in the minority; more strongly represented were the 'adventurers', mainly former Foreign Legionnaires, and (thirdly) those who simply wanted to be looked after.⁵⁶ The politicization of the Legion, created by the rivalry between the various groups, the presence of Doriot, his influence on Colonel Labonne, and the latter's promotion practices, contributed to the failure to develop any sense of solidarity. Discipline and combat-readiness among soldiers depend more on their ties to the primary military group (group, platoon, company), and on the conduct of NCOs and officers, than on abstract ideological objectives. The professional incompetence of most of the officers, who had indeed been chosen for their political reliability, also helped to destroy the internal structure of the regiment.

Initially the Legion was transferred to the Rear Army Area Centre. The German leadership was keen to see it reorganized and then given light security tasks. When even this proved impossible, the unit was sent out of the area of operations to Radom in Poland. There the Legion was to be 'completely

⁵⁶ Report on the operations of the French Legion and lessons learnt, 14 Feb. 1942, PA, Handakten Etzdorf, Frankreich, vol. 2; report by commander of Rear Army Area Centre, la No. 263/42, 24 Jan. 1942, BA-MA RH 22/230.

depoliticized' and moulded into a 'militarily usable instrument'.⁵⁷ Hitler decided that it should consist of 15,000 men. The guidelines envisaged the dismissal of coloured troops, former Foreign Legionnaires, Russian *émigrés*, and legionaries who failed either in action or in exercises lasting several days. (It seems that, despite the regulations, not only 'Aryan Frenchmen' had been accepted for service.) To avoid hurting the pride of the legionaries and in the hope of creating a positive attitude among those dismissed (who were regarded as potential foreign workers for Germany), dismissal was to be on medical grounds wherever possible.⁵⁸ The legionaries also had to commit themselves 'to an unpolitical attitude' during their service. Four officers and eleven men did not sign the required declaration. To avoid the fiasco of the LVF becoming too obvious, Colonel Labonne and seven other legionaries were awarded the Iron Cross Second Class. There are varying figures on the size of the Legion. According to the war diary of the training staff in Dèba, disbanded at the end of March 1942, 190 officers and 2,902 NCOs and men had arrived at the camp, of whom 9 officers and 152 men were returned to France, presumably either on medical grounds or because of inability to reach the required standard. A memorandum for the chief of the Army General Staff of 9 July 1942 refers to 113 officers and 3,528 NCOs and men. In addition, it gives the strength of the two battalions at the end of January 1942 as 58 officers and 1,038 men.⁵⁹

Hitler himself regarded the French Legion and the groups as valuable mainly in the context of French domestic politics. The soldiers' task was 'not to see action on the eastern front, but if necessary to be active in Paris one day to protect our Party men there (Marcel Déat!) from their own countrymen'. Hitler expected these 'Party men' to 'bring Paris into opposition to Vichy and keep it there'.⁶⁰

In occupied Belgium volunteers also came forward to take part in Hitler's war in the east as members of the 'Walloon Legion'. The most famous legionary, Léon Degrelle, gave the following motives for himself and his comrades: defence of the West and the common European fatherland against Bolshevism, and thirst for adventure. He made no mention of his domestic political motives. In autumn 1940 Degrelle had already developed an ambitious plan for a Fascist Greater Belgium under the leadership of his Rexist movement; this would operate within the framework of a 'New Order' in Europe guaranteed by Germany, and be shaped by the 'hard, pure, and revolutionary' idea

of National Socialism. The idea was directed both against the German military administration and against the 'old democratic, plutocratic, Masonic, and even Jewish cliques' in Belgium which collaborated with it and which must be 'eradicated pitilessly'.⁶¹ Degrelle's scheme had been blocked by the military commander. However, the launching of the supposed 'crusade of Europe against Bolshevism' appeared to offer Degrelle a new opportunity to win influence for himself and his movement in discussions on the future shape of Belgium. He therefore volunteered for service on the eastern front with 'several hundred of his best followers'.⁶² Degrelle claimed later that these men were now ruled by 'a new law. The law of existence or non-existence . . . There was no going back, there was only ahead, they had burnt the boats behind them with their own hands'.⁶³

The Wehrmacht High Command guidelines of 6 July 1941 made no mention of Walloon volunteers, while Flemings were permitted to join the Waffen-SS. According to Hitler's racially inspired—but never implemented—plan to divide Belgium, devised in the summer of 1941, the Walloon areas of Belgium were to be dealt with in the same way as France. Similar treatment was also to be applied to Walloon volunteers: they were to be registered and sent on their way by the military commander in Belgium.

On 8 August 1941 860 Walloon volunteers left Brussels by train for Meseritz camp in the Warthegau [formerly western Poland]. Measures were taken there to establish and train the '373rd Walloon Infantry Battalion', comprising four companies. Until the end of December 1941 its commander was Captain Jacobs. The battalion was not—as Degrelle later maintained⁶⁴—part of a 'European organization', but was an integral part of the Wehrmacht. At the end of August 1941 it swore an oath of allegiance to Adolf Hitler for the 'struggle against Bolshevism'. The first period of training ended in the middle of October, when the transport of almost 850 Walloon volunteers to the eastern front began. The battalion was to be placed under the command of 97th Light Infantry Division,⁶⁵ which it finally reached at the beginning of December 1941. In the interim period it was apparently used in companies against local partisan groups.

The 97th Light Infantry Division fought as part of Seventeenth Army on the southern flank of the eastern front. On 5 December 1941 it was forced on to the defensive, having reached 'the end of its strength'.⁶⁶ Soviet troops broke through its lines on several occasions. In this situation, the battalion was not incorporated into the front line but was used to secure a rear base. It had a

strength of 23 officers and 649 NCOs and men.⁶⁷ Belgian documents reveal that the winter temperature—on 6 December, for example, it reached -24°C —caused morale to deteriorate. There were also internal tensions. On 30 December 1941 the battalion commander was replaced by Captain Pauly.⁶⁸ German records clearly indicate that conflicts were occurring within the battalion over the political line to be taken. The divisional commander, Major-General Maximilian Fretter-Pico, reported to IV Army Corps Command that two groups had emerged, Rexist and 'a kind of National Socialists'.⁶⁹ He had been asked to mediate between them. Fretter-Pico responded to this request by asking the corps to deploy the battalion elsewhere. The corps shared Fretter-Pico's view and judged the battalion to be 'worthless in military terms'. For their part, the Walloon volunteers felt that they were being worse treated by the German authorities than the Hungarians and Italians, and complained directly to the Army High Command. The commander of Seventeenth Army wanted to avoid a row 'out of regard for subsequent foreign-policy plans through these forces';⁷⁰ he therefore placed the Walloon 373rd Infantry Battalion directly under the command of another corps. Tensions none the less remained: 97th Light Infantry Division now complained that the 'very competent German liaison officer' had been 'reprimanded in an unpleasant manner in the presence of a corporal [Degrelle]' by the chief of staff of LII Army Corps.⁷¹ Once again the German leadership responded by changing the command structure. At the end of January 1942 the battalion was placed under the command of 100th Light Infantry Division for 'locality and railway protection'. One can only speculate about the group which was competing with Degrelle's party. Might there have been members of the Flemish Verdinasso among the Walloons? At any rate, the chief of the Militia, Jef François, had given the name *De Nationaal-Socialist* to the newspaper he had founded in June 1941.⁷² In 1938 the Verdinasso, which also supported ideas of a Greater Belgium, had described the Walloons as 'Romanized Dietsche'.⁷³

The Walloon 373rd Infantry Battalion was reorganized and given intensified training in tactics and discipline. At the beginning of January 1942 six officers and fifty men were sent back home on the grounds of incompetence or sickness. Degrelle, who had volunteered as an ordinary soldier, was promoted to officer rank during 1942 for gallantry in action, and was awarded the Iron Cross First and Second Class. In a major speech in January 1943 he repeated his claim for a say in the future shape of Belgium, now 'with

purely Germanic lineaments'.⁷⁴ Hitler noted the change: 'It is highly interesting that the Walloons are suddenly considering themselves to be *Germanen*'.⁷⁵ The way was now opening for Walloon volunteers to enter the *Waffen-SS*.

Volunteers for Hitler's war in the east were found in south-eastern as well as western Europe. Ante Pavelić, head of state of Croatia, responded to the German attack on the Soviet Union by assuring Berlin of Croatia's 'complete inner readiness to support this struggle by the Reich with its own forces also'.⁷⁶ In a personal letter to Hitler, Pavelić offered Croatian volunteer formations from the army, navy, and air force to fight 'shoulder to shoulder with their German comrades against the Bolshevik enemy'.⁷⁷ The 'German general in Agram [Zagreb]', Infantry General Edmund Glaise von Horstenau, regarded the offer as a sincere and politically astute gesture.⁷⁸ It was part of an attempt to establish such close relations with Germany that the Croats would be able to resist further Italian territorial and political pressure. Though an 'independent state of Croatia' had been declared on 13 April 1941, it had been dominated by Rome since the Croatian-Italian treaty of 18 May 1941.⁷⁹ The Croatian army leadership was permitted to create two infantry divisions and three mountain divisions, each with six battalions and two artillery detachments.⁸⁰ In mid-June Croatia had joined the Tripartite Pact. On this occasion the pro-German minister of defence and second most important man in the state, Kvaternik, had told the German foreign minister that Croatian volunteer formations would be available for 'future operations'.⁸¹ By providing volunteers, the Croatian state leadership hoped to secure German help for the armed forces it had begun to create; furthermore, Croatia might also be able to evade the military agreements of the treaty of mid-May, which envisaged the co-operation of Italy alone in the establishment of Croatian fighting forces. Croat political calculations proved correct. Hitler accepted the offer of volunteers and ordered that issues of organization be settled by General Glaise von Horstenau and the German minister in Zagreb, Siegfried Kasche. The Croat offer was certainly governed by ideological considerations as well as domestic and foreign-policy motives. Both Pavelić and Kvaternik were convinced anti-Communists and anti-Semites. Hitler was assured of a sympathetic audience

⁸¹ German legation Zagreb, telegram No. 574, 24 June 1941, PA, Büro St.S., Kroatien, vol. 1. Kvaternik had already made a similar offer on 12 Apr. 1941. Halder had described the idea of a Croatian legion as a 'nonsense' on 15 Apr. 1941 (*Diaries*, 876).

when he gave free rein to his hatred of the Jews in a conversation with the Croatian minister of defence on 21 July 1941:

The Jews are the scourge of humanity . . . If the Jews had their way, as they have in the Soviet paradise, they would carry out the most lunatic plans. Thus Russia has become a plague-centre for humanity . . . If just one country tolerates a Jewish family in it for whatever reason, this would become the germ-centre for new corruption. If there were no longer any Jews in Europe, the unity of the states of Europe [under German rule] would no longer be disturbed.⁸¹

Following this conversation, Marshal Kvaternik was unable to inspect Croatian troops on the eastern front, but he was permitted to visit Army Group South and Sixth Army. Thereafter he expressed great admiration 'for the greatness of the Reich', and for the indomitable courage, discipline, and organization of the German troops. Kvaternik also renewed his 'vow of loyalty to the Führer'.⁸²

The Croatian leaders accepted German requests for self-contained volunteer formations by offering to second a regular infantry regiment to the Wehrmacht in addition to four air Staffeln and a larger number of marines. The heavy companies were to consist of volunteer reservists under the leadership of regular officers. Owing to the unconditional commitment of the political and military leadership, no major recruitment campaign was necessary. Pavelić, however, issued an appeal on 2 July. The Croatian army contingent assembled in Varazdin for transfer to the troop-training ground at Döllersheim in Lower Austria for training, while barely 300 'air-force volunteers' were sent to Germany. At the same time, the Croatian state leadership was placed under pressure to second a legion of battalion strength to the Italian army. Kvaternik described this idea as untenable in domestic politics. He received the personal support of Glaise von Horstenau in his endeavour to block this Italian request.⁸⁴ However, the German leadership officially adopted the role of neutral observer, with the result that the Croats were eventually forced to establish a Croatian Legion supervised by Italy. This was finally dispatched on 14 December 1941, and from 1942 was employed on the eastern front as part of the Italian expeditionary corps.

The Croatian volunteers in Döllersheim swore an oath of loyalty to Adolf Hitler on 31 July. From among their number, Military District XVII established the 'reinforced 369th Croatian Infantry Regiment'. After a short period of training in the camp, on 7 October it was placed under the command of 100th Light Infantry Division within Army Group South. The regiment con-

sisted of three battalions, each with four companies plus two heavy companies. It was reinforced by the 369th Light Artillery Detachment. The division was given the task of guaranteeing 'organization and discipline according to the German model' by providing further training.⁸⁵ Four weeks later the training of the regiment was transferred to the regimental commander, Colonel Ivan Markulj; responsibility for 369th Croatian Artillery Detachment under Lieutenant-Colonel Marko Mesić remained with German 83rd Artillery Regiment.⁸⁶ The reinforced 369th Infantry Regiment was an organic part of the 100th Light Infantry Division. On 21 November 1941 it had a strength of 104 officers, 5 officials, 496 NCOs and 3,195 men;⁸⁷ 60 per cent of the officer corps consisted of regular officers.⁸⁸

As levels of training were still inadequate, the regiment was not initially employed as a self-contained unit. At the end of October, however, individual companies were assigned to German regiments and acquitted themselves 'quite well'. Nevertheless, the first report was highly critical of the officer corps. 'Though good will and consent to German instruction are found among the majority, a considerable section of the officers and NCOs, who do not meet requirements as leaders regarding character, personality, and intellectual ability... must be replaced... The leadership corps [of 369th Light Artillery Detachment] is altogether superior to that of the infantry regiment.'⁸⁹

By 15 November 1941 the regiment had suffered 165 casualties (37 dead, 76 wounded, and 52 missing in action). The service of the Croats was rewarded in mid-December with the award of 11 Iron Crosses Second Class. The reinforced Croatian regiment remained with 100th Light Infantry Division, later 100th Rifle Division, and took part in the German summer offensive. In the spring of 1942 the Croatian government offered to establish another regiment. Underlying this proposal was the desire to form a Croatian division. The Army High Command overrode the objections of Wehrmacht High Command by arguing that the urgent need for security forces demanded the acceptance of this 'stopgap'.

At the end of August 1942 Hitler finally ordered the extension of the Croatian troop units into an independent division.⁹⁰ He was also thereby accommodating the wishes of the Croatian leadership. However, the Croats took the decision to reinforce their contingent within the German army mainly for its effect in domestic politics. At the end of December 1941 Kvaternik had already offered to strengthen the 'Croatian Legion' serving with the Italian expeditionary corps by six battalions in order to prevent the planned extension

of the security area of the Italian Second Army in Croatia. Both Kasche and Glaise von Horstenau had openly represented Croatian interests.⁹¹

3. VOLUNTEERS FROM NORTHERN EUROPE AT THE BEGINNING OF THE WAR AGAINST THE SOVIET UNION

GERD. R. UEBERSCHÄR

One aim of National Socialist propaganda relating to the 'European crusade against Bolshevism' was to bring countries such as Finland and Sweden into the war against the Soviet Union on an official basis. However, the campaign was also designed to produce indirect support and military assistance from the countries of northern Europe. Accordingly, Berlin responded positively 'for political reasons' to the first registration of volunteers from Scandinavia.⁹² On principle, the German government would welcome the registration of sufficient numbers of volunteers to enable them 'to take part as self-contained national formations in the European struggle against Bolshevism within the framework of the German armed forces'.⁹³

After Finland entered the war, volunteers from Sweden quickly reported for service in the Finnish army. Although a volunteers' office was set up in Sweden in July, propaganda for the recruitment campaign was not permitted. At this stage Swedish military circles considered sending a self-contained air-force formation or an entire division to serve as a volunteer unit in Finland.⁹⁴ Berlin thought it appropriate not to object to such operations in Finland. However, the Germans hoped that 'a larger number of Swedish volunteers would also participate on the German side in the struggle against the Soviet Union, so that a Swedish volunteer corps can be established as well'.⁹⁵

According to the guidelines issued by Hitler, these 'Germanic volunteers' were to enter the Waffen-SS. The 5th SS Division Germania (renamed the SS Division Viking from December 1940) had already been established in September 1940 as the volunteer formation of the 'Nordic' and 'west Germanic' peoples.⁹⁶ A small number of Swedes had joined the newly established SS Standarte Nordland within this division following Himmler's decision of 4 September 1940 to permit the recruitment of volunteers from Sweden.⁹⁷

⁹⁷ As early as Aug. 1940 SS main office had made contact with Swedish private individuals with the aim of recruiting for the SS Standarte Nordland: see letter from SS Brigadeführer Berger,

New volunteer formations were now to be established for Operation Barbarossa. Recruitment for the Waffen-SS had previously appealed only to Fascist and anti-British sentiments and groups, but the launching of the war against the Soviet Union gave it an additional anti-Communist component which increased the political weight and appeal of the volunteer movement.

However, the Swedish government evaded the request of the German special emissary in Stockholm, Schnurre, for Swedish volunteers to serve within German formations in the war against the Soviet Union. For their own training purposes, the Swedes were prepared to release a group of regular officers from the Swedish army and permit them to take part in the fighting against the USSR within the German armed forces. It was planned that Swedish volunteers, however, would fight only in self-contained units in the Finnish army. Berlin was disappointed and irritated. Ribbentrop rejected such officer volunteers, who would 'not have any real sphere of activity'.⁹⁸ Furthermore, it is significant that Swedish officers had reacted extremely negatively to a questionnaire on the subject.

By the beginning of September 1941 approximately 2,000 Swedish volunteers had registered for service in Finland. Between 800 and 850 men had arrived in Finland and been sent into action at Hanko [Saarinaa] as the 'Hangöbataljonen'.⁹⁹ After the Soviet evacuation of Hanko, the Swedish volunteer unit was disbanded in December 1941. Some 200 Swedish volunteers stayed within Finnish units as officers and specialists at the front. In January 1942 more Swedes registered as volunteers, and a Swedish volunteer company was set up within the Finnish 13th Infantry Regiment ('Svirkompaniet') in Finland (Turku).¹⁰⁰

Very few Swedish volunteers either reported individually to the German recruiting office of the Waffen-SS in Tornio, Finland, or travelled to Norway and directly to Germany to join the organization. Despite German consent,

chief of Waffen-SS training office, to Himmler on 29 Aug. 1940, Tgb. No. 131/40 g.Kdos.: recruitment in Sweden; also reply from Reichsführer SS, Personal Staff, to SS Brigadeführer Berger, 4 Sept. 1940, Tgb. No. 876/40 g.Kdos., reproduced in the documentary appendix of the unpublished work kindly provided to me by Lennart Westberg, Matfors, Sweden, 'Notizen zu der Rekrutierung von schwedischen Freiwilligen für die Waffen-SS 1940-1945'. The creation of the 'SS General Service Troops Standarte Nordland' had been ordered by Hitler on 20 Apr. 1940: see PA, Dept. Inland IIg, vol. 17a (also for Himmler's directive of 23 Apr. 1940 to the effect that the Standarte was to be composed 'half of volunteers from Denmark and Norway' and half 'of German SS men').

I, 11 Sept. 1941, *ibid.*, Wi/I E 3.30b; telegram No. 1354, German legation Stockholm to foreign ministry, 6 Sept. 1941, PA, Büro St.S., Schweden, vol. 3.

¹⁰⁰ Telegram No. 178, German legation Stockholm to foreign ministry, 23 Jan. 1942, PA, Büro St.S., Schweden, vol. 3. In May 1942 the 'Svirkompaniet' comprised around 160 men, according to information given to the author by Lennart Westberg, 7 Aug. 1981.

such volunteers were contravening the wishes of the Swedish government.¹⁰¹ The practice was sharply criticized by the Swedish press and the general public. Entry by Swedish nationals into the war service of foreign powers without government permission was forbidden by law; in autumn 1941 the Swedish government officially repeated its opposition.¹⁰² By this time volunteers had also begun to report for service with the Western powers. At the beginning of September, therefore, the government decided that no more Swedes would be permitted to volunteer for foreign service, other than with the Finnish army.¹⁰³ At the end of the month, in a discussion with the Swedish chargé d'affaires in Berlin, Ribbentrop was bitterly critical of this indirect ban on the participation of Swedish volunteers in Germany's war on the Soviet Union. The German foreign minister declared that all Europe—even former enemies such as France—was providing volunteers in German uniform and thereby helping to 'defeat Bolshevism'.¹⁰⁴ Only Sweden and Switzerland 'had excluded themselves from participation in this struggle'. Ribbentrop recalled Molotov's visit to Berlin the year before, when he had expressed Soviet interest in Baltic Sea outlets 'along the Swedish coast', to argue that the Soviet Union had designs on Swedish territory. The Swedish attitude to the 'battle against Bolshevism', he declared, was 'totally incomprehensible'.

In February 1942 the Finnish-Swedish Colonel Ekström renewed efforts to bring Swedish volunteers to Norway for enrolment in the Waffen-SS.¹⁰⁵ This development received very little support in Sweden; the Swedish share in the contingent of European volunteers in the Waffen-SS remained relatively small at about forty men.

SS endeavours to recruit volunteers in Finland were considerably more successful. At the end of February 1941, at Himmler's request, Hitler gave his permission for the recruitment of Finnish volunteers to the Waffen-SS. This step had been planned since the beginning of that year by the head of the SS main office, SS Major-General Gottlob Berger, and his Finnish contact in Helsinki.¹⁰⁶ At the outset, it was decided that the volunteers were to be of

Swedish or Germanic descent where possible, and were to be recruited into the SS Standarte Nordland. An attempt was thereby made to accommodate the wishes of some military quarters in Finland, who wanted to revive a version of the old 'Royal Prussian 27th Rifle Battalion' which had served as a Finnish volunteer force in Germany during the First World War.¹⁰⁷ From mid-March, with the consent of the government in Helsinki, a private volunteers' committee was set up under the leadership of the former head of the Finnish criminal police, State Councillor Esto Riekki. This took on the task of organizing recruitment in co-operation with the German legation in Helsinki and the Waffen-SS recruiting board. The Finnish government initially wanted the volunteer formation to be incorporated into the German army.¹⁰⁸ However, it subsequently agreed to the creation of a self-contained formation within the Waffen-SS, thus preventing the Finns from serving with volunteers from occupied Norway and Denmark in the newly established SS Standarte Nordland.

At the end of April an agreement was reached between the German foreign ministry and the Finnish volunteers' committee about the position, use, supply, and accommodation of the volunteers, as well as the oath to be taken to the 'leader of the Greater Germanic community of destiny, Adolf Hitler'. Recruitment could now begin. The volunteers committed themselves to serve for a two-year period until June 1943. Out of regard for the sovereignty of Finland and its diplomatic and trade relations with Germany's enemies, the volunteers were described as workers for the 'Hermann Göring Werke at Fallersleben'. The first transport arrived in Germany at the beginning of May. By the launching of Operation Barbarossa, about 1,200 Finnish volunteers were already in Germany. In mid-June 1941 approximately 400 trained reservists and officers were distributed among individual units of the SS Division Viking and were thus already in place at the start of the invasion of the Soviet Union. Volunteers arriving subsequently were, as promised by Berlin, gathered in the 'SS Volunteer Battalion North-East', which was established as an independent formation on 13 June 1941. At the end of the month this special formation was approximately 1,000 strong; by the end of the year it contained around 1,180 men. The formation was renamed the 'Finnish Volunteer Battalion of the Waffen-SS' in September 1941. At the beginning of January 1942 it was sent into action with the SS Division Viking on the southern sector of the eastern front.

Significantly, only about 12 per cent of the Finnish volunteers were 'Finlanders' of Swedish descent; it was clear that the acceptance of the predominantly non-Germanic Finns had violated the original concept of the 'Germanic' SS. However, this fact did not affect the establishment and reten-

¹⁰⁷ In Aug. 1941, however, preservation of the traditions of the 'huntmen's movement' was transferred by Army High Command to 92nd Inf. Reg., in order to prevent it being left to an SS formation. See report of the military attaché in Helsinki, 18 Aug. 1941, BA-MA RW 4/v. 325.

¹⁰⁸ See Halder, *Diaries*, 851 (3 Apr. 1941).

tion of the Finnish volunteer formation. The Finns did not swear an oath of loyalty to Hitler as 'leader of the Greater Germanic community of destiny', but took the oath of the European (non-Germanic) volunteers in the Waffen-SS.¹⁰⁹

Field Marshal Mannerheim was informed about the affair only in retrospect. Along with the Finnish high command, he viewed the volunteer action with caution, if not outright rejection. It was noted with regret that the Finnish army was being deprived of virtually irreplaceable trained officers and NCOs on the eve of the country's own struggle against the Soviet Union.¹¹⁰ After Finland entered the war against the USSR, no further major recruitment of volunteers for the Waffen-SS could be expected. Instead, appeals were made for the volunteer formation to be recalled prematurely, or at least for it to be sent into action in the Finnish theatre, for instance with SS Division North on the Salla front.¹¹¹ Contacts to that end through the German legation in Helsinki proved fruitless, however. SS main office in Berlin turned down the request on the grounds that this volunteer SS formation would deepen and consolidate German-Finnish relations more effectively than the normal foreign-ministry channels.

It is thus apparent that the Finnish volunteers had entered German service not after the beginning of the 'crusade against Bolshevism', but before it. The Finnish government had not consented to the sending of volunteers to Germany out of any real political and ideological affinity with National Socialist Germany. Instead, the Finnish aim was to create a sense of German obligation to Finland, thus persuading it to offer support if Finland were to be attacked by the Soviet Union. In the spring of 1941 Helsinki was eager to use the volunteer issue to consolidate German interest in Finland.

Norwegian volunteers had also been sworn into the Waffen-SS since the summer of 1940. In April 1940, only days after the occupation of Norway, the SS had set up its own supplementary office 'North' in Oslo in order to recruit volunteers for the newly established SS Standarte Nordland. Very few Norwegians had come forward by the end of the year. The leader of the Norwegian National Socialist Party (Nasjonal Samling), Vidkun Quisling, therefore made a radio appeal to 'nationally conscious' youth to volunteer for service in the Waffen-SS and its Volunteer Division Viking, formed in December 1940; their role would be to defend freedom and the independence of the homeland.¹¹²

¹⁰⁹ The oath ran: 'I swear to you, Adolf Hitler, as leader, loyalty and courage. I vow to you and the superiors appointed by you obedience until death, so help me God.' See Buss and Mollo, *Hitler's Germanic Legions*, 136; Tieke, *Finnisches Freiwilligen-Bataillon*, 76.

¹¹⁰ On this subject see Jägerskiöld, *Marssalken av Finland*, 34 ff. German sources show a more positive attitude on the part of Mannerheim towards voluntary service in the Waffen-SS: see Ueberschär, *Hitler und Finnland*, 307.

¹¹¹ Jägerskiöld, *Marssalken av Finland*, 35.

¹¹² On Quisling's appeal of 13 Jan. 1941 see *Nordland-Echo*, 2/3 (19 Jan. 1941), and the section 'Quisling's Military Co-operation with Germany' in Andenæs et al., *Norway and the Second World War*, 71 ff.

However, this vague slogan was unlikely to appeal to many volunteers. Until the summer of 1941 the results of this recruitment campaign were modest in the extreme. By the end of June 1941 294 Norwegians had joined the SS Standarte Nordland as volunteers—and SS main office was forced to withdraw its qualification regulations for the recruits. Nevertheless, the SS leadership in Berlin did not waver from its aim of meeting the growing need for personnel by recruitment in the 'Germanic' countries of northern Europe.¹¹³

The attack on the Soviet Union offered an opportunity for better results. Operation Barbarossa gave the recruitment campaign in Norway a broader base, thus making it possible for an appeal to be made to all anti-Communist groups within the population for the 'struggle against Bolshevism'. A considerable enlargement of the reservoir of potential volunteers was therefore to be expected.

On 29 June 1941, a few days after Finland entered the war, the 'Reich Commissioner for the occupied Norwegian territories', Gauleiter Terboven, issued a proclamation to the Norwegian population. He appealed with some skill to the sense of solidarity among the Scandinavian peoples by arguing that Soviet demands on Finland had been the cause of the war; Soviet power politics were described as an 'attack against the Nordic states and their culture'.¹¹⁴ Terboven stressed that people had a duty to take an active part in fighting the threat from the east: 'What is true for the rest of Europe is true to an incomparably greater degree for the north and thus for Norway. From now on the issue is no longer first and foremost: England or Germany; but, above and beyond all domestic political variations of opinion and differences, it is simply, clearly, and imperiously: European Nordic culture or Asiatic Bolshevism.' To give the Norwegian population the opportunity 'to share in this conflict of unique historic significance', Hitler had acceded to the wishes of the Norwegian people and 'agreed to the immediate establishment of a "Norwegian Legion"'. This national formation would be 'equipped and employed according to Norwegian guidelines' as a self-contained unit under Norwegian leadership. In fact, this principle was not adopted immediately; the first 300 volunteers of the 'SS Volunteer Legion Norway', established by SS main office on 1 August 1941, came unambiguously within the framework of the Waffen-SS.¹¹⁵ On 3 October 1941, in the presence of Quisling, the Norwegian 'legionaries' swore an oath to Hitler as 'supreme commander of the German armed forces' for the 'struggle against Bolshevism'.¹¹⁶ At first the plan was to establish

¹¹³ See the documentation in Wegner, 'Pangermanische Armee' (also for the following).

¹¹⁴ Declaration of the Reich Commissioner for the Occupied Norwegian Territories, Terboven, on 29 June 1941, reproduced from DNB report in *Monatshefte für auswärtige Politik*, 8/7 (1941), 675-6.

¹¹⁵ On the history of the 'SS Legion Norway' see Buss and Mollo, *Hitler's Germanic Legions*, 88-9; also the commemorative essay 'Der Schicksalsweg der norwegischen Freiwilligen-Division der Waffen SS'; from a Norwegian point of view see Blindheim, *Nordmenn*, 35 ff.

¹¹⁶ The oath of the Norwegian legionaries on 3 Oct. 1941 was in line with the formula for 'foreign volunteers in the struggle against the Soviet Union': 'I swear by God this holy oath, that in the struggle against Bolshevism I offer unconditional obedience to the supreme commander of

the formations of the 'SS Volunteer Legion Norway' at regimental strength. However, it was soon apparent that far fewer volunteers had come forward than expected, forcing the SS leadership in Berlin to moderate its ambitious plans. The weak Norwegian response to the 'Norske Legion' (as the unit was known in Norway) may have been due in part to the refusal of the Norwegian clergy to call for volunteer participation in Hitler's war in the east. Most of the volunteers came from the ranks of Quisling's 'Nasjonal Samling'.¹¹⁷ In consequence, the volunteer movement looked like a party-political manoeuvre.

Nor was there any significant influx of volunteers to the SS Standarte Nordland after 22 June 1941. In September 1941, as before, some 300 Norwegians were serving in the SS Viking Division, for which Norwegian volunteers continued to be recruited. At the beginning of 1942 the 'SS Volunteer Legion Norway' consisted of approximately 1,200 men.¹¹⁸ During the recruitment campaign there had been references to service in Finland, but in March 1942 the Legion was sent to the front at Leningrad. There it was placed under the command of Eighteenth Army within Army Group North. In July 1941 Colonel-General von Falkenhorst had refused to employ the Legion in his area of command in northern Finland. The staff of Army Command Norway argued that such employment was 'undesirable' on military and political grounds, since it might 'give impetus' to 'certain desires' in Norwegian circles for territory in northern Finland and northern Russia.¹¹⁹ Furthermore, Colonel-General von Falkenhorst 'did not think much of the troops'.

Only a few weeks after the German occupation, from May 1940, volunteers in Denmark had also begun to come forward for the SS Standarte Nordland.¹²⁰ Most of them were members of the Dansk National Socialistisk Arbejderparti (DNSAP: Danish National Socialist Workers' Party) and erstwhile volunteers for Finland's Winter War against the Soviet Union, who had returned to Denmark in June 1940. It was also hoped that former soldiers from the Danish army would be attracted after it was reduced in size at the end of April 1940.

the German Wehrmacht, Adolf Hitler, and as a brave soldier will be ready to stake my life for this oath at any time.' See decree of OKW/14g/w WFSu/Org(I)-19/42, 10 Jan. 1942, 'Guidelines for the employment of foreign volunteers in the struggle against the Soviet Union (revised version)', BA-MA RL 2 II/106; see Blindheim, *Nordmenn*, 21.

¹¹⁷ According to Neulen, *Eurofaschismus*, 138, 60% of the volunteers were members of the 'Nasjonal Samling'.

¹¹⁸ See also Halder, *Diaries*, 1405 (17 Feb. 1942), who gives the figure as 1,100 men. Buss and Mollo, *Hitler's Germanic Legions*, 92, and Neulen, *Eurofaschismus*, 107, give 1,218 men for the beginning of 1942. On 16 Mar. 1942 1,150 men were in action at Leningrad.

¹¹⁹ The offer to send the 'Norwegian Legion' into action with Army Command Norway came from Reich Commissioner Terboven. On the refusal of Falkenhorst see telegram No. 4, German legation Helsinki to foreign ministry, 19 July 1941, PA, Büro St.S., Norwegen, No. 12/65.

¹²⁰ On the Danish volunteers' movement see Thomsen, *Besatzungspolitik*, 94 ff.; Buss and Mollo, *Hitler's Germanic Legions*, 76-87; on the dates see Tieke, *Tragödie*, 10-11; id., 'Geschichte des "Freikorps Danmark"'; and Schou, *Danske Østfront-frivillige*. On Hitler's order of 20 Apr. 1940 for the creation of the 'SS General Service Troops Standarte Nordland' see PA, Abt. Inland IIg, vol. 17a (also for the information given by Himmler to Ribbentrop).

In the view of the SS, the volunteers were preparing the way for a 'Greater Germanic empire'. The recruitment campaign was therefore extended to the ethnic Germans in northern Schleswig.¹²¹ Though Danish law forbade the recruitment of volunteers on Danish soil for foreign military service, in September 1940 the SS opened a 'supplementary office of the Waffen-SS branch office North Sea' in Copenhagen. By June 1941, however, the Danish contingent in the SS Viking Division comprised only 216 men.¹²²

After the war in the east began, the 'plenipotentiary of the German Reich' in Copenhagen, Minister von Renthe-Fink, told the Danish government that the Germans wanted Danish volunteers to participate in Operation Barbarossa. Their service should be organized 'mainly' on the German side and not in the Finnish army, for which Danes had begun to register immediately after the entry of Finland into the war.¹²³ At the beginning of July 1941, with the official consent of Danish government authorities, a volunteer formation for the Waffen-SS, the 'Free Corps Denmark', was set up. The intention was to employ it as a self-contained Danish national formation with the Waffen-SS, and only in the struggle against the Soviet Union. The oath taken by the Danish volunteers to Hitler as the 'supreme commander of the German army' also referred explicitly—like that of the Norwegians—to the 'struggle against Bolshevism'.¹²⁴ Throughout Denmark, recruitment offices began work under the leadership of the DNSAP. The government in Copenhagen even agreed that regular soldiers in the Danish army could volunteer for the new formation. Approximately 600 volunteers set off for training in Germany at the end of July. A major 'anti-Communist rally' was held in Copenhagen on 12 August 1941, at which the DNSAP warned that it was 'Denmark's duty to participate in the crusade against the Soviet Union'.¹²⁵ 'The military honour of the Danish people would be restored' by massive recruitment to the 'Free Corps Denmark' and active participation in the 'struggle against Bolshevism'. By the end of 1941 the 'Free Corps Denmark' comprised some 1,060 men; in May 1942 it was sent to Army Group North on the eastern front, as a reinforced infantry battalion with approximately 1,200 men.

After bitter fighting and heavy casualties, in September–October 1942 the 'Free Corps Denmark'—now 650 strong—was sent as a self-contained unit on leave to Denmark. Despite several propaganda rallies involving the 'Free

¹²⁴ The Danish volunteers were sworn to Hitler with the legionaries' oath. On its text see n. 116. See also Tieke, 'Geschichte des "Freikorps Danmark"', 191.

¹²⁵ See report of the Plenipotentiary of the German Reich No. Inn. V 3 No. 355/41 to foreign ministry, 12 Aug. 1941, PA, Abt. Inland II., Akten betr. Waffen-SS: Dänemark No. 300 (also for the following quotations).

Corps', neither the German authorities nor the Danish National Socialists were able to achieve a significant increase in volunteer registration.¹²⁶ The 'Free Corps Denmark' was regarded as a creature of the Danish National Socialists, particularly as its recruitment offices were situated in DNSAP branch offices. Inevitably, the Danish public tended to regard the legion as a party body born out of internal dissension. The leader of the Danish National Socialists, Frits Clausen, complained in February 1942 that the German authorities had not adequately supported his efforts to counteract public hostility to the Danish volunteers.¹²⁷ Few sections of the population were impressed by the 'Free Corps Denmark', and very few Danes volunteered for military service against the Soviet Union either in German or in Finnish units.

Berlin revealed a particular interest in recruiting ethnic Germans from North Schleswig as volunteers. However, by the end of 1941 only about 530 volunteers had reported for service in the Waffen-SS, and approximately 100 for the Wehrmacht.¹²⁸ At the beginning of 1942 recruitment efforts were therefore intensified. The campaign, which was run from the end of February 1942, was notable for making volunteering 'the duty' of this ethnic group. By the end of April the Ethnic Group Agency in North Schleswig was able to report that over 1,400 volunteers had come forward for the 'final struggle against Bolshevism'.¹²⁹ At first the volunteers from North Schleswig were incorporated into the 'Free Corps Denmark'. However, the North Schleswig ethnic-group leader, Dr Jens Moeller, complained about this practice to the German plenipotentiary in Copenhagen and also directly to Himmler. Subsequently, the volunteers were assigned to the SS Death's Head Division.¹³⁰ Yet even after Himmler's decision, the Ethnic Group Agency and the National Socialist Workers' Party in North Schleswig made a number of complaints to SS departments that ethnic German volunteers from North Schleswig were being assigned against their will to the 'Free Corps Denmark'. In individual cases, volunteers also joined the Wehrmacht. Though the Party and SS leadership were unhappy about such cases, consent was given to them retrospectively.

Overall, the number of volunteers from Finland, Sweden, Norway, and Denmark—including the ethnic Germans from North Schleswig—reached 5,501

¹²⁹ Of these, 829 men were fit for service. See the numbers and telegrams in PA, Abt. Inland IIg., Akten betr. Waffen-SS: Dänemark No. 298.

¹³⁰ Decree of Himmler, Tgb. No. AK/1271/8-RF/V., 22 Apr. 1942, PA, Abt. Inland IIg., Akten betr. Waffen-SS: Dänemark No. 299. See also *ADAP* II, No. 176, pp. 294 ff. (29 Apr. 1942).

in the Waffen-SS at the beginning of 1942.¹³¹ These men were to take part in the 'crusade against Bolshevism'. The total was a disappointment to the National Socialist leadership, which had expected more enthusiasm and greater numbers of volunteers from the 'north Germanic peoples'. Hitler had expressed this view in a proclamation on 2 October 1941, in which he emphasized that the nations of Europe had come together under his leadership 'for the first time' for 'joint action to save the most valuable continent of culture'.¹³² Alongside this foreign-policy aspect, the SS leadership attempted to create as many volunteer formations as possible. At the same time, it was revealing a willingness to give up its claim to be an élite, or at least to redefine this claim to cover the whole of Europe. The creation of new legions in western and northern Europe can thus be regarded as a 'significant contribution to the transformation of the Waffen-SS into a supra-national mass army'.¹³³ There were even hopes that these legions, by being granted minor national concessions and limited autonomy in their relations with the rest of the Waffen-SS, might persuade the European peoples to adopt a more positive attitude towards the occupying power. In view of the minute numbers of recruits alone, these hopes were utterly unrealistic. The conduct of German authorities and liaison staffs towards the foreign volunteer formations also led to many justifiable complaints. Army High Command's deep mistrust of the employment of self-contained foreign volunteer formations was exemplified by its demand for specially 'increased' intelligence supervision and censorship of the volunteers' letters from the field.¹³⁴ At the end of 1941 Wehrmacht High Command was compelled to respond to the ill feeling and tension caused by the arrogance of the German authorities and the 'petty-minded criticism of the value of these formations', as well as to the lack of attention and care they had received. Field Marshal Keitel noted that it was 'the German Wehrmacht's obligation of honour to treat the foreign legions with particular respect and to extend to them all care, even if these formations do not always meet German military standards'.¹³⁵

In view of the low number of volunteers in the months after 22 June 1941, the Germans stepped up their demands for the other European nations to take a greater part in operations planned for 1942. At the beginning of that year it was argued that they must help to 'guarantee the required superiority in forces for a rapid offensive operation' as part of the 'decisive

¹³¹ A 'survey of the Germanic volunteers in the Waffen-SS' by SS main office, Dept. VI/2, 15 Jan. 1942, gives the following figures for the four nations: Finns, 1,180; Swedes, 39; Norwegians, 1,883; Danes (including men from northern Schleswig), 2,399. See IZ MA 321, No. 3,910.

struggle of all European nations' against the Soviet Union for 'existence or non-existence'.¹³⁶

By now Wehrmacht High Command regarded the full utilization of the fighting power of all European countries as 'essential'. Ambitious demands were therefore addressed to allied or collaborating governments, politicians, and parties. In the light of these, it was inevitable that—especially in the occupied countries of Norway and Denmark—the existence of the volunteer formations became linked with certain political speculations and plans. The two leaders of the native Fascist parties in Denmark and Norway, Clausen and Quisling, thus saw the volunteer legions as the core or cadre for a national armed force. As this development concealed solid national interests, it was not welcome to the SS leadership in Berlin. The German authorities emphasized the special status of the legions as quasi 'semi-independent national units' simply in order to make entry into 'non-German formations' possible and attractive to foreigners.¹³⁷

SS operations office, however, continued to regard the volunteer formations virtually as the contribution of various subordinate European peoples to Germany's struggle against Bolshevism. During 1942, when Berlin realized the 'national-state interpretation' of the formations, its response was to push through an increased concentration of the volunteers in major SS formations, and to 'out the cord' to the collaborating groups and Fascist parties in the occupied countries in order to achieve a 'reorientation in the Germanization policy of the SS'.¹³⁸ This SS Pan-Germanism, moreover, led to the removal of the previous limited autonomy of the legions by integrating and incorporating them completely into Waffen-SS divisions. There was a perceptible move away from any recognition of the unique national features of individual legions. The SS leadership now regarded the volunteers as the logical contributions of various Germanic Gaue to the 'Greater Germanic Reich' under Hitler and to his 'decisive struggle' against the Soviet Union.

¹³⁶ ADAP E i, No. 92, p. 171 (also for the following quotations). In this 'contribution of OKW to the discussion of the Reich foreign minister with Regent von Horthy', 4 Jan. 1942, the call was made directly to Hungary; however, it applied equally to the other countries of Europe.

VI. The Failure of the Economic 'Blitzkrieg Strategy'

ROLF-DIETER MÜLLER

I. ECONOMIC POLICY IN ANTICIPATION OF VICTORY

VOLUNTEERS from the occupied and dependent states of Europe were recruited largely because of the dilemma facing the German war economy—its inability to provide sufficient men either for the munitions industries or for the Wehrmacht. Even before the invasion of the Soviet Union, conscription to the Wehrmacht had left great gaps in the labour market, which could not be filled despite the increased reliance on French prisoners of war and other foreign workers. Another consequence was a significant rise among Germans in indiscipline and reluctance to work. According to the economic authorities in a report to the Reich Marshal, this was especially noticeable among young people and women, 'who are demanding excessively high wages without an appropriate return, as a result of their favourable situation *vis-à-vis* older skilled workers'.¹

The increasing seriousness of the labour shortage was one important indicator of the excessive strains being placed on the German war economy. Another was the inadequate supply of raw materials, which was reaching a critical stage. The steep fall in iron and steel production was especially striking in this context. Its cause was a decline in the extraction of coal, as the result of the withdrawal of labour for the Wehrmacht and the priority given to military transports. The temporary obstruction of ore imports from Sweden and nickel imports from Norway, owing to the operations in the Baltic,² was of only minor significance in comparison. It is true that the region accounted for about a quarter of German iron-ore supplies, but transports across had declined by only 15 per cent in July 1941. Nevertheless, the German leadership regarded the potential danger to ore deliveries as so great that it warranted putting the navy on the offensive against the Soviet Baltic Fleet. Hitler repeatedly intervened in the direction of operations to press for the rapid occupation of Leningrad, which would safeguard the supply of iron ore from Sweden.

In the view of the political and military leadership at any rate, the bottlenecks in the German war economy had already reached dangerous proportions on the eve of the German invasion of the Soviet Union. From the outset,

¹ Reich Marshal of the Greater German Reich, Plenipotentiary for the Four-year Plan, VP 11594/41, g.Rs., survey on the overall economic situation, 23 July 1941, 8, BA R 26 I/44.

² See OKW/WiRüAmt/Stab Z-SR No. 2667/41 g.Kdos., war-economy situation report No. 23, July 1941, 11 Aug. 1941, BA-MA RW 19/177. For an assessment see also Wittmann, 'Deutsch-schwedische Wirtschaftsbeziehungen im Zweiten Weltkrieg', 202.

attempts were therefore made to eliminate or at least limit additional strains. The great hope was that the situation would be relieved by a quick end to the war in the east, thereby allowing the exploitation of Soviet resources. It appeared that the imminent decline in German war production, and the placing of extra burdens on the population, could be avoided only by making full use of Soviet raw materials and foodstuffs.

However, German economic preparations and economic war aims went beyond this short-term task.³ Colossal armaments plans by the Wehrmacht for the period after Barbarossa, made with an eye to the expected conflict with the Anglo-Saxon bloc for world supremacy, demanded a ruthless exploitation of the projected Russian 'supplementary area' as a colonial economy to extend and complete the German supra-regional economy in Europe. Behind such plans lurked the traditional German goal of achieving world-power status. It was to be attained by the creation of an autarkic continental empire, which would stretch from the Atlantic to the Urals and be secure against blockade. In the preparatory phase of Operation Barbarossa, these economic ideas had become inextricably entwined both with Hitler's plans for racial and ideological annihilation, and with the apparent inherent necessities of the war economy.

These dimensions to the war in the east must be borne in mind during any attempt to show the historical significance of military events and to assess economic preconditions, accompanying developments, and consequences. There are three main requirements in such an analysis: first, to compare the economic approach and expectations of the German leadership with the actual course of the war; second, to examine specific armaments policies and their results in relation to the material demands of the war in the east; and third, to investigate the interaction between economic policy, operational leadership, and occupation policy.

For the economists and the men responsible for armaments production, the launching of the war against the Soviet Union had different implications from those confronting the soldiers engaged in fighting. The leaders of the economy were already debating and planning the period after Barbarossa. In the expectation of a short campaign, they believed that urgent measures to overcome bottlenecks in the war economy could be postponed. This anticipation of victory was partly due to the unwieldiness of the production process—the relatively long period which elapsed between the taking of an economic decision and the concrete results in production terms. However, it was also believed that Operation Barbarossa could be completed with only a limited armaments effort, which had already been largely completed. The shortage of reserves of production appeared to require immediate concentration on the tasks which were likely to arise after 'Barbarossa'.

The economic leadership thus relied totally on the success of Germany's

³ See sect. I.III.2(f).

military planning for the war. They neglected to mobilize those reserves which were still available for the war in the east, and failed to combat frictions within the war economy which were often caused by sheer weaknesses of organization. Instead, the economists and armaments experts had begun to take the Russian 'booty' into their calculations even before it had been captured by the army. It was almost inevitable that the economy would adjust to the assumptions of the state leadership, especially in wartime, even though the consistency and success of war production were thus directly linked to the gamble being undertaken by the political leadership.

Such dependence was not one-sided. During the planning and preparation of the campaign against the Soviet Union, the political leadership had been forced to rely on the prognoses of the economic experts, and had guaranteed them a free hand both in establishing an Economic Organization East and in setting the economic goals. On 26 June 1941 Infantry General Thomas informed Göring of the results.⁴ Göring described the preparatory work undertaken under the central control of the OKW as 'excellent', and declared 'that without the organization of the Ec[onomic] and Arm[aments] Department, it would not be possible to achieve success in the campaign in the east'. Göring submitted the material he had received from Thomas to Hitler, who signed a decree on the economy in the newly occupied eastern territories on 29 June 1941.⁵ This gave Göring the authority to order all measures 'which are necessary for the greatest possible exploitation of the stocks and economic capacities that are found, and for the development of economic forces for the benefit of the German war economy'. Barely three weeks later, on 16 July, Hitler again explained his war aims to the leadership élite of the Reich.⁶ The basic need was 'to break up the enormous cake into manageable slices, so that we can first rule, second administer, and third exploit it... We must make a Garden of Eden out of the newly won eastern territories; they are essential for us.'

Hitler left no doubt that other plans for the future, proposed on this occasion by Rosenberg, would have to take second place to the tasks of the war economy. As Reich Commissioner for the Ukraine he appointed Gauleiter Koch, who had a reputation for ruthlessness, despite the fact that Rosenberg had wanted to see Koch appointed to the Moscow area, where he could work to suppress racially and ideologically undesirable 'Russiandom'. In taking this step, Hitler was responding to the wishes of the economic authorities;⁷

⁴ See memorandum Chief of War Economy and Armaments Department, report to Reich Marshal, 26 June 1941, BA-MA W1/I A.84.

⁵ Printed in *KTB OKW* i. 1019 (63).

⁶ Bormann minute on the discussion on 16 July 1941, No. 221, *IMT* xxxviii. 86 ff.

⁷ Two days before Hitler's decision, the leader of the Agriculture Group in Economic Staff East, Riecke, had held a conversation with Koch concerning his work in Russia: see Economic Staff East/Agriculture, War Diary notes, memorandum of 14 July 1941, BA-MA RW 31/42. The appointment of Koch nourished a conflict lasting years, especially with Rosenberg, whom Koch made the scapegoat for the failure of the political war effort. See the overall account in Dallin, *German Rule*.

these, anticipating rich economic gains in the Ukraine, were opposed to a more careful approach there of the sort advocated for political reasons by Rosenberg.

Under the impression that victory in the east was imminent, Hitler was devoting his attention to future armaments projects in the period after Barbarossa. At the forefront of his thinking was the expansion of the Luftwaffe. In Göring's view, the number of combat aircraft produced would have to be quadrupled.⁸ At the same time, Hitler also demanded the implementation of Tank Programme 41. Each of these plans alone exceeded the current productive capacity of the German war economy; together—and with the navy's building plans—they could be put into effect only by exploiting Soviet economic potential.⁹ The use of 8,400 machine-tools freed by the rupture of economic relations with Russia brought little relief.¹⁰ Since Soviet raw materials and factories were not available at first, there was no prospect of getting the new programmes under way immediately, given the stagnation of German munitions production.

As a transitional solution, Hitler therefore ordered that the army share of total armaments should be further reduced. The capacity this released was to be concentrated on the production of tanks, submarines, and aircraft.¹¹ Once again the Chief of Army Armament Programmes was forced to reckon with the lowest conceivable production quota in his sphere.¹² He concluded that the resources saved would not be sufficient to allow the army to fulfil its new tasks. These involved an increase in the production of tanks, anti-aircraft guns, and anti-tank guns, and the establishment of a motorized expeditionary corps for operations after Barbarossa. In these circumstances, contributions from the army to support the expanded Luftwaffe programme could not be justified.¹³

For the time being, the Luftwaffe was forced to restrict itself to restoring its existing formations to full strength. In fact, a significant extension of capacity, and the employment of at least 200,000 extra workers, proved to be necessary even for this purpose. Clearly, appeals from the War Economy and Armaments Department for strict concentration on the most urgent tasks throughout the Wehrmacht¹⁴ would not be sufficient to solve the armaments problem.

⁸ See discussion with State Secretary Milch on 26 June 1941, in *KTb OKW* I. 1016-18 (60).

¹⁴ OKW/WiRüAmStab/Rü (IIa) No. 2438/41 g.Kdos., letter on reorientation of armaments, 21 July 1941, BA-MA Wi/I A. 84.

For example, in a conversation with General Thomas, Major-General Adolf von Schell, General Plenipotentiary for Motor Transport, indicated that the new tank programme required large numbers of other motor-vehicles which could not be provided solely by restructuring the army.¹⁵ Staff at Führer headquarters were obsessed with armoured cars, overlooking the numerous motor-vehicles that were essential to their support.

The Tank Committee, which was dominated by manufacturers, understandably welcomed Hitler's directive. It proposed to create a capacity of 900 armoured cars per month, i.e. more than double the current level.¹⁶ Todt himself retracted this unrealistic projection shortly afterwards, and accepted that an increase to 650 armoured cars per month would be satisfactory¹⁷ (production in June 1941 was 312). This kind of juggling with unrealistic figures and exaggerated expectations had been a damaging factor in the German armaments economy ever since the 1930s. Yet again the result was an organizational muddle, as even Todt was incapable of co-ordinating the mutually exclusive wishes and demands of the various branches of the Wehrmacht. Nevertheless, despite the opposition of Keitel, he reported to Hitler that things were functioning 'magnificently', and Hitler contented himself with the assertion that everything would be all right 'with more good will'.¹⁸ In fact, the time when such problems could be solved by 'good will' alone was long past.

In this situation, leading German economic circles tightened their influence on war-aims planning and on the imminent distribution of the Soviet 'booty'. At a meeting of the Trade Committee of the Reich Chamber of Industry on 17 July 1941, the main issue was outlined by Hermann J. Abs, board member of the German Bank. Abs claimed that the

economy of Russia . . . will in considerable parts at least, be added to a future continental European economic sphere. In the current state of development it is not possible to estimate what increase will accrue to this area in productive strength and in consumer strength. In any case, it will be further consolidated, also from the point of view of being self-sufficient in important goods.¹⁹

Future prospects for expansion in the Russian territories were discussed in detail during an exchange of information with the state economic agencies.²⁰

²⁰ Alongside numerous surveys for the military departments (BA-MA RW 19, appendix I), mention should be made of Gutachten des Instituts für Konjunkturforschung, 'Raw material balance of continental Europe with the inclusion of European Russia and North Africa', BA R 3/ vorl. 1942. On the following see also Müller, 'Rolle der Industrie', and for the documentation Müller, 'Interessenpolitik'.

Interest was expressed in securing supplies of industrial raw materials, and in the continued operation of raw-material manufacturing industries, especially the extraction of coal and iron ore in the Donets region, of strategically important manganese ore in Nikopol, of Caucasian oil, and of significant phosphorus supplies on the Kola peninsula. For this to be achieved, Soviet power-stations had to be reopened and the transport network extended. In contrast, the industrial area of the Urals was regarded as unprofitable because of the unfavourable transport situation, and was virtually written off.²¹ Detailed 'share-out plans' were also discussed.²² Most vocal in this process was the industry of Upper Silesia, which laid claim to the 'eastern territories' as its domain with the same exclusiveness as had been demonstrated by the industry of Rhineland-Westphalia in western Europe.²³ The Reichswerke-Konzern thus made an immediate claim for the coal supplies of the Ukraine, first to preempt claims by Ruhr businesses dating back to the First World War, and second to seize the opportunity to extend the central and east European business empire to Russia, under the patronage of Göring.²⁴ For other industrial groups, this onslaught was an important aspect in restraining their own ambitions and in leading them to urge that the Russian 'spoils' should not be distributed until after the end of the war.²⁵ Overall, German heavy industry welcomed the extension of German steel capacity by the imminent conquest of Soviet foundries.²⁶ It had no serious reservations about taking over the installations, as the Soviet combines were largely self-supporting.²⁷ In the 'view of leading circles in the metallurgical industry', an 'improvement in work discipline' was the main requirement for a future increase in productivity from the Soviet blast furnaces.²⁸

The light metal industry was of absolutely vital importance for armaments production. Developments here were typical of the way in which economic interests could sometimes conflict. Shortly after the German attack on the USSR began, interested companies had approached the ministry of economic affairs in order to obtain an agreement on the sharing out of Soviet

²¹ See report from liaison officer War Economy and Armaments Department/Reich minister of economic affairs on Russia, 2 July 1941, BA-MA RW 45/15.

²⁸ See 'Die dringlichsten Aufgaben'.

firms.²⁹ However, this was opposed by the ministry of aviation, which considered that the installations could not be rebuilt until working and transport conditions, and the availability of raw materials, had been clarified.³⁰ The companies therefore concentrated their interest on the extraction of raw materials. Intense competition between them prevented the creation of a joint monopoly company,³¹ of the kind founded in other branches of industry. The influential IG-Farben company thus chose to act on its own, and applied to take over factories making semi-finished goods with the aim of cannibalizing Soviet establishments rather than restarting them.³²

However, the main interest of IG-Farben concerned the acquisition of the Soviet buna companies,³³ which were potentially very profitable in view of the bottlenecks in the German supply situation. An agreement was quickly reached with the ministry of economic affairs on the creation of the Russka Company Ltd. (Russka-Betrieb GmbH) to take over the Soviet installations.³⁴ However, deep differences with the ministerial bureaucracy came to the surface during the drafting of the company contract.³⁵ On the grounds that IG methods and patents would have to be applied to operate the firms, the company demanded a right of first refusal or appropriate compensation. This was refused by the ministry of economic affairs: the buna development had been subsidized before the war with considerable public funds, and the company's claims for compensation were therefore regarded as unsubstantiated. The decision led the company board to suspect that the Soviet buna firms might be intended for the German Labour Front, creating a state firm which might endanger the monopoly position enjoyed by IG-Farben.³⁶ However, its anxiety soon proved to be unfounded.

Such friction apart, close co-operation also rapidly developed between the state apparatus and the private economy in the chemical sector.³⁷ The critical petroleum problem had already been settled with the founding of the Continental Oil Corporation (Kontinentale Öl AG) in the spring of 1941. On 8 July

³⁴ See Circular No. 2 of 14 July 1941, doc. NI-6737, printed *ibid.* 261-2.

³⁵ On the following see the account in the letter from August von Knieriem, board member of IG-Farben, to the Reich minister of economic affairs on the subject of the Synthesekautschuk-Ost GmbH, 17 Dec. 1941, doc. NI-6735, printed *ibid.* 274 ff.

³⁶ The conflict came to a head in the middle of 1942, when the Reich authorities demanded financial compensation from IG-Farben for the exploitation of looted Soviet patents: doc. NI-6735, printed *ibid.* 274 ff.

³⁷ On this subject in general see Gibbons, 'Soviet Industry', 199 ff.; Czollek, 'Estrnische Phosphate'; Quiltzsch, 'Zur verbrecherischen Rolle', 157 ff.

Funk, the minister of economic affairs, invited the leading figures of the chemical industry to Berlin to discuss future action in Russia.³⁸ Funk assumed that the establishment and operation of a certain number of chemical firms in Russia was necessary, both for the supply of the occupied territories and to relieve pressures on the economy within Germany. His main concern here was the manufacture of medicines, fertilizers, and detergents. These would certainly be needed in the future German colonies in the east, and it would be more practical for firms in the east to supply them. It was decided to establish a consortium of eight companies under the leadership of IG-Farben, to reach agreement on the creation of a semi-nationalized Chemical East Company Ltd. (Chemie-Ost GmbH). It soon became apparent that IG-Farben was anxious to limit state influence and prevent the creation of binding business principles.³⁹ This, it was hoped, would protect the company against possible risks and losses which might result from the uncertain political conditions in the east.

Family firms, for example the textile sector, demonstrated rather less restraint than most other branches of industry. Thanks to his position as general representative for special duties within the ministry of economic affairs, its representative, the entrepreneur Hans Kehrl, was able to suppress plans for the foundation of a semi-nationalized monopoly company for textiles.⁴⁰ Instead, with the Ostfaser Company Ltd. (Ostfaser GmbH) he created an undertaking organized and directed exclusively by private industry. During the war years Kehrl built this company into the biggest textile concern in Europe, with around 300 Soviet factories. He worked closely with the German Bank, which had offered to act as investor. The bank, which had traditional business interests in Russia, attached great importance to 'taking a leading part in the new possibilities that offer themselves'. As the textile industry expected a turnover of several hundred million marks, the business 'would be a very comfortable one' for the bank.⁴¹

Kehrl got his way despite the opposition of State Secretary Backe, who refused to support him over the cultivation of flax and cotton in the east.

³⁸ See letter from Reich minister of economic affairs, 30 July 1941, printed in *Trials*, viii, 259-60. On the results of the various discussions see the report by Ilgner on 7 July 1941, doc. NI-1334, and the minutes of the 26th board meeting of IG-Farben on 10 July 1941, doc. NI-8077, both printed *ibid.* 262-3.

³⁹ On this subject see the memorandum of the legal department of IG-Farben, 23 July 1941, doc. NI-4962, *ibid.* 266 ff., and a corresponding letter from board member Georg von Schnitzler to the head of Economic Group Chemical Industry on 8 Aug. 1941, doc. NI-4961, *ibid.* 268-9. On 1 Nov. 1941 the Chemistry East Company was finally established. IG-Farben participated with an investment of RM1,000; see doc. NI-4964, printed *ibid.* 272-3.

⁴⁰ See the account in Kehrl, *Krisenmanager*, 222 ff., and specifically on the Baltic area Czollek, *Faschismus und Okkupation*, 137 ff.

⁴¹ Memorandum by Gerhard Elkmann, deputy director of Deutsche Bank, of a discussion with the head of Economic Group Textile Industry, Hans Croon, on 9 July 1941, printed in *Anatomie des Krieges*, No. 169. On the foundation of Ostfaser GmbH, see also the position of the board member of Deutsche Bank, Karl Kimmich, on 19 Aug. 1941, also *ibid.*, No. 175. On the role of Deutsche Bank overall see Radandt, 'Beziehungen', 9 ff.

Backe explained that he was much too preoccupied with the problem of food supply, and needed every acre of Russian soil within reach of transport. However, he also promised not to obstruct Kehrl if he chose to act on his own.⁴² General Thomas, who had ordered that the textile-processing factories in the east should be neglected for the moment because of the needs of the armaments economy, responded in similar fashion. However, as German factories were only employed to 50 per cent of capacity, their owners were much more interested in finding favourable sources of raw materials and sales outlets than in obtaining additional processing capacity. When the textile industry explained that German cotton supplies would be exhausted the next winter, and that the situation would become 'very serious' without the implementation of detailed textile-manufacturing plans in Russia, Thomas promised his support.⁴³

Overall, in its commitment to the east the main interest of the German private economy was in obtaining the use of Soviet raw materials. The desire of individual firms for expansion in the east took second place to a general endeavour to clarify the important issue of future ownership rights. The day after the German attack began, Göring attempted to accommodate these interests. During a discussion with leading representatives of industry, he announced his intention to reprivatize all state holdings in industry after the end of the war.⁴⁴ In the period that followed, the political leadership made it clear that the most efficient economy could be expected 'only on the proven foundation of (state-guided) private enterprise'. The collective economy in the east would be maintained only as long as was absolutely necessary 'to avoid disruption which could result from the sudden switch of economic systems', and which might damage the provision of supplies to the Wehrmacht or the development of the economy for German purposes.⁴⁵

The Continental Oil Corporation offered a model for co-operation between the state and the private sector. This semi-nationalized company was to be established on a permanent basis, taking immediate and 'final' control of the Soviet petroleum economy. Similar solutions were envisaged for other raw materials, the 'permanent transfer of which to German hands [was] in the interests of the German economy as a whole'; the plan was to 'transfer the factories in question immediately into the possession of the German undertakings which would operate them in the long term'.⁴⁶ Generally, however, a

NI-5262, printed in *Anatomie des Krieger*, No. 174), to the effect that Göring and Hitler were in agreement on the issue of reprivatization.

⁴⁶ Göring order of 27 July 1941, BA-MA RW 31/11.

transitional solution was chosen with the establishment of 'eastern companies' under the leadership of the ministry of economic affairs.⁴⁷ With effective participation from interested economic circles, these companies were to operate various sectors of the Soviet national economy as monopolies, and prepare the way for later privatization. This system offered the state apparatus sufficient opportunity to direct the companies according to the needs of the war economy, to skim off economic profits for the purpose of financing the war, and to avoid a 'great race by German industry for Russian plants'.⁴⁸ There was a price to be paid in the form of the further proliferation of the Economic Organization East. For the private sector itself, this settlement offered more advantages than an immediate transfer of ownership.

Through the use of trustees and temporary factory managers, firms were able to establish themselves in occupied Soviet territory without risks.⁴⁹ This procedure also secured them a legal claim for—though not a guarantee of—a subsequent transfer of ownership.⁵⁰ An acquisition would be carried out later only 'if the final shape of the political, legal, and economic conditions in the occupied Russian territory were taken into account' and if the German Reich intended to dispose of the factories.⁵¹ Competition for the intended trustee posts was so fierce that the task of sorting out the applications monopolized the attention of the new section for the economic reorganization of the eastern territories within the ministry of economic affairs.⁵² The applicants used every opportunity to exploit the chaos over authority in trusteeships for their own benefit, and to play off the various state offices against each other.⁵³

The Economic Staff East operated at the junction of state and private-sector interests in the exploitation of the Soviet 'spoils'. Two days before the German attack on the Soviet Union, Göring's state secretary, Körner, had defined its main task as obtaining the greatest possible amount of vital goods from the

⁴⁷ See WiStabOst/Chefgruppe W/Allg. W/Gr. 1, No. 55256/42, survey of the tasks of the eastern companies, printed in Brown Folder, part A, Apr. 1942, appendix 9, BA-MA RW 31/134. eastern territories which were occupied.⁵⁴ First and foremost, this meant petroleum and foodstuffs to supply the areas under German control.

In its attempt to accomplish this objective, the policy of the Economic Staff East was greatly affected both by the shortages facing the German war economy, and by the dominance of representatives of the civilian economic bureaucracy and the private sector in the organization. From the outset, the organization was always more concerned with economic 'reconstruction', and the cannibalization of existing installations for delivery to the Reich, than with providing direct military support for the army in the east.⁵⁵ Military influence on the creation of guidelines for action also declined steadily. After the distribution of the 'Green File', the War Economy and Armaments Department was immediately forced to begin work on a revised edition following numerous protests from civilian departments.⁵⁶ The strongest opposition came from Rosenberg's office. In response to the 'Green File', this office drafted different guidelines based on the following principle: 'The war against the Soviet Union is a political campaign, not an economic raid. The conquered territory as a whole must not be regarded as an object to be exploited, even though German food supply and the war economy must lay claim to larger areas.'⁵⁷

OKW initially paid little attention to these differences. Like the ministry of economic affairs and the Four-year Plan authority, its members assumed that Rosenberg and his staff would not take over the administration of the occupied eastern territories until later in the war, and would not have any influence over economic policy. Proposals were thus made for a uniform network of economic agencies in the east, based on five economic inspectorates which would operate according to the directives of the Berlin Operations Staff. Since the authorities of the civilian administration would have to spend considerable time preparing for their practical work, the Economic Staff East also at first believed that its own political activities would be able to fill the vacuum. Its plan was therefore to extend the system of military administration by means of a 'dense network of commandants' offices (Kommandanturen) with economic advisers', and operate them for a considerable period against Hitler's express instructions. It also intended to create a 'halfway loyal' native leadership élite to support this structure.⁵⁸ An appropriate directive from Göring to the com-

mander-in-chief of the army was expected to that end.⁵⁹ However, in a discussion between General Thomas and the quartermaster-general on 8 July 1941, it transpired that the army leadership had no particular interest in an alliance of this kind with the economic agencies. Wagner was more concerned to release the rear areas from his responsibility as soon as possible, despite the fact that Rosenberg was nowhere near completing his own preparations.⁶⁰ When Thomas suggested that they should jointly advocate that Rosenberg's proposed administrative personnel should be attached either to the army or to the Economic Staff East, Wagner was prepared to co-operate, but he left it to Thomas to contact Göring on the subject.

On 16 July the Economic Staff East brought the political issue to the fore. Its second report underlined the 'need for a larger number of district commander's offices with security and administrative tasks . . . The waves of German agricultural leaders now pouring in are the backbone of the future, but will only obtain higher crop and livestock yields if they are given rapid backing from these district commander's offices.'⁶¹ On that day, however, Hitler reiterated his wish for the rapid installation of Rosenberg, and the restriction of the military administration in the rear. Though confirming Göring's autonomy in economic matters, Hitler left it to his vassals to agree among themselves over the demarcation of authority.⁶²

Rosenberg did not dare challenge Göring's position. He therefore abandoned the idea of establishing his own economic apparatus, and agreed that the local economic commands should be turned into armaments commands subordinate to OKW when territories were transferred to civilian administration. The various Agriculture, Labour, and Economy Groups would then move step by step into civilian service, and be taken over by the Reich Commissioners as the economic administration.⁶³

These groups continued to receive their specialist directives via the Economic Operations Staff East. The departments of agriculture and of trade and industry in the Economic Staff East were also taken over by the Ministry for the East through personal union (the officials belonging to both bodies), thereby maintaining the unity of economic leadership in principle at least. In reality, however, the complicated regulations on the chain of command opened the way for the administrative chaos in the east which was greatly regretted later. Military responsibility was restricted to the area of operations

from now on. The armaments inspectorates in the Reich Commissions could protect solely the armaments requirements of the Wehrmacht against the civilian economic agencies.⁶⁴

On 17 July 1941 General Thomas met Göring to discuss administrative questions. By that time, the decision against a purely military solution—even for a specific transitional 'period'—had already been taken.⁶⁵ For the time being, the chance for close co-operation between the economic organization and the machinery of the quartermaster-general, and for a unified direction and management of the economy to provide material support for the army in the east, had been lost.

Despite the official demarcation-lines *vis-à-vis* the civilian administration, the Economic Staff East remained mainly concerned with the 'rear', i.e. with the delivery of supplies to Germany and the preparation of the economic 'new order'. As long as the army in the east was operating near to the border and could make use of the relatively well-stocked supplies of the Reich, support for the troops was not necessarily compromised. However, the army's rapid advance into the Russian interior brought an increased need for material assistance, which was to be provided by Economic Staff East in line with the division of tasks between the Army High Command and OKW. The unsatisfactory fulfilment of this task, and the increasing recognition at the end of July 1941 that a rapid victory in the east was no longer possible, led to a serious crisis in both the operational and the economic leadership.

Alongside the issues of food supply and the labour force, the supply of fuel had become a serious problem for the army in the east, and indeed for the entire German war economy. While fuel consumption on the eastern front increased steadily, the amount of fuel seized as booty was declining; at the same time, Berlin expected to import at least 400,000t. of mineral oil per month from Russia, beginning in October 1941, in order to meet the most urgent needs of the German war economy. Barely any reference was made to the enormous quantities required for the expanded aircraft programme.⁶⁶ In any case, on 16 July General Thomas had told Göring that the Caucasian mineral oilfields must be seized as quickly as possible.⁶⁷

In the last three months of 1941, during preparations for a detailed memorandum from the War Economy and Armaments Department on the fuel situation, it was finally decided that consumption in the areas under German control could not be cut back any further. No increases in productivity could be expected in the conquered oilfield at Drogobych, which had given Ger-

many control of 1 per cent of Soviet capacity, nor during the development of the Estonian shale-oil deposits. Under these circumstances, it was difficult to see how the needs of Russian agriculture, and of the winter building programme in the east, could be met.⁶⁸ In his aviation-fuel programme Krauch again called on OKW to demand annual imports of 9m. t. of petroleum from Russia, and the development of a new oilfield between Kiev and Kharkov.⁶⁹ However, Thomas preferred to base his plans on realistic foundations, and to prepare for the least favourable situation, i.e. for coping without major deliveries from Russia in 1941; this would eventually require further restrictions on German consumption.⁷⁰

In its latest situation report, the Economic Staff East concluded that the raw materials already obtained in conquered Russian territory would not significantly improve the German supply situation.⁷¹ It was still expected that the front would gradually advance from the mainly agrarian areas to 'get a grip on the industrial centres'. Nevertheless, the first signs of a failure of the economic strategy, which had aimed at a smooth 'take-over' of the Soviet economy, could not be overlooked. In particular, the increasing level of destruction and evacuation carried out by the Soviet side was taking its toll.

The leadership in Berlin was fully aware of the consequences of this development, which threatened to intensify as the war in the east was prolonged. During a discussion on 29 July 1941, the under-secretary of state, Lieutenant-General von Hanneken, told Thomas that he would have to curb the coal consumption of German industry by 40 per cent.⁷² The 'time had been reached when the Führer himself must decide what is to happen in the raw-material sector in the winter'. Yet no one was prepared to bring 'the matter to the Führer for a decision finally'. Thomas and Hanneken both regarded the fuel supply as the biggest bottleneck. They agreed that, where supplies were running out, they must create a united front of all the economic agencies, allowing the Reich Marshal to give the Führer a clear picture of the situation and press for the most rapid possible conquest of the Caucasus.

Next day, it became apparent that the munitions companies were already drawing the appropriate conclusions from the confused situation. Ewald Loeser, a director of Krupp, asked General Thomas to release those members of the company's workforce who had been made available for service in Russia but had not yet been deployed.⁷³ In view of the constant decline in productivity

in German factories, the enormous demands on manpower for the reconstruction of the Soviet works could not be justified. It was more sensible to maintain the factories in the Reich at their current level of production, rather than keeping valuable workers ready for work in the Soviet installations.

A series of high-level meetings on the issue was held in Berlin on 31 July. These aimed to draw up an interim balance sheet, and to set the course for the imminent second phase of operations—the struggle for the vital economic centres in the European part of the Soviet Union. The problem of food supply came to the fore during a meeting of the Economic Operations Staff East under State Secretary Körner.⁷⁴ Like the subsequent discussions involving inspectors in the military Economic Staff East, this concluded that absolute priority must now be given to providing material support for the army in the east.⁷⁵ Previously, more attention had been devoted to economic considerations, on the assumption that military operations would be completed more swiftly. The report maintained: 'Now it is more correct not to be unnecessarily concerned with economic measures. The main duty of the organization is to solve short-term tasks.' Göring was only interested in oil and grain, while Rosenberg wanted to work according to the 'long view'. It was therefore better for the organization to show restraint in political measures; it should concentrate on supplying the troops, and only then on delivering material to the Reich. As regards the methods to be employed, the Russians were a 'stubborn pack and difficult to get to work'. More pressure would therefore have to be exerted on the population, with the economic organization being involved everywhere 'where there is something. All other areas must remain unworked. We cannot administer the whole country. The intelligentsia has been killed, the commissars are gone. Large areas will have to be left to themselves (to starve).'

In this context, General Thomas ordered that only industry in the Baltic was to be put back into operation for the time being. Industrial activity solely to assist employment policy would not be considered, since the workers could not be fed. It was essential to concentrate on factories which were important to the war effort, and leave everything else 'to go to the dogs'.

Apart from organizational changes to eliminate failings in the Economic Organization East, the leading economic agencies thus intended to maintain their previous course. The economic exploitation of the occupied Soviet territories was to be made more efficient mainly in order to help supply the troops. It was to be achieved not by making concessions or showing concern for the population, but by intensifying the policies of force and hunger which condemned countless civilians and prisoners of war to death. Behind it lay the belief that the economically vital regions in the European part of the Soviet

Union—the Caucasus (oil) and the lower Volga (grain)—would soon be in German hands. To supply the army in the east with the materials necessary to achieve this objective, while at the same time sending supplies of food to Germany, the economic leadership would stop at nothing. Only time would tell whether this determination would be sufficient to close the widening gap between the demands of the war in the east and the resources available to wage it.

2. FIRST MODIFICATIONS

The economic and armaments policy of the Third Reich had been based on the assumption of rapid military victory in the east. When the failure of the campaign plan became perceptible from July 1941, leading to the unexpected extension of the German-Soviet war, economic and armaments policy had to be adapted to the changed conditions. This process of adjustment, however, was sluggish and inconsistent. The political and military élites delayed making moves towards fundamental reorganization because they still hoped to achieve military victory over the following weeks. As a sense of reality was lost, refuge was taken in the art of improvisation. However, Hitler had begun to recognize that the war would probably last into 1942; he took this as additional support for his view that the capture of 'vital sources of raw materials' was more important than the achievement of operational advantages.⁷⁶ Hitler told his adjutant that he could not sleep at night,

as he was still not clear about many things. In his bosom two souls were struggling, the political-ideological and the economic. Politically he would say that the main abscesses must be removed: Leningrad and Moscow . . . Economically there were quite different objectives. Though Moscow was also a big industrial centre, the south was even more important, with oil, grain, absolutely everything that was necessary to secure living-space. A land flowing with milk and honey.⁷⁷

Though this issue remained a matter of dispute between Hitler and the army leadership, some recognition of the logical consequences of unfavourable military developments could not be further delayed. Measures to reorganize and re-equip the army, originally planned for the autumn of 1941, had to be put off for the foreseeable future.⁷⁸ However, this step was not accompanied by any abandonment of wildly unrealistic armaments plans.⁷⁹ During discussions between the responsible OKW departments in the middle of August, the Chief of Army Armament Programmes warned in vain of the need to emerge from 'cloud-cuckoo-land' and adjust military requirements to meet

⁷⁶ See Hitler's study on the continuation of the war in the east, 22 Aug. 1941, *KTB OKW* i. 1063 ff. (100).

the resources actually available.⁸⁰ Though the principle that existing plans must be scaled down to a feasible level was accepted, this did not produce any adjustment of armament production to help the army. Air-force armament remained the priority.⁸¹ Past omissions had prevented the prompt deployment of a new wave of men and materials at the start of the second phase of the Russian campaign; now, the modification of strategic and armaments plans in July–August 1941 was unlikely to lead to a significant stepping up of the war effort.

As before, the biggest obstruction to armaments production was the manpower shortage.⁸² Initially, it had been expected that rapid victory in the east would be followed by the release of around one million workers from the armed forces. These hopes, however, had been dashed. Some 1.5 million extra workers were required, a need which could not be fully met by the deployment of 500,000 French prisoners of war. One possible solution was to draw on the untapped reservoir of Soviet prisoners of war. However, there were political objections to this step.⁸³ In vain did the economic agencies argue that French prisoners of war, due to be transferred from agriculture to the armaments industry, should be replaced by Russians.⁸⁴

The German coal-mining industry also demanded extra workers to meet the rapid increase in demands upon it. In September alone, for example, the industry was expected to supply 320,000 t. of locomotive coal to the east for operational purposes.⁸⁵ Since it was not practicable to release miners from the army in the current circumstances, the chairman of the Reich Coal Association, Paul Pleiger, eventually demanded the use of Soviet prisoners of war.⁸⁶ He also wanted to recruit Ukrainian miners for the Ruhr coalmines to replace Italian workers who had run off after the air raids. Himmler, in particular, objected to these measures on political grounds.⁸⁷ Only after the economic agencies had created a united front to support Pleiger did Hitler change his own mind; in October 1941 he gave permission for the employment of 10,000

⁸⁷ Talk between armaments chief and departmental head, 30 Sept. 1941, *ibid.* 254.

Ukrainian miners in the Reich.⁸⁸ Once this political and ideological taboo had been broken, Hitler also accepted that Soviet prisoners of war could be used. Yet no systematic solution to the manpower problem was found. With the exception of those men already in labour squads under the control of the quartermaster-general, most Russian prisoners of war were no longer fit for work because of the appalling living conditions in the camps. Their number was being decimated by hunger and epidemics.

Attempts to solve the raw-material problem were equally inconsistent. At the discussion of 16 August 1941 with the branches of the armed forces it was already apparent that the desired figures for armaments production would be completely out of reach without the capture of those parts of European Russia that were rich in raw materials. Hitler therefore decided to switch the main thrust of operations to the south, in order to obtain 'the high-grade iron-ore deposits and the large blast furnaces' by occupying Krivoy Rog.⁸⁹ This, of course, meant accepting the demands of the Thomas memorandum of February, which had been underpinned by the alarming decline in German iron and steel production. However, in his memorandum Thomas had predicted that the capture of the raw-material area would ease the situation only if the Germans managed to prevent large-scale destruction by Soviet forces, to solve the transport question, and to conquer the Caucasus in 1941.⁹⁰ Even in August 1941 it was obvious that these conditions could not be met.

In view of the destruction in Krivoy Rog, which made a resumption of iron-ore mining and the reopening of the smelting works impossible for some time to come, the Economic Staff East decided that it was more sensible to concentrate available workers, machines, and experts on the manganese-ore operations in Nikopol, which were vital for German steel manufacture.⁹¹ Without the reconstruction and exploitation of the Ukrainian iron-smelting industry, it was virtually impossible to increase iron and steel production in German-dominated areas sufficiently to fulfil the gigantic armaments plans, and to keep pace with the war production of the enemy powers. Such plans would have to be abandoned for the time being, quite apart from the fact that the majority of German iron and steel industrialists were not inclined to help in such a task.

Despite these developments, on 26 August 1941 the Reich foreign minister issued a circular celebrating German victory in the east, and declaring that Germany would no longer face difficulties over food supplies and raw materials.⁹² This claim was utterly unrealistic. On the contrary, OKW was forced to take far-reaching measures to obtain control even of the raw materials in the occupied territories, so that they could be exploited for the German war

economy as quickly as possible. In addition to the existing posts within the military and civilian economic agencies, Göring appointed Lieutenant-General Walter Witting as 'Inspector General for Registration and Utilization of Raw Materials in the Occupied Eastern Territories'.⁹³ Witting had a consultant's agreement with the Flick company, and on 22 August 1941 had written to its managing director Richard Bruh to tell him that he wanted to go as far east 'as our troops can manage, eventually by plane to Vladivostok and Turkestan, and [I] look forward with interest to receiving word of your wishes'.⁹⁴

The raw-material question could not be solved by administrative measures alone. This was especially true of the supply of oil, the great long-term problem of the German war effort. Finding a solution to this problem was undoubtedly of vital importance for the operational and economic leadership alike, in the occupied eastern territories and in the whole area under German control. Despite temporary stopgaps, the chances of solving the problem ultimately depended on whether and when the armed forces managed to capture the oilfields of the Caucasus. This issue became even more important once it was clear that the war would not end quickly, and that fuel consumption by the army in the east could not be reduced. The reaction of the military élite was inconsistent. While Army High Command remained obsessed with Moscow, and therefore regarded the prospects for an operation against the Caucasus with scepticism, the Wehrmacht operations staff was more optimistic.⁹⁵ OKW drew up a new balance sheet relating to the need for mineral oil in the changed conditions; this starkly revealed the difficulties Germany would face until spring 1942 owing to inadequate oil supplies.⁹⁶ An overall balance was achieved, but only by severe curbs on consumption, especially in the civilian sphere. As a result, there would also be an acute danger of delays in production in the armaments factories, as well as other undesirable political, military, and economic repercussions. Only on these terms could the needs of the army in the east be secured until the end of 1941. It remained an open question what would happen thereafter, unless—against all expectations—consumption on the eastern front was drastically reduced.

In the context of the material conduct of the war, Hitler's decision to wage the battle for Kiev was thus a logical step, being designed to open the way to

⁹³ RK 13402 B: Reich Marshal of the Greater German Reich, Representative for Four-year Plan, Economic Operations Staff East, VP 11083/1, order of 6 Sept. 1941, BA R43/II 609.

⁹⁴ See Besymenski, *Generale ohne Maske*, 285–6. Through his earlier post as chief of the Central Raw Material Agency in the Reich air ministry, and then as War Economy Inspector IV (Dresden), Witting was predestined for his new role. His post was abolished by Göring ten months later, after the raw-materials economy had passed into the hands of the civilian administration; see Reich Marshal of the Greater German Reich, Plenipotentiary for the Four-year Plan, VP 10673/114/6/2, 14 July 1942, BA R 43/II 609.

⁹⁵ Report by raw-materials chief to departmental head, 5 Aug. 1941, KTB WiRüAmt/Stab 1941, 185, BA-MA RW 19/165; also Halder, *Diaries*, 1158–61 (7 Aug. 1941).

⁹⁶ WiRüAmt Az. 11 k 2209 (Ro Vs) No. 2873/41 g.Kdos., mineral-oil supply situation in second half of 1941 and first quarter of 1942, 26 Aug. 1941, BA-MA WiRüF 5.2695.

the Soviet Union's industrial bases and raw-material deposits. The successful prosecution of the operation, and the advance into the Dnieper-Donets industrial region, did bring Hitler closer to achieving his main economic objectives. The price, however, was high. The consumption of fuel and ammunition, and the losses in men and material, were considerable. They significantly weakened the substance of the army in the east, since new production in the Reich was totally unable to compensate for the losses sustained.⁹⁷ Despite the inevitable erosion of the fighting power of the army in the east, the battle of Kiev was a success for Hitler's plans. However, it did not bring about an end to the conflict; nor was the success exploited to the full to boost the German war economy and to sustain further operations. The most important reason for this was the fact that the Red Army did not collapse, as the Germans had hoped. Instead, it continued the struggle with undiminished ferocity, and its measures of evacuation, paralysis, and destruction made it exceptionally difficult for the occupiers to exploit the land. The civilian population also played its part. Though its initial reception of the German troops had been friendly, the longer the war lasted, the more the population adopted a policy of passive—and in individual cases even active—resistance.⁹⁸

Finally, the economic exploitation of military successes was also hampered by inefficiencies in economic management. The proliferation of high-level organizations, due to the multiplication of tasks and the increasing influence of civilian agencies, was only one cause of this process.⁹⁹ As before, the biggest problems arose over co-operation with Rosenberg's civilian administration. As a committee of the main economic functionaries, meeting only at irregular intervals, the Economic Operations Staff East could not provide the necessary central direction. Moreover, the civilian administration was not yet ready to take control; when Hitler established the Reich Commissariat Ukraine on 20 August 1941, it was still making its preparations.¹⁰⁰

At this stage, Rosenberg appeared to be most interested in his power-struggle with Himmler and Göring for the dominant role in the east. Above all, he was anxious to prevent further expansion by the SS. Since Himmler was also trying to carve out a role in economic policy, Rosenberg found an important ally in Göring.¹⁰¹ Yet agreement between them lasted only a short time; after they had successfully fended off Himmler's claims, rivalry and

disagreements between Göring and Rosenberg erupted again. Koch, the newly appointed Reich Commissioner for the Ukraine, was also trying to pursue an independent policy in carrying out his task of exploiting the region. His own strained relations with Rosenberg led him to turn first to the economic organization for support in building up an administrative apparatus in the Ukraine.¹⁰² After a short time, however, Koch's activity also began to have a detrimental effect on economic management,¹⁰³ as the new agencies of the civilian administration sought to create their own sources of income. Koch encouraged the existing monopoly companies to demand that goods which were vital to the war effort be handed over by the military economic agencies for sale in the Reich, at least partly to swell the coffers of the Reich Commissariat.¹⁰⁴ He made this attempt even though, four weeks previously, Göring had decreed that the armed forces were to have first option on captured machinery, semi-finished goods, and raw materials in order to meet the needs of the troops. Only goods produced afterwards could be sold to improve the financial position of the Reich Commissioners.¹⁰⁵ Göring confirmed this guideline in a formal decree, thereby assuring the Wehrmacht of the decisive influence, at least in the armaments sector, even in areas controlled by the civilian administration.¹⁰⁶ The struggle for authority was officially settled.

Nevertheless, in individual cases the Wehrmacht commanders, and armaments agencies in the Reich Commissariats, became embroiled in conflict with the civilian administration. This was particularly the case over the appointment of provisional administrators in firms important for armaments production, the allocation of Wehrmacht orders, and the requisitioning of goods for the war effort.¹⁰⁷ Hosts of officials and officers were kept busy settling these disputes. In the city of Riga, for example, Supply District North had set up a fuel depot and an ammunition dump in the Meza Park and had organized the laying of railway tracks.¹⁰⁸ After Riga was removed from the army's area of operations, the newly appointed Area Commissioner protested against what he saw as an 'unjustified interference in the affairs of the city', and

demanding the transfer of the installation. At precisely this time—the middle of October 1941—the supply of the army in the east was in crisis owing to the unsatisfactory transport situation; the Wehrmacht departments were already at full stretch. In such circumstances, the damage done by these conflicts is clear.

The civilian administration's preoccupation with peacetime conditions sometimes even led to coalitions with the army departments against the economic apparatus. Rosenberg's new guidelines for the civilian administration,¹⁰⁹ completed in September 1941, again made it clear that the ministry for the east was concerned primarily with creating a racial and political 'New Order' in the east, and that it intended to use economic policy to that end.¹¹⁰ The key issue involved the collective farms. Rosenberg wanted to press forward as quickly as possible with the reprivatization of agriculture, at least in the Baltic and the Ukraine, in order to win the co-operation of the native population. Here he was supported by some army offices, in the belief that such measures would help to pacify the hinterland.¹¹¹ The foreign ministry also advocated the immediate breaking up of the collective farms.¹¹²

However, the economic leadership maintained the view it had taken in the spring of that year, to the effect that hasty action would destroy any prospect of Germany gaining possession of the Russian harvest.¹¹³ Backe refused to accept responsibility for anything more than the existing propaganda efforts—transformation of the collective farms into so-called communal farms.¹¹⁴ For his part, Hitler avoided taking an unequivocal decision; after a discussion with Rosenberg, he advocated only a step-by-step and limited return of the collective farms to private ownership.¹¹⁵

The Economic Staff East pointed to Hitler's general directive to the effect that the Ukraine and the Caucasus were to be administered 'in a purely colonial manner', and that priority was to be given to exploiting them for the war effort.¹¹⁶ Political considerations could not be taken into account. As

regards economic efficiency, there were diametrically opposing views, as was revealed in a meeting of the agricultural leaders of the Economic Inspectorates on 20 October 1941.¹¹⁷ The Economic Inspectorate North opposed the proposal that the collective farming system should be at least partially dismantled. This was justified on the grounds of Hitler's decision to regard the Baltic as a German settlement area, which meant that no new property rights should be created for the native population. In contrast, the representative of Economic Inspectorate Centre claimed that the collective farming system could not be retained in his area if a further increase in damaging partisan activity were to be prevented. Agricultural production could only be maintained with the goodwill of the rural population. Finally, the Economic Inspectorate South argued that the collective system must be retained at all costs, since the area 'had to be ruled by force', and any relaxation might have unforeseen consequences. There should be an end to discussion; the policy should be carried out with full rigour.

As these discussions demonstrated, the economic leadership also faced a dilemma which increased inexorably as Germany's military position deteriorated. In such conditions, the original interplay between political-ideological and economic objectives could no longer function smoothly. On this occasion too, his preoccupation with the supply of the homeland and the troops led Backe to reject any alterations to the economic policy of exploitation.

However, this coalition between the civilian administration and the economic leadership was not successful, because the army leadership shrank from political conflicts. This attitude is demonstrated by a letter written by the quartermaster-general on 20 September, in which he announced his pleasure 'that this time we have nothing to do with any of the political business. In the west it worked, but here, where so many ideological questions play a part, I'm very glad.'¹¹⁸ It also explains the general eagerness of the commander-in-chief of the army to hand over the occupied territories to the Reich Commissioners as quickly as possible, despite the fact that Koch, for example, wanted to wait until spring before taking over because there was not much he could do in the coming winter anyway.¹¹⁹ And yet, despite these reservations, it remains true that in September 1941 the army began its efforts to bring about a modification of occupation policy. The objective was to pacify the hinterland by means of a more considerate treatment of the population, especially in economic matters.¹²⁰

¹¹⁷ WiStabOst, Chefgr. LA Ia No. 23443/41, report on the meeting of agricultural leaders on 20 Oct. 1941, BA-MA RW 31/42.

¹¹⁹ Discussion between Schlotterer and departmental head, 15 Oct. 1941, KTB WiRüAm/Stab 1941, BA-MA RW 19/165.

¹²⁰ Thus, for example, Army High Command and the Ministry for the East together attempted to persuade the Economic Operations Staff East to make consumer goods available for the population in the conquered eastern territories, since these people could not be won over with 'paper money'; see letter from both agencies in BA R 6/287.

An important precondition for this approach was a closer integration of the Economic Organization East into the army apparatus, and greater concentration on satisfying the needs of the troops. Earlier agreements about the deployment of the economic agencies as near the front as possible, and close co-operation with the rear army authorities,¹²¹ were not always observed because of the ponderous apparatus of the Economic Staff East. When the Economic Action Teams lagged behind, army agencies often had to take charge of the most urgent economic measures, such as bringing in the harvest. Most complaints about a lack of co-operation came from the sector covered by the Economic Inspectorate South, which was incapable of adjusting efficiently to the course of operations. According to the commander of Rear Army Area South, many specialists had little 'understanding for military matters'.¹²² General Thomas took note of this criticism. Once again he instructed the economic agencies to seek greater co-operation with the army offices, and to put aside all political considerations in favour of the vital tasks of the war.¹²³

The complaints did not stop, even though the quartermaster-general was ordered to rely more than before on the support of the economic agencies in implementing his new programme to create winter accommodation and equipment in the occupied eastern territories. There was no shortage of goodwill in the economic organization. However, it frequently lacked the ability to take an overall view, and the capacity to achieve its objectives. One specific example will serve to demonstrate the difficulties that arose. When Economic Inspectorate Centre ordered the subordinate economic commands, and specialists in the field commandant's offices and armies, to report details of possibilities for manufacturing consumer goods, building materials, and equipment for the winter accommodation programme, these failed to respond; they believed that their first duty was to help individual soldiers and local units rather than to supply the troops at the front.¹²⁴

Similar events occurred in the sector covered by the quartermaster-general, as was revealed by a complaint from Armaments Inspectorate Ostland at the beginning of October 1941. During the preparation of winter quarters and efforts to meet the direct requirements of the troops, 'individual troop contingents, from the army down to the smallest units, were inclined to meet requirements by circumventing the official channels, sending details here directly to the armaments departments or even placing them directly with industry'.¹²⁵ Under these circumstances, it was scarcely possible for the eco-

conomic agencies to obtain an overall view of capacity to complete Wehrmacht orders. Moreover, directly after the occupation of the country almost all important factories that were still in operation had been inundated with orders from Wehrmacht units, the Todt Organization, and other departments. Almost all of them would be working at full stretch for the foreseeable future.

The main problem was undoubtedly the independence of the economic organization; this hampered the co-ordination of policies. Thus, while Army Group South repeatedly demanded the deployment of German specialists to protect and reconstruct the industrial region of Krivoy Rog,¹²⁶ Economic Inspectorate South concentrated on starting manganese extraction at Nikopol, in accordance with instructions received from headquarters in Berlin.

General Thomas and the chief of Economic Staff East realized only gradually that it would have been preferable for the economic organization to be subordinate to the army from the outset.¹²⁷ Appropriate conclusions were drawn in November 1941: the economic inspectorates were attached to the army groups, and given the main task of securing supplies from the land for the troops.¹²⁸ Parallel to this, the quartermaster-general reorganized his field offices into Assistant Chief of Staff offices (*Oberquartiermeister-Stäbe*) with the army groups.¹²⁹ Now at last the army groups had control of their own economic apparatus, uniting responsibility both for the exploitation of the land and for the organization of supplies from Germany in the hands of the various senior commands.

The preparation of Operation Typhoon had revealed that these organizational changes were long overdue. After the battle of Kiev, Hitler had recognized that a further effort would be required to destroy the bulk of the Red Army before Moscow, enabling Germany to gain strategic supremacy in 1941 and favourable starting-positions for continued fighting in 1942. A study by the War Economy and Armaments Department, stressing the need to occupy the Moscow-Tula region in order to prevent the Russians from recovering during the winter, provided the basis for this decision.¹³⁰ The offensive was thus intended to bring the major fighting to an end, giving the army in the east the opportunity for rest and rehabilitation during the winter pause before finishing off the war in the following year.

However, the conditions for such a development were deteriorating rapidly. German armaments production was now unable to meet even the running requirements of the war. In these circumstances, it was inconceivable that the

armaments programme for the period after Barbarossa could be fulfilled.¹³¹ Though the effects of the growing, conscription-induced labour shortage were limited by internal reshuffles and the use of Soviet prisoners of war, the shortage of raw materials had become an insuperable obstacle to the implementation of the armaments project. Such manifest difficulties could not be eliminated by a reduction in the technical equipment of the armed forces, nor by other specific measures. New ammunition production, which had already been curbed, had to be dispatched directly to the front as replacement supplies, since stocks of ammunition had been exhausted. Owing to the shortage of labour and raw materials, prospects for increasing production were minimal. In the tank sector, despite rising production figures, new manufacture was insufficient to replace losses on the eastern front.

At the beginning of November 1941, after the offensive against Moscow had ground to a halt, Germany seemed in danger of losing the race against time. Hopes were pinned on a last, decisive battle to bring the 1941 campaign to such a triumphant conclusion that men could be released to increase war production during the winter pause. Whether the weakened and battered army in the east was remotely capable of such a victory would depend first and foremost on the efficiency of the supply leadership, which had the task of bringing to the front whatever supplies were obtained from the Reich or procured from the occupied territories.

3. THE SUPPLY OF THE ARMY IN THE EAST UNTIL THE FAILURE BEFORE MOSCOW

In the preparatory phase of operations, the quartermaster-general had made great efforts, and proposed numerous measures, to solve the problem of providing adequate supplies for the army in the east.¹³² The supply task which had to be mastered outstripped all historical precedents. Over 3 million men, with approximately 600,000 motor-vehicles and around the same number of horses, had to be supplied with rations, fuel, ammunition, replacement parts, and other requirements of war. All this had to be achieved along a front stretching over 2,500 kilometres from the North Cape to the Black Sea; within a few weeks, moreover, this front was due to reach operational objectives lying 1,500 kilometres from the starting-positions. The territorial, climatic, and geographical conditions were all very different from those previously encountered by German armies during the Second World War. Until the last mo-

¹³¹ See in detail in Reinhardt, *Moskau*, 102 ff.

I.iv.7 (g) at n. 73 (Klink); for the following see also the account by Creveld, *Supplying War*, 143-80; *Versorgungsführung* [Supply management], MGFA T-8-6, *Vorbereitungen und Grundlagen der Heeresversorgung* [Preparations and foundations of army supply], MGFA T-8-1; also OKH/GenStdH/Gen.Qu/Abt. VersFührung/Qu 2 No. 1/17591/42 geh., *Erfahrungen aus dem Ostfeldzug für die Versorgungsführung* [Experiences from the eastern campaign for supply management], 24 Mar. 1942, BA-MA H 10-51/2. On the significance of the railway system see Schüler, *Logistik*.

ment, the country which the Wehrmacht was setting out to conquer in a lightning campaign had been supplying the German war economy with indispensable strategic commodities, ranging from grain to oil. This flow inevitably dried up when the attack was launched. It was the task of the economic leadership to survive on the meagre stocks available until imports—now obtained through the economic exploitation of the country—could be resumed.

The role of the Army High Command was to calculate and obtain in advance the outlay that would be necessary to achieve the envisaged goals of conquest. Some of the factors involved were almost impossible to predict. These included the speed of the advance (on which depended the consumption of fuel), the intensity of enemy resistance (which determined expenditure of ammunition), and—most of all—the duration of the campaign. Army High Command was too ready to rely on optimistic assumptions: that the expenditure of ammunition would be no greater than during the campaign against France; that much of the army's food could be obtained from the land; and that the Red Army could be completely destroyed in front of the Dnieper-Dvina line.

Even if these assumptions were correct, difficulties remained which over-stretched the capacities of the Wehrmacht. For example, the problem of supplying tyres was almost impossible to solve because of the bottleneck in rubber supplies in Germany. From the outset, a high level of wastage had to be expected in the motorized columns, which had to negotiate the few and poor roads and the trackless terrain. Virtually no replacements were available. Armoured vehicles were also affected by the shortage because the development of a pure metal track was still not complete, and the rubber-padded tracks in use were not sufficiently durable.

Most serious of all was the fuel shortage. Although civilian and military consumption had been drastically reduced before the start of the campaign, and the motorization of the army was kept within extremely narrow limits, a reserve of three monthly consumption quotas was all that had been provided. Direct imports from Romania to the eastern front promised to provide some relief. On the other hand, captured stocks would be of little assistance, since Soviet fuels had a lower octane rating and could not be used in German engines without adaptation. The previous year there had been moves to assimilate German and Soviet fuel quality, but these had been thwarted by the breakdown of the negotiations involving IG-Farben in Moscow.¹³³ Overall, it had to be assumed that there would be a fuel shortage by July at the latest.

Another problem area was the enormous need for replacement parts by the army in the east. This was caused not only by the expected wear and tear on motor-vehicles, but also by the use of over 2,000 different types of vehicle¹³⁴ as a result of the use of captured material. More than a million different spare

¹³³ See sect. I.III at nn. 75–6.

¹³⁴ See Krumpelt, *Material*, 187.

parts were required in the area covered by Army Group Centre alone. Owing first to the multiplicity of types, and second to the inadequate production of replacement parts in Germany, it proved impossible to provide sufficient supplies to compensate for breakdowns and the poor state of many vehicles. The inevitable result was a steady decline in combat-readiness and levels of motorization.

In the ammunition sector, the Chief of Army Armament Programmes had initially demanded a reserve of twelve monthly consumption quotas, based on the highest levels of consumption during the French campaign. This could not be achieved because ammunition manufacture had to take second place to weapons production. Beyond the two to three basic issues, the army in the east had minimal reserves at its disposal.

Overall, the quartermaster-general had to assume that supplies from the Reich would be meagre. The ministry of food supply refused to provide rations, telling the Wehrmacht to live off the land. On the eve of the campaign, the manufacture of new weapons, equipment, and ammunition was restricted still further; the army's already small share of armaments was reduced in favour of the other services of the armed forces. Larger reserves of men and material were not available either in the training army or in other formations of the army in the field.

The problem of providing adequate supplies was overshadowed by the difficulty of transferring to the front such material as was available. Logistically, the sheer extent of the planned operations could be mastered only with the help of the railway system. The railway network in the Soviet Union, however, was inadequate. Apart from consisting of only a small number of lines, the Soviet network also used a wider gauge, which prevented a trouble-free takeover by the Germans.¹³⁵ It was no great technical problem to move the rails to the 8.9-cm. narrower German gauge, but this would still take more men and time than the Wehrmacht could afford if it hoped to prevent the Red Army from retreating into the vast Russian hinterland. Their intention to wage a lightning campaign forced the Germans to rely more than before on the use of motor-vehicle convoys, requiring increased costs (fuel, wear and tear, men) for smaller payloads. Some 1,600 lorries were needed to replace the capacity of a double-track stretch of railway.¹³⁶ Furthermore, there were not even enough motor-vehicles available to equip all the divisions of the army in the east with the planned motorized supply columns. Despite the use of large numbers of captured vehicles, 77 infantry divisions were equipped only with horse-drawn transport columns; each, in addition, received 200 wooden peasant carts.

By means of a systematic integration of motorized transport capacity, it proved possible to deploy 20,000 t. of haulage capacity with each army group.

¹³⁵ On this see Pottgießer, *Deutsche Reichsbahn*, 24 ff., and *Die Bedeutung der Eisenbahn* [The significance of the railway], MGFA T-8-27.

¹³⁶ Crevel, *Supplying War*, 143.

This consisted of heavy trailer lorries belonging to the Reich railway and civilian transport hauliers, which were called up with their drivers and amalgamated into three motor-vehicle regiments.¹³⁷ No further reserves were available. The plan was for this system to cover the first 500 kilometres in one fell swoop, and then to establish a new supply-base for the second phase with the help of the railway. The Wehrmacht had no choice but to adopt this combination of road and rail. At most, the lorries could bring in about 10,000t. of supplies per day to the front on their ever longer journeys, i.e. roughly 70t. for each division; the estimated requirement of the mobile divisions, however, was 300t. per day. In order to supply the armies over a distance of over 1,000 kilometres by motor convoys alone, transport capacity would have had to be increased tenfold. Germany lacked both the fuel and the vehicles to achieve this. A fully motorized supply-system would have been sensible for Operation Barbarossa, because of the intended rapidity of the operations and the problems of rail transport. During the Second World War, however, only the American army managed to achieve such a performance.

Army High Command attempted to find a new solution to cope with the two heterogeneous masses of the army in the east, one of which was advancing in front of the other. Its plan was to make the mobile assault troops independent of a supply-base in the first stages of the campaign, and to prevent the lorry convoys on their journey from the supply-depots to the most advanced units from becoming entangled with the marching infantry columns. This was to be achieved by equipping the motorized divisions with an extra 'suitcase' of supplies, consisting of 400–500t. of transport capacity, integrated with the fighting troops. After supplies were consumed or unloaded, the lorries were to be taken back behind the front. There they would join the large-volume haulage vehicles in creating a 'necklace' of supply-bases. Starting from each army group's supply district, which was sited close to the border and was already partly stocked, bases were to be established at intervals of 100–200 kilometres to supply the various armies. As soon as motorized convoy capacity became available and the railways were made usable, the Army Group Supply District was to be moved further into captured territory, and then supplied from the rear by rail alone.

To direct and supervise this new system, the quartermaster-general established a field agency directly subordinate to him with each army group.¹³⁸ Its task was to direct the staffs of the assistant chiefs of staff in the separate armies. These would remain independent of the troop commanders, and would be able to set up priorities in the management of supplies. To this end, the haulage facilities and a range of supply-depots, field hospitals, equipment stores, and workshops were integrated into the supply district, and placed under the control of the field agencies. The separation of the army groups

¹³⁷ Windisch, *Nachschubtruppe*, 37 ff.

¹³⁸ For details see Fährndrich, *Aufgaben und Arbeit der Außenstellen*, MGFA T-8-2.

from the management of supplies enabled the quartermaster-general to set his own priorities and, if necessary, to establish a balance between the different sectors of the front. Yet the danger remained that the control of operations and the management of supplies were not always synchronized. At the beginning of 1942 the field agencies were therefore reorganized into Army Group Assistant Chief of Staff offices (*Oberquartiermeisterstäbe der Heeresgruppen*).

Other errors of organization occurred elsewhere. For example, the quartermaster-general had control over supplies from Army High Command stockpiles, and over the depots and haulage vehicles, but he had no authority over the railways which were operating between them. These were under the control of the Chief of *Wehrmacht* Transport, Lieutenant-General Rudolf Gercke.¹³⁹ This OKW department gathered individual requests for supplies, and decided on the final allocation of trains. The army's quartermaster-general could therefore bring supplies to the railway, and fetch them from the unloading-point, but he had little control over what quantities arrived at the destination, or when. The interests and approaches of the Army High Command and OKW did not always coincide. Furthermore, Gercke used his own troops, badly equipped and ill-prepared for their tasks in Russia, on this railway service. OKW's Authorized Transport Officer with each army group had authority over the Commander of Railway Engineers, with appropriate construction teams and a Field Railway Command of 22,000 men for the operation and development of the tracks prepared by the engineers. Though each army normally required its own stretch of line to supply it, the railway troops were seldom able to re-lay and operate more than one main line per army group. In the most favourable circumstances, four companies of railway engineers managed to re-lay 20 kilometres in 24 hours.¹⁴⁰

In these conditions, it is surely very doubtful whether the ambitious operational objectives could have been achieved even if enemy resistance had collapsed rapidly, as the German leadership expected. In theory, the balance achieved between rail, wheel, and caterpillar track was the best that could be obtained. At the same time, however, there was no way of keeping the flow of supplies constant or distributing them evenly. As the Germans penetrated further eastwards, and formations sent increasing demands to the supply controllers, the supply of men and materials was bound to diminish. Difficulties were intensified because logistical issues had not been taken adequately into account during the planning and implementation of operations. Army High Command intended to achieve victory by means of rapid armoured spearheads—but not in the Ukrainian countryside, where conditions favoured tanks, nor with the support of fully motorized supplies—towards the vital

¹³⁹ Inf. Gen. from 1 Apr. 1942. On this subject in general see Rohde, *Wehrmachtstransportwesen*, and *Die Steuerung der Bahntransporte* [The direction of railway transports], MGFA T-8-26.

¹⁴⁰ See *Die Bedeutung der Eisenbahn* [The significance of the railway], MGFA T-8-27.

oilfields of the Caucasus. Instead, victory was to be achieved in central Russia, which offered less favourable opportunities for movement, and obtained with a supply apparatus which became increasingly dependent on the railway and horse-drawn vehicles as the advance moved to the east. Nevertheless, the military élite had no doubt that the operation would be successful. Far from adjusting their operational objectives to the limited resources available, they considered that they might even have been too cautious in their calculations, and might reach their objectives even more quickly.¹⁴¹

In fact, the first few days of the campaign brought unpleasant surprises. Though the mobile divisions with their 'suitcases' advanced rapidly to the east and carried out the first encircling operations, the great bulk of the infantry divisions with their horse-drawn transport columns fell ever further behind. As the empty lorries travelled back from the armoured spearheads through the vast unsecured area between the two groups, the most advanced sections of the railway engineers began work repairing and re-laying the tracks. This was an unprecedented development in modern warfare: a section of the supply apparatus was advancing ahead of the bulk of the army instead of following in its wake. Inevitably, it resulted in heavy casualties.

Though Army High Command had been aware that the few roads were in poor condition, the sheer extent of the difficulties was greater than had been expected. The surfaced roads were not capable of bearing the heavy lorry traffic, and were often ruined after a few days. Unsurfaced roads were badly rutted by the horse-drawn vehicles; after heavy rainfall at the beginning of July 1941, these roads became little more than quagmires. The resulting breakdowns, including the losses caused by enemy action, amounted to 25 per cent of the haulage-vehicle capacity.¹⁴² In Army Group Centre this figure rose to over 30 per cent by 20 July. A major problem was the fact that repair facilities, still sited far to the rear in the Government-General or the Reich itself, could not be brought to the front.

The rapid decline in available motorized transport capacity was accompanied by an unexpected increase in fuel consumption. Owing to poor road conditions and tactical detours, the daily requirement of the army in the east rose from the original estimate of 9,000t. to 12,000.¹⁴³ In practice, fuel sufficient for 100 kilometres under normal conditions was enough for only 70 kilometres in the Russian countryside. As a result of periods of high temperatures during the day, the fuel was often unserviceable, and its use led to breakdowns. In Armoured Group 2, the spearhead of Army Group Centre, 30 Mark III and 4 Mark IV tanks broke down at the beginning of July 1941 because captured oil had been used.¹⁴⁴

Much of the damage sustained by the motor-vehicles could have been avoided if there had been enough time and fuel to prepare the drivers for the extraordinary conditions they would meet in Russia, and the special driving skills they would require.¹⁴⁵ A shortage of maps also necessitated travel in convoy, causing considerable loss of time in the event of a major breakdown. Many of the civilian vehicles used by the troops, especially the motor-cars, proved to be unserviceable because of their low ground clearance. In summer they bottomed out on sandy and sodden tracks, and in winter they were stuck in snowdrifts. As a result, these vehicles frequently suffered irreparable damage to their oil-sumps and transmission. During the advance, many breakdowns were also caused by broken suspensions. Stocks of spring steel in the replacement-part depots, provided on the basis of demand during the French campaign, were exhausted after a short period, compelling the armies to use their own lorries to fetch small amounts of spring steel from Königsberg and Elbing, or from Stuttgart and Ulm. Tyres proved unable to withstand the abrasion of the sandy tracks, but could be replaced only infrequently. On 10 July 1941, Army High Command informed the armies that no more tyres at all would be supplied.¹⁴⁶

Difficulties and breakdowns plagued the numerous horse-drawn vehicles as well as the motor-vehicles. Their usual rubber tyres were rapidly worn to shreds, and had to be replaced with wooden wheels clad with iron hoops. Moreover, the German horses were not up to the demands made on them. The heavy columns and field howitzer detachments, in particular, were held fast by the deep, loose sandy ground. The number of horses lost through exhaustion rose inexorably, leaving some infantry divisions faced with the prospect of having to leave the heavy artillery behind. In some cases, radical temporary measures were adopted with the disbanding of the heavy convoys and the motorized baggage train. For example, 167th Infantry Division maintained its mobility and fighting strength by leaving its 'heavy baggage', vehicles, and equipment in a divisional camp at Slonim, together with 200 men who lived independently under military administration and did agricultural work.¹⁴⁷ The camp was disbanded only in the winter of 1942, when the division, inadequately clothed and equipped, was forced to end its advance 800 kilometres further east.

In the first phase of the campaign, when supplies had to be transported mainly by road, the numerous vehicle breakdowns inevitably reduced the movement of supplies. Very few replacement vehicles were available. Until the end of July, only about one in ten broken-down vehicles was replaced by a new one. Thereafter, Army High Command refused to provide more vehicles

because of the shortage of lorries, and because it planned to establish new formations.¹⁴⁸

This reduction in motorized strength inevitably led to bottlenecks in supplies, because the railway network also performed below expectation. Army High Command had hoped that, in addition to the re-laying of tracks, extensive parts of the Soviet railway system could be taken over unaltered and operated with captured rolling-stock. However, the Red Army succeeded in evacuating most of its locomotives and wagons, partly because the most advanced German formations paid insufficient attention to this danger.¹⁴⁹ The only solution was to re-lay a major part of the railway network to the German gauge, and to operate it using German material. However, even this proved to be more difficult than expected. The bed of the Russian tracks was generally so weak, and the rails so lacking in load-carrying capacity, that the only German engines they could carry were light models dating from before the First World War. The railway system had also suffered serious damage: some rails had been torn up by the Russians with sleeper ploughs; many stations had been destroyed by the Luftwaffe; the German troops themselves had often inflicted excessive damage, such as the destruction of telephone lines, the burning of snow-fences and sleepers, the removal of serviceable railway material as scrap, etc. Moreover, since operations generally followed the roads, additional military operations were often necessary to clear the railway lines, further delaying efforts to put them back into operation.

Co-operation between the railway engineers and field railwaymen was seldom smooth. The engineers, who were expected to work quickly, frequently laid the track without regard to operational requirements. In many cases only one track was re-laid on two-track sections, so that important installations such as ramps and engine sheds were out of reach. The engineers' reports on the capacity of the lines proved to be too optimistic, since these took no account of the capacity of junction stations, or of the railways' own needs for coal and building material. In these conditions, Lieutenant-General Gercke's assessment of daily railway capacity was completely unrealistic.¹⁵⁰

(a) Army Group North

The greatest problems of supply were undoubtedly to be found in the most northerly sector of the German-Soviet front, during the operation of German troops against Murmansk.¹⁵¹ There were few transport networks and settlements in the subarctic tundra mountains, and the extreme climatic and geographical conditions made communications and supply very difficult to maintain. At the end of the year Mountain Corps Norway produced a devastating progress report complaining about the utter inadequacy of organiz-

ational and material conditions.¹⁵² Supplies to this remote theatre were co-ordinated not by the quartermaster-general, but mainly by the OKW 'Home Staff Overseas'. This had to direct transports across the Baltic to Finland, and over the North Sea to Norway, and thence along the 500-km. long Arctic Sea route, or by sea to Kirkenes.

By comparison, Army Group North was relatively easy to supply. The distance from the jump-off base in East Prussia to Leningrad, its most important operational objective, was only about 750km. At least in the former Baltic States, there was a relatively well-developed transport network. East of Lake Peipus, however, the countryside became more thickly wooded and trackless. Apart from the haulage vehicles, which were directly controlled by the quartermaster-general, the leader of Field Agency North, Major Alfred Toppe, was able to put to use about 50 lorry convoys and 10 motorized supply companies with bakeries, butchers, etc., plus the stocks of his supply district in East Prussia. With the capture of the Baltic ports, it was likely that some sea transport could be used to ease the strain on overland connections.

Toppe's greatest problem arose shortly after the beginning of the campaign, when Armoured Group 4 advanced with unexpected speed and left the infantry far behind. The tanks covered almost 350km. within five days. When the armoured group's supply columns were held up on the advance roads by the following infantry during the day, serious temporary bottlenecks were created, which could be overcome only by air transport. In these circumstances, no further advance was possible until the supply-base was moved forward, thus condemning the tank formations to halt until 4 July. Thereafter, only limited new operations were possible. Even these required the entire haulage capacity of the army group to be concentrated behind Armoured Group 4, while 16th Army had to be held back. The delaying of the infantry advance had serious consequences on the approaches to Leningrad, when the armoured formations advanced into thickly wooded countryside which was unfavourable to tank operations. The armoured group was not deterred by the risk, and was eager to seize the opportunity for a rapid capture of Leningrad. It demanded that the entire transport capacity should be placed at its disposal to that end.¹⁵³ However, such a move would render Sixteenth and Eighteenth Armies immobile, while the armoured group itself would be dependent on long and vulnerable supply-lines. Field Marshal Ritter von Leeb could not be persuaded to take the risk; Armoured Group 4 was ordered to wait for the arrival of the infantry at the gates of Leningrad, where it faced a permanent supply crisis.

Meanwhile, though the railway troops had succeeded in making some

¹⁵² Command Mountain Corps Norway/Ia No. 300/41 geh. Kdos., *Erfahrungsbericht über den bisherigen Osteinsatz im Eismeergebiet* [Experience of operations so far in the Arctic Ocean region], Dec. 1941, 16ff., BA-MA. XIX. Geb.K., 76205.

500km. of track usable,¹⁵⁴ only one train per day was arriving instead of the expected ten in Daugavpils, where Supply District North had been set up after its first move forward. The quartermaster-general had calculated that the tank formations could be provided with support from base as far as Leningrad.¹⁵⁵ However, his thinking would remain purely theoretical until the supply-base could be stocked with the necessary material, and until sufficient motorized convoys could be dispatched along supply-lines stretching several hundred kilometres to the front, and protected against the attacks of Soviet partisans. To have any hope of keeping pace with the rapid advance, it was necessary to make more use of captured rolling-stock on Russian tracks. However, the process of re-laying from German to Russian gauge soon became a bottleneck for the entire supply-system. The situation in Eydtkau and Siauliai became so catastrophic for a time that re-laying was taking up to eighty hours instead of the regulation three, and whole trains were being 'lost'. In these circumstances, only a small part of the network of track could be fully utilized. The army group, which demanded thirty-four trains per day to satisfy its needs, could count on receiving eighteen at most, and even this figure was reached only in exceptional cases.¹⁵⁶

Though Field Agency North could argue that no unit had faced a dire emergency, complaints from the troops were increasing. In particular, Colonel-General Haider was very critical of the management of supplies.¹⁵⁷ Trains intended for his armoured group had been 'hijacked' by the infantry armies. The Luftwaffe was helping itself by claiming a larger share of the incoming trains than had been assigned to it, and guarding them with armed officer commandos. Neither Wagner nor Gercke was willing to take responsibility for the chaos, and there was very little improvement before the end of July despite the personal intervention of the commander-in-chief of the army.¹⁵⁸

Railway capacity was inadequate to supply the front to the extent required, at the same time as laying in new stocks and moving the bases forward in line with the advance. The haulage vehicles therefore had to be used for this purpose. After their earlier losses, their capacity was only about 60 per cent of the original level. Heavy rainfall made the undulating roads of northern Russia impassable for lorries with trailers; on the other hand, unhitching the trailers virtually halved the transport capacity.¹⁵⁹ The use of the sea route to Riga, and the resumption of shipping traffic on Lake Peipus, brought some relief. In the second half of July the supply troops were fully engaged in advancing the supply-base from Daugavpils to Riga, and stocking up with supplies.

¹⁵⁴ For the schedule of supplies in Army Group North see the maps in the atlas of operations: 'Der Feldzug gegen die Sowjetunion, Kriegsjahr 1941' [The campaign against the Soviet Union, war year 1941], BA-MA RH 19/661 D.

There was some justice in the quartermaster-general's claim, in the face of complaints from Armoured Group 4, that the supply situation of Army Group North was much better than that of the rest of the eastern front.¹⁶⁰ Yet if the optimistic predictions of Wagner are compared with the actual results, it is clear that the unsatisfactory supply-system helped to prevent the rapid capture of Leningrad, which Hitler still regarded as one of the most important objectives of the campaign. The attack on Leningrad had to be postponed for supply reasons on seven occasions. Even Hoepner's desperate plan to attack the huge city with a single armoured corps was vetoed by Wagner, because he felt unable to guarantee the necessary supplies.¹⁶¹

When the offensive was eventually resumed on 8 August 1941, the defence of Leningrad was prepared. Heavy rainfall made the roads impassable, so that even the troops' urgent demands for ammunition could not be met. On 11 September Hitler withdrew Armoured Group 4 for the attack on Moscow. Leningrad was now to be destroyed by the Luftwaffe, and starved out.

(b) *Army Group South*

The operational objectives of Army Group South were even wider and more varied than those of Army Group North. The army group was intended to achieve the most important economic goals of the campaign, in the Ukraine, the Donets basin, and the Caucasus. The advance from Poland, south of the Pripet marshes, led into countryside which was favourable to tanks. However, this opportunity could not be fully exploited at first, because most of the mobile troops were deployed with Army Group Centre. Moreover, Army Group South encountered the bulk of the enemy forces in the Ukraine. The Soviet forces were well led, and offered vigorous resistance which slowed down the German advance. The bitter fighting led to an unexpectedly high ammunition requirement, which depended almost entirely on the achievements of the haulage vehicles, since only a few stretches of railway line were available. However, in the middle of July heavy rainfall turned the black Ukrainian soil into deep mud, forcing up the rate of breakdowns in the lorry convoys to 50 per cent. Supply-units were therefore forced to switch from motor-vehicles to peasant carts to a greater extent than had been anticipated.¹⁶² This led to a significant fall in productivity, as incomparably more time and manpower had to be devoted to the horse-drawn convoys which were brought in to help the 'most modern army in the world' out of its supply difficulties. Added problems were caused by the delay in advancing the supply-base: supply-runs were often over 200 km. long, twice the distance considered acceptable.¹⁶³

As in the other sectors of the front, by the end of July there was significant

¹⁶⁰ KTB Pz.Gr. 4/O.Qu., 95 (31 July 1941), BA-MA RH 21-4/334.

strain on the supply-system, there were increasing complaints from the troops, and reciprocal impounding of trains. In the operational planning of Barbarossa it had been envisaged that there would be a pause for rest and rehabilitation once the Dnieper-Dvina line was reached. During this period, following the destruction of most of the enemy's fighting strength, the formations would be restructured and fresh stocks provided for the second phase of the attack. In fact, this had not been achieved: in the sector of the front south of the Pripet marshes the encirclement of the strong Soviet formations had not been completed, while the German army had neither reached the course of the river nor established bridgeheads for the next move. Instead, Armoured Group 1 had to wait on the banks of the Dnieper for the infantry, while the enemy succeeded in establishing a new front. The Soviet Fifth Army held out in a gap between Army Group South and Army Group Centre, tying down significant parts of the inner flanking armies, preventing a concentration of forces for the advance across the Dnieper at Kiev, and hindering an orderly rehabilitation of the formations. In view of the continuing fighting, withdrawal of the armoured groups could not be contemplated. Meanwhile, the infantry was exhausted from fighting and marching to encircle the great pocket before becoming involved in repulsing the counter-offensive. It was no less in need of rest than the mobile formations.

In these circumstances, it was extremely important to advance the supply-base into the Dnieper bend. This was achieved only with considerable difficulties and delays, owing largely to the fact that the railway could provide only some of the necessary transports; the haulage vehicles that were required for the remainder had to make the entire journey as far as the former Polish border, 1,000 km. overall. When the offensive was continued across the Dnieper at the beginning of August, the supply-base had not been fully restocked, and bottlenecks inevitably intensified in the course of operations. For example, Armoured Group 1 had such low stocks of fuel and ammunition that incoming supply-trains had to be used to supply the immediate needs of the troops.¹⁶⁴ In the southern sector, it was hoped that the situation could be eased by exploiting the sea route to Nikolaev. An independent supply agency, the Assistant Chief of Staff Black Sea, was established for this purpose.¹⁶⁵ However, plans to use the Bug as a supply-route had to be abandoned because of the shortage of shipping capacity.

To prepare for the battle of Kiev, the quartermaster-general took personal charge of supply measures for Army Group South. Here the operation of motorized supply convoys played a bigger role than previously. For that reason, the haulage transport vehicles were withdrawn for rehabilitation at the end of August to be made ready for their forthcoming tasks. However, this measure met with little success, since the shortage of replacement parts prevented readiness for action from rising above the 70 per cent mark. Stocks

¹⁶⁵ See Supply management, 6, 9, MGFA, T-8-6.

of spare parts were virtually exhausted. As the raw materials required for an increase in production were not available, the Army Ordnance Office argued that the critical question was whether the production of motor-vehicles should be reduced still further in favour of the manufacture of spare parts.¹⁶⁶ To maintain the current fleet of lorries, an annual production of 150,000 vehicles would have been necessary. In fact, only 39,000 lorries were built in 1941; a further weakening of this vital component of the transport system on the eastern front was inevitable. The allocation of an entire month's instalment of new lorries in August 1941 brought some relief, but covered only about half of the running loss (see Table II.vi.1).

There was thus little prospect of providing Army Group South with adequate stocks and guaranteeing further supplies, because the railway system was also overstretched. The most that was achieved was to supplement the first issue of the troops, and to cover regular consumption. Where no serious supply problems emerged in the course of the battle, this was due largely to favourable weather conditions, which made it easier to bring in motorized transports from the railhead at Pervomaysk. Overall, however, the two railway lines available to the army group were not sufficient to bring up adequate supplies. Instead of the 24 trains per day that were demanded, Rundstedt obtained 14.5 on average, or less than half as much as Army Group Centre.¹⁶⁷ In Supply Catchment Area South, where the trains were assembled, chaos ensued when one line was blocked by flooding. Trains frequently arrived at their destination only half loaded.

The greatest concern was how to get the railway traffic across the Dnieper. When the Germans failed to capture the Dnieper bridges intact, the process of re-laying the track came to a temporary halt. During the months of work to rebuild the bridges, a difficult ferry service had to be operated. In these circumstances, the army group considered that its operational objectives could not be achieved.¹⁶⁸ Nevertheless, after the liquidation of the Kiev pocket the advance was initially so rapid that Armoured Group 1 was cut off from its rear communications at the beginning of October, because the infantry columns were blocking the supply traffic. When the muddy season began on 6 October, the offensive generally came to a standstill. Many difficulties were caused by the policy of systematic, long-term destruction practised by the Soviets in the approaches to the Donets region. All convoys were brought to a halt on the unusable roads, and there were also significant delays in getting the railway into operation. Men and materials could no longer be brought up by road; instead, resort had to be made to time-consuming 'over-head' building.¹⁶⁹ On occasion a shuttle operation was maintained with the scant rolling-stock that

weather at the end of October permitted a single corps to continue the advance on Rostov. By that time, almost all transport movements were made solely by peasant cart. Sixth Army also managed to avoid the destroyed Dnieper bridge at Kremenchug by using ferries; temporarily, it operated the stretch to Kharkov with some captured Soviet goods wagons drawn by rail lorries. These were heavy motorized tractors which were equipped with interchangeable road and rail wheels, the latter adjustable for wide and normal gauge.¹⁷¹

^a The most important of the army's big equipment and weapons have been chosen. Figures of losses and allocation are taken from the 10-day reports of OKH/GenQu, BA-MA III W 805/5 ff. Obvious errors in addition have been corrected. These lead to minor divergences from the overall figures which appear in the GenQu reports from autumn 1941 and are frequently referred to in the literature; see e.g. the table in *KTB OKW* i. 115. Figures on manufacture were taken from *Überblick über den Rüstungsstand des Heeres (Waffen und Gerät) Juni 1941-Januar 1942*, BA-MA RH 8/v. 1090, 1091.

^b Supply figures for artillery pieces are unavailable. Until Oct. 1941 losses were replaced on a running basis from the equipment depots of the GenQu or through deliveries from BdE and OQu West. Thereafter losses were not replaced because it was thought that divisions in the east would soon be recalled, leaving their heavy equipment and weapons to cover the losses sustained by the remaining units.

^c As no evidence is available, the planned total from the survey of the preceding month has been used.

^d Includes armoured radio vans, heavy and light armoured scout cars, observation cars, Panhard radio vans and Panhard scout cars, Somua and Hotchkiss tanks, and self-propelled mounts.

By means of similar stopgaps, also in the sector covered by Armoured Group 1, a first supply train was brought up in October via Mariupol to the Sea of Asov. But even after the railway bridges at Dnepropetrovsk were brought back into operation on 6 November 1941, and in winter, when rails were laid over the frozen Dnieper, the transport achievements of the railway could not begin to satisfy supply needs. Only about a third of the running supply requirements could be met, and that at the expense of bringing up the supplies necessary to restock.¹⁷² This development was already perceptible in outline in the late autumn of 1941. During the whole of October, only 195 trains arrived at the Dnieper base instead of the expected 724.¹⁷³ The presence of German-allied troops proved to be another burden; almost immobile and badly equipped, these had to be additionally supplied by the German managers.

Army High Command was unwilling to accept the escalating supply crisis as a reason for Army Group South coming to a standstill.¹⁷⁴ However, Halder was forced to recognize that the army and corps commanders saw no possibility of continuing the advance to the Don, let alone to the Caucasus, in these circumstances. Further advances along the railway line to the east seemed possible only after winter restocking had been completed. The onset of the period of first on 14 November 1941 brought fresh unpleasant surprises: huge numbers of vehicle engines broke down in temperatures of -20°C because of a lack of antifreeze; railway transport also deteriorated; the ice floes on the Dnieper hindered the passage of ferries with supplies. Field Agency South eventually reported that the troops could not be supplied even with essentials.¹⁷⁵ The success of Armoured Group 1 in reaching Rostov at all is remarkable. It paid a heavy price, including the deterioration of the army's vehicles to a state in which they were deemed 'no longer suitable for mobile warfare' owing to high losses, wear and tear, and the lack of repair facilities.¹⁷⁶

The case of Army Group South proved the accuracy of the original assumption that the army in the east could be properly supplied only within an area 500 km. deep, i.e. as far as the Dnieper. Though the supply organization did its best to support the operation by means of improvisation, it too suffered from organizational weaknesses. The Army High Command, Hitler, and von Rundstedt all failed to take full account of the fact that the troops had reached the end of their tether. Instead, the Supreme Command assumed that the attack could be resumed before the end of 1941 through Rostov, although even this objective lay outside the range of the logistical apparatus. The successful

Soviet counter-offensive, which led to the abandonment of Rostov, forced them to change their minds.

(c) *Army Group Centre*

(See the *Annexe Volume*, No. 26)

According to the plans of Army High Command, the outcome of the campaign was to be resolved in central Russia. For that reason, the biggest of the three army groups was deployed here with the bulk of the armoured formations, which were to destroy the enemy and advance on Moscow in rapid pincer operations. Yet despite these ambitious objectives, there was no genuine concentration of forces, which could have been achieved by integrating all the mobile troops and all the haulage transport. Not even for the thirty-one infantry divisions and sixteen mobile formations deployed was a fully motorized and efficient logistical apparatus established. The inadequate provision of motor-vehicles for the Wehrmacht was partly to blame for this situation. Other difficulties were created by the geographical and transport conditions of the region: owing to the inadequate road system, supplies had to be transferred to the railways as the advance moved further from the starting-point. Apart from the question of whether and how quickly the Soviet railway system could be got back into operation, the small number of serviceable tracks offered most cause for anxiety.

Though the terrain was less favourable to tanks than the Ukraine, it could be covered more easily than the countryside of northern Russia. Nevertheless, Army Group Centre did not advance as quickly as Army Group North. This was partly due to the fact that there were fewer roads in the sector covered by Bock's army group and the marching discipline of the formations was not sufficiently strict. Enormous masses of infantry blocked the Bug bridges in the first days, preventing the haulage vehicles intended for Guderian from crossing the river until the evening of 25 June; Armoured Group 2 had to be supplied with fuel by air.¹⁷⁷ Conditions in Ninth Army, where infantry and horse-drawn supply convoys struggled with Hoth's Armoured Group 3 for priority on the roads, were equally confused.¹⁷⁸ Frequent detours into the countryside dramatically increased the fuel consumption of the tank formations. However, this did not initially lead to difficulties, owing to the capture of a big Soviet fuel depot at Baranovichi; after appropriate technical processing, almost a third of the group's fuel consumption was for a time covered from captured stocks.

The spearheads of Guderian's armoured group reached the Dnieper, and thus the limits of assured supply, on 2 July 1941. Until that time no serious bottlenecks had occurred, although the dusty conditions and the shortage of spare parts led to breakdowns in the tank formations. With the advance so rapid, supply had to be concentrated on the fuel sector. Though supply stocks

¹⁷⁸ KTB AOK 9/O.Qu., 22 June-6 July 1941, BA-MA, 9. Armee, 13904/1.

were full when the Dnieper was crossed, Guderian's assessment of his supply situation had been too optimistic.¹⁷⁹ There was a real danger that the offensive would be forced to a standstill sooner or later if serious enemy resistance was encountered. If that occurred, the overstretched supply-lines would be unable to respond to the dramatic increase in ammunition expenditure.

Following the deployment directive for Army Group Centre, Guderian attempted to reach the area Roslavl-Yelyna-Smolensk as quickly as possible. Yelyna was situated 750km. from the supply-base, scarcely within reach of motorized supply. The transport problem thus became the dominant factor. Moreover, the important Warsaw-Minsk-Smolensk railway route was not brought into operation quickly enough. Large parts of the remaining railway network remained under Soviet control for longer than expected, and could not be used to ease the situation. At the beginning of July railway capacity was just sufficient to supply Armoured Group 3. Ninth Army was completely dependent on haulage transport, although the distance from the supply-base was now almost 400km., and the roads were in poor condition.

Supply District Centre had been established in the area around Warsaw and Suwalki. In the first days of the invasion it had begun to set up supply-bases on the line Alitus-Voronovo-Lesna in order to shorten the supply-routes. Each supply-base included ammunition, fuel and foodstuffs depots, field hospitals, maintenance and repair workshops, bakers' and butchers' companies, a spare-parts detachment, and a supply battalion or else a detachment of the Reich Labour Service, as well as a Vehicle Transport Detachment, and public-order services. At the end of June 1941 preparations were made to create a new backbone of support for the supply-system, beginning on the line Molodechno-Minsk-Slutsk. However, the evacuation and movement of the workers and administrative personnel from the supply district in the deployment area took far too long.¹⁸⁰ For one thing, the supply district was still at full stretch, and was therefore reluctant to give up supply troops. In addition, there was insufficient transport available to stock the new bases. Railway capacity remained below requirements, so that motorized transport capacity was already at full stretch moving the necessary regular requirements from the supply district and from the bases along the advance roads to the troops. A great deal of time would have been saved if spare supply troops and motor-vehicle convoys not needed in the Warsaw area had been available for rebuilding work.

The new base, the Dnieper Supply District, was extended eastwards to the line Polotsk-Lepel-Borisov-Bobruysk by the middle of July. Restocking proceeded slowly once the track had been re-laid, and the railway was operating efficiently enough to bring increased supplies to the new bases. Halder and Wagner had intended that the Dnieper base would be ready by the end of July,

¹⁷⁹ See Krumpelt, *Material*, 165.

¹⁸⁰ On this see Fährdrich, *Der Aufbau des Versorgungsbezirks Dnjepr* [Structure of the Supply District Dnieper], MGFA T-8-4.

when it would be able to guarantee the tank formations an operational range as far as Moscow. Daily deliveries of 37,000t. of supplies would have been necessary to achieve this objective. These conditions were not fulfilled: when Guderian crossed the Dnieper, the new base contained munitions sufficient for only five days' fighting, fuel for 40km., and half a day's rations.¹⁸¹ Yet the organizational structure of the base did keep pace with the advance. At the end of July the bases of Orsha and Smolensk were established along the army group's main line of advance.

At the same time, a serious ammunition crisis developed in the Yelnya salient.¹⁸² When Soviet counter-attacks forced the German formations to mount a five-week defensive battle, the high level of ammunition expenditure could not be made good because of the long, overstretched communications with the rear. As long as the railway system was unable to transport regular daily supply requirements sufficiently close to the front, the troops would remain dependent on the efficiency of motorized transport capacity. Stocks at the advanced supply-bases were so low that the motorized convoys were compelled to travel back to the nearest working railhead—a distance of 750km. Fundamentally, the crisis at Yelnya was no accident; the investigation ordered by Hitler found no evidence of a dereliction of duty. But only time would tell whether the right lessons were being learnt from the overstretching of supply management.

When priority was given to ammunition supply at the beginning of August, a drastic cut in the supply of fuel and rations was necessary. The armies which had been sent into action to liquidate the pocket at Smolensk were thus placed in a difficult situation. For some units, the distances were reduced by the advancing of the supply-bases—on the southern flank the Slutsk-Bobruysk-Mogilev axis, and on the northern flank, which was particularly difficult to reach due to the road and transport situation, the bases at Polotsk, Nevel, and Vitebsk. However, no decisive overall relief was possible as long as supplies from the Reich continued to be sluggish. Vital ammunition trains 'got lost' in the Warsaw supply catchment area, with days elapsing before they were located and sent further. The ammunition stocks of Army Group Centre declined even further, instead of increasing to the extent which would have been necessary to prepare a new offensive. The resistance of the Soviet troops in the Smolensk pocket also delayed the rest period which had been planned for the mobile formations. The Soviet forces held out for a month, although Guderian had originally calculated that only three or four days would be lost.

During August and September 1941 the Dnieper Supply District was moved forward to the area round Smolensk and expanded into a productive base. The rear bases had to be closed down step by step, and the supply troops moved

¹⁸¹ Hofmann and Toppe, *Verbrauchs- und Verschleißsätze* [Consumption and wear-and-tear rates], 85, MGFA P-190, T. 2.

¹⁸² On the following see Krumpelt, *Material*, 167-8.

forward in order to receive and distribute the supplies that were being moved up by train. In addition, the apparatus of the quartermaster-general was employed in order to obtain food, clothing, engineers' material, and other supplies, including captured weapons and ammunition, for the troops 'on the widest basis, by utilizing the institutions, supplies, and workers of the country'.¹⁸³ The rear services of divisions and armies endeavoured to live off the land as far as possible, in order to relieve the strain on supply. Under their supervision and with their co-operation, the harvests were brought in, and mills, dairies, bakeries, and craftsmen's businesses were set up. In the case of 167th Infantry Division, for example, these measures resulted in an improvement in rations, while captured tractors were repaired in the tractor station and used to motorize a heavy artillery battery and to establish a breakdown platoon with the workshop company.¹⁸⁴

Army Group Centre's capacity to resume the offensive depended partly on the arrival of reinforcements, and partly on the restoration of its fighting strength by making good its losses and providing sufficient supplies. In September 1941 there was not enough time to achieve this. Though the advancing of the equipment store from the Warsaw area to Smolensk did shorten the supply-route, the losses of weapons and equipment could not be made good. Running losses alone exceeded the new production of the Reich in almost every sphere. Moreover, only part of this new material was available for the eastern front, because much of it was being held back for new formations. At first, Hitler had actually ordered a complete ban on supplies for the armoured force. If major losses were sustained, individual tank formations were to be amalgamated, and surplus support troops and occupation troops withdrawn.¹⁸⁵ With only minor exceptions, Hitler kept to this decision until the end of the year. By the end of August 1941 the army in the east had lost 1,488 armoured fighting vehicles, i.e. more than a third of the original supply; it was allocated 96 vehicles in replacement, from a new production of 815 during the period June–August 1941. The loss of tanks due to a shortage of spares was often greater than that caused by enemy fire.¹⁸⁶ Frequently the troops responded by obtaining spares from Germany independently, thus avoiding central direction by the quartermaster-general.¹⁸⁷ These material losses were even more damaging as there had been gaps in the equipment of the army in the east even before the campaign began.¹⁸⁸

¹⁸⁷ For the reaction see ObdH/GenStdH/GenQu 3 IIb No. 34000/41, Anordnung betr. Nachschub von Kfz-Ersatzteilen [Instruction regarding supply of motor-vehicle replacement parts], 6 Oct. 1941, BA-MA RH 20-11/375.

¹⁸⁸ See sect. I.III.4 at n. 454.

At the beginning of September 1941 the tank position—compared with the starting-position—was as follows: total losses 30 per cent on average, under repair 23 per cent, ready for action 47 per cent.¹⁸⁹ Among the armoured divisions of Army Group Centre, however, only 34 per cent of tanks were ready for action. The repair units subordinate to the quartermaster-general's command posts were overstretched; as a result, damaged vehicles sometimes had to be transferred to the central repair facility in Germany, placing an additional burden on the inadequate railway system. Field repairs had to be carried out in unsatisfactory working conditions and with inadequate means, especially a shortage of tank engines, workshop installations, and fuel. Furthermore, the general condition of the repaired tanks had been so weakened by previous rough treatment that they were often unable to withstand new demands. It was calculated that when new operations were launched, between 20 and 30 per cent of the original and repaired tanks would break down again within 50 km.¹⁹⁰

Under these conditions, it was extremely difficult to make a realistic assessment of the fighting power of the army in the east, particularly as the statistical declarations and reports available to Army High Command did not always appear to be reliable. Thus, for example, 157 captured light Czech 35-tonne tanks were sent into action with 6th Armoured Division, but these do not appear in any of the quartermaster-general's statistics, although the division still reported 41 total losses by the beginning of September 1941.¹⁹¹ In view of the very different situations facing the individual armoured formations, overall figures and averages did not provide any reliable guide for the planning of combat tasks. Even a regular inventory was ineffective in the last analysis, because it gave no information about combat-worthiness. With increasing wear and tear, the shortage of spare parts, and the lack of repair facilities, the number of vehicles which were out of action inevitably rose steeply towards the end of the year. It should also be remembered that the figures for replacement vehicles dispatched did not mean an unconditional gain for the troops. Apart from the fact that a lengthy period might elapse between the allocation of the tanks and their arrival at the front, it was not unusual for armoured fighting vehicles to be delivered in an unsatisfactory condition. Brake fluid and accessories, which could not be supplied at the front, were often lacking. In addition, obsolescent models were delivered, and—during the winter—models with narrow tracks; these had to be kept back by the unit commanders until they could be made fit for service.¹⁹²

It would certainly have been unrealistic to expect the front-line troops to

¹⁸⁹ OKH/GenStdH/Org.Abt. (I) No. 702/41 g.Kdos., on tank supply east, 15 Sept. 1941, appendix 1d, BA-MA RH 22/v. 1326.

Source: See Table II.VI.1.

submit precise reports of losses and actions during the fighting. A tank which was initially regarded as a write-off might be repaired shortly after, and would then appear as a loss for the second time when it broke down again. It was also unlikely that accurate reports would be made of the many Soviet vehicles and weapons which were captured and used by the front-line troops; when levels

of supply were so inadequate, it was not in the interests of a unit to provide details of surplus material.¹⁹³ On the other hand, there must often have been a temptation to manipulate the figures on losses, repairs, and combat-readiness, in order to secure as large a share of supplies as possible, or to justify the failure to carry out orders to hold on or attack, especially during the heavy winter fighting. Such 'cries for help' did indeed multiply at the end of the year. Apart from the question of their reliability, they can be regarded as an indicator of the success of supply provision, which was at least partly dependent on the confidence of the troops. If these troops could be certain of receiving supplies at the critical moment, they would be less tempted to report that they were running out of ammunition before this was actually the case.¹⁹⁴ However, the efforts of Army High Command to prepare the logistics of Operation Typhoon were hardly likely to justify the confidence of the troops. For Army Group Centre, Hitler's decision to postpone the advance on Moscow in favour of the battle of Kiev at least gave Armoured Group 2 time to recover before the forthcoming fighting in the Ukraine. During his operations in the south, Guderian did not face further serious supply problems, because the German railway transport had now reached Gomel, and Armoured Group 2 could therefore be supported effectively from the Roslavl-Gomel line.

However, the switching of the main supply-line to the south-east delayed the restocking of supplies for Second Army, whose supplies were dependent on a less efficient Soviet railway line from Gomel to Gorodnya. Not until 15 September did the army describe its supply situation as secure; and even then, the slow build-up of stocks made any resumption of the advance impossible before the beginning of October.¹⁹⁵ Moreover, in the northern sector, Ninth and Fourth Armies reported that transport capacity was insufficient to provide running supplies as well as stocking the depots to an extent at which the troops could totally rely on them during the coming fighting.¹⁹⁶

Army High Command hoped that the advance on Moscow would bring about the last and decisive act of Operation Barbarossa. However, it neglected to concentrate the available supply capacity behind this sector of the front. At the end of August, 5,000 t. of haulage capacity was actually withdrawn and placed at the disposal of Army Group South in order to build up its supply-depots.¹⁹⁷ In order to cover running requirements, and at the same time to lay in sufficient stocks for the advance on Moscow, Field Marshal von Bock demanded 30 trains daily; Gercke could promise him only 24. In fact, in August Army Group Centre seldom received more than 18 trains per day.

¹⁹⁷ Halder, *Diaries*, 1198-9 (25 Aug. 1941).

Sufficient numbers were not dispatched even after the strategically important Orsha-Smolensk line had been re-laid.¹⁹⁸

Despite these problems, the troops' supplies had been partially restocked by the end of September. The exception was Armoured Group 2, which had returned to Army Group Centre after the battle of Kiev and now had only small reserves of fuel available. On the other hand, the restocking of Dnieper Supply District was still in the early stages. It was clear that the offensive on Moscow and the encirclement of the city, plus the provision of cover against enemy relief attacks, would require vast quantities of ammunition. Moreover, the first supplies of winter equipment to the troops, which had still to be carried out, would make further demands on the supply system. Equally, the continuation of the fighting east of Moscow during the depths of winter would mean an extraordinary attrition of material of all kinds. At the beginning of the offensive Army Group Centre had no supply basis capable of meeting all these demands.

The establishment of supply-bases near to the front, in Gomel, Roslavl, Smolensk, and Vitebsk, could bring relief only until the stocks in store there were exhausted. Because of the inadequacies of the railway network and the damage inflicted upon it by partisan groups, the troops inevitably encountered increasing supply problems as they moved further away from the railheads. Given the scarcity of motorized transport capacity, these problems might easily develop into full-scale crises if weather conditions were to deteriorate.¹⁹⁹ The quartermaster-general's Army Supply Department warned that the position regarding tanks, motor-vehicles, and fuel was so precarious that the fighting strength and mobility of the army in the east might be 'insufficient to bring the eastern campaign to a conclusion in the autumn'.²⁰⁰ 'A great reduction in the fighting power and mobility of the army, perhaps at the crucial moment', might occur unless drastic measures were adopted. These included a considerable increase in supplies to the eastern front, and the release of all new production to replace lost material.

This demand was partly fulfilled, at least as regards tanks, with the allocation of 316 armoured fighting vehicles—more than the total production for the month of September—and the dispatch of 2nd and 5th Armoured Divisions from Army High Command reserve with around 450 tanks. In addition, large numbers of captured French tanks were to be dispatched for deployment on security tasks in the rear area. In October 62 of these vehicles were already at the disposal of Army Group Centre (Army Group South had 21, Army Group North had 28).²⁰¹ Even then, the reinforcement of heavy equipment was not sufficient to restore the armoured formations in the central sector of the eastern front to full combat strength. In fact, Army High Command was not certain how the position should be assessed. The game of playing with

²⁰¹ Halder, *Diaries*, 1236–8, 1281–3 (15 Sept., 9 Oct. 1941).

percentages for combat-ready tanks, and the submission of widely differing situation reports, had become a serious problem. On the basis of the position taken by the army administration, Wagner reported to Halder that there was a deficiency of 40 per cent;²⁰² three days later, Army High Command Organization Department reported a deficiency of 53 per cent to OKW;²⁰³ the two departments of Army High Command showed a difference of 543 tanks in the number of losses they reported. Such hair-raising errors in this order of magnitude were the result of different chains of reporting. Moreover, they were disregarded in the Army General Staff, which also used divergent figures on available new production. Only Hitler was irritated by the confusion. 'How was he to conduct a war, if he was counting on 1,000 additional tanks and then someone told him there were actually only 500? He had assumed that the people in the Ordnance Office could at least count.'²⁰⁴

Whatever the level of equipment available to Army Group Centre, it had been achieved at the expense of the supply of rations, replacement parts, and ammunition. The quartermaster-general estimated that the stockpile of one issue of ammunition was not sufficient to replace even two weeks' consumption in an attack.²⁰⁵ Shortly before the launching of the attack, the arrival of fuel trains was considerably in arrears,²⁰⁶ although the reinforced Army Group Centre now had three armoured groups and two infantry armies—eighty big formations—to keep moving. Fuel stocks would not support an advance of more than 300 km.—at most as far as the gates of Moscow. On the eve of the attack Wagner reported that supply for 'Typhoon' was 'satisfactory', and everything was 'ready for the jump-off'.²⁰⁷ Though the last part of the report was accurate as far as it went, it was very doubtful whether the 'jump-off' would reach as far as Moscow and beyond. Wagner was still unshakeably optimistic in his conviction that he could get Army Group Centre to Moscow.²⁰⁸ Further than that he dared not think, hoping that by then 'the winter [would be] here, and with luck the war would be at an end'. Wagner was playing a dangerous game with his readiness to take any risk in the conduct of operations, and his tendency always to give an optimistic answer to any question about the range of supply despite 'some nerves'.²⁰⁹ Though all the signs indicated that Army Group Centre was not strong enough to achieve its operational goals, Halder was vociferous in advocating the advance on Mos-

²⁰² Ibid. 1225 (11 Sept. 1941).

²⁰³ OKH/GenStdH/Org.Abt. (I) No. 702/41 g.Kdos. to OKW/WFSt/Abt. L, 15 Sept. 1941, BA-MA RH 2/v. 1326. Here, in contrast to the figures provided by the Dept. Army Administration, the losses of Mark I and Mark 35t were included. The differences are also explained by the fact that the Org. Dept. based its figures on the position on 5 Sept., and Dept. Army Supply on the position on 25 Aug. It is nevertheless remarkable that both reports were circulating in Army High Command at the same time without any adjustment.

cow. Wagner was not the type of man to oppose him because of concern for the management of supply. Should a crisis arise, the railway was always a good scapegoat, particularly as it was not under the control of Army High Command.

The first problems of supply emerged at the beginning of October 1941, shortly after the launching of the new offensive. For example, after its operation with Army Group North, Armoured Group 4 had returned with only about 50 per cent of its combat-ready motorized transport capacity. It was therefore unable to make the supply trips to the depots which were necessary to cover its needs.²¹⁰ After great initial successes in the battles of encirclement at Vyazma and Bryansk, the army group encountered increasing difficulties during the pursuit, when heavy losses caused by enemy action were intensified by supply problems. The change in the weather between 9 and 11 October turned the few usable roads into deep mud. Tracked vehicles alone were able to tow individual vehicles and big guns to the front, a process which was extremely arduous and time-consuming. The armies were marooned in mud for almost three weeks, the divisions and their baggage-trains often hundreds of kilometres apart. An attempt was made to get essential material to the troops using tractors and peasant carts. Apart from local expedients of this kind, the movement of supplies came to a standstill almost everywhere. In the Smolensk-Vyazma sector the Minsk-Moscow highway was paved with cobblestones; this surface was quickly ruined by the heavy loads.²¹¹ An entire infantry division eventually had to be employed to make this important route serviceable again. At a time when the fighting in the Mozhaysk defensive line would have demanded extensive supplies, there was a real collapse of supply management.²¹²

Second Armoured Army had hoped to capture Bryansk quickly and establish a supply-base there. In fact, from the middle of October it faced a serious crisis in fuel supply. There were a number of reasons for this: Bryansk could not be stocked up by haulage vehicles as effectively as anticipated owing to the poor road conditions; the most important supply-route was barred by constant enemy incursions north of Glukhov; shortly afterwards, the number of fuel trains arriving in Orel fell sharply.²¹³ The army was forced to a standstill, even when the frost later made the roads passable again. This instance demonstrates that operations were not called off solely as the result of any single factor: not weather conditions, not the tactical situation, not even the permanent crisis of the railway system. Only in combination with the inadequate preparation of men and materials did they lead to failure.

Supply management was unable to provide adequate supplies and rehabilitation for Army Group Centre during its enforced standstill. Clearly, then, it

was in no position to lay in increased stocks for a new offensive, or to satisfy its running requirements. The supply-base was moved forward as far as the Rzhev-Vyazma-Bryansk line, with an advanced base in Orel, but there was insufficient transport capacity to stock it. Across almost 1,000km. from the Reich border, through land that was almost empty from a logistical point of view, most supplies had to be moved along two railway lines (Warsaw-Minsk-Smolensk, and Brest-Gomel-Bryansk); these had only a limited capacity and were under attack by partisans. The ability of Dnieper Supply District to transport and distribute the supply goods brought in by train was dependent on available lorry capacity, i.e. on the number of serviceable vehicles, on the supply of fuel, and above all on the condition of the roads. Even when the supplies eventually arrived with the divisions, they still had to be taken to the front by peasant carts and a small number of motor-vehicles, often off the roads.

When the frost made the roads passable again at the beginning of October, the motor-vehicles—sometimes sunk to their axles in frozen mud—had to be dug out. In many cases they were damaged beyond repair. Though antifreeze had been sent to the army group from 11 October, many of the vehicles were not winterproof and broke down.

It is possible that Hitler had forbidden his commanders to refer to the problem of winter equipment. However, this had not prevented Halder from ordering appropriate measures from the beginning of July 1941.²¹⁴ Hundreds of regulations, orders, and circulars from the quartermaster-general had been issued during the autumn to deal with winter preparations.²¹⁵ These concerned three main problem areas. The first need was to define requirements for winter equipment and supplies. For this purpose the number and condition of the troops, their geographical distribution, and their form of service had all to be taken into account. In anticipation of a rapid victory, it was initially assumed that an occupying army of 56 divisions would be required,²¹⁶ to be provided with appropriate accommodation. Two-thirds of the army in the east would therefore be brought back home, leaving some of their material behind to provide stocks for the occupying troops. As early as the beginning of September 1941, the base figures for the winter programme had to be revised upwards by 50 per cent, to 750,000 men and 150,000 horses.²¹⁷

When winter set in at the beginning of November, the entire army in the east was still in action. Army High Command was forced to adjust to the idea

that major operations on the eastern front would be necessary throughout the winter. Only in mid-December did its leaders recognize that it was no longer possible to bring divisions back to Germany, and that, on the contrary, considerable reinforcements would have to be brought into Russian territory. The bulk of the formations would have to be employed in the winter fighting, in areas which offered hardly any opportunities for them to live off the land, with exhausted troops, battered equipment, and without satisfactory stocks. The quartermaster-general was simply not prepared for the resulting demand for winter equipment and supplies.

The second need was to make the necessary material ready in good time. To this end, it was essential to consider productive capacities in the occupied eastern territories as well as in the Reich. This option appeared particularly attractive, because the manufacture of accommodation and other winter equipment in the occupied areas would also reduce the need for transports from Germany. At any event, energy installations such as gas and electricity works in the occupied territories must be put into operation, and large repair workshops established for army equipment. In practice, moreover, given the strains facing the German war economy, extra orders to satisfy the needs of the Wehrmacht could not be accommodated within Germany. Production in the occupied territories was also sluggish, not least because of friction with the economic agencies and the civilian administration.²¹⁸

Nevertheless, it was here that the only possibilities for improvement lay. In the middle of September Army High Command instructed the army formations in the east to endeavour to lay in their own winter stocks,²¹⁹ despite the fact that the final accommodation areas and the composition of the occupying troops had not yet been defined. The overriding principle was 'to obtain and utilize the stocks and products of the country to the fullest possible extent, in order to relieve the homeland'.²²⁰ The quartermaster-general therefore launched an extensive production programme in the area of operations. Alongside bathtubs, poker, and other equipment, this included the manufacture of 252,000 handkerchiefs, 445, 789 articles of knitted underclothing, and 30,000 snow-shirts.²²¹

Third, such of the winter equipment as could not be produced in the occupied eastern territories had to be dispatched from the Reich and distributed in good time. Decisions had to be taken according to operational con-

²¹⁸ On the quartermaster-general's production programme see the account in *Kriegswirtschaft im Operationsgebiet des Ostens in den Jahren 1941-1943* [War economy in the area of operations in the east in the years 1941-1943], 220ff., IfZ ED-2.

²²¹ See OKH/GenStdH/GenQu I No. 913 a/41, order regarding supply with accommodation requirements and consumer goods in the east, 9 Oct. 1941, BA-MA RH 20-11/375, and the survey of production performances, WiRüAmt/Ro I/Ost, 22 June 1941, appendix 5, BA-MA, WiID. 1185.

ditions and transport possibilities. Since rapid victory was anticipated in the east, it seemed reasonable to assume that the necessary winter goods could be dispatched to the troops after the conclusion of operations. Unexpected military developments, especially the preparation and implementation of Operation Typhoon, meant that consignments of ammunition and fuel were subsequently given priority.

In order to meet at least the most urgent needs of the troops, the quartermaster-general planned a transport movement—named 'Bow'—from 22 to 30 October 1941.²²² The 'Bow' trains were loaded in the Reich with clothing, accommodation material and equipment, motor-vehicle winter equipment, sledges, and skis. This plan, however, fell victim to the failures of railway transport. The trains were kept waiting in the Warsaw supply catchment area, and could only be brought to the front in isolated cases, slipped in between the ammunition and fuel trains which had priority.

As a result, it was left largely to the initiative of the individual armies to demand trains with winter equipment, if necessary at the expense of ammunition supplies. For example, Second Army, advancing through Bryansk to Tula, had decided on 16 October that the dispatch of winter clothing was urgently necessary to prevent frostbite; after the arrival of clothing at the Gomel supply-base, it applied for this to be brought to the front by air transport. A week later two army corps received a drop comprising 47,000 pairs of gloves and 68,000 Balaclava helmets. The situation had not greatly improved by the time the frost set in fourteen days later. Convoys containing light winter clothing were still on their way to XXXXVIII Armoured Corps; in the case of five divisions it was calculated that at least a week would be required in the absence of adequate supplies in the army area.²²³

When the need for winter equipment soared with the onset of winter, it would have been necessary for several hundred trains to be dispatched to meet the new demand.²²⁴ Given the fact that the transport crisis was intensifying at this time, there was no possibility of an appropriate response. The situation was even worse because the winter clothing provided was inadequate to meet the demands of the Russian winter. Furthermore, even when the equipment had arrived with the armies, it could not easily be transferred to the front-line troops. With road and transport conditions so poor, it often took several days to get the clothing to the troops, while in the meantime the fighting units were decimated by frostbite. The situation in the individual formations varied considerably, even in Army Group Centre, which faced the worst conditions.

The onset of winter had its worst effect on the railway. German locomotives, unlike Russian ones, had their cooling-pipes on the outside; in icy conditions between 70 and 80 per cent of them froze and burst.²²⁵ The ensuing

transport crisis exceeded all others. Between 12 November and 2 December no supply trains arrived at Second Army for days on end, necessitating serious reductions in consumption in all areas.²²⁶ In the period from 9 to 23 November only one fuel-train came though to Ninth Army, and its contents could not be taken to the troops because there was only just enough fuel to fill the empty tanks of the lorry convoys.²²⁷ At the same time, the railway tracks were continuing to carry 'Jew trains' from Germany. This led to an understandable protest from Bock, who feared that it 'would mean that a corresponding number of vital trains to supply the attack would have to be dropped'.

In this period the management of supplies depended almost exclusively on the effectiveness of the haulage vehicles. In fact, it was due to them that the army group survived at all at this time. From the beginning of the campaign until the end of the year 616th Lorry Transport Regiment employed with Army Group Centre carried 291,000 t. of supplies, or the freight of 650 railway trains.²²⁸ By mid-November half of the vehicles had already broken down. In response, Army High Command decided to amalgamate the serviceable units of the haulage fleet and to leave them in the area of operations, while vehicles in need of repair were sent back to Germany.²²⁹

A few days before this decision Halder had endeavoured, in Orsha, to convince the armies in the east that the offensive must be continued at all costs. Major (General Staff) Otto Eckstein, who was responsible for the supply of Army Group Centre, strongly opposed this view, with the assistant chief of staffs of the earmarked attacking armies also offering a pessimistic assessment of the situation.²³⁰ However, Bock did not support his supply officer. He believed that it would be better to make one last major effort to take Moscow, rather than be forced to continue the fighting in winter. Though Halder too was aware that the operation could not be properly prepared, he agreed with Bock. In this situation even Wagner's optimism disappeared; he was now convinced that the army had reached the end of its strength.

In view of the heavy losses of material, Army High Command now estimated that the actual fighting strength of an armoured division was only 35 per cent of its normal strength. The situation facing Second Armoured Army was especially precarious. Guderian reported that he had begun the campaign with around 1,000 tanks, and had been assigned a further 150 during the course of operations, but that he now had only 150 tanks available.²³¹ Even more catastrophic was the condition of the unarmoured motor-vehicles; in the middle of November only 15 per cent of the fleet was fully ready for service. As a result, the motorized transport capacity of the armies had to be amalgamated, and the divisions were forced to resort to horse-drawn convoys.

²³¹ KTB Pz.AOK 2, 18 Nov. 1941, BA-MA, RH 21-2/v. 244.

Army Group Centre was thus sent into action for a last attack on Moscow. Its troops were exhausted and decimated; its motor-vehicles and tanks had sustained excessive damage; important sections of its armies were not ready for action because of the shortage of winter equipment; it lacked adequate stocks in the supply-base; and it had no prospect of receiving a smooth and sufficient flow of supply trains. The attack was based solely on the belief of the operational leadership that the enemy was in a much worse position. The initial successes of the attack could not be exploited because there was not enough fuel, and movements came to a temporary standstill.²³²

At the end of November the attack was finally called off altogether. Halder nevertheless remained full of confidence. During a discussion with the assistant chiefs of staff of the armies in the east, he painted a positive overall picture. In particular, the management of supplies had been a success up till that time.²³³ Halder did concede that the weakness of the troops and the supply situation—in these weeks only 16 trains a day were arriving at Army Group Centre instead of the 31 demanded²³⁴—no longer permitted major co-ordinated operations in 1941. Nevertheless, Halder announced that the attack would be resumed before the end of the year, and urged the armies to accept 'the greatest risk in supply matters . . . for the sake of the operational concept'. At the same time, he submitted ideas for the rehabilitation of the army in the east during the winter months. Only a few days later these were shown to be already outdated.

When, at the beginning of December 1941, the supposedly defeated Red Army launched a surprising counter-attack, Army Group Centre was so shaken that the commander-in-chief of the army saw no way 'of saving the army from the difficult situation'.²³⁵ Inadequate stocks with the armies and in the Dnieper Supply District meant that the army group found itself in extreme difficulty as soon as a few supply-trains failed to arrive. Soviet penetrations frequently forced the German formations into precipitate retreats because the troops had no confidence in the management of supplies. On the icy and congested roads the battered motor-vehicles were unable to withstand the renewed strains upon them. The constant shortage of fuel and replacement parts caused further problems, so that by the beginning of January 1942 more than 10,000 vehicles had had to be abandoned. Equally disastrous for the mobility and fighting power of the troops was the extraordinarily high loss of horses, particularly with the horse-drawn artillery. Guns either had to be blown up or allowed to fall into the hands of the enemy. Overall, the losses of weapons and equipment in December 1941 increased steeply. Replacements could not be brought up because of the lack of transport capacity, since the troop movements ordered by the army group served only to intensify the shortage of engines for the supply-trains.²³⁶

In the severe command crisis produced by the threat of defeat for the army in the east, Hitler urged the army leadership to adopt a ruthless approach to the civilian population. Villages were to be burnt down during retreats; all prisoners and civilians were to have their winter clothing confiscated in order to meet the needs of German soldiers.²³⁷ Hitler also promised the immediate dispatch of reinforcements and supplies in order to support his orders to stand fast. From an operational point of view, it may appear sensible for him to have called on the troops not to yield an inch of ground. But in reality Army Group Centre faced a situation in which enormous losses of men and materials could be expected whether it held out in its existing positions or made withdrawal movements. At the Führer's headquarters, and in the Army High Command, the promised assistance may have looked impressive; but for the formations engaged in desperate defensive fighting the disastrous transport situation prevented the arrival of effective and immediate support.

In this situation the so-called 'elephants movement' was ordered as a replacement for the withdrawn haulage vehicles. Transport companies were hurriedly equipped with French lorries, totally untrained officers and drivers were selected from newly conscripted men, and the vehicles—some straight from the production line—were sent off in temperatures of -20°C and without being run in.²³⁸ Not surprisingly, an exceptionally high percentage of the vehicles had broken down by the time they were assembled in Warsaw. After a journey of almost 2,000 km. an insignificant number of serviceable vehicles reached Army Group Centre in January. Second Armoured Army, which had originally had six big lorry convoys of 60t. at its disposal but at this stage was able to operate only one, received precisely 54t. of additional transport capacity from the 'elephants movement'.²³⁹

Most of the remaining reinforcements did not arrive at the front until the Soviet offensive had already come to a standstill. To implement the movement from west to east, the quartermaster-general had established the 'Control Staff Centre'.²⁴⁰ The idea was to continue using the railways as much as possible, but to become independent of them for a time and to supply the troops by road transport. Since the territory between the Reich border and the army fighting 1,000 km. to the east lacked any logistical installations, a supply relay would be created along the proposed supply-roads as far as the Smolensk area.

By 10 January 1942, 44 bases had been established to service the draft-conducting battalions, horse-moving detachments, and lorry convoys. The draft-conducting battalions were the first to be dispatched. A rest-day had to be included after every three marching days because of the exceptionally heavy falls of snow and snowdrifts, a persistent east wind reaching gale force, icy roads, and temperatures as low as -45°C . The lorry convoy set out at the end of January. Many of the vehicles had been brought straight from the factory

to be loaded with winter equipment, replacement parts, lubricants, sledges, stoves, medicines, etc. These were followed by the divisions, and finally by the horse detachments. By the end of April, within 100 days, 5 infantry divisions with 60,000 men altogether, 26 draft-conducting battalions with 17,000 men, 6,500 horses, and 650 lorries with 3,000t. of transport capacity had been brought to Army Group Centre.

During this period Dnieper Supply District near Smolensk, with its advanced bases of Roslavl, Vyazma, Bryansk, and Gomel, became the backbone of the winter fighting waged by Army Group Centre. The bases proved to be cornerstones of the defence. The troops withdrew to them at times of crisis, and used them as bases from which to launch counter-attacks to close gaps in the front and gain secure defensive positions in this sector of the eastern front. Supply troops frequently had to be sent into battle as a last resort. Of course, the concentration of the rear services in the few cities was liable to persuade the military commands that significant reserves for the front could be released by vigorous 'combing-out' operations. Apart from the questionable military value of these men, who were generally poorly armed and were often unsuitable for front-line service, such interventions had highly regrettable consequences.²⁴¹ They weakened rearward connections at a time when they were more valuable than ever, and when partisan attacks and appalling weather and transport conditions were placing them in increasing danger.

Though the combat strength of the infantry was declining, it was not feasible to enforce an equal reduction in the supply troops. The decline in fighting strength affected only the rations transports, which comprised only a small part of the supply load. Consumption of ammunition and fuel was unchanged. In fact, the need for ammunition actually tended to increase whenever an attempt was made to compensate for the weakened fighting power of the infantry by an increase in artillery firepower.²⁴² In addition, the demands on the personnel in workshops and salvage units rose as the aim was to get broken-down vehicles back to the front as quickly as possible, or to transport them to the rear during withdrawals.

Though the combing out of rear services was an obvious and popular emergency measure in the eyes of the combat troops, it could not resolve the contradiction between the demands of the war and the means available to wage it. With some justice, the supply leadership can be charged with mistakes in organization and some inefficiency, the quartermaster-general with a dangerous optimism, and the supply troops with a lack of discipline and poor preparation for action.²⁴³ But even with the best will and the greatest dedication, the quartermaster-general's men could only bring to the front the ma-

²⁴¹ See e.g. the protest by XXXXVII Army Corps against the deployment of corps supply troops which had been ordered for the defence of Orel, KTB Pz.AOK 2/O.Qu., 23 Jan. 1942, BA RH 21-2/v. 819.

²⁴² Windisch, *Nachschubtruppe*, 11.

²⁴³ See e.g. OB 4. Armee, O.Qu.III/IIa/Ic No. 2000/41 geh., special order for the maintenance of discipline, 11 Sept. 1941, BA-MA RH 20-884.

terial provided by the war economy and the Economic Staff East—and that was simply not enough to satisfy the requirements of the army in the east. It may be that the principal reason for the failure of supply leadership lay in the fundamental errors of operational thinking, which was based on a belief that the bulk of the Red Army could be destroyed west of the Dnieper, and that relatively few forces would be required to occupy the remainder of European Russia. As far as the Dnieper-Dvina line, supplies proved to be secure and generally functioned satisfactorily. By contrast, the conditions for an adequate reconstruction of the supply-base on the far side of the Dnieper were wholly lacking.

Even in July 1941, it was obvious that the operations plan had failed. Despite this, no new war plan was developed to take account of economic and logistical possibilities. Hitler and the military leadership held to the strategic goal of the elimination of the Soviet Union as a military factor in 1941; they decided to continue operations despite the fact that increasing enemy resistance was producing an inexorable erosion of the strength of the troops. This improvised operational thinking was based on the assumption that the enemy was on the verge of collapse, and that guaranteed and secure supply services could be dispensed with. The quartermaster-general was not prepared to fetter the operational leadership by pointing out the realities of the supply situation. He accepted the risk of supplying the troops along diminishing supply-routes, even though it was clear that any interruption of the flow of supplies—whether due to organizational mishaps and bottlenecks in the war economy or to the effects of enemy action and the weather—would intensify local crises and could have unforeseen consequences. Wagner subordinated himself completely to the operational leadership, even when he knew that the army in the east had reached the limits of its strength in men and material. His conduct was partly a response to his position in the military hierarchy, and to the traditional failure to value the role of quartermaster-general in comparison with the art of operational leadership. But Wagner's position was also affected by his mediating role between the needs of the army and the civilian economic leadership, which was still waiting for a swift military victory in the east to free workers for war production. This interdependence between economic policy and the military conduct of the war can also be detected in the case of the food-supply issue. This, indeed, became the key problem of German occupation policy in the occupied eastern territories.

4. THE FOOD-SUPPLY ISSUE: STARVATION STRATEGY OR PRAGMATISM

Obtaining foodstuffs from the occupied eastern territories was regarded from the outset as one of the most important economic objectives of the campaign. In the spring of 1941 the Reich Ministry of Food and OKW had agreed on a hunger strategy to be directed against the Soviet population. Its aim was to

gain control of the surpluses and stocks of the country, and also to collect the largest possible quantity of foodstuffs for the Reich by enforcing a drastic reduction in overall consumption. For the military, the main incentive was that the army in the east could ease the strain on the supply-system by living off the land. For its part, the ministry of food hoped that the food-supply situation in Germany could be greatly improved, particularly if the entire Wehrmacht—more than five million men on the highest daily rations—could be removed from food-supply calculations. At the state secretaries' discussion of 2 May 1941 it was clearly understood that if the Wehrmacht were to live off the land this would mean death by starvation for millions of Russians. Clearly, the situation would be even more drastic if, in the long term, up to 10m. t. of grain were to be exported from the European part of the Soviet Union to cover the deficit in the Greater German economic area. This calculated catastrophic starvation went hand in hand with radical plans for deindustrialization, which would make millions of industrial workers, especially in the major cities, seem 'redundant'.

Two days after the beginning of the campaign, State Secretary Backe summarized his ideas in the General Council of the Four-year Plan.²⁴ He pointed out that 1.65m. t. of Soviet grain had been lost to Germany after the collapse of the trade treaty. At the same time, mass conscription to the Wehrmacht meant that many former recipients of standard rations were now receiving significantly higher Wehrmacht rations. In consequence, there would be a deficit of about 2.5m. t. in Germany's grain balance. Attempts by the army in the east to live off the land would be a relief measure worth approximately 1.9m. t. It was therefore necessary to transport at least 600,000 extra tonnes of grain into the Reich. Though it was no longer thought possible to meet the entire needs of the Wehrmacht in this way, the issue of how to calculate the procurement quota in the east remained open. In addition, Backe expected to obtain 1.5m. t. of oil-bearing seeds from the east in order to resolve Germany's shortage of fats. Several million cows and pigs would also have to be slaughtered in Russia, because the Führer was opposed to any further reduction of the meat ration in the Reich.

The food-supply question was therefore governed by an unequivocal political decision to avoid at all costs placing burdens on the German population. Instead, Germany's future eastern colonies were to be exploited ruthlessly. It cannot be argued that such an approach was unavoidable because of domestic constraints, since the German population had accepted the reduction in the meat ration in May 1941 'without undue excitement'. Hitler and the military leadership nevertheless remained extremely anxious, because the economic authorities reported that a further reduction would be necessary in the autumn 'unless very considerable surpluses are obtained from previously inaccessible

²⁴ Reich Marshal of the Greater German Reich, Plenipotentiary for the Four-year Plan, VP 10103/1, g.Rs., 11th meeting of General Council on 24 June 1941, doc. NI-7474, Staatsarchiv — Nürnberg.

sources'. There would 'certainly [be] greater repercussions' then.²⁴⁵ A marked decline in the productivity and mood of the workers was already perceptible; if the critical harvest conditions in the occupied territories of west and south-east Europe were also taken into account, there seemed genuine reason for concern about internal security in the areas under German control.²⁴⁶

Hitler gave his full support to the plans of Backe and Thomas to implement a radical starvation strategy in Russia, particularly regarding their intentions of starving out the major cities. He informed Halder of his firm decision 'to raze Moscow and Leningrad to the ground, to prevent people remaining there whom we would then have to feed in winter'.²⁴⁷ Conversely, the Economic Organization East also identified itself with the racial ideological component of this 'national catastrophe'. In the first phase of the campaign the Economic Staff East constantly pressed for 'harsh measures' against the Jewish section of the population, despite admitting in its first situation report that the Jews were 'economically at least temporarily necessary because of their large numbers'.²⁴⁸ In its second situation report of 16 July 1941, after the mass murders carried out by the SS special-duty squads, the Economic Staff East referred to some initial successes in the 'solution of the Jewish question'. For example, the important petroleum refinery at Drogobych had needed its 'leading Jews' only a week ago, but was now operating 'completely Jew-free'. Further measures were urgently necessary for economic reasons, above all the rapid transfer of the remaining Jewish population into ghettos, 'so that the more reliable local non-Jews will get a chance and our economic work will not be endangered by Jewish counter-propaganda'. Production losses in the towns would also be avoided.²⁴⁹

Ten days later, attention was drawn once again to the 'Jewish danger'. Express approval was given to the shootings carried out by German police:

In this first period, the Jews, who form at least a third and often over half of the population in the towns, have in many cases openly expressed their hostility to and their hatred of Germany through whispering campaigns, and occasionally through illegal meetings. The reprisals taken by the native population against the Jews as henchmen of the Communist regime, and the shootings by the German police of numerous Jews suspected of sedition, have intimidated the Jews and to some extent made them willing to work.²⁵⁰

The economic agencies thus linked the security argument in favour of terror

and extermination with the argument of economic practicality. On one hand, mass liquidations eliminated 'useless mouths'. On the other, they seemed likely to have the deterrent effect which OKW believed to be necessary to 'remove any desire for insubordination from the population', and to prevent 'acts of despair and attacks' arising from the 'famine which can be expected in large parts of the conquered territories'.²⁵¹

In the optimistic mood produced by the first military triumphs, the implementation by force of this hunger strategy appeared to pose few problems in Berlin. The army in the east had gone into action with 20 days' supply of rations; with the help of captured foodstuffs, this would probably be enough to feed the bulk of the Wehrmacht during the anticipated short campaign. The belief that a much smaller army of occupation could then live completely off the land—at the expense of the urban population—was not unrealistic. In the first phase of the campaign the economic agencies therefore concentrated on transporting to the Reich all obtainable foodstuffs which had not been claimed by the Wehrmacht. These would later be used to supply the Wehrmacht units which, it was thought, would soon be returning from the east, without breaking into the domestic balance. In addition, efforts were made to establish an agricultural organization in the occupied eastern territories, and to introduce effective measures of economic management in the longer term.²⁵²

With the economic agencies preoccupied with medium- and long-term planning, the immediate task of supplying the troops was regarded as much less important. In consequence, the quartermaster-general soon came into conflict with the Economic Staff East over the deduction of the foodstuffs obtained by the Wehrmacht in the occupied territory from the supplies brought in from the Reich, which the economic authorities wanted to curb as much as possible.²⁵³ Army High Command considered that 'in contrast to opinion in Berlin, supplying the troops completely from the occupied territories had not yet been possible'. It demanded that further contributions of rations should be made available from the Reich; this was necessary if only to overcome local bottlenecks. The advance of the mobile formations often resulted in the establishment of vast, unsecured areas stretching over a hundred kilometres between them and the following infantry formations; in that area there was 'much stealing on the part of the population'.²⁵⁴

The most vigorous complaints about inadequate rations came from the GOC Armoured Group 4, Colonel-General Hoepfner.²⁵⁵ Some trains were not

arriving at all, or only after being partially or completely plundered; the adjoining armies were better off simply because they were not operating, as the armoured group was, in a scanty, wooded area. With only three days' rations in stock, he could not properly prepare for the forthcoming operations. Hoepner saw no possibility of increasing the amount he obtained from the land, and demanded supplies from the Reich to bring stocks up to between six and ten days' rations.

At this stage, the army in the east was still being supplied relatively efficiently. Army High Command therefore saw no reason to take drastic action, even though Wagner reported that 50 per cent of overall supply requirements were having to be supplied from the Reich. The figures were on the increase, which meant that expectations of the ability of the troops to live off the land were not being fulfilled.²⁵⁶ Anticipating rapid victory in the east, Army High Command regarded the emerging bottlenecks in supply as temporary, and was prepared to expose the troops to greater risks in pursuit of rapid victory. Since it was unable to put pressure on the economic authorities in the Reich to change their position, the army in the east was forced to resort to a more ruthless exploitation of the occupied territories. In this context, the army intendant rejected Hoepner's complaints and demands.²⁵⁷ Even a reduction of stocks to one or two days' rations was not to be regarded as dangerous. The armoured group must simply 'try harder' to increase its exploitation of the occupied territory in order to overcome supply bottlenecks.

This instruction to try harder to live off the land was perhaps an indication that the troops had behaved with more restraint towards the civilian population than the supreme leadership had intended. In its first situation report of 10 July 1941 the Economic Staff East had noted the difficulty of imposing a unified policy concerning the issue of food supply. The basic position of the Berlin central authorities was that it was not the business of the German authorities to feed the native population:

However, with the territories so vast and the occupying forces along the army's rearward communications so slight, there is, on the one hand, a military interest in keeping the population quiet, but, on the other hand, an economic interest on the part of Wehrmacht and homeland in ensuring that not too much is consumed by the native population. Particularly as we do not yet know what we will find and harvest.²⁵⁸

These deliberations signalled the first tentative signs of a retreat from the radical hunger strategy. However, they remained insignificant because no

²⁵⁸ Chief WiStabOst No. 40018/41 g., 1st situation report, 10 July 1941, BA-MA RW 31/11. In the 1944 history of Economic Staff East mention is made of the fact that in 1941 it was believed that there were sufficient fighting forces in the east and that it was not necessary 'to be concerned with providing food, clothing, and accommodation for them'. This position was rapidly proved to be incorrect; see *Kriegswirtschaft im Operationsgebiet des Ostens*, 207 (see n. 218).

authority felt any responsibility for feeding the subject Soviet population. The task of the army's military administration was limited both in time and scope. From the military point of view, the issue was the responsibility of the economic authorities; for their part, the economic authorities were content to shift the responsibility to the civilian administration, which was not yet ready to begin its work.

For the time being, Army High Command still had to administer most of the occupied territory. Its ambivalence was clearly demonstrated in an instruction of 25 July. On the one hand, this demanded ruthless action against the native civilian population, and the prisoners of war, in order to secure the conquered territory and make its exploitation possible. On the other hand, however, it argued that efforts should be made to keep the inhabitants at work, because this was the quickest way to achieve pacification.²⁵⁹ Although a wage was to be provided rather than rations in return for work, it was clear that the co-operation of the population could not be achieved without concessions in the supply of food. The economic leadership responded at once by declaring that German food supplies could only be ensured at the expense of the occupied territories, and that virtually nothing could be done for their inhabitants.²⁶⁰ This was especially true in the central Russian area of deficiency, and in the big industrial cities; on the other hand, the help of the agricultural population was urgently needed by the German occupation authorities to bring in the harvest, and their support was to be gained by guarantees of adequate food.²⁶¹ In fact, the network of agricultural leaders was so thin, and the number of occupying troops so small, that they could not hope to get complete control of the new harvest. In such circumstances, 'concessions' were easy to make. While the agricultural population could feed itself in an emergency, and the urban population managed to survive these early months by living on their stocks and making 'foraging trips', hundreds of thousands of Soviet prisoners of war became the helpless victims of German despotism.

Expecting a short war, the military élite saw no need to provide adequately for the masses of prisoners who fell into its hands.²⁶² Some attempts had been made during the planning stage of the campaign to argue that the prisoners of war were 'valuable' workers who should be fed according to the Geneva Convention. These came to nothing, because Army High Command had no authority over the economic apparatus in the occupied territory, and no agreement on food-supply guidelines for Soviet prisoners of war was made until August 1941. Until then it was left largely to the various army commands

to decide what efforts should be made to feed the prisoners. Individual examples reveal that rations were usually fixed so low that the prisoners had little chance of surviving for long. The only exceptions were the prisoners of war who were taken along by the troops as indispensable workers. These were promised, and generally received, good provisions.²⁶³

It was the civilian economic authorities in the Reich which expressed most interest in preserving the work capacity of Soviet prisoners of war. In June 1941 these expected that the political directives forbidding Soviet prisoners from being put to work in the Reich would be withdrawn sooner or later; domestic political reservations about their use were unconvincing 'because of the many years of National Socialist indoctrination of the peasant circles, the great difference in culture, and ultimately also the lack of an adequate understanding of the language'.²⁶⁴ Of course, such general interest on the part of the economic leadership in Soviet workers involved only a small section of the population or of the prisoners of war. It did not therefore give rise to any opposition to the extermination measures which were being planned and carried out in the east. After a few weeks, however, these practices had assumed such proportions that they ran counter to the growing interest among military and economic quarters in the utilization of Soviet manpower. This growing interest was due to the unfavourable military developments. The responsible military authorities were helpless and, in some cases, indifferent in the face of the consequences of famine and epidemics.

In the Minsk prison camp, for example, 100,000 prisoners of war and 40,000 civilian prisoners were herded together in an extremely small area.²⁶⁵ They were guarded by a detail of active soldiers in company strength. The most brutal force was used against the prisoners, who received only small amounts of food from relatives in the neighbourhood. In these chaotic conditions, while prisoners 'killed each other for a piece of bread', the Organization Todt requested the selection of 10,000 'racially valuable skilled workers' for urgent road-building work. The appeal was rejected by Marshal von Kluge, because he wished to reserve any decision on the release of civilian prisoners to himself.

Catastrophic conditions were not confined to the area of operations in the east, but were to be found even more frequently in the camps of the Government-General and the Reich. This fact proves that the mass deaths of Soviet prisoners of war were not due solely to the ignorance of, and the extreme strains on, the military authorities. First and foremost, these developments were the consequence of a deliberate decision taken in Berlin: both the German population and the Wehrmacht were to be supplied with food

from the occupied eastern territories, without any consideration of the consequences for the enemy population which had come under German control. To that extent, it is justifiable to speak of a deliberate policy of extermination.²⁶⁶

When the Economic Operations Staff East drew up a first interim balance on 31 July 1941, State Secretary Backe offered impressive figures.²⁶⁷ Beyond the partial supply of the Wehrmacht, around 500,000 t. of grain and 100,000 t. of meat had been obtained for the Reich. The short-term objectives of 24 June 1941 had almost been fulfilled. Prospects for the future were less favourable, however. In particular, the assumption that big reserves from earlier harvests would be found had proved to be incorrect. In view of the devastation and the lack of fuel, it was impossible to count on a regular autumn cultivation. With his eye on the imminent transfer of part of the occupied territory to the civilian administration, Backe explained that rations for the population must be 'the very smallest' from the outset. For the urban population, in particular, very little food was available 'because the main part of the produce requisitioned must be reserved to supply the troops and to be taken to the Reich'. Even if the civilian administration should eventually want to feed the inhabitants adequately, this would have 'invariably to take second place to the demands of the Greater German food economy'.

Backe's arguments were essentially a reaction to ideas circulating in the Ministry for the East. In a draft for the civilian administration, Rosenberg's political adviser, Minister Otto Bräutigam, rejected Backe's radical concept of exploitation. Bräutigam argued that it was an illusion to believe that large quantities of grain could already be obtained from this year's harvest. Expectations of quantities between 7 m. and 10 m. t. of grain were unrealistic. In fact, it might even be necessary to assist the population—except in the Russian areas—with German stocks. In any case, without the willing co-operation of the peasants, neither the political 'New Order' objectives nor the economic targets could be reached. Collection of grain must therefore 'depend exclusively on the size of surpluses which can be procured without *substantially* damaging the continuation of agriculture or the living standards of the population. It would be a sufficiently great achievement if the German army of millions could be fed from the land to a significant degree.'²⁶⁸ Of course, German economic interests must not be neglected. 'However, procuring of stocks to an extent which drives the population of the occupied territory to desperation, and arouses hatred of Germany, may produce momentary relief at best, but cannot serve German interests in the long term.' Time would show

that Bräutigam's assessment of the practical difficulties of the policy of exploitation, and of its disastrous consequences, was correct. But in the summer of 1941 Hitler, Göring, and Backe were interested only in short-term gains. They believed that resistance in the occupied territory could be overcome by the use of the most brutal force. Once the anticipated rapid victory was achieved, there would be sufficient men available to apply it.

Despite sporadic attempts to adopt a more pragmatic approach, the German military leadership thus held to its radical policy of exploitation in the occupied Soviet territories, and permitting millions of people to die of starvation. Alongside State Secretary Backe, this concept was once again supported by General Thomas. He instructed his inspectors to exert strong pressure on the Soviet population, and to leave large areas to their own devices, i.e. expressly to let them 'starve to death'.²⁶⁹

The unexpected prolongation of the war in the east had two main consequences for occupation policy. First, it meant that more Russian workers had to be recruited to supply the most urgent needs of the troops and the homeland. Second, it became necessary to compensate for the growing shortage of security forces by introducing political and economic measures of pacification. This situation gave increasing weight to the pressure for a modification of the radical starvation strategy. Nevertheless, the economic leadership vehemently opposed all endeavours to change food policy, especially those encouraged by individual military quarters. When the Wehrmacht stated its growing demands and needs, Backe reminded it of its duty to exploit the occupied territory more fully.²⁷⁰ At a meeting of the relevant departments on 16 September 1941, Göring supported Backe's approach, and essentially confirmed the existing guidelines. According to these, not only was a reduction in German rations to be avoided at all costs out of regard for the public mood at home, but if possible they were to be increased. Göring listed the order of priorities for the distribution of foodstuffs:

First come the *fighting* forces, then the remaining troops in *enemy countries*, and then the *troops at home*. The daily rations are fixed accordingly. Next the *German* non-military population is supplied. Only then comes the *population in the occupied territories*. Basically, in the occupied territories only those people who are working for us should be assured of appropriate food supplies. Even if one *wished* to feed all the rest of the inhabitants, one *could not* do so in the newly occupied eastern territory. As for issuing food to Bolshevik *prisoners*, we are, in contrast to the situation with other prisoners, not bound by any international obligations. Provisions for them can therefore only be determined according to the work they do for us.²⁷¹

(a) *Self-supply by the Wehrmacht*

Although the Wehrmacht was granted the highest priority in the allocation of food, this did not relieve the situation confronting it on the eastern front. First, the Reich Ministry of Food remained anxious to remove the army in the east as much as possible from its calculations within the Reich, and to prevent supplies being sent to it from Reich stocks. Second, the ministry intended to continue transporting captured foodstuffs away from the occupied eastern territories.²⁷² The troops themselves were not always sufficiently frugal in their use of Russian supplies; accustomed to the regular supply of rations, they regarded Russian foodstuffs as mere supplements which could be consumed at will.²⁷³ Despite many appeals for frugality, the soldiers were often responsible for wasteful exploitation which inflicted considerable damage. The GOC Fourth Army, Field Marshal von Kluge, issued a Draconian decree against looting and the vilest forms of crime, which he had found to be prevalent, especially in the hinterland. The occupied territory should be regarded as 'German economic land' and treated with due respect.²⁷⁴ Looters were threatened with the death penalty, while superior officers who failed to stop their men running wild would face court martial.

Maintenance of discipline among the troops was also an essential precondition for organizing the large-scale exploitation of the country that Göring had demanded. In this context, Army High Command told the supply agencies 'that a ruthless and intensive exploitation of the country is an absolute necessity from the standpoint of the overall food situation'.²⁷⁵ The entire food supply of the army in the east would have to be obtained from the land in the near future. Efforts to that end were to be intensified. For the army, the need was no longer simply to safeguard current supply, but also to lay in winter stocks for the occupying troops. According to directives from the quartermaster-general, self-supply in food was to be guaranteed through a close network of supply-depots situated near rail links, from which goods could be moved to the front when operations came to a stop. This would allow the army of occupation to survive the winter on a largely self-sufficient basis, by making itself independent of the difficult transport situation.²⁷⁶ In fact, this objective was realized only to a slight degree. Individual units understandably showed little inclination to bring in the harvest or lay in stocks when it was likely that they would have to advance further east, or when they were due to return to Germany.

²⁷⁶ See Halder *Diaries*, 1247 (20 Sept. 1941).

In these conditions, there was little prospect of achieving the quotas laid down by the Economic Staff East at the end of September 1941.²⁷⁷ Unreliable data—German and Russian units of area were sometimes confused during the calculations²⁷⁸—often led to the setting of exorbitantly high quotas. As a result, such supplies as could be obtained were transported to the Reich as soon as the immediate requirements of the troops had been met, thereby reducing the long-term prospects of survival for the troops. A brief examination of the relationship between the procurement quotas and the needs of the troops reveals that surpluses which could be taken to the Reich were to be expected only in the Ukraine; in central Russia, the procurement target fell far short of satisfying the needs of Army Group Centre (see Table II.vi.2).²⁷⁹ The army group also calculated that, during Operation Typhoon, it would be advancing into a region which had already been harvested and stripped of food by the Red Army. The quartermaster-general therefore immediately demanded increased supplies from Germany to replenish stocks.²⁸⁰ The economic authorities were unable to meet this demand: the desperate transport situation even ruled out an otherwise conceivable 'triangular transaction'—taking supplies from Reich stocks to Army Group Centre, and replenishing stockpiles with surpluses from the Ukraine.²⁸¹ Attempts to increase the exploitation of the area of operations for the needs of the troops also failed because the Economic Staff East had insufficient transport to get the food to the front, and the quartermaster-general could not provide any additional transport capacity.²⁸² Supplies could not be brought in when required owing to the priority accorded to ammunition and fuel convoys to support operations, at a time when the transport system was becoming less efficient. The troops just about managed to supply themselves in the Baltic and the Ukraine. However, Army Group Centre was forced to adopt a ruthless policy of 'eating the country bare', which made organized economic management for the winter more difficult from the outset.²⁸³

The overall food supply of the army in the east was under threat from the onset of the muddy season, particularly as it also brought agricultural operations to a halt. Even in Army Group South, cases of pillage and signs of

disintegration among the troops were on the increase.²⁸⁴ Although adequate food supplies were available in the hinterland, the front-line troops suffered hardship from time to time. Transport problems were not the only reason. The personal union of the agricultural leadership posts in the Economic Inspectorate South and in the Reich Commissariat did not always lead to a greater regard for military interests, as might have been expected, because the Chief Group Agriculture concentrated primarily on the demands of the home front to the detriment of food distribution in the area of operations. There was even deliberate deception of the agencies of the quartermaster-general over the purchase of foodstuffs in the territory of the Reich Commissariat.²⁸⁵ Local agricultural leaders offered the army rations offices large quantities of grain, which had to be taken charge of immediately or be sent to the Reich. Owing to a lack of depot and transport capacity, the army offices were unable to accept these 'offers', giving the authorities of the Reich Commissariat the necessary justification to sell the stocks in the Reich. Only after an argument that dragged on for weeks was an agreement reached; this allowed the military offices to take over half of all the depots which were sited near railways, enabling them to buy up at least some of the produce offered them by the agricultural leaders.

The army group was in desperate need of this support. During its advance towards the Black Sea and the Donets industrial area, it was entering territories which had been largely denuded of male workers by the Red Army, so that it was extremely difficult to bring in the harvest. The ruthless plunder of valuable regions of agricultural surplus by Hungarian and Romanian troops further diminished food-supply prospects for the winter. The chief of staff of Sixth Army argued that the troops must therefore be spread out as widely as possible across the land to enable them to survive the winter.²⁸⁶ He also warned against continuing the offensive to the Don, because this would mean reaching an area where nothing edible was likely to be found, and where poor rail communications made it impossible to bring up supplies.

However, the operational leadership took no account of these reservations. The army in the east was ordered to resume the battle after the end of the muddy season. Nevertheless, the quartermaster-general told the Reich Ministry of Food that a ration contribution must be made available from the Reich for the next six months, because full self-supply from the occupied territory would not be possible.²⁸⁷ Moreover, since the next spring thaw would probably hamper the transport movements necessary to collect and distribute supplies

from the land, sufficient stocks must be laid down in the Reich to meet all the rations needs of the army in the east for at least two months. Backe agreed to these demands. However, these concessions were described merely as 'contributions' from Reich holdings, while the basic principle of self-supply from the land was maintained.

In view of the escalating transport crisis, and the priority given to fuel and ammunition transports needed to support operations, the front-line formations soon faced major difficulties in obtaining food supplies. With stocks as low as one or two days' rations, the troops were living virtually from hand to mouth. Any interruption in the transport of rations, whether due to the non-arrival of trains from Germany or to a fall in procurement levels, could lead to crises at least at local level. In this situation, the survival of the troops depended mainly on whether sufficient food could be found in the rear area and brought to the front. The greatest problem here was the continuing tug of war between the obligation to send deliveries back to the Reich and the supply needs of the Wehrmacht. In Army Groups North and Centre, the food collected locally by the German occupation authorities was almost all available for the Wehrmacht. On the other hand, the civilian administration in the 'Ukrainian bread basket' had to deliver high quotas for transport to the Reich.

The Chefintendant attached to the Wehrmacht Commander Ukraine, who was responsible for satisfying the needs of the troops, did not even have a precise idea of food-supply prospects or of amounts likely to be collected, because the Economic Inspectorate South and the agencies of the Reich Commissioner were unable to provide him with the necessary data.²⁸⁸ Nevertheless, transports into the Reich were continued, though the civilian authorities themselves described this as a 'leap in the dark'. In November–December 1941, for example, five transport trains containing cattle were sent each day from the Ukraine to Germany, at a time when Army Group South was urgently calling for a supply of cattle from the rear area because it could no longer guarantee supplies of fresh meat.²⁸⁹ Only after bitter protests from the Wehrmacht did the civilian administration declare itself willing to cut down on cattle transports to the Reich. From the beginning of 1942 it then dispatched twelve cattle-trains per week to the Field Agency South of the quartermaster-general. However, the quantities of processed meat products, likewise asked for, could not be prepared for dispatch because there were no nails for the crates.²⁹⁰

Similar friction also appeared over the supply of grain. Worst affected were the horses used by the army in the east, because State Secretary Backe refused

²⁸⁸ Chefintendant beim W.Befh. Ukraine, situation report for Army High Command (see n. 278).

²⁸⁹ See half-monthly report of Economic Staff East 1–15 Nov. 1941, BA-MA RW 31/14, and letter of Außenstelle Süd/OKH/GenQu/O.Qu. to Army Group South, authorized transport officer, 12 Nov. 1941, BA-MA RH3/Arb. No. 111.

²⁹⁰ See Chefintendant beim W.Befh. Ukraine, Sachgebiet E, No. 194/42 secret, letter to OKH about fresh meat supply, 15 Jan. 1942, BA-MA RW 41/9.

to provide roughage and oats from the Reich, even after intervention by Brauchitsch.²⁹¹ In Army Group South the horses were eventually fed on grain; in Army Group Centre straw roofs in the villages were removed for use as fodder. With the onset of winter, the undernourished horses were unable to carry their increased burdens, and many perished. The supply of bread-grain was also uncertain.

The most likely solution to these problems was for the troops to rely increasingly on the grain that could be obtained from the land, and to enlarge the stocks under German control, i.e. to reduce the share remaining to the local people. To this end, the occupation authorities planned a large-scale threshing drive in November 1941.²⁹² In the course of the winter, troops were to be used to compel the peasants to bring in the remaining grain harvest, to thresh it, and to load it for the occupying power. The objective of the operation was outlined by the Wehrmacht Commander Ukraine: '*The utilization of the harvest of the occupied eastern territories is of vital significance for the further conduct of the war. In particular, rapid procurement of the grain harvest is necessary to avoid spoilage, and to prevent access by the native population.*'²⁹³

Though the Germans estimated the harvest in the Ukraine at 5.2 m. t., the collective farms had delivered only 1 m. t. of grain, almost all of which had already been distributed (Wehrmacht 250,000 t., transport to the Reich 50,000, Reich reserve in store 600,000).²⁹⁴ Expectations of additional booty were therefore high—between 2 m. and 3 m. t. The men responsible—Göring, Koch, Thomas, and the Economic Staff East—realized that this target could be attained only if front-line troops were made available for the threshing drive. However, the quartermaster-general refused to make eight divisions available for this purpose, as that would doom the advance on Moscow to failure. Hitler declined to take an unambiguous decision on whether priority was to be given to the military operation or the economy.²⁹⁵ The drive was set to begin on 15 December 1941. A few days before, however, all security formations which were at combat strength had to be withdrawn for front-line service in order to check the Red Army counter-offensive. In addition to the weakness of the military elements who were due to carry it out, the drive was also hindered by a shortage of fuel, threshing-machines, and means of transport. Almost half the harvest brought in was subsequently lost through damp and damage caused by mice.²⁹⁶

²⁹⁶ See discussion of agriculture chiefs (n. 294).

Despite the fact that the drive was carried out under military control, only part of the remaining harvest went to the Wehrmacht. Although there was an agreement with the civilian administration for 160,000 t. of grain to be handed over to the Wehrmacht, and although the Chefintendant attached to the Wehrmacht Commander Ukraine tried to get the purchasing districts of the army rations offices to operate according to the production levels of the harvest areas, the Agricultural Organization continued to refuse to provide actual collection figures, and moreover delayed the handing over of depot capacities as agreed.²⁹⁷ Such conduct by the civilian authorities was not always due to an unwillingness to co-operate. They were often simply overstretched.

Thus, a disastrous shortage of sacks forced the closure of mills because the flour could neither be stored nor transported.²⁹⁸ In Kirovo district, in the heart of the Ukraine, 600,000 t. of grain, pulses, etc. had to be moved from collective and state farm stores, where they were in danger of spoiling. Though goods in the region had previously been transported by rail, this became impossible because of the inadequacies of the German railway operation; the use of lorries was out of the question owing to the poor road conditions. With only 6,000 horse-drawn vehicles available, the necessary transports would take over 200 days. Army Rations Office 751 in Kirovo eventually demanded individual railway wagons to enable it to ensure at least the current supply for the troops.²⁹⁹

It is no exaggeration to claim that German endeavours to exploit the occupied territory to the full were condemned to failure. The root causes were the persistent inefficiency of an often chaotic administration, and the rivalry between military and civilian agencies. The self-supply of the Wehrmacht, the first priority of German food-supply policy in the east, was also affected by these conditions. Though in general the army in the east was relatively well supplied throughout the winter, the situation at the front varied considerably from sector to sector.³⁰⁰ In the agriculturally poor region of northern Russia, Army Group North survived only because of a constant inflow of foodstuffs from the Baltic, which created considerable transport problems for Sixteenth Army in the Tikhvin area. Since the army area itself was 'an absolute wilderness without a hinterland', intermittent crises were inevitable. The situation facing Army Group Centre was more favourable. Apart from the case of Ninth

Army in the Upper Volga region, there were stocks of cattle and grain in the rear area to allow the army to live off the land for extended periods. Some of these supplies, however, were lost during the precipitate retreats which marked the winter months.

Army Group South faced critical conditions. Sixth Army, in the Kharkov region, was operating in an area which had been 'eaten bare' for hundreds of kilometres. In the Donets industrial region Seventeenth Army encountered three major problems. First, transport conditions east of the Dnieper were so catastrophic that it was impossible to bring in enough supplies. Second, the slow rate of the German advance had given the Red Army time to destroy the region and denude it of stocks. Third, the position of the army was damaged by friction with the economic agencies. For example, the Economic Inspectorate South was transporting cattle from the Dnepropetrovsk area to Germany even as Seventeenth Army was being forced to bring in cattle from the western Ukraine for its own supplies. On the other hand, although First Armoured Army occupied an exposed position on the Don, it was helped by the fact that the supply leadership had established a base there which ensured adequate supplies. Despite the destruction of the war, the enormous agricultural wealth of the Don region allowed the army to live extensively off the land. In the Crimea, however, Eleventh Army faced a very different situation. Here the army would only be able to live off the land until the end of the year. Thereafter, it would be almost totally dependent on supplies being brought in.

(b) Selective Starvation Policy against the Soviet Civilian Population

The goal of food policy was to cover the food deficit in the Reich both by ensuring that the Wehrmacht was able to support itself completely from the occupied eastern territories and by exporting additional foodstuffs to Germany. This objective had been only partly achieved by the winter of 1941-2. Furthermore, so long as the German occupation authorities were unable to collect the quantities demanded for the troops and the homeland, they had no cause to worry about making food available to the civilian population. For conflicting ideological and economic reasons, the economic authorities were unprepared for such a task. Besides, the ruling élite in Berlin left no doubt of its desire to maintain the starvation strategy at all costs, a resolve strengthened by the arguments of State Secretary Backe that the policy was essential in order to maintain rations in the Reich. Nevertheless, there were repeated proposals for a change of direction from the occupation agencies directly concerned with implementing this policy.

At the heart of their reasoning lay practical considerations. Since unfavourable military developments were tying down all available military forces, the occupying power was unable to organize and exploit Soviet agriculture at the same time as maintaining control of the urban population whom it had effectively condemned to death by starvation. The growing demands of the front weakened the German presence in the hinterland, and increased the

need for native workers who would have to be fed. Consequently, attempts to exempt larger sections of the civilian population from the starvation policy were inevitable. The first signs of this trend appeared in the military administration, next in Rosenberg's civilian administration, and last of all in the economic agencies.

Even in August 1941, when the military administration was earnestly endeavouring to bring in the harvest,³⁰¹ there was some flouting of the principle that the towns were not to be supplied with food and the population left to its own devices. The security police reported confidence among the population 'that the Germans would take every measure to avert this famine'.³⁰² In many places this confidence was apparently well founded. This is indicated, for example, by a progress report submitted by 213 Security Division, operating in the western Ukraine. The report, written at the end of August 1941³⁰³—before the area was handed over to the civilian administration—noted that the urban population could survive on its own stocks until the new harvest was brought in, with the Wehrmacht making some quantities available from captured stocks for the operation of community kitchens in an emergency. It concluded: 'Once the new harvest is brought in, the supply of the population ought not to cause any major difficulties.'

Such a procedure was covered by the immediate tasks assigned to local commandants' offices during the occupation of Soviet territories.³⁰⁴ These included 'concern for the feeding of the civilian population, rationing if necessary in agreement with IV Wi of the field commandant's office', and the appeal to the peasants to supply the towns with food. The measures clearly contradicted Backe's guidelines of May 1941, because they allowed food to be consumed by the civilian population before German demands were met.

Conditions changed rapidly with the transfer of individual areas and towns to the civilian administration, and the development of the German Agricultural Organization. From the outset, Rosenberg's staff had shown disapproval of the starvation strategy advocated by the Four-year Plan Authority, but their views had little chance of being taken into account after the appointment of Koch as Reich Commissioner Ukraine. Koch committed the administrative machinery to meet war-economic objectives as its priority. Moreover, the agricultural organization directed by Backe had its main focus here. The state Zentralhandels-gesellschaft Ost (ZHO: Central Trade Company East) established a network of over 100 branches to procure, transport, and distribute the agricultural produce. This ensured that the food-policy guidelines could be

³⁰¹ See Befh. rückw. H.Geb. Mitte/Ia, instruction on harvest work, 15 Aug. 1941, BA-MA RH 26-221/17.

ruthlessly enforced in the civilian administration. Even in ideal circumstances, it would have been difficult to create an effective system to procure and distribute food to the towns, owing to personnel deficiencies in the German administrative apparatus, and to the lack of transport. Nevertheless, if the German side had possessed the will, the urban population could still have been fed adequately. Enough food was available, at least in the Ukraine. About a million tonnes of grain were required to supply the population in the Ukrainian cities. However, the agricultural population quickly recognized that the occupying power was offering neither material nor political incentives for the delivery of surpluses. The inevitable result was that the collective farms often produced only enough to satisfy their own needs. The few German agricultural leaders, usually completely unqualified, were incapable of controlling and organizing agricultural production in the whole country outside individual points of concentration.

Ultimately, even the area of operations was affected by the attempt of the economic authorities to maintain the starvation strategy. Any pragmatic approach by the military quarters was therefore possible only within narrow limits. Nevertheless, some individual commanders did try to feed the civilian population under their control. Successes were most readily achieved by the implementation of emergency regulations. At the end of August 1941, for example, Army High Command responded to numerous requests by limiting an earlier decree from OKW, according to which members of former enemy states now working for the Wehrmacht were responsible for feeding themselves. Army High Command stipulated instead that Russian workers in mobile services—railway personnel, farm-cart drivers, and road-building columns of the Organization Todt—were to be fed from German stocks on the basis of the lowest daily rations in the Wehrmacht.³⁰⁵ Another emergency regulation was issued shortly afterwards, to cover those engaged in non-mobile work for agencies of the army or of the army entourage in the territory under civilian administration. This laid down that provisions from Wehrmacht stocks could be supplied in return for wage reductions. Though the rations provided were only about half the Wehrmacht rations, and were accompanied by a big wage deduction (of 6 roubles per daily ration, compared with the hourly wage for an unskilled male worker of 1 rouble), they were much higher than those received by prisoners of war. These rations were also given to Jews, who, as a matter of principle, were to receive rations alone in place of wages.³⁰⁶

The Chief of the Economic Staff East in the area of operations, Lieutenant-General Schubert, went further. He supported a demand from the commander of Rear Army Area Centre that food should be provided for the whole

³⁰⁵ Reproduced in Special instructions for Supply District South No. 112, 2 Sept. 1941, BA-MA RH 3/Arb. No. 105.

³⁰⁶ Kdr. Vers.Bez. Süd/Qu., appendix to Special instructions to Supply District No. 121, 13 Sept. 1941, *ibid.*

civilian population.³⁰⁷ The commander had pointed out that a deliberate 'guerrilla war' was being waged in his sector. The attitude of the population was crucial: the less able the Germans were 'to pacify them by guaranteeing minimal nourishment', the 'more effectively they were influenced' by the partisans. Schubert subsequently issued an order for the setting up of community kitchens for the urban population. Accepting that the 'complaints of our troops' would continue to increase, he asked General Thomas to urge Göring to change the guidelines covering food supply. So far as one can tell, he was not supported by Thomas or Backe.

On the contrary, Göring's directives of 16 September 1941, in which Backe appears to have had an important part, signalled a determination to maintain the previous course of feeding only those Soviet citizens who were working for the Germans.³⁰⁸ According to Göring, because of the difficult food situation, larger towns were not to be occupied in future, but left to their own devices and starved out. Backe also obtained the support of Hitler for this course of action. After receiving information on the food supply of the Reich for the following winter, Hitler ordered that the capitulation of Leningrad and Moscow was not to be accepted, because the Germans could not justify feeding two cities' populations at the expense of Germany.³⁰⁹

These political guidelines were unequivocal. Nevertheless, even in the ensuing period some commanders continued to urge that the civilian population be left enough food 'for them to exist in makeshift fashion until the new harvest'.³¹⁰ If no food was available, native workers could not be found and put to work. At least in Army Group Centre, the need for manpower was so great that it could not be satisfied by the labour deployment offices of the economic inspectorate; Jewish skilled workers had 'perforce' to be used.³¹¹

The contradictions in economic policy were made manifest after the occupation of the big industrial cities of the Donets region. From the point of view of food policy, there might appear some justification for the notion that the administration and exploitation of the occupied territories in the east would be made easier by increased chaos, and by the 'increased flight of the population of the Soviet Russian cities to the interior of Russia'.³¹² On the other hand, it was in the interests of the Economic Inspectorate South, and the troops

operating in the Donets region, to recruit as many workers as possible from those cities to reconstruct and operate the workshops, power-stations, railway lines, mines, and industrial plants. It was this attitude which led the anxious field commandants' offices to demand new directives for gaining the 'good-will' of the Ukrainians, which was now also essential for the pacification and security of the hinterland.³¹³

Rapidly emerging tensions between town and countryside aroused considerable interest on the part of the Germans. After all, the occupiers would be the obvious beneficiaries 'if the various parts of the population were to hold each other mutually responsible for the hunger that is inevitable in the future'.³¹⁴ On the other hand, passive resistance at the very least might be encouraged if, 'as reported by the representative of the Economic Inspectorate South, the delivery quotas are set five times as high for the collective farms as they were in Russian times', and if food-supply problems escalated. Sporadic initiatives from field commandants' offices, such as encouragement of a drift from the towns to the countryside while continuing municipal welfare, were bound to be ineffective so long as the economic agencies removed all the foodstuffs they could lay hands on without any concern for those sectors of the population left unprovided for.

Tensions increased with the onset of the muddy season, since Wehrmacht needs rose as supplies failed to arrive. The economic leadership, however, was not prepared to change course. In this situation, the army leadership at last began to support the efforts of local occupation authorities to achieve better treatment of the population. The commander-in-chief of the army, Field Marshal von Brauchitsch, now demanded a new order of priorities in the use of agricultural produce in the occupied territory: the troops should be supplied first, then the native population, and only then should any surpluses be sent to the Reich.³¹⁵ Backe rejected this request out of hand, on the grounds that if he accepted it, he would be unable to honour the meat coupon in the Reich³¹⁶ as Hitler and Göring had ordered. In the area of operations, the Economic Staff East, which had abandoned its push for independence and was seeking closer links with the command structure of the army, had reached a different conclusion. It considered that anxiety over growing resistance from the Soviet population was justified. The Germans were too weak to prevent those groups of the population who had been condemned to starve from joining the partisans and obtaining food by force of arms. Inadequate nourishment of the civilian population also reduced the 'enthusiasm for work' of men who were

urgently needed for German projects. All too often, workers simply failed to turn up because they were away bartering for food in the country. Increased emigration by the urban population also complicated the security problem, and made it more difficult to bring in big harvest yields. More food was being consumed by the population than the Germans had intended.³¹⁷

On 6 November 1941 a discussion was held between the commander of Rear Army Area South, Infantry General Erich Friderici, and the head of Economic Inspectorate South, Lieutenant-General Hans Stieler von Heydekampf, in an attempt to reconcile these differing interests.³¹⁸ The economic leadership referred to a letter from GOC Army Group South, based on a suggestion by State Secretary Backe to the effect that the economic inspectorate was authorized to take drastic measures even against army units in order to fulfil the delivery quota. Stocks would suffice to cover the needs of homeland and troops, and possibly of the working part of the Ukrainian population, but not for their families or those without work.

In contrast, Friderici argued that the population must be guaranteed food 'to a certain degree'. 'A person working for us, in industry or trade, must not be allowed to starve totally. This is not a humanitarian matter, but a purely practical measure in the German interest.' This principle—that at least those people working for the Germans must be fed—was the lowest common denominator. It appeared that no more could be achieved. In any event, this seemed to be the conclusion drawn in a situation report written by the commander that same day. It stated:

The ruthless exploitation of the country to feed the homeland, which is the task laid upon the economic agencies, may lead to extensive hunger revolts and looting raids on the countryside by those sectors of the Russian population who are excluded from any provision. In addition to the military supply installations, protection against the starving urban proletariat will also have to be provided for those groups of urban workers who are working for us and are therefore still [*sic*] being fed, as well as for the rural population. The need for security forces will thereby be greatly increased.³¹⁹

Hitler had already adjusted to this situation in July, and ordered the setting up of captured-tank units with the security divisions. Immediately upon the onset of winter, when the hunger crisis was reaching its peak, the first French armoured vehicles were allocated and the training of crews was begun.³²⁰

In his discussions of 7 and 8 November 1941 on the need for greater productivity in the German war economy, Göring emphasized that the food-supply guidelines must be maintained. The planned labour of large numbers

of Soviet prisoners of war and civilian workers in Germany ought not to lead to a 'serious breach' of the food balance. He therefore ordered the 'establishment of their own diet (cats, horses, etc.)'.³²¹ Göring also made these remarks concerning food supplies for the Soviet population:

1. Provision for the rural population will create no especial difficulties. 2. The urban population can only receive very meagre quantities of foodstuffs. For the big cities (Moscow, Leningrad, Kiev) nothing at all can be done for the time being. The consequences of this are harsh, but unavoidable. 3. People working directly in the German interest are to be fed by direct distributions of food in the factories so that their ability to work is more or less sustained. 4. In the Ostland too, the food rations of the local population are to be set at a level well below the German, so that the greatest possible surpluses can also be obtained from there for the Reich.³²²

Göring was well aware that the order to continue removing food to the Reich might bring about 'the greatest mortality since the Thirty Years War' in the occupied eastern territories.³²³ He remained determined to maintain the ruthless policy of exploitation at all costs. Despite this, some occupation authorities did continue their efforts to achieve an improvement in the food supply for the Soviet population. The attitude of the civilian administration in Estonia, which refused to deliver bread cereals to the army at the expense of the native population,³²⁴ was certainly an exception. The Economic Staff East applied itself to a 'policy of small steps' in these circumstances. It took advantage of the task of procuring food for the working section of the population in order to gain tighter control over the procurement and distribution of the foodstuffs available in the countryside as a whole.

On 4 November 1941 'maximum rations had been laid down for the supply of the towns' on condition that the needs of the Wehrmacht, the German authorities, and deliveries into the Reich were not affected.³²⁵ The nutritional value of these rations was approximately 1,200 calories for inhabitants who were doing 'useful work', roughly 850 calories for those who were not working for German projects, and approximately 420 calories for children under the age of 14 and Jews. These were starvation rations which gave the population virtually no chance of survival in the long term. Additional rations above the maximum were forbidden, supposedly because they would inflict 'intolerable disadvantages for the feeding of the homeland'. Furthermore, the local econ-

omic agencies were instructed to delay until any stocks the population had managed to hoard were exhausted.

However, some efforts were made to introduce support measures which would improve the situation. The Economic Staff East made simple consumer goods available in order to offer the peasants an incentive to deliver surpluses.³²⁶ The threshing drive was also designed to increase the procurement of foodstuffs. In addition, the economic agencies suggested that women should be regarded as particularly appropriate for work in the Reich, because they were least likely to be found work, and provided with food, in the east.³²⁷ Special attention was paid to preventing a black market and flight from the towns.³²⁸ The aim was 'to bind the workless urban population to the city, with the most productive possible exploitation of their work potential', in order to prevent the uncontrolled influx of foodstuffs from the land. To this end, orders were given for demolition and clearance work, the collection of material, road-building, and snow-clearing, all on condition that 'appropriate' provision could be supplied. The Economic Staff East hoped that this would achieve 'the regulation of food supplies in line with German interests', as well as 'relieving the countryside of unsafe elements from the politically more contaminated urban population'. Other measures were adopted alongside these work-creation projects: the larger towns were repeatedly sealed off, illegal imports of food were seized, and unauthorized markets were broken up by force.³²⁹ Of course, such efforts to achieve a 'fair' distribution of available foodstuffs were extremely limited in scope. It should always be remembered that the 'maximum rations' were appallingly low, and that priority continued to be given to providing supplies for the Wehrmacht and the Reich.

The reaction of the military authorities remained inconsistent and indecisive. It fluctuated between resignation and a vain attempt at least to contain the starvation catastrophe which appeared to be inevitable. For example, in Orsha on 13 November 1941 the quartermaster-general reported that the food-supply question was 'catastrophic' for the civilian population, and that the army was virtually powerless to improve the situation.³³⁰ At a ministry of food briefing on 20 November 1941 the commander-in-chief of the army again called for adequate rations to be given to the Russian civilian population.³³¹

In the area of operations itself, reactions varied. The commander of Supply District South criticized the chaotic organization of economic matters, and demanded a 'modest but adequate supply of food' for Russian civilians.³³² On the other hand, some military quarters demanded the elimination of 'superflu-

ous mouths' in the towns, especially inhabitants who were regarded as politically unreliable or racially inferior.³³³ Some army commanders appealed to their soldiers to see the war as a racial and ideological war of extermination. 'Sympathy and softness towards the population' were therefore completely misplaced. 'The struggle against emerging difficulties of food supply is to be left to the self-administration of the enemy population.'³³⁴ From the repeated prohibitions that had to be issued, it appears that ordinary soldiers often showed more humanity than their superiors, and fed Russians from their own field kitchens 'contrary to regulations'.³³⁵ In any case, the quartermaster-general reported to Halder that German soldiers were often 'very considerate' towards the population.³³⁶ Propaganda was therefore aimed at persuading the soldiers to remain 'hard in the face of starving women and children'. The German soldier would

be inclined to give some of his rations to the population. But he must say to himself: Every gram of bread or other food that I give to the population in the occupied territories out of the goodness of my heart, I am taking away from the German people and therefore from my family.³³⁷

The Army High Command either could not or would not agree to more than a further, slight relaxation of the rations regulations for Russian workers in the service of the Wehrmacht.³³⁸

Ultimately, only marginal adjustments were made to the German starvation policy in the occupied eastern territories. The anticipated consequences were not long delayed. In the main Ukrainian cities of Kiev, Kharkov, Dnepropetrovsk, Zaporozhye, Poltava, and Taganrog the supply situation soon became critical.³³⁹ As the local authorities were able to distribute only whatever small stocks were available, widely varying food quotas became the norm. In the newly occupied towns of the southern Ukraine, where the local people were still unaware of the real food situation, the military administration used propaganda in an attempt to keep them unsuspecting for as long as possible. In the long run, however, the food crisis in this region inevitably

became acute, as everywhere else. Caught between the strict guidelines from Berlin and the growing pressure of problems on the spot, the occupation authorities searched in vain for a panacea. Their differing reactions, and the consequences, can be examined in the case of three cities which, according to express instructions, were to be starved out.

In line with orders from Hitler and Göring, Kiev, the capital of the Ukraine, was to receive the same treatment as Leningrad and Moscow by being cut off from all food supplies and starved out. Nevertheless, the military administration had initially tried to regulate the supply of food to the urban civilian population. Following Göring's directive of 16 September, the Economic Inspectorate South forbade any further importing of food into the city, but the field commandant's office continued to encourage at least the delivery of vegetables by the rural population.³⁴⁰ When most of the military agencies had withdrawn from the city following the great fire, and had been replaced by the undermanned organs of the civilian administration, the 400,000 inhabitants of Kiev—about half the pre-war level—were left virtually to fend for themselves. In the middle of November 1941 conditions in the city were described by the Armaments Inspector Ukraine, Lieutenant-General Hans Leykauf:³⁴¹ not even the 25,000 workers on German projects could be fed adequately; the inhabitants were roaming the countryside in never-ending columns to barter for food, while the peasants travelled to the city with farm wagons to fetch the furniture they had been offered in return. Fourteen days later Leykauf wrote a vigorous letter to General Thomas demanding immediate measures to relieve the starvation, which he blamed on the thinking of the Wehrmacht:

'Skimming off the agricultural surpluses from the Ukraine for the food purposes [of the Reich] is . . . conceivable only if internal Ukrainian trade is suppressed to a minimum. Attempts are made to achieve this (1) by the elimination of superfluous mouths (Jews, population of the big Ukrainian cities which, like Kiev, receive no allocation of foodstuffs whatsoever); (2) by the most extreme reduction of the rations made available to the Ukrainians in the remaining towns; (3) by the reduction of the consumption of the peasant population.

However, the Germans must recognize that in the Ukraine 'in the last analysis, only the Ukrainians can produce objects of economic value through their work. If we shoot the Jews, let the prisoners of war die, allow much of the big city population to starve to death, we cannot answer the question: *Who will then produce economic assets here?*'³⁴²

After the fortunes of war changed, this question became more urgent. The vast distance of the front from the supply facilities back home, along with

the difficult transport situation, strengthened the argument for building up the Ukraine as a supply-base for the fighting troops. In the search for unused industrial capacity, the attention of the Wehrmacht was inevitably drawn to big cities such as Kiev, where the basis already existed for the establishment of repair workshops and factories for accommodation needs and the requirements of the troops. This interest went hand in hand with efforts by the civilian administration to increase the economic benefits derived from the country by reviving the industrial economy.³⁴³ Keeping the population alive and fit for work therefore came to be regarded as more important than before.

In December 1941 the starvation of Kiev was eased for the first time by the allocation of 200g. of bread per person per week, with an additional 600g. of bread for those at work. However, other vital foodstuffs such as fat, meat, etc. were not distributed; this resulted in a rapid increase in the number of people swollen with hunger.³⁴⁴ Though the Wehrmacht was increasingly interested in the exploitation of the Ukraine for armaments purposes, its attitude thus had no lasting influence on the distribution of foodstuffs controlled by Backe. The approach taken by German heavy industry may also have helped to prevent a change in the course of German food-supply policy. After detailed enquiries into available industrial production capacities in the Ukraine, representatives of industry advocated the 'cannibalization' of the installations and their relocation to Germany.³⁴⁵ The massive need for Soviet manpower in the German economy also suggested that moving people who were fit for work to Germany might be of greater benefit than leaving them in the occupied territory, where they could hardly be adequately fed and put to work under existing conditions.

This hesitation on the part of the German occupation regime left a large part of the population of Kiev to starve in the winter of 1942.³⁴⁶ The shortage of food became so acute that there were not even enough rations for the 3,500 workers at the city's power-stations. Though the German authorities did not prevent a drift to the countryside, this often removed the most useful workers from the factories. The Armaments Inspector Ukraine reported on 11 March 1942: 'For many, work is almost a disadvantage, since those who work cannot concern themselves with obtaining food.'³⁴⁷ The problem was exacerbated by the attempts of the civilian administration to prevent black-marketeering, on the grounds that it encouraged crime. This achieved the opposite effect to the one they had sought: the fixing of low market prices actually resulted in such food as had been freely on sale—and this was already in short supply—

disappearing from the market altogether.³⁴⁸ Stocks near to the city could not be used because of transport problems. The bitter cold and heavy snowfalls made things worse. Even the increase in the official allocation to 400g. of black bread per person per week, and the distribution of small amounts of barley, grits, flour, and occasionally a little meat, did not significantly ease the hardship.³⁴⁹

These attempts to provide emergency supplies for the urban population, but without challenging the priorities of German food-supply policy, could do very little to prevent starvation. A greater catastrophe, of the kind which the Germans had been prepared to see, was avoided largely by the efforts of the people of Kiev themselves. The fact that the city had a civilian administration made little difference. In fact, a second example demonstrates that the urban population fared no better under military administration.

Kharkov, the industrial metropolis of the Donets region, was conquered only in late autumn, and remained under military administration as a front-line city in the winter of 1941-42. The Red Army had succeeded in evacuating almost all food supplies; the remaining population—about half of the original 600,000 inhabitants—had no further chance of obtaining foodstuffs. Under these circumstances, the survival not only of the population, but also of Sixth Army, which was deployed in the city, was threatened during the coming winter.³⁵⁰ The troops endeavoured to exploit the hinterland to find food for themselves, proceeding with some caution in order to prevent the area from being 'eaten bare' prematurely.

By the beginning of December 1941 food in the city was already so scarce that people were starving to death every day.³⁵¹ As there was not enough transport to bring sufficient food into the city, and stocks in the nearby areas had been exhausted, the military authorities advocated a partial evacuation of the population.³⁵² However, the local economic command feared that the inhabitants might consume more food out in the country than the quotas allowed them by the Germans. Instead, it proposed that a delivery quota be imposed on the surrounding villages in order to feed the city, thus keeping consumption under control.³⁵³ Hitler made a personal intervention in the argument, to forbid evacuation into the hinterland. Keitel's compromise suggestion—that the population should be deported across the front into Soviet-held territory—was dismissed as impracticable by the GOC Sixth Army

because the inhabitants refused to go voluntarily and the troops could not be expected to drive them out by force.

The conflict was quickly resolved by the decision that Sixth Army was not to be responsible for a forced evacuation. However, in January 1942, with a third of the inhabitants suffering from malnutrition, the city commandant decided to encourage people to leave. Following investigation by the security police, passes were handed out to individuals to allow them access to the hinterland.³⁵⁴ Yet these people did not stay on the land for long, preferring to use the opportunity to barter for food and then return to the city. This black market was subsequently hampered by the appalling weather, and the food shortage reached catastrophic proportions in the spring of 1942. The Germans were now feeding only the workers employed by the Wehrmacht. The city commandant also ordered that units should make full use of their kitchen waste by distributing it to the starving population.³⁵⁵

The number of civilians who starved to death as a result of German food policy in the winter of 1941-2 cannot be assessed with any certainty. However, the greatest number of deaths undoubtedly occurred during the siege of Leningrad. Though the Wehrmacht lacked the strength to close the ring, so that limited food supplies could still be brought in and partial evacuations carried out, the death toll from starvation probably reached several hundred thousand during the 900-day siege. Admittedly, these people were only indirect victims of the German starvation strategy, because they were on the other side of the German lines, but the connection is absolutely undeniable. In fact, the case of Leningrad sheds a particularly revealing light on the nature of the German starvation strategy. Owing to the successful defence of the city, German deliberations remained purely theoretical; the underlying approach of the various authorities towards the civilian population can therefore be seen with particular clarity, unaffected by practical considerations.

After the experiences at Kiev, Hitler and the Wehrmacht leadership resolved to avoid battles for big cities whenever possible and not to occupy them permanently in future. Siege and starvation became the means by which military victory was to be achieved. In the case of Leningrad, however, the decision about the fate of the city had already been taken before the great fire in Kiev on 24 September 1941. Hitler had spoken to this effect at the beginning of July, and on 16 September, after Backe's report, Göring confirmed that the conquest and occupation of big cities were undesirable for 'economic reasons'. In the minutes of the discussions in the Wehrmacht operations staff of 21 September, a single reason is given for the decision not to occupy the city: 'because then we would be responsible for the food supply.'³⁵⁶ This argument

³⁵⁶ Landesverteidigung No. 02119/41 g.Kdos. (I Op), memorandum Leningrad, 21 Sept. 1941, BA-MA RW 4/v. 578. See sect. II.vi.4 at n. 245; also sect. II.i.1(c) at nn. 247 ff. (Klink) for a different interpretation of the facts, and sect. II.iii.2(b) at n. 155 (Ueberschär).

was to be repeated in all statements subsequently adopted by military command authorities.

The issue of food supply clearly also played a major role in later decisions taken by Hitler, and during the deliberations of the military concerning the fate of the city. This fact is important, because the capitulation of Leningrad was thought to be imminent. The idea of starving the city out had therefore lost its military utility and became merely an instrument of food policy. Political and ideological aspects were also involved: the city was regarded as the 'breeding-ground' of Bolshevism, and its depopulation and destruction were regarded as worthwhile objectives by the National Socialists. The military commands were determined to maintain the encirclement even if the city capitulated, to leave the population to fend for itself, to open fire on starving women and children if they tried to cross the German lines, and to leave open a corridor for evacuation to the east if necessary. This approach meant nothing less than the certain extinction of millions of human beings, in whose existence the occupying power had no political, ideological, or economic interest. The military commands produced scrupulously matter-of-fact reports on the practical possibilities open to the military authorities, revealing that they were fully aware of the consequences. The military made no attempt to examine in detail the assertion that Germany could take no responsibility for feeding the city at the expense of the Reich, even though vast quantities of food were being stored in the occupied territory for export to the Reich at a later date. During this period, the commanders expressed concern only for the morale of their troops. These facts in themselves cast significant light on the nature of the war being waged by Germany.

Despite original intentions, Army Group North did not manage to ignore the fate of the civilian population altogether. The long siege of Leningrad made it necessary to push large numbers of people from the area near the front into the hinterland, although this made it more difficult for the troops to live off the land.³⁵⁷ In the winter of 1942 the remaining civilians close to the front at Leningrad were facing catastrophic conditions. Even those Russians who had been employed and fed by German units faced the threat of death by starvation in March, when several divisions were disbanded and their Russian auxiliaries left behind without work and practically without food. According to a report from Special Duty Squad A of the security police, in the period of three or four weeks before the new formations took on Russian workers 'a large section must try to evacuate or die'.³⁵⁸

The suffering of the population was so great that people could not be prevented even by threats of the most Draconian punishment from roaming near the front lines in search of food. To alleviate the worst suffering, the

³⁵⁷ See minutes of discussion with the liaison officers of OKW War Economy and Armaments Department with the armies in the east on 29 and 30 Dec. 1941, quoted in *Deutsche Besatzungspolitik*, No. 84, P. 205.

³⁵⁸ Events report USSR No. 190, 8 Apr. 1942, 6-7, BA R 58/221.

Wehrmacht agencies began to make more food and rations available to the civilian population. Nevertheless, the security police were mystified that 'mortality from starvation [was] not even higher'. Their only explanation was to suggest 'that the population is getting food by begging from Wehrmacht units; some have also preserved'... stocks in especially well constructed hiding-places, [and the population also] appears to be accustomed to tolerating periods of hunger and surviving on inferior substitutes in a way undreamt of in German conditions'.³⁵⁹ Even horses that had died and been buried the previous summer were being dug up and eaten. Uncounted thousands still died of starvation, and were piled up ready for burial when the thaw came. Special Duty Squad A reported: 'In Pushkin, for example, a squad was put together of members of the citizens' militia to search through the houses for bodies. About 400 bodies which had not been interred were found.'

Such reports inevitably give a more realistic picture of events than is provided in the positive account given by the Economic Staff East on 22 June 1942. This noted:

The experiences of the last winter have shown that the native population has an astonishing capacity to adjust. Despite all pessimistic predictions, it has proved possible to bring them through the winter without recognizable damage to health and with a minimum ration of food and heating material. But it has also been clear that without such a minimum ration, usually some form or other of feeding at work, the population simply does not come to work.³⁶⁰

In the past winter almost every urban household had possessed some reserves and objects which it could use to barter for food from the rural population. In future, the 'extent to which economic life in the occupied eastern territories can be maintained' would depend entirely on distributions to the inhabitants.

Fewer Soviet citizens starved to death during the first year of the German-Soviet war than the millions which had been expected, consciously accepted, and even encouraged by the German leadership. It would certainly be misleading to attribute this to the assistance offered by the local occupation authorities, which began hesitantly and increased during the winter of 1942. First and foremost, it was the successes of the Red Army that forced the German occupation authorities to show more concern for the civilian population, and increased the need for native auxiliary workers. The GOC Ninth Army recognized this fact at the beginning of December: 'If the Russian campaign had been a lightning war, we would not have needed to take the civilian population into account. But no end can be seen... Under these circumstances it is unreasonable to follow a course which makes the civilian

³⁵⁹ *Ibid.* 7.

³⁶⁰ One year of the Russian campaign: Achievements of the war-economy formations of OKW/WiAmt. in the raw-material sector, compiled by OKW/WiAmt/Ro I Ost, 22 June 1942, 13, BA-MA WiID. 1185.

population 100 per cent our enemy.'³⁶¹ The dependence of German food policy on considerations of power politics was revealed most clearly in the treatment of those Soviet citizens who were most vulnerable to German despotism: the prisoners of war.

(c) *Mass Deaths among Soviet Prisoners of War*

Though measures to enforce the starvation policy against the civilian population created a serious security problem, this was not true of the prisoners of war. Approximately 600,000 of them were to fall victim to the deliberate extermination measures of the SS during the war.³⁶² Another 700,000 were set to work as forced labourers by the Wehrmacht by the autumn of 1941,³⁶³ and therefore had to be given at least some food. These men comprised the last and weakest link in the German food-chain, since even fewer rations were allocated to them than to Soviet civilian workers. On 6 August 1941 the feeding of the prisoners of war was made subject to uniform regulations in the entire military area for the first time.³⁶⁴ On the grounds that Germany was under no obligation to feed the captured Soviet soldiers according to international law, a level of rations was fixed which—even had it been achieved in practice—would inevitably have led to malnutrition. The regulations were therefore unlikely to make any significant improvement to the catastrophic conditions in the camps.

At the beginning of September, when the Reich Labour Service units were withdrawn from the rear supply installations and deployed by the Wehrmacht as replacement manpower, there was a slight increase in the need for prisoners who were fit for work. In Supply District North, for example, six prisoners' battalions had to be established for skilled craft and loading work at the bases.³⁶⁵ For the operation to run smoothly, it was essential to select capable, healthy prisoners of war, and to provide medical attention, clothing, and adequate food from army stocks.³⁶⁶ This was only the first step: in the absence of German security forces, six 'escort companies' of Latvians and Lithuanians were set up to guard the prisoners of war; these too had to be fed by the

No. 105, ordering the provision of a hot midday meal for prisoners engaged in heavy work all day.

Wehrmacht.³⁶⁷ In addition, from the autumn of 1941 increasing numbers of prisoners of war were released for use as 'volunteers' in anti-partisan operations and to reinforce the German security forces. They had to be fed as well as armed.

These men were the minority. Most of the prisoners of war, over three million men, were given no chance of survival. The steep rise in mortality, which reached approximately 1.4 million by December 1941, cannot be attributed to the conditions created by the war alone; the process began in the camps on Reich territory, and reached its peak in the area of operations only at the end of the year. The real cause of the deaths lay in the determination of the economic leadership to provide the least possible amount of foodstuffs both to the prisoners of war and to the Soviet urban population.

It was this objective which led the Economic Staff East to argue repeatedly that an increased use of Soviet prisoners of war as workers was unacceptable because of the food requirement.³⁶⁸ Even the prisoners already being used in the rear army area could not be fed adequately, so that 'many would not survive this winter'. Göring confirmed the principles of German food policy once again on 16 September 1941. Thereafter, there was little chance that the efforts of some commanders on the eastern front to improve conditions in the camps, and to increase or at least honour daily ration levels,³⁶⁹ would lead to a general change of policy. In no case were these fully supported by the military leadership.

Instead, the military leadership launched an unrestrained propaganda of hate, opposing humane treatment of the Soviet prisoners of war and 'false' sympathy with the starving.³⁷⁰ It was in this spirit that the quartermaster-general also accepted the proposal of the Economic Staff East³⁷¹ for a drastic reduction in prisoners' rations. He instructed unit commanders to remember 'that every item of food that is granted to the prisoners either incorrectly or in excess must be taken from relatives at home or from German soldiers'. This order of 21 October 1941 can be explained by the assumptions of the previous spring, which remained largely intact. 'The decision was marked by the continued belief that many, at least, of the prisoners were expendable, and that deliberate efforts to sustain life were necessary only for those prisoners who could be of direct economic use to the German Reich.'³⁷² The quartermaster-

general had allowed himself to be persuaded by the food-supply agencies that the food situation was 'dreadful', and that no adequate harvest—sufficient to satisfy the needs of the occupied eastern territories as well as cover the deficit faced by the Reich—could be expected until 1943.³⁷³ From this point of view, a selective starvation policy appeared to be unavoidable.

However, Wagner's decision of 21 October 1941 appears in another light when set against the fact that the armaments economy had begun to achieve some success in its efforts to exploit the potential Russian labour force. In his function as chairman of the Reich Coal Association, Göring's industry manager, Pleiger, had been urging since the end of June 1941 that Soviet prisoners of war should be made available to him to cushion falling productivity in the German coal-mining industry.³⁷⁴ After gaining the support of the War Economy and Armaments Office and the Reich Labour Ministry, Göring agreed to present the problem to Hitler. On 21 October Hitler decided that Pleiger should be allowed to recruit 10,000 Ukrainian miners to work in the Reich.³⁷⁵

The inflexible attitude of the German leadership had thus been changed for the first time. The decision also revived discussion about the exploitation of the Soviet prisoners of war, since the shortfall of workers in the German war economy was now almost two million. Besides, when operations came to a halt during the muddy season, all hope that the war could be concluded before the end of the year, and manpower thereby released to increase armaments production, was lost. According to a report from General Thomas, 'the commanding generals now approached the Führer . . . because of the situation of the Russian prisoners of war, owing to unfavourable repercussions on the mood of the troops. Führer has now given directive that the 3 mill. Russians are to be set to work in the economy and properly fed.'³⁷⁶ The relevant Führer decree of 31 October 1941 was officially justified on the grounds that the manpower shortage was becoming 'an ever more threatening impediment to the future German war and armaments economy'. It was decided

that the labour of the Russian prisoners of war is also to be extensively utilized by making them work for the requirements of the war economy on a large scale. Precondition for their efficiency is an appropriate nutrition. Alongside this are envisaged very low pay for the most modest provision of some small luxuries of daily life, and bonuses should the occasion arise.³⁷⁷

However, State Secretary Backe felt unable to accept responsibility for feeding an extra three million recipients of rations in the Reich.³⁷⁸ Hitler, on the other hand, refused to countenance a reduction in rations for the German

population. This conflict remained unresolved even as the collapse of the transport system, and widespread epidemics among the prisoners, prevented them being evacuated into the Reich. Mass mortality took its course, the more so as the Army High Command after nearly four weeks ordered no more than a paltry increase in rations (about 5 per cent more calories).³⁷⁹ Once the harvest surpluses and the herds of cattle in the occupied eastern territories had been consumed or taken to depots, there was not enough food left for the urban population or the prisoners of war.

The military leadership was perfectly well aware of the consequences. At the discussions in Orsha on 13 November 1941 the quartermaster-general claimed that he was helpless, and explained that prisoners of war who were not working would simply have 'to starve to death'.³⁸⁰ 'In individual cases, working prisoners of war could also be fed from army stocks. In view of the general food situation, however, even that cannot be ordered on a universal basis.' Yet not all military commanders were prepared to stand idly by while thousands starved. On 16 November, for example, the commander of Rear Army Area Centre ordered immediate action to organize the inhabitants of nearby villages to feed and clothe the prisoners in his sector.³⁸¹ To this end, a prisoners' spokesman was to be chosen in each camp in order to appeal to the local leaders for their charity. The aim was to organize a constant flow of horse-drawn vehicles from the villages to the prisoner-of-war camps.

As long as State Secretary Backe refused to provide food at the expense of the homeland and the troops,³⁸² there was little prospect that such stopgap measures would prevent catastrophe. At the end of November, after a discussion with the chiefs of staff of the army in the east, the quartermaster-general tried to accommodate the wishes of the troops. He moved to cancel the reduction of rations that had been introduced four weeks previously, and ordered daily rations—even for non-working prisoners³⁸³—which were higher than those of August. Supplements were also to be given to make the prisoners fit for work. The food for this purpose was to be obtained from the land.

This order not only came too late, but was also inadequate. Many camps were simply unable to obtain sufficient food from the surrounding land. Even in agricultural surplus regions of the Ukraine, attempts to provide food for the prisoners were fraught with problems. On 27 November 1941 the Economic Staff East reported:

On all the roads along which prisoners of war are taken, one sees leaves and discarded turnip-stalks being snatched from the fields in desperate hunger and devoured. These

columns of prisoners make a pitiable impression on the native population. In the villages, the inhabitants gather to throw turnips, potatoes, and slices of melon to the column. In the fields, the women near these prisoner transports throw turnips into their path, and these are hastily gathered up by the prisoners. The sight of these debilitated prisoners, with hunger staring from their eyes, must surely damage the feeling of the population towards the Germans.³⁸⁴

In central Russia it was not even possible to provide adequate quantities of grits and buckwheat. Worst fed of all, it seems, were the camps in the harsh countryside of northern Russia. For example, at the end of November the commandant of rear *Armeegebiet* 584 on Lake Ilmen in the sector of Sixteenth Army reported that there was hardly any food for the prisoners of war because of the great poverty of the country. Adequate nourishment was possible only by making distributions from the supply-depots at the front. In any case, the daily rations ordered by the Army High Command were not sufficient to save the prisoners of war, the majority of whom were already near starvation when they entered the camps. The prisoners, most of whom came from the territory occupied by the German troops, therefore asked to be released or to be put to work in the Reich.³⁸⁵ The commandant of the SS-administered camp at Novgorod-Savaskiy, despite adequate food, classified almost half of the prisoners who were not put to work as 'candidates for death'.³⁸⁶ Of the 2,800 men in the camp, between 50 and 60 were dying each day. In his monthly report for December 1941 the commandant of Prisoner of War District C in Rear Army Area North noted that there was no chance of finding enough food. As a result of the consequent high mortality rate, the number of prisoners able to work had already declined so much that it was impossible to meet even the most urgent demands for workers in the rear army area. He complained that though daily rations had been increased on paper, they were hardly ever available for distribution in full.³⁸⁷

In his report for General Thomas on 2 December 1941 the Armaments Inspector Ukraine also noted the economic absurdity of allowing hundreds of thousands of prisoners of war to starve to death in the coming winter, when they 'could profitably have been used for the economy in the Ukraine'.³⁸⁸ Such warnings did not affect the appalling death rate of the Soviet prisoners of war, which continued until the spring of 1942. Of 3,350,000 prisoners taken in 1941, almost 60 per cent had died by 1 February 1942, including over 600,000 since the beginning of December 1941. Mortality was especially high in the Reich

(18.5 per cent as of December 1941), with about 47 per cent of Soviet prisoners of war there dying of starvation and typhus by the beginning of April 1942. This fact alone proves that the prisoners did not die as the result of an unavoidable 'emergency situation', but fell victim to a ruthless starvation policy.³⁸⁹

The leadership élite of the Third Reich accorded absolute priority to the nourishment of the homeland and the troops, because of an enduring anxiety about the stability of the system of government within Germany. This approach dictated the adoption of a policy that was directed not merely against the prisoners of war, but against the entire population of the conquered Soviet territories. In the spring of 1941 OKW and the Four-year Plan Authority had agreed on the objective of ruthless exploitation of the food capacity of the future colonies in the east on behalf of the German war effort. The death by starvation of 'umpteén million' Soviet citizens was consciously accepted. Certainly, the starvation policy also slotted seamlessly into a racial and ideological war of annihilation. Nevertheless, it seems clear that even Hitler regarded it less as a deliberate goal of occupation policy than as an apparently inevitable consequence of inherent economic necessities. This attitude made it difficult to change the course of food policy, even though Backe's measures were increasingly inconsistent with military interests and the requirements of armaments production after the autumn of 1941. The starvation strategy remained the official guiding principle of occupation policy until the spring of 1942.

Despite its retention, fewer Russians died from starvation than the Germans had expected. There are many reasons for this. First, the urban population had already fallen dramatically during the German invasion. The large-scale evacuation of munition workers, experts, administrative and Party officials by the Soviet government played a part, as did the mass liquidations carried out by the SS against the extensive Jewish section of the urban population. Second, the Germans had failed to achieve the expected rapid victory in the east. This greatly reduced the prospects of carrying out the starvation programme by force, because there were not enough security forces to seal off and starve out the big cities. From late summer 1941, some military quarters had tried to ensure an adequate supply of food for the Soviet population. The restrictive attitude of the economic agencies had prevented them from achieving results, even though the economic authorities recognized that the motives of the military were pragmatic, aimed at pacification of the hinterland and the recruitment of workers. By arguing that rations in the Reich could only be maintained by the ruthless exploitation of the occupied eastern territories, Backe could always rely on the support of Göring and Hitler for his policy. Interventions by military figures were bound to fail, because they were undertaken without the necessary vigour. Army leaders at the top and in the field

³⁸⁹ On the figures see Streit, *Keine Kameraden*, 136.

could not agree on a decisive and unanimous approach. Hitler's concept of a racial and ideological war of annihilation was already so widely accepted by the command authorities of the Wehrmacht that it frequently determined their attitudes towards wartime difficulties. Like the administrative apparatus, the army in the east and the supporting Luftwaffe formations were forced to live largely off the land, i.e. at the expense of the native population. Because the military leadership still assumed that the war would end quickly, thereby easing the food situation, it was not inclined to provoke a conflict with the political and economic élites for the sake of a better treatment of the Soviet population.

The direct benefits of the troops and home front, as well as the opportunity to provide adequate food supplies for Soviet civilians and prisoners of war, were greatly reduced by the inefficiency of the German agricultural administration. A number of factors helped to keep results well below expectations: the number of qualified agricultural leaders was much too small; organizational conflicts and wrong decisions abounded; transport facilities and security forces were insufficient. Enough food was seized to feed the Wehrmacht tolerably well, and to create a substantial Reich reserve, though this had to be kept in the east owing to lack of transport capacity. (Of 600,000t. of wheat, only around 50,000t. were taken to the Reich by the spring of 1942.) Much of the reserve in the east was spoiled, as Bräutigam had foreseen. Almost nothing was left to feed the Soviet population. The occupying power was not even capable of providing enough food for the workers it employed.

The unintended result was to give the Soviet civilian population a better chance of survival by moving to the countryside and using the black market. Though many local occupation authorities were willing to tolerate or even to encourage such self-help, the fundamental approach of the political and military leaders did not change even after the experiences of the winter of 1941-42. Any slight improvement in the spring of 1942 was due mainly to the fact that the deaths of millions of prisoners of war and civilians had inevitably eased the demand for food in the occupied territories. The military élite continued to deny overall responsibility for feeding the enemy population. A progress report from the quartermaster-general on 24 March 1942 merely urged greater efficiency during future operations. It stated:

The selection and nourishment of native skilled workers among the prisoners and the civilian population must be undertaken as early as possible, even when these skilled workers cannot be set to work immediately on supply tasks or other labour duties. The workers will be required urgently by the troops or the Reich at a later date. Their labour must therefore be safeguarded as against the remaining civilian population, to prevent physical loss of strength as a result of inadequate accommodation and nourishment.³⁹⁰

³⁹⁰ OKH/GenStdH/Abt. Vers.Führg./Qu 2 No. I/17591/42 geh., Lessons from the campaign in the east concerning supply management, 24 Mar. 1942, 12, BA-MA H 10-51/2.

These comments appeared to offer the opportunity to gain Hitler's consent to a change of direction in occupation policy. However, his decision at the end of October 1941 to use the Soviet prisoners of war as workers, and to feed them adequately, had no positive effect. Another step forward remained possible on the key issue of disbanding the collective farms, which the Wehrmacht and the civilian administration saw as the best way to win the support of the Soviet population. At the beginning of December 1941 Backe was outvoted in the Four-year Plan Authority.³⁹¹ Even Backe's own representative in the Economic Staff East had been convinced by the evidence of his own eyes that only a step-by-step reprivatization would lead to bigger yields. Surprisingly, on 15 February 1942 Hitler, despite protests from Backe and Koch, decided in favour of a draft along those lines from the Ministry for the East. Though the proclamation of the 'new agricultural order' brought the Russian peasants no substantial concessions—they would receive the land to be allocated to them only for their own use, not own it as their property—it was still the first step towards a 'more considerate' treatment of the Soviet population. The rescinding of the 'commissar order' was also a response to changed conditions at the front. When Albert Speer, the new Reich Minister for Armaments and Ammunition, attempted to get increased rations for Soviet prisoners of war, Hitler told him 'that he did not approve of the bad nourishment of the Russians. The Russians must receive an absolutely sufficient nourishment, and Sauckel had to see that this nourishment was secured from Backe.'³⁹²

At this stage Bormann and Backe intervened, and the reduction in rations for the German population and the Soviet prisoners of war went through as planned. Clearly, a more drastic reduction of rations in the Reich would have been necessary in order to feed the prisoners adequately and leave the Soviet civilian population enough food to live on. Hitler was not prepared to make such a move. The starvation policy in the east was retained at a high price, because it inevitably led to an increase in passive and active resistance from the population. Equally, the destabilization of the hinterland further reduced the economic gains to be obtained from the occupied Soviet territory, and tied down military forces which could have been used elsewhere by the German operational leadership. This vicious circle arose as a result of the failure of Operation Barbarossa. It was also the direct consequence of yet another decision by the National Socialist leadership to postpone the total mobilization of the German population—at the expense of the occupied territories.

5. ECONOMIC CAUSES AND CONSEQUENCES OF THE FAILED BLITZKRIEG

At the beginning of November 1941, with the agreement of the military élite, Hitler had resolved to make one last effort to bring the offensive to a successful conclusion, and to win a breathing-space for the rest and rehabilitation of the army in the east.³⁹³ The new offensive was designed partly to gain a great prestige victory, which was held to be necessary to improve the mood of the German population; above all, however, it was intended to destroy the remaining bulk of the Red Army, and to prevent the regeneration of Soviet fighting capability. Despite an inability to guarantee either adequate stocks and supplies or sufficient reinforcements for the troops, the German leadership still believed that the battle-weary divisions could achieve their ambitious operational objectives. The ability to make an accurate assessment of the enemy, and of the actual state of the German troops, had long been lost.

During the advance on Moscow, there were increasing signs that the Wehrmacht was reaching the limits of its strength in manpower and material. It had no prospect of regaining the level of armaments it had possessed at the start of the campaign.³⁹⁴ Even the most urgent armaments orders of the Wehrmacht were not being fully completed because of the shortage of workers and raw materials. In fact, the chief of the army armaments programme was faced with such a serious decline in weapons and ammunition manufacture that he thought it advisable to make peace as soon as possible.³⁹⁵

His pessimism was shared by the Reich Minister for Armaments and Ammunition. After a tour of inspection by his tank commission to the eastern front, Todt became convinced that the war could no longer be won. On 29 November 1941 he advised Hitler to conclude a political peace.³⁹⁶

It was questionable whether the stopgaps contemplated by the Army High Command, especially the drastic reduction in army motorization,³⁹⁷ would suffice to prepare at least some of the mobile formations for new offensive operations by the spring of 1942. Since October 1941 the supply of weapons to the eastern front had dried up, because Army High Command believed that large numbers of weapons would be accumulated by the planned disbanding of divisions in the east during the winter. This miscalculation bore bitter fruit in December, when it became clear that the divisions could not be disbanded, and when the high losses could not be replaced from the army groups⁷

equipment stocks. Five divisions of Army Group Centre reported the loss of more than half of their heavy weapons; many of the remaining artillery pieces would soon fail due to overuse and a shortage of replacement parts.³⁹⁸ Two arms convoys were precipitately prepared for Army Group Centre, but the difficult transport conditions made it unlikely that the convoys would reach the front for several weeks. Selective stopgaps and emergency measures of this kind could not solve the overall problem. Army High Command was forced by exhausted stocks and the low level of new manufacture to maintain the principle of not replacing lost weapons, and of keeping back all available stocks for the rehabilitation of existing and the establishment of new formations for the east.

Overall, the balance sheet of Operation Barbarossa shows that the bulk of the armaments produced in 1941 was lost on the battlefields of the east. The German army was reduced in many areas to the level of armaments of 1940, and sometimes to the position of 1 September 1939 (the number of tanks capable of front-line service at the start of war was 3,506, as against 3,383 on 1 January 1942).³⁹⁹ By 31 January 1942 losses of armoured fighting vehicles had reached 3,254 vehicles (the starting strength on 22 June 1941 was 3,648); losses of guns were 14,648, including 2,360 from the army artillery (the starting strength on 22 June 1941 was 7,184). Of approximately half a million motor-vehicles, 121,529 had been lost, including 42,851 motor-cycles—a blood-letting from which the most mobile ground troops of the Wehrmacht, the

³⁹⁸ See appendix 7 to OKH/GenStdH/GenQu/Abt. I/Qu 2 (III) No. I/6562/41 g.Kdos., evaluation of 10-day report, 25 Dec. 1941, BA-MA III W 805/7, T. 2.

³⁹⁹ See summary in Müller-Hillebrand, *Heer*, iii. 274.

motor-cyclist riflemen, never recovered.⁴⁰⁰ In addition, the supplies of fuel and ammunition were largely exhausted, and barely any trained reserves of personnel were left.

Fromm and Todt correctly foresaw that the Reich would find it very difficult to prevent a further decline in armaments production, or to mobilize those reserves that were still available. In any case, it could no longer compete with the hugely superior resources of Germany's enemies. Even if Hitler refused to accept the political consequences as Todt had outlined them, he could not change the fundamental balance of forces whatever he did: Despite the production records that Speer was to achieve later, the superiority of the anti-Hitler coalition increased steadily. The enormous losses sustained during Operation Barbarossa had already reduced the prospects for a successful resumption of the offensive in the summer of 1942. From now on, it was only a matter of time before the Allies' superiority in material and manpower brought about the defeat of the Third Reich.

After an exhausted Army Group Centre ground to a standstill before Moscow at the beginning of December 1941, Hitler ordered an increase in German armaments production.⁴⁰¹ He had apparently recognized that the period of Blitzkrieg was over, and that Germany faced a long war of attrition. Yet he was not prepared to take decisive action until the middle of that month, when the Soviet counter-offensive threatened to achieve an operational breakthrough which would shake the entire front, and when the entry of the United States brought another superior enemy into the ring. The immediate reorientation of armaments production in favour of the army required a fundamental reorganization of the German war economy. Hitler could no longer avoid introducing measures to centralize war production, and was forced to decide whether the war economy should be dominated by the military or civilian sector.

General Thomas submitted two memorandums in a vain attempt to advance the leadership claims of the military.⁴⁰² In his decree on 'Armaments 1942' of 10 January Hitler accepted the most important proposals made by Thomas. Nevertheless, it was Todt who made most of the running. Following an agreement with the most important armaments industrialists, Todt submitted his proposals for the rationalization of German armaments production at the end of January. These were accepted by Hitler. His system for the 'self-responsibility of industry' was later, after Todt's fatal accident, adopted by his

successor Speer. With its help, the industrialists finally ousted OKW and the ordnance departments from responsibility for the development and production of war material. From now on, only one other rival remained—partly with Hitler's support—to lay claim for the direction of war production. This was Heinrich Himmler, whose 'slave state' expanded dramatically after the beginning of 1942. In the autumn of 1941 attempts by the SS leadership to create its own economic and armaments concerns using Soviet prisoners of war had failed, because the extent of the executions and starvation measures had meant that hardly any prisoners were able to work.⁴⁰³ However, the decline in German armaments production at the end of the year gave Himmler the chance to offer his concentration camps for armaments production and to build up the Government-General into a giant armaments workshop for the army. In January 1942 the Wannsee Conference created the organizational framework for the provision of the necessary labour force. Millions of European Jews, whose destruction had already been planned, were now to be channelled through the camps and factories of the SS. Those unable to work were to be murdered immediately as 'useless mouths', and the others subjected to 'destruction through labour'. The 'final solution of the Jewish question', which was motivated by racial and ideological considerations, was thus to be exploited to provide economic benefits in the armaments sector.

This development took concrete shape only in the summer of 1942, after Speer had finally eliminated the military from the direction of armaments production. Until this time, General Thomas had endeavoured to prevent the complete loss of his power, and to maintain military influence over the war economy. As in the spring of 1941, his attempt to gain Hitler's favour by making an excessively optimistic forecast about the prospects of success for the planned operations in the east⁴⁰⁴ ended in failure. His earlier efforts to exaggerate the achievements of the military economic organization, which Thomas claimed as his greatest success so far, had been equally unsuccessful. In November 1941 the War Economy and Armaments Office had launched a major press campaign to publicize the work of the economic officers.⁴⁰⁵ Thomas himself provided an introduction in which he praised the 'outstanding' achievements of his organization. Yet had the Economic Staff East really fulfilled the tasks entrusted to it?

Its most important objective, that of ensuring that the army in the east could be supplied from the land, had been achieved only partially and amid considerable organizational friction. Food requirements could not be fully met. The following goods, among others, had to be brought in from Germany:⁴⁰⁶

fodder	50%

The exploitation of the occupied territory to meet the immediate requirements of the troops, mainly in the form of repair workshops and small factories to manufacture accommodation equipment, peasant carts, etc., achieved only modest success. In the area of operations some 57 factories were being supervised by the Wehrmacht on 1 March 1942. In the territories of the civilian administration the situation was scarcely more favourable. At the end of 1941, for example, the Armaments Inspector Ukraine considered that in view of the poor opportunities available, it would not be worth while to continue 'the activity of an armaments organization to the previous extent'.⁴⁰⁷ Yet the Soviet government had managed to evacuate some 1,500 munitions factories from its lost territories; at precisely this time, most of them were being put back into operation, and were supplying the Red Army with increasing numbers of tanks, guns, aircraft, etc. The comparison demonstrates that the Economic Organization East was able to derive only minimal economic benefits from the occupied Soviet territories.

This relative failure can also be detected in another important objective of the campaign, the effort to obtain and utilize Soviet raw materials for the German war economy. Compared with the pre-war era, under German occupation the following production of raw materials was achieved up to the spring of 1942:⁴⁰⁸

brown coal	under 1%
cerium	—
mica	still under development
graphite	—
manganese	9%
oil	75%
oil shale	60%
phosphorite	still under development
quartz	still under development
mercury	—
salt	—
bituminous coal	under 1%
peat	still under development

TABLE II.vi.4. *Performance of Economic Staff East over its First Twelve Months (t.)*

	Lost deliveries agreed by treaty	Produced or seized for homeland and troops	Difference
Grain	1,900,000	1,030,000	- 870,000
Fats	29,600	47,200	+ 17,600
Meat	9,200	213,500	+ 204,300
Mineral oil	700,000	750,000	+ 50,000
Skins/hides	1,000	15,000	+ 14,000
Manganese (concentrate)	255,000	105,000	- 150,000
Chromite	32,700	5,200	- 27,500
Phosphate	200,000	600	- 199,400

Source: Ergebnisse der Vierjahresplan-Arbeit, Ein Kurzbericht nach dem Stande vom Frühjahr 1942, bearb. von der Dienststelle des Beauftragten für den Vierjahresplan, 88, BA R 26/18.

Taking into account the fact that the short-term economic objective of the campaign had been at least to replace the commodities which had been promised by treaty but lost when war broke out, it is scarcely appropriate to talk of success.

In terms of the economic benefits derived, the 'economics of smash and grab' (Milward's phrase)⁴⁰⁹ advocated mainly by OKW was barely more successful than the political war effort conducted by imperial Germany in the era of Brest-Litovsk. From the middle of 1917 to the end of 1918 some 1,249,950 t. of foodstuffs, cereals, and fodder had been obtained from the Russian area of occupation and the Ukraine (710,000 t. to the army of occupation, 539,950 t. exported to Germany).⁴¹⁰ Then political considerations regarding the native population had ensured a different order of priorities for the distribution of the agricultural produce: (1) local population, (2) occupying army, (3) Germany. Even so, the direct gain for Germany was scarcely less than in 1941, although it too had failed to meet original expectations. Assessed purely in economic terms, the policy of starvation and annihilation pursued by the National Socialists did not pay off.

The failure of the policy of economic exploitation (see Table II.vi.4) becomes even more explicit when actual developments are compared with the projections of the spring of 1941. At that time, grain acquisition was envisaged at between 8m. and 10m. t.; Thomas and Backe assured Hitler that the

conquest of the European part of the Soviet Union would relieve him of all his economic worries.⁴¹¹ These economic objectives could not be achieved in 1941, for much the same reasons as in 1918. First, the organization designed to secure them failed because of transport difficulties, organizational friction, and the passive and active resistance of the native population. Second, economic policy was unrealistic in that it concentrated more on the long-term tasks of reorganization of agriculture in the occupied territories than on the immediate measures needed to support home front and troops. Third, and most important, the war took a different course from that expected in Berlin. This was recognized too late.

In 1943 the representative for eastern questions in the Four-year Plan, Dr Friedrich Richter, wrote that Backe's 'colonial thesis' would have been a realistic possibility if the appropriate means of applying military force in the occupied territory had been available.⁴¹² He continued:

I know from my own work in Berlin the immense pressure from the raw-material and food-supply side, which led to drastic measures and demands on the eastern territories . . . The short-term requirements of the war economy triumphed over the politically necessary line of a careful handling of the eastern peoples. This state of affairs was aggravated by the significant human inadequacy of many Germans in the eastern territories, which expressed itself in lack of financial moderation and the basest conduct. But the decisive factor [was] the inconstancy of the political line, owing to the arbitrary nature of many local and specialist rulers, and the wait-and-see attitude of many central authorities.

The dilemma facing the Economic Organization East is highlighted in a report from Chief Group Agriculture on 27 December 1941, concerning a tour of inspection to the Ukraine.⁴¹³ It noted that the same problems recurred constantly in all the discussions: not enough men and materials, critical shortage of fuel and means of communication and transport, lack of any tight concentration of forces, splits in the organization—all combining to prevent the more effective exploitation of the country. After the transfer of territories to the civilian administration, for example, the majority of agricultural leaders were employed in the administration, leaving practical work on the land in the hands of unqualified workers who revealed 'an alarming picture of rigidity, lack of knowledge, sometimes great lack of education as well'. The report also revealed continuing preoccupation on the part of the military economic staff with unrealistic tasks connected with the postwar period and the New Order. For example, there were detailed proposals for the division of the land. Zone I, containing between 2m. and 3m. hectares and sited directly round the markets of the larger towns and transport centres, would be the centre for the German specialist personnel and all available means of production. The base leaders, the future 'lords of the manor', would be joined by the first 10,000

⁴¹¹ See sect. I.III.1(f) at n. 259.

⁴¹² See extract from his army postal service letter of 26 May 1943, BA R 6/60a.

German settlers, and would receive the 'best economic management and most secure foundation for staying the course and achieving prosperity'. This zone, which would receive preferential treatment, would have others attached to it. The other zones would be left to the natives to cultivate, and would be supported by the German colonial administration in varying degrees.

In general, these plans conformed to the deliberations of the SS leadership for a 'General Plan East'. However, the military Economic Staff East was preoccupied with them at a time when Operation Barbarossa had already failed, and the war threatened to assume unsuspected dimensions. Two main conclusions can be drawn. First, the claim that it worked almost exclusively for the material support of the troops⁴⁴ is only partly true. Not until the end of 1941 did a growing awareness of the real military demands of the war in the east lead to the greater integration of the economic apparatus into the army command structure, at least in the area of operations. However, this hesitant reorganization came too late to repair the inadequate level of support for the troops at the front, or to provide the conditions for the material superiority of the army in the east. Instead, organizational friction continued. For example, First Armoured Army later reported that it had tried in vain to strengthen the authority of the local economic command against the other, independent economic agencies.⁴⁵ After the occupation of the Donets industrial region, 'the Armeegebiet [was] flooded with a host of persons, commissions, special representatives, etc., some of them regular adventurers'. At first, organizations had sprung up 'like mushrooms'. However, after finding industrial opportunities less favourable than expected, 'some of these persons withdrew, mostly after dispatching long one-sided reports, which were often passed on, without the knowledge of the army, to the highest offices but which failed to correspond to the facts'. At the end of 1941 emissaries of the Berg- und Hüttenwerksgesellschaft Ost mbH (Mining and Smelting Works Company East Ltd.) appeared on the scene, hoping to take over those factories which had been put back into operation by First Armoured Army to assist in the repair of their motor-vehicles, tanks, and equipment,⁴⁶ and switch them to meet the needs of the German market.

Second, it is clear that the hugely ambitious plans of General Thomas—to build up an autonomous economic apparatus largely independent of the army leadership—significantly influenced the shape taken by Operation Barbarossa as a colonial war of exploitation. By giving the racial and ideological programme of annihilation an ostensible economic rationality, he helped to ensure that the Wehrmacht became even more entangled in this programme than before. The military élite never managed to disentangle itself. It remained

enmeshed even when the unfavourable course of the war forced its members to recognize that the unrestrained policy of annihilation and exploitation was against military interests; that, instead of mobilizing the maximum quantity of relief goods and additional workers for the eastern front, it was leading to the rapid destabilization of the hinterland and to additional military burdens.

VII. Securing 'Living-space'

JÜRGEN FÖRSTER

I. PACIFICATION OF THE CONQUERED TERRITORIES

It is a little-known fact that large areas of the Soviet Union spent an extended period under German military administration in 1941.¹ This was not according to plan. Owing to the failure of Operation Barbarossa, only two of the four planned Reich Commissariats (Ostland and Ukraine) had been established, and of these the Ukraine was considerably smaller than originally envisaged. In the remaining occupied areas of the Soviet Union—that were still areas of operations—the military administration inevitably developed from a temporary into a permanent institution.

Hitler's declared intention had been to treat the military administration as only an interim stage leading to the political reorganization of the conquered 'living-space' in the east.² Military planning had been directed towards achieving a swift victory by the Wehrmacht over the Red Army, and ensuring the rapid collapse of the Bolshevik system. Both these objectives were to be assisted by the deliberate liquidation of the Communist functionaries, the 'Jewish-Bolshevik intelligentsia', inside and outside the Red Army. Their elimination, it was thought, would destroy not only the bases of Stalinist Bolshevism, but also the potential germ-cells for organized resistance to German rule.

The basis for military administration in the occupied Soviet territories was provided by OKW 'Guidelines on special territories to Directive No. 21' of 13 March 1941,³ and by Army High Command's 'Special instructions for supply, part C' of 3 April 1941.⁴ These orders were supplemented by oral explanations from the quartermaster-general. No detailed written working guidelines for the military administration, of the kind worked out before the war in the west in 1940,⁵ were issued for Barbarossa.

¹ As yet there is no overall account of the German military administration in the east. The standard works by Rich, *War Aims*, ii, Dallin, *German Rule*, and Reidinger, *Haus auf Sand gebaut*, largely neglect the issue; Simpson, 'Rear Area Security', is written predominantly from the standpoint of military security. For a Marxist view see Müller, *Wehrmacht und Okkupation*. In Vol. v/1 of this series (pp. 95 ff.) the various types of German occupation in Europe are examined systematically, and described for each of the countries affected, subject by subject (Umbreit). An overall account of German occupation policy in two army rear areas in the central sector has been provided by Schulte, *German Army*. For 1942-3 see Mulligan, *The Politics of Illusion*.

² See sect. LVII.1 at nn. 6-13.

³ *Hitlers Weisungen*, No. 21a (not in trans.).

⁴ OKH/GenStdH/GenQu, Abt. Kriegsverwaltung No. II/0315/41 g.Kdos. Chefs., 3 Apr. 1941, BA-MA RH 22/12; *Deutsche Besatzungspolitik*, No. 4.

⁵ OKH/GenStdH/GenQu No. 800/40 g., Sammelmappe 'Militärverwaltung', BA-MA RH 24-3/218. See Umbreit, *Militärbefehlshaber*, 3-4.

At the start of operations, Hitler formally transferred executive authority in the area of operations to the commander-in-chief of the army.⁶ The area of operations was to consist of the army areas and three rear army areas under the control of the army groups. Each army area was subdivided into the combat area and army rear area (Armeegebiet).

Executive authority in the army area was in the hands of the army commander-in-chief, and in the rear army area was held by the commander of the rear army area, with both following the directives of the army group. *De jure* each of these commanders was the sole holder of disciplinary power and the right of decree, which he exercised via the various security divisions, field commanders' offices, and local commanders' offices under his control.⁷ In the Reich commissariats executive authority was to lie with the Reich commissioner, while the Wehrmacht commander was to retain supreme military power.⁸ However, the executive authority of the individual army commanders and commanders of the rear army areas *vis-à-vis* the civilian population was restricted from the outset: the special-duty squads of the security police and SD (the security service of the SS) were given special tasks 'outside the troops', and empowered to take 'executive measures' against the civilian population. These measures were to be carried out on their own responsibility, though in close co-operation with the appropriate intelligence officer⁹ to ensure that they did not hamper military operations.

It was the task of the military command authorities in the rear area of operations to secure supply-bases, supply-routes, railway lines, lines of communication, vital airfields, and captured camps, as well to guard and evacuate the prisoners of war (see Diagram II.vii.1). Particular attention was paid to the protection of supply-bases.¹⁰ The commanders of the rear army areas and the army rear areas had a variety of forces available to fulfil these tasks: security and order troops, security divisions and regiments, field and local commanders' agencies, units of the field gendarmerie and the secret field police, and staffs for prisoner assembly points and transit camps. Where necessary, the commanders were also authorized to call on units of the Waffen-SS and regular police which had been deployed in their areas and were subordinate to the local 'Higher SS and Police Leader' for security tasks.

⁹ OKH/GenStdH/GenQu, Abt. Kriegsverwaltung No. II/2101/41 geh., 28 Apr. 1941, on regulation of operations of security police and SD within the army, BA-MA RH 22/155; Jacobsen, 'Kommissarbefehl', doc. 3.

¹⁰ OKH/GenStdH/Ausb.Abt. (Ia) No. 700/41 g., 21 Mar. 1941, BA-MA RH 22/271; 285. Sich.Div./Ia No. 38/41 g.Kdos., 12 May 1941, on guidelines for the operation of the security division, *ibid.* RH 26-285/4.

The commanders were instructed to deploy the three security divisions under their command 'like a string of beads' along the major transport routes. Only in the Reich commissariats were 'considerations of space' to be the criterion for the security formations. As the representative of the quartermaster-general explained on 16 May 1941, away from the roads it was 'mainly' the security police and the SD 'who would be actively engaged in the army area (Heeresgebiet). The army could not be spread out.'¹¹

For the purposes of internal administration, i.e. the establishment and supervision of a native administration, the commanders, security divisions, and field commanders' agencies had at their disposal special departments (dept. VII) staffed with officials of the military administration. The creation of a systematic, closely integrated administrative apparatus, of the kind created in the west, was not planned in Russia. There were two main reasons for this decision. It was considered that 'primitive conditions in Russia',¹² and the plan to establish a civil administration very swiftly, made such a step unnecessary. Ordered conditions were to be established only to the extent that was deemed essential to secure the rear areas and exploit the land for the benefit of the troops by relieving the burden on supply.¹³ The existence of a civil administrative apparatus was not generally envisaged.

Political decisions by the Reich commissioners were not to be anticipated under any circumstances. As a result, mayors were installed in the municipalities and towns, and superintendents in the *Rayons* (districts). Anti-Bolshevik inhabitants of non-Russian stock—Lithuanians, Latvians, Estonians, Poles, Ukrainians—tended to be appointed to these posts in the Baltic States, Belorussia, and the Ukraine. They were investigated for political reliability and technical suitability by means of close co-operation between the intelligence officer and the security police and SD. The district administration was usually dealt with by the field commanders' agencies. It was the task of the mayors, under German supervision, to re-establish and maintain law and order by creating an organization to keep public order, registering the population, and distributing identity papers.¹⁴ For example, Sixth Army Command defined the tasks of the Ukrainian public-order service as 'picking up of the activist young men, supervision of important military installations, discovery of Bolshevik suspect elements, and the search for escaped Red Army members'.¹⁵

DIAGRAM II.vii.1. Structure of the Occupied Territories

Source: BA-MA, 9. Armee 13904/3b. See HDv (1938 and 1945).

Fourteen days after the start of the invasion, the German army had advanced so far east that it was possible to establish rear army areas for the three army groups, on 2, 3, and 9 July 1941. The commanders were Infantry Generals Franz von Roques (North), Max von Schenckendorff (Centre), and Karl von roques (South). The staff of the commander of Rear Army Area South noted that they faced an exceptionally difficult task. The army areas were extended eastwards as operations progressed; to the west, large parts of the occupied land were taken over by the Reich commissioners, or transferred to the Government-General or East Prussia. The first piece of territory to be detached from the army area of operations was the city of Brest-Litovsk, which was transferred to the military commander in the Government-General on 18 July 1941.¹⁶ Reich Commissariat Ostland was established a few days later (25 July), though at first its territory covered Lithuania alone.¹⁷ On 1 August 1941

¹⁶ 221. Sich.Div., Abt. Ia, 18 July 1941, on handing over of city of Brest and surrounding area . . . , BA-MA RH 26-221/12. Executive authority in civilian matters appears not to have passed to the governor-general, since the incident was not mentioned either in Frank, *Diensttagebuch*, 386 ff., or in *Generalgouvernement*, 59 ff. The 'Security Sector Brest' belonged to the Reich Commissariat Ukraine from 1 Sept. 1941: OKH/GenStdH/GenQu, Abt. K.Verw. (Qu 4), No. II/5458/41 geh., 21 Aug. 1941, BA-MA RH 22/271.

the district of Białystok was placed under the administration of the president of East Prussia, Gauleiter Koch;¹⁸ Galicia and Lemberg (Lvov) were taken over by Governor-General Dr Hans Frank,¹⁹ and Reich Commissariat Ostland was extended by adding the district of Vilna (Vilnius).

When the military administration began its activity, the political objectives of the supreme leadership for the shaping of 'living-space' existed only in outline. Moreover, the Reich Minister for the Occupied Eastern Territories, Rosenberg, had yet to be officially appointed. Commanders at various levels were forced to apply the general guidelines they had received according to their own assessment of the situation. In the Baltic States and the Ukraine, in particular, they encountered political endeavours which they had been ordered not to accommodate. Though most officers and civil servants regarded it as their duty to follow orders and to give them, it is clear that the German conduct towards the Soviet population combined elements of 'uncertainty, racial arrogance, a national-political programme, and an unreflecting faith in the methods of force'.²⁰ Conduct of this kind had not been embarked upon in the countries of western and northern Europe occupied by the Wehrmacht, though it had appeared in Poland. From the outset, the guidelines issued by OKW and Army High Command to secure the conquered territories were harsh. Active and passive resistance was to be nipped in the bud through the imposition of Draconian punishments. Army High Command regarded a deliberate and ruthless approach to 'anti-German elements' as an effective preventive measure, though it failed to define these elements more closely.²¹ On the other hand, the OKW guidelines of 19 May 1941 were more specific.²² These demanded 'ruthless and energetic action against Bolshevik agitators, guerrillas, saboteurs, Jews'. Though the military administration in the west had stipulated that 'special measures' could not be taken 'solely on the basis that the inhabitant is a Jew',²³ this restriction was dropped in the struggle against 'Jewish Bolshevism', the 'deadly enemy of the National Socialist German people'. It was not the supreme leadership alone which regarded the Jews in the occupied Soviet territories, along with the Communists, as 'anti-German elements'; even before the start of operations, Army Command Norway had issued a leaflet attacking the treacherous Soviet conduct of the

war, and urging the troops to pay 'particular attention' to Jews as well as priests and commissars.²⁴ Seventeenth Army Command informed its soldiers that the Soviet conduct of the war was 'treacherous and sadistic' because the peoples of the Soviet union were partly Asiatic, and were 'under Bolshevik-Jewish leadership'.²⁵ At the beginning of July 1942, III (Motorized) Army Corps HQ informed its troops that in the Ukrainian towns they must pay particular attention to 'Jews, Russians, Poles'.²⁶ It also demanded from Armoured Group 1 the production and distribution of more effective leaflets among the Red Army. Among other things, these should call on Red Army soldiers to 'dispose of political commissars and Jews'.²⁷ The occupying power removed from their public posts all Jews who had not fled, set them to work as forced labour before involving other groups, and ordered that they be registered and made to wear distinguishing marks. That was only the beginning. The first moves were also made to evacuate the Jews and confine them to ghettos.²⁸ The way was thus prepared not only for the exploitation of Jews for forced labour, but also for their subsequent systematic annihilation by the special-duty squads of the security police and the SD.

The first declarations and appeals of the German troops in the conquered territories announced that the Wehrmacht had marched in to liberate the 'working people, workers, and farmers' from the Bolshevik yoke. The protection of the German army would be available to all those who behaved 'quietly, peacefully, and obediently', continued to work hard, and followed the directives issued.²⁹ Espionage, sabotage, guerrilla activity, and assisting escaped Red Army soldiers would be punishable by death. After a maximum of three days, the life of any person found in possession of weapons, ammunition, fixed knives, radios, transmitters, and Communist literature would be forfeit. Similar decrees had also been worked out before the war in the west, and covered by the usages of war.³⁰ In the occupied Soviet territories, however, as in Poland, the military administration quickly demonstrated 'the little value it accorded human life'.³¹ In so doing, it was merely following the guidelines that had been issued, foremost among them the order concerning the exercise of martial jurisdiction of 13 May 1941, its supplements and explanations.³² The term 'guerrilla' was interpreted very widely. The logical consequence of this

approach was revealed in an order by VII Army Corps HQ on 29 June 1941, to the effect that 'civilians who are encountered armed, even when they only have razors in their boots', were to be regarded as guerrillas and executed.³³ Ninth Army HQ also ordered that persons in civilian or semi-civilian dress were to be regarded as guerrillas if they were armed.³⁴

Further radicalization in the conduct of the war in the army area of operations was encouraged by two factors: the shootings and/or terrible mutilation of German prisoners of war by Soviet troops, and Stalin's call for a 'patriotic war against German Fascism' and the 'unleashing of partisan warfare everywhere'. At first Army High Command tried to counteract this development, stressing pragmatic arguments for its approach rather than humanitarian concerns. When Sixth Army HQ proposed on 2 July that captured Red Army soldiers should be shot in reprisal for the illegal treatment of German soldiers in Soviet captivity, the commander-in-chief of the army at first hoped that such measures could be avoided. Brauchitsch believed that in fighting 'the Russians—unlike the Western powers'—the shooting of large numbers of Soviet prisoners of war would be counter-productive. It would achieve only an 'increasing bitterness in the fighting'.³⁵ At the beginning of July 1941 he regarded this as undesirable, since it would delay the signs of disintegration that he was expecting to see in the Red Army. However, shortly before he received the guidelines from Army High Command, the commander of Sixth Army, Field Marshal von Reichenau, had ordered a number of officers from the Soviet 124th Rifle Division to be shot in reprisal for 'atrocities' committed by their subordinates.³⁶ A month later, in line with the approach taken by Brauchitsch, the commander of Seventeenth Army, Infantry General Carl Heinrich von Stülpnagel, rejected the suggestion of XXXIX (Mountain) Army Corps HQ that Soviet generals should be shot in reprisal for the murder of German prisoners, and that this should be publicized by means of leaflets. He argued that German reprisals would only intensify Soviet resistance.³⁷ Though this attitude by the commander-in-chief of the army and individual officers prevented official reprisals on a major scale, it was unable to stop acts

of revenge committed by German soldiers after the discovery of mutilated comrades.³⁸ The conduct of some Soviet units was clearly in violation of international law. It gave added impact to the propaganda campaign begun by the German side even before the launching of operations, stressing the treachery and brutality of Soviet warfare and the bestiality of the commissars and political leaders. Further impetus was provided by the destructive operations of NKVD troops against political prisoners and thousands of people suspected of spying, whose bodies were found by the advancing German units. Lvov stands as a symbol for many other incidents.³⁹

The development of the German-Soviet war into a war of ideologies and annihilation was not due solely to the measures taken by the German side before 22 June 1941. Its roots also lay in the Soviet reaction to the German invasion. On 3 July 1941 Stalin delivered a broadcast in which he argued that the war against 'Fascist Germany' was no 'ordinary war' between two armies. 'It is also the great war of the entire Soviet people against the Fascist German troops.'⁴⁰ The Soviet people should understand that the struggle against 'German Fascism' was a matter of life and death, and should 'have no pity for the enemy'. Stalin called for 'the unleashing of partisan war'. The aims of this 'patriotic people's war against the Fascist oppressors' were 'to crush the enemy', and to liberate the peoples of Europe who had been subjugated by the Germans. Stalin called on the 'workers, collective farmers, and intellectual workers' in the occupied territories of the Soviet Union to create intolerable conditions for the Wehrmacht by blowing up bridges and roads, destroying lines of communication, and setting fire to woods and camps. The enemy must be ceaselessly pursued and annihilated. Soviet leaflets were produced in German to make the occupying soldiers aware of this appeal. In Hitler's view, 'the totally indoctrinated Bolshevik population' would ensure that the vast expanses of occupied territory continued to pose great dangers for communications with the rear, despite the ruthless action being taken. Furthermore, measures of pacification using infantry methods alone would be time-consuming, involve heavy casualties, and fail to have the necessary deterrent effect. On 5 July 1941, following Hitler's instructions, Keitel therefore instructed the Chief of Army Armament Programmes and commander of the replacement army to equip the security divisions, local defence formations, and police formations with captured French tanks.⁴¹ Hitler regarded Stalin's appeal as the 'chance' to present his war of annihilation as an act of armed conflict. Ten days later he declared openly that the partisan war behind the front offered the

opportunity 'to eliminate anything that opposes us'. In order to pacify this immense area as quickly as possible, it was best 'to shoot dead anyone who even looks at us askance'.⁴² At this discussion, on 16 July 1942, Keitel also advocated Draconian measures against acts of resistance. Civilians must realize 'that anyone who did not function would be shot', and that they would be held collectively liable for conduct which contravened German orders. To ensure that the troop leaders also adopted this attitude, on 23 July 1941 OKW supplemented Directive No. 33 by stipulating that the occupying power would break resistance in the occupied eastern territories 'not by the legal punishment of the guilty, but by striking such terror into the population that it loses all will to resist'.⁴³ At the same time, Hitler ordered that the native inhabitants were to be disarmed immediately 'as a special measure, using the most drastic means'.⁴⁴

In mid-July, in the belief that the Red Army was already defeated, the operations department of the Army General Staff had begun to work on plans for the structure and subsequent distribution of the formations which would be required 'to occupy and secure the Russian space'.⁴⁵ The intention was to keep the number of occupation formations as low as possible, and to concentrate them on the most important industrial areas and transport points. In addition to their occupation duties, these formations must also be capable of destroying any potential revival of resistance by advancing mobile formations deep into the areas not occupied by troops. Underlying these plans was an over-optimistic assessment of the situation, which was soon overtaken by the development of operations. In this context, the radical conduct demanded by Hitler and Keitel was designed to compensate for the fact that the number of security forces was inadequate to pacify the ever expanding area of operations, particularly as they had to be reinforced by combat formations withdrawn from the front.

In contrast, the Army High Command and some troop leaders wished to adopt a different policy. They argued that the troops in the western areas of the Soviet Union had been regarded as 'liberators from Bolshevism' by the population, and frequently greeted with bread and salt. These officers wanted to forbid arbitrary requisitions and the seizure of goods without payment by soldiers 'in this impoverished and plundered land'.⁴⁶ In addition, they wished to treat the population 'reasonably', and not to institute collective reprisals

against the population in punishment for acts of sabotage, which remained relatively infrequent. Instead, such acts should be blamed predominantly on Communists, Russians, and Jews.

Advocates of these measures regarded the taking of hostages, and the shooting of selected people considered to be 'anti-German', as a sure method of driving the 'loyal population' back into the 'Bolshevik camp'. On 12 July 1941 Army High Command issued appropriate guidelines.⁴⁷ Some days before, LI Army Corps HQ had already ordered that Ukrainians were not to be regarded as generally sympathetic to the Germans. Instead, it was necessary to distinguish between Communists and non-Communists. For that reason hostages should be taken in every billet by the highest-ranking officer: '(a) from the Russian and Jewish population, (b) from Communist circles considered to be responsible for attacks on Germans.'⁴⁸ On 20 July 1941 III (Motorized) Army Corps HQ ordered three Jews to be shot, on the grounds that their 'authorship or complicity' in the murder of a German soldier was regarded as proven because of 'the known hostile attitude of the Jews, especially in the Red Army'. The actual culprit had managed to escape.⁴⁹ The commander of 44th Infantry Division, Lieutenant-General Friedrich Siebert, ordered collective measures to be taken after unsolved cases of sabotage. These could consist of the shooting of local Jews or Russians, and the burning down of Jewish or Russian houses.⁵⁰ Second Army HQ also instructed the troops in the former Polish and Belorussian territories to distinguish between 'activist Party men and Jews' on one hand, and the mass of the population on the other. Since the latter regarded the Wehrmacht as its liberator from the 'political and economic terror of the Soviet rulers', hostages should be taken 'only from Party men' belonging to the previous system.⁵¹ This measure clearly demonstrated an affinity between the ideological outlook of senior and top-ranking officers and the National Socialist concept of 'Jewish Bolshevism'. However, it also contained pragmatic elements: 'Though the troops must appear as masters, especially in the eastern territory, they must also avoid everything that is likely to shake the population's trust in the German armed forces.'⁵²

On 25 July 1941 the commander-in-chief of the army responded to information about Soviet instructions for the creation of partisan detachments by political cadres. In addition, it was claimed that 'the required harshness [had] not been employed at all points' by the German side. The guidelines laid down before the start of operations were expanded by the issuing of a special order

⁵² Ibid. The commander of 221st Security Div., Lt.-Gen. Pflugbeil, also ordered a raid on Bialystok on 18 July 1941 to take 'hostages (especially Jews)', to be shot in the event of the slightest unrest, BA-MA RH 26-221/12.

on the 'treatment of enemy civilians and Russian prisoners of war in the rear army area'.⁵³ This order was typical in combining preventive and punitive elements, and in justifying them on military and ideological grounds. It was emphasized that the main priority was 'absolute safety for the German soldier'. The army leadership judged this safety to be endangered, particularly in 'purely Russian areas', by the massive size of the area of operations and the 'perfidy and peculiarity of the Bolshevik enemy'. Rapid pacification was necessary 'to rule the territory gained and to exploit the land'; this could only be achieved if every 'threat from the enemy civilian population' was ruthlessly suppressed. Russians had long been accustomed to hard and merciless action from the authorities. Any form of leniency and softness on the part of the Germans would be regarded as weakness, and would endanger the troops. Soviet plans to organize partisan detachments, their call for young people to form bands, and 'the inflammatory effect of the carriers of the Jewish-Bolshevik system' made it likely that guerrilla warfare would recur even in areas which had previously been quiet. On behalf of Brauchitsch, Lieutenant-General Müller again urged that collective drastic measures be used against passive resistance, or in cases of sabotage where the culprits were not immediately identified. The troops were expressly instructed that it was not necessary to have taken hostages beforehand as a guarantee against 'future wrongdoing'. *Ad hoc* 'punishment measures', i.e. summary executions and the destruction of whole localities, became the rule.

Soviet soldiers who had been cut off from their units during the fighting, whether in uniform or civilian dress, were also regarded by the army leadership as a potential threat to the pacification of the conquered territory. Public announcements were to be made ordering them to report to Wehrmacht posts by a certain date in each area. Once the date had expired, these stragglers were to be regarded as guerrillas and shot, whether or not they had actually taken part in acts of sabotage. Any support and help for partisans and stragglers from the civilian population was to be punished by death. In addition, the army leadership ordered that all 'suspicious elements' who appeared 'dangerous as regards character and attitude', even if they had not committed any known offence, were to be handed over to the special-duty squads or commandos of the security police and SD.

To implement the Army High Command directive of 25 July 1941, the commander of Rear Army Area South ordered that all stragglers captured

⁵³ OKH/Gen. z.b.V.b. ObdH/Az. 453 Gr. R.Wes. No. 1332/41 geh., 25 July 1941, BA-MA RH 22/271; *Deutsche Besatzungspolitik*, No. 34. The fighting formations were instructed at the same time 'to treat as guerrillas members of Soviet "partisan" detachments appearing in front of or behind our front and, as regards observance of the rules of war, clothing, equipment, or identifiability, not unquestionably meeting the conditions set for a body of fighting men, a militia, or a volunteer corps. It is irrelevant whether they were previously soldiers, still describe themselves as soldiers, or are non-soldiers. Civilians who give any kind of help to such partisan detachments are thereby supporting irregular action and are likewise to be regarded as guerrillas according to the usage of war' (OKH/Gen. z.b.V.b. ObdH/Az. 454 Gr. R.Wes. No. 1260/41 g., 18 July 1941, BA-MA RH 19 I/124; *Deutsche Besatzungspolitik*, No. 33).

after 8 August were to be treated as guerrillas.⁵⁴ A similar order for Rear Army Area Centre stipulated that all 'soldiers who were stragglers and still roaming about' west of the Berezina after 15 August should be treated as guerrillas.⁵⁵ However, the expiry date was extended by fourteen days because hundreds of Red Army men were coming forward to surrender.⁵⁶ At the end of August 1941 Schenckendorff ordered that any Red Army man encountered between the Dnieper and Berezina after 15 September 1941 was to be shot as a partisan.⁵⁷

Army High Command's guidelines for the treatment of enemy civilians in the rear army areas were adopted by Seventeenth Army HQ in its sector at the end of July 1941. The troops must 'take more action than before against any kind of guerrilla activity, sabotage, and passive resistance, and even crush the first signs of these'. As soon as such activity was attributed to them, guerrillas were to be shot on the order of an officer. 'Suspicious elements' were to be handed over to the special-duty squads of the security police and SD 'if possible'. At that time there were two such squads (6 and 4a) in the army area. As a separate measure from the Army High Command guidelines, Stülpnagel gave details of the conduct to be adopted in cases of passive resistance or acts of sabotage where the culprits were not captured immediately. 'Collective measures *not* to be taken *indiscriminately*. Where the initial act cannot be attributed to the *Ukrainian* local inhabitants, the local superintendents are to be instructed to name Jewish and Communist inhabitants in the first instance. By means of such pressure, the population is to be forced to inform the police.' Since most of the active older Communists had fled, the younger ones should be seized where necessary. 'The Jewish Komsomol [Communist Youth Organization] members in particular are to be regarded as supporters of sabotage and the organization of gangs.'⁵⁸ These scapegoating methods were designed to convince the bulk of the population that the Wehrmacht was behaving firmly but justly towards pro-German loyal inhabitants in cases of sabotage. In this context, the commander of Seventeenth Army was convinced that there was 'in many cases an inflamed sentiment against the *Jews*' among the Ukrainian population. However, Stülpnagel also reported that the 'Draconian measures against the Jews [had aroused] pity and sympathy among some circles of the population'. In his letter to Army Group South on the 'position and influence of Bolshevism' he therefore argued that a 'determined *enlightenment*' of the Ukrainian population regarding Jewry was 'necessary at the outset in order to obtain a resolute and more

⁵⁸ AOK 17, Gruppe Ic/AO Br.B. No. 2784/41 geh., 30 July 1941, BA-MA, Alliierte Prozesse 9, NOKW-1693. The commander of Rear Army Area South also ordered that reprisals should be taken against Jews and Russians, and not against Ukrainians (Befh. rückw. H.Geb. Süd, Abt. VII/No. 103/41, 16 Aug. 1941, BA-MA RH 22/6).

uniform rejection' of Jews. Stülpnagel also wanted to prevent the Jews from becoming 'active as centres of a resistance movement'. He therefore made detailed proposals to Army Group South for Wehrmacht propaganda, and argued that it should be independent of 'the goals being pursued by German policy'.⁵⁹

The harshness of collective measures against members of specific population groups and non-participants cannot be explained solely by the need of the troops for security in the rear area, nor by pragmatic considerations. In truth, the ideological background to these measures is beyond question. The reprisals went far beyond what was necessary, as is demonstrated by an order from Army Group Centre on 7 August 1941.⁶⁰ It opposed such measures. Though there was understandable anger among the troops as a result of attacks by armed guerrillas, reprisals should not be inflicted on communities simply because they were 'close to' the location of the attack. Inhabitants should be shot only when there was irrefutable proof that they were the culprits, or had been connected with them. Second Army HQ passed on this instruction to the corps commands, noting that experience had shown that the partisan groups in the rear of the troops 'were being supported less by the mass of the people than by the remaining political functionaries and other activist-minded Communists'.⁶¹ Second Army therefore applied to the army group for larger SD units to be sent forward into the army area from the rear army area.

Second Army HQ supported this request by claiming that experienced specialists were needed to expose Bolshevik elements. Reservations about the increased use of the SD in the army area had to take second place to the security requirements of the troops, 'particularly as the troops also urgently [desired] such measures'.⁶² The activities of Special Commando 7b (SS Major Günther Rausch), which had advanced with the army but had insufficient men, had 'always been gratefully welcomed by the troops'. If the troops could be certain that organizations sent in for the purpose were working to defeat the 'dangerous elements' at their rear, they would stop imposing the excessive collective measures which had been criticized by the army group. Army Group Centre appears to have submitted the request from Second Army to Army High Command. On 14 August Army High Command ordered that operations in the rear army areas by the SS, or by police units subordinate to the higher SS and police leaders, would not be 'considered under any circumstances'.⁶³ However, seven days before, in Eleventh Army sector, Special Duty

Squad D had already been instructed to take over responsibility for 'the defensive security of the combat area behind the fighting troops, alongside its previous tasks'.⁶⁴ Together with the secret field police, it was to hunt for escaped Red Army men in uniform or civilian dress. In contrast to Second Army, which had only one special commando assigned to it, Eleventh Army had two special commandos and three special-duty squads at its disposal.

From autumn 1941 the German-Soviet war of annihilation took on another dimension in the rear areas. There were several reasons for this: the growing activity of well-organized, trained Soviet 'partisan detachments and diversionary groups' under the leadership of local administrative and Party agencies; the ever widening gap between the tasks of the German security formations and the resources available to them, especially as some units had to be withdrawn and employed in battle duties; and the increasing disillusionment of the civilian population over the retention of the collective economy and the inadequate supply of food. The rural population in particular found itself wedged between the Soviet hammer and the National Socialist anvil (A. Dallin's expression). While the partisan groups demanded support in men and material, and moved ruthlessly against collaborators, the occupying power expected the population to behave loyally and provide help in anti-partisan activities.⁶⁵

The commanders and commandants reported that Stalin's appeal for a 'patriotic people's war' was not being obeyed by the bulk of the population. As a result, the Germans were not being opposed by an armed popular movement. They dismissed Communist leaflets which maintained the contrary as 'typical Jewish insolence and Communist distortion'.⁶⁶ However, the treatment of actual or supposed 'partisans', 'guerrillas', 'bandits', 'go-betweens' and their sympathizers and helpers was to be even more severe. The starting-point was intelligence regarding Soviet instructions for the 'organization and activity of the partisan detachments and diversionary groups'. This led the Germans to assume that it was the political and state officers of the NKVD and NKGB, and not the Red Army, who were the 'exponents' of the partisan

⁶⁴ Quoted in Krausnick and Wilhelm, *Die Truppe des Weltanschauungskrieges*, 199, 216. The relevant documents are missing from BA-MA.

⁶⁵ III (mot.) Army Corps HQ notified Armd. Group 1 on 13 Aug. 1941 that it was to treat as guerrillas even those civilians who had been forced into resistance. 'If a Ukrainian, for fear of being shot by the commissar, allows himself to be forced to participate in the struggle, he must know that the German Wehrmacht will condemn him to death and shoot him according to international law': BA-MA RH 24-3/135. Armd. Group 1 responded with an order on the 'treatment of fighting civilians' (Pz.Gr. 1, Abt. Ic/AO No. 3441/41 g., 19 Aug. 1941, BA-MA RH 27-13/111). On the other hand, any person who, by his information, made it easier to combat partisans, to clear up acts of sabotage, to discover arms caches, or to capture Communist functionaries, was promised a reward of up to 1,000 roubles: appeal to the population of 10 Oct. 1941, BA-MA RH 27-7/158.

⁶⁶ AOK 2 Ic/AO/Abw. III No. 2075/41 g., 2 Oct. 1941, on combating Soviet partisans (guerrillas), BA-MA RH 20-2/1093.

movement.⁶⁷ Consequently, Second Army regarded the 'elimination of the leaders of such agencies' as the key to successful action against the partisans.⁶⁸ For its part, Army Group Centre devised proposals for the creation of mobile 'hunt commandos' with heavy weapons and pioneers to operate alongside commandos of the secret field police and SD.⁶⁹ At the same time, in response to a query from Sixth Army, Army High Command dispatched an ambiguous instruction from the commander-in-chief of the army.⁷⁰ This stated that uniformed Soviet fighting troops led by responsible officers had a claim to be treated as prisoners of war even when fighting behind the front; on the other hand, Soviet soldiers or groups which disrupted German rear communications 'incoherently on their own initiative' after fighting had ended were to be regarded as guerrillas. It was the duty of the troop commanders to make the decision in individual cases, according to the tactical situation. Second Army concluded that the 'Bolshevik rabble' in the rear of the troops could not be separated into Red Army men, uniformed or civilians, but was to be regarded as one 'organic special entity' and shot as guerrillas.⁷¹ In the interests of Wehrmacht security, Seventeenth Army advocated that harsh measures against the civilian population must be taken wherever necessary; the Soviet leadership had exploited lenient German behaviour to supervise civilian traffic and 'to bring partisans, saboteurs, and spies through the advanced line into the army and into the hinterland'. Various 'suspicious elements' were listed: outsiders of both sexes in the locality, disguised NKVD militiamen (partisans), escaped military and civilian political commissars, and Jews of both sexes and all ages. The commander of 285th Security Division, Lieutenant-General Wolfgang Baron von Plotho, requested an order from Rear Army Area North for all Red Army men still roaming the land to be treated as partisans and shot.⁷² Presumably with Roques's approval, Plotho then issued an order to that effect. Exceptions were to be made only for Red Army men who had undoubtedly deserted, or for escaped prisoners of war who had had no contact with other Soviet soldiers. 'In cases of doubt, every partisan and Red Army man is to be shot.'⁷³

In its guidelines on anti-partisan activity, Second Army ruled that the

population should be dealt with tactfully to persuade them to provide information about partisans. 'Collective measures against villages and their inhabitants must be the exception and are only to be taken where the mass of the population makes such a measure, the success of which is always doubtful, unavoidable.'⁷⁴

In his order of 25 July 1941 regarding the 'treatment of enemy civilians and Russian prisoners of war in the rear army area', the commander-in-chief of the army had referred to the 'inflammatory activity of the exponents of the Jewish-Bolshevik system' in opposition to German efforts at pacification. Some individual army commanders had then adopted this order within their own sectors. From the outset, the army regarded the Jews, as well as the political cadres of the Red Army and the Communist functionaries, as 'exponents of the enemy attitude' and 'Bolshevik driving forces', and therefore as suspected partisans. During the capture of Daugavpils and Rezekne at the beginning of July 1941, the deliberate hunting down and arresting of Jews was justified on the grounds that they had been guilty of acts of sabotage against the troops 'directly or indirectly'.⁷⁵ At the same time, the commander of Rear Army Area Centre enlisted the regular police and SD to carry out the evacuation of all male Jews in whose neighbourhood there were suspected Red Army stragglers.⁷⁶ When, on 3 September 1941 in a report on the 'pacification of the Pripet marshes', 1st SS Cavalry Brigade (SS Colonel Hermann Fegelein) reported to Command Centre that links between the partisan groups were being maintained 'above all by Jews', and that 'Jew-free' villages had never been partisan bases, this ludicrous assertion was accepted without question.⁷⁷ The customary approach taken by the SS brigade was recommended to the army security troops some days later. Schenckendorff thought that the 'multifaceted partisan struggle' had to be opposed by 'equally multifaceted ways of fighting' on the part of the security divisions. Anti-partisan operations were described as a 'rich field of soldierly activity' for intellectually alert and inventive divisional and troop commanders.⁷⁸ To promote the pacification of the army area, Schenckendorff inaugurated an 'exchange of experience' between the army and SS regarding the struggle against the partisans. Participating officers were selected according to 'their achievements and experience' in

operations already undertaken.⁷⁹ The course included lectures from the higher SS and police leader, SS Major-General Erich von dem Bach-Zelewski, on the 'seizure of commissars and partisans', and from the chief of Special Duty Squad B, Major-General Arthur Nebe, on the 'co-operation of troops and SD in fighting the partisans'. There were also realistic demonstrations of systematic searches of a locality.⁸⁰ Not surprisingly, participants in the course used their experiences as the basis for future pacification practices in their units: 'Where the partisan is, the Jew is, and where the Jew is, there is the partisan.'⁸¹ The chief of staff with the commander of Rear Army Area Centre, Lieutenant-Colonel Rübesamen, informed the quartermaster-general that the experiences of the course had fully confirmed the need for discussions. The participants, who included representatives of the Army High Command and Army Group Centre, had gained new ideas which would have a 'fruitful' effect on the struggle against the partisans.⁸²

Many officers accepted the idea that the resistance came mainly from Jews and Communists. As a result, the special-duty squads of the security police and SD were able to report an 'excellent understanding' with the military leadership, and a 'pleasingly good attitude' on the part of the officer corps with regard to the Jews.⁸³ In their reports, the units of the army's secret field police repeatedly referred to their positive and smooth co-operation with the special-duty commandos and special squads.⁸⁴ The attitude of the troops towards the extermination policy of the security police and SD varied. While some remained aloof and closed their eyes to what was happening, others were sympathetic to the measures being taken. In 1941 the destruction of east European Jewry was marked by co-operation between the army and the SS. Here, of course, it is necessary to make a distinction between two kinds of conduct: one involved co-operation with the measures to establish distinguishing marks for Jews, to hunt and evacuate Jews and force them into ghettos, and to help the special-duty squads to carry out mass executions; the other relates to joint action between the Wehrmacht and the SS to pacify the rear areas. One major reason for co-operation was the acceptance by many officers and men of the propaganda image of 'Jewish Bolshevism'. Another was the fact that the differences between military tasks and security policing measures had deliberately been blurred, as Hitler had desired. Before Barbarossa there had still been a gap between the various tasks, but numerous orders from army and

field commanders since June 1941 had helped to bridge it. For example, the army carried out summary executions of Jews, Communists, and Russians as 'collective drastic measures' in punishment for unsolved acts of resistance; these merged with the ideological policy of extermination being undertaken by the special-duty squads for the 'final elimination of Bolshevism'.⁸⁵ Was there an attitude which can be regarded as typical or representative of the approach of senior officers towards the activities of the security police and SD in the occupied Soviet territories? Since this survey cannot provide a quantitative assessment of German occupation policy, it must suffice to note a number of cases as examples of conduct. When the commander of Rear Army Area North, Infantry General Franz von Roques, complained about the mass murder of Lithuanian Jews in Kaunas to Ritter von Leeb, the commander-in-chief of Army Group North, Leeb noted in his diary: 'We have no influence on these measures. The only thing to do is to keep clear of them. Roques is certainly right to think that the Jewish question cannot be solved in this way. The most reliable course would be to solve it by sterilizing all male Jews.'⁸⁶ The fact that Leeb and Roques discussed the mass sterilization of Jews as an alternative to mass murder reveals how deeply the 'poison of anti-Semitism' had 'corroded' the mentality of senior conservative officers.⁸⁷ When the shootings of several hundred Jews and Communists aroused 'some unrest' among men of 281st Security Division (Army Group North), the commander consulted with General von Roques. He then declared himself satisfied that the actions were legal, and forbade any criticism.⁸⁸ The commander of 444th Security Division (Army Group South) merely noted in his situation report at the end of August that 'the Jewish question [was being] settled by the SD', but that the division had no clear idea of the individual measures taken.⁸⁹ No resistance was possible from officers who were prepared to close their eyes in the face of the extermination of the Jews, which was described by Hitler's adjutant as a 'necessary cleansing of the land'.⁹⁰ It was even less likely from those others who expressly consented to the actions of the security police and SD, or saw them as helping their own pacification policy. The 3rd Staff Officer of 221st Security Division (Army Area Centre) considered

⁸⁵ This is how SS Standartenführer Nockemann described the task of the special-duty squads to the Ic of the army groups and armies on 6 June 1941, BA-MA RH 19 III/688. See Cooper, *Phantom War*, 37 ff.

⁸⁶ Leeb, *Tagebuchaufzeichnungen*, 288 (8 July 1941). By coincidence, at the same time a leaflet by Theodore N. Kaufman, *Germany Must Perish* (Newark, 1941), had appeared in the USA, demanding the sterilization of all German men under 60 and all German women under 45. Needless to say, the Reich government from the end of July 1941 used these ideas of an insignificant fanatic to launch a wide-ranging propaganda campaign against Roosevelt and his policy. After the war Kaufman was portrayed by radical right-wing circles as the intellectual founder of the National Socialist programme of annihilation. See Benz, 'Judenvernichtung', 623 ff.

that 'superior control of this old national struggle' (between Poles and Belorussians) 'with the simultaneous eradication of Jewry . . . [was] the key to total political and economic pacification' of the Bialystok region.⁹¹ The commander of 213th Security Division (Army Area South) noted that the 'harsh measures' carried out by the special-duty squads against the Jews had met with 'complete understanding' from the Ukrainian population and had weakened the Jewish will to resist. 707th Infantry Division (Commissariat-General Belorussia) also believed that the 'complete eradication of this alien element [would] best advance the pacification of the country'.⁹² The commander of 339th Infantry Division (Army Area Centre), Lieutenant-General Georg Hewelcke, reported that the population felt more free after its 'liberation from Jews and politically damaging elements'. In areas 'where a removal of Jews by the SD' had not yet occurred, the population was less actively involved in the pacification of the area.⁹³ In another situation report, Hewelcke had suggested 'eliminating all harmful persons and useless eaters (escaped and recaptured prisoners of war, tramps, Jews, and gypsies)'. This would be better than making big cuts in the rations of the Ukrainian auxiliary guard units.⁹⁴ 62nd Infantry Division considered it appropriate for 'SD or police units to remove' the 120 Jews in the town of Gadyach, particularly as bandits were operating in the area. This suggestion was noted by the staff of the commander of Rear Army Area South, and passed on by the 3rd staff officer to the higher SS and police leader.⁹⁵

The gorge of Babiy Yar near Kiev, where 33,771 human beings were murdered, is a symbol not only of the atrocities of the special-duty squads, but also of the support they received from the army.⁹⁶ SS Special Detachment 4a, under the command of SS Colonel Paul Blobel, took up its 'security police' work in Kiev on 26 September 1941. It reported to Berlin that it envisaged the execution of at least 50,000 Jews. Blobel used explosions in the city, which damaged people and property, as a welcome excuse for 'appropriate measures of punishment'.⁹⁷ The city commandant of Kiev and Field Commandant 195, Major-General Kurt Eberhard, welcomed these measures and asked Blobel

⁹⁶ Here I am following the account of Krausnick and Wilhelm, *Die Truppe des Weltanschauungskrieges*, 188-9, 235. However, it is based solely on the operational reports of the participating special-duty squad and disregards the documents of Field Commandant's Office 195 (454th Security Div.), stationed in Kiev. On the suppression of public memory of the systematic extermination of the Jews in the Soviet Union see Goldjagen, 'Der Holocaust', 503-4.

⁹⁷ Thus Field Commandant's Office 195 lost 3 men killed and 7 wounded on 24 Sept. 1941 through time bomb or remote-controlled bomb. The resulting fire reduced about 1 sq. km. of the city to ashes and made around 10,000 inhabitants homeless. See War Diary of the quartermaster of 454th Security Div., entry of 25 Sept. 1941 (BA-MA RH 26-454/25), and the report by Dept. VII of the same division, 2 Oct. 1941, on visit to Field Commandant's Office 195, Kiev (BA-MA RH 26-454/28).

for 'radical action'. At a discussion between Eberhard, Blobel, and the chief of Special Duty Squad C, Dr Otto Rasch, plans to shoot the Jews were discussed quite openly. Subsequently, with the support of 637th Propaganda Company in Sixth Army, Major-General Eberhard issued an appeal to the Jews of Kiev to report for 'resettlement' on 29 September. Special Detachment 4a boasted after this action that the Jews had believed that they were being resettled until immediately before they were killed 'as a result of thoroughly skilful organization'. It was proud that, in co-operation with other SS units, it had murdered almost 34,000 human beings within two days.

Of course, there were some commanders who advocated a clear distinction between the tasks of the security police and those of the troops. 'Incidents' in which these distinctions had been blurred led the commander of 207th Security Division (Army Area North), Lieutenant-General Karl von Tiedemann, to issue an order on 22 July 1941.⁹⁸ After repeating verbatim the regulations in the order of 28 April 1941, Tiedemann specifically forbade 'members of the division from taking part in tasks of the SD, and superior officers from giving permission for such activity or employing their troops in tasks of the SD'. A few days later, the commander of Rear Army Area South, Infantry General Karl von Roques, felt compelled to forbid the 'participation of Wehrmacht members in excesses'.⁹⁹ 'The German soldier who participates in pogroms against Jews etc. seriously damages the reputation of the Wehrmacht, and displays an unsoldierly mentality.' Though the 'Führer decree' of 13 May 1941 allowed the troops to use the harshest measures against a hostile civilian population 'in the course of fighting', 'unauthorized acts of violence' in the pacified territory were nothing other than arbitrary acts. It was the duty of all superior officers to punish such acts.

It would not be true to say that a resistance had arisen within the army to 'constant close co-operation' between it and the SS as demanded by the army leadership in the ideological war against 'Jewish Bolshevism'. However, the troop leaders were concerned that individual soldiers were involving themselves 'in an unpleasant manner' in the tasks of the security police and the SD. At the beginning of August 1941, for example, the commanding general of XXX Army Corps, Infantry General Hans von Salmuth, ordered that 'only such soldiers who are specifically ordered to do so' could participate in special commando actions against Party members and Jews in the army rear area: 'I also forbid any participation as onlookers... Where troops are ordered to [take part in] actions of this kind, they must stand under the leadership of officers. These officers are responsible for ensuring that no unpleasant excesses on the part of the troops take place.'¹⁰⁰ A few days later, the commander

⁹⁹ Befh. rückw. H.Geb. Süd, Abt. Ic No. 1125/41 g., 29 July 1941, on pacification measures, point 1, BA-MA, RH 22/170.

¹⁰⁰ Gen.Kdo. XXX. AK, Abt. Ic No. 628/41 geh., 2 Aug. 1941, Intelligence Decree No. 4, point 2, BA-MA, Alliierte Prozesse 9, NOKW-2963.

of Sixth Army, Field Marshal von Reichenau, also forbade 'any participation by soldiers of the army as onlookers or performers in executions [by the SD] which are *not ordered* by a military superior'.¹⁰¹ His order was issued after off-duty soldiers had volunteered to assist the SD in carrying out executions, had been present as onlookers, and had taken photographs. However, in this order Reichenau also spoke of the need for these 'executions of criminal, Bolshevik, mostly Jewish elements', and allowed local commandants to provide cordons against onlookers if requested by the SD. On 20 August 1941 the 1st staff officer of 295th Infantry Division, Lieutenant-Colonel Helmuth Groscurth, protested to the chief of staff of Army Group South about the shooting of ninety Jewish children and a number of women in Belaya Tserkov. Yet Groscurth was aware that the underlying orders were irrevocable. He therefore based his arguments almost exclusively on the need to maintain discipline, and demanded that 'similar measures take place away from the troops'. Groscurth was certainly aware of the order issued by the commander-in-chief of the army on 7 February 1940, when Brauchitsch had informed the field commanders that Hitler's order for the 'solution of national political tasks... [would] inevitably lead to unusual, harsh measures' against the Polish population. Subsequently, Himmler had promised 'to keep events and actions that are damaging to the spirit and discipline of the army away from the troops'.¹⁰² After the field commandant, Lieutenant-Colonel Riedl, had repeatedly explained that 'this scum must be exterminated', and the commander of Sixth Army had given his consent to the execution, Groscurth, who in earlier years had played an important part in the military opposition to the regime, resigned himself to the apparently inevitable.

Roques's order of 29 July 1941 did not have the desired effect. He was growing increasingly concerned that the troops were moving beyond the control of their officers and might become little more than a 'mob'. On 1 September 1941 Roques issued a further order because 'cases [have] occurred recently in which soldiers and also officers have carried out shootings of Jews independently or have participated in them'. The tasks of the Wehrmacht in the army rear area were clearly defined. 'Any independent overstepping of these tasks undermines the discipline and reputation of the Wehrmacht and leads to the degeneration of the troops.' It was the duty of every superior officer to intervene immediately and resolutely in all these cases. 'Executive measures against specific sections of the population (especially Jews)' were the sole responsibility of the forces of the higher SS and police leader, particularly in areas that had already been pacified. Roques continued: 'Any *unauthorized* shooting of native inhabitants, even of Jews, by *individual* soldiers, and any

¹⁰¹ AOK 6, O.Qu/Qu. 1, Special instructions for supplies and for supply troops No. 50, 10 Aug. 1941, appendix 1, on executions by the SD, Nbg. Dok. NOKW-1654; quoted from Krausnick and Wilhelm, *Die Truppe des Weltanschauungskrieges*, 230-1.

¹⁰² Groscurth, *Tagebücher*, appendix iv, 534 ff., and army C.-in-C. No. 231/40 geh., 7 Feb. 1940, regarding army and SS, Nbg. Dok. NOKW-1799; quoted from Krausnick and Wilhelm, *Die Truppe des Weltanschauungskrieges*, 104.

participation in executive measures of the SS and police forces [was] to be punished as disobedience in disciplinary terms at least, in cases where legal intervention [was] not necessary'.¹⁰³ The orders of Generals von Tiedemann, von Roques, von Salmuth, and von Reichenau were wholly in accordance with the distinctions made by the commander-in-chief of the army in his 'disciplinary decree' of 24 May 1941; Roques even reminded the officers of the content of Article 16a of the decree on martial jurisdiction. Brauchitsch had indeed sanctioned the temporary replacement of martial jurisdiction by 'ruthless action' of the troops in the event of punishable offences by the Soviet civilian population. At the same time, however, he had exhorted all officers 'to prevent arbitrary excesses by *individual* army members, and to prevent degeneration of the troops by timely intervention'.¹⁰⁴

To the fury of Special Duty Squad 5 under SS Brigadier Erwin Schulz, a major action against the Jews in Uman was 'damaged extraordinarily' by the 'premature' and 'unplanned excesses' of Ukrainian militia members and Wehrmacht members. Army Group Command South was informed, and Rundstedt felt compelled to intervene. Like Salmuth, Roques, and Reichenau before him, he pointed out that 'the search for and combating of activities and elements hostile to the Reich in the occupied territories [was] solely the task of the special commandos of the security police and SD'. These were to carry out the 'necessary measures', particularly against Communists and Jews, on their own responsibility. '*Unauthorized* action by individual Wehrmacht members, or participation by Wehrmacht members in excesses by the Ukrainian population against the Jews, is forbidden, as are watching or taking of photographs during the implementation of the measures of the special squads.'¹⁰⁵ The Wehrmacht Commander Ukraine extended the ban on off-duty photography: 'If anyone photographs the sick, the suffering, those writhing in pain, the dead, and the dying, then he is demonstrating that he has a base character and is not fit to be called a German soldier.'¹⁰⁶ In October 1941 and March 1942 the commanders of Rear Army Areas Centre and South felt it necessary to repeat the ban on off-duty participation in shootings carried out by SS and police forces. This fact must be regarded as confirmation that such incidents were taking place.¹⁰⁷ As in Poland before, many incidents had taken place which persuaded the commanders to forbid lynch law against Jews, and acts of terror against other Soviet citizens. Evidence for this is provided by 'Special Corps Order No. 25', issued by the commander of Rear Army Area

Centre on 5 September 1941. On the basis of a rumour against them, four Russian civilian prisoners, 'after being whipped for hours on end, had petrol poured over them by . . . a crowd of soldiers and were burnt alive. The local commandant, a captain, [had] watched this outrageous activity to the end without intervening.' Schenckendorff had the culprits court-martialled, with the most severe punishment meted out to the officer who had tolerated this 'bestial brutality'.¹⁰⁸

The commander of Fourth Army, Field Marshal von Kluge, also felt it necessary to issue a 'special order' to maintain discipline.¹⁰⁹ It was 'high time to put a complete end to the unjustified methods of obtaining supplies, the raids, the plundering trips over vast distances, all the senseless and criminal activity'. The honour of the German soldier demanded a decent approach to the population in the conquered territories. Criminal conduct could turn the opinion of the 'basically harmless population' into hatred. The result would be more participation in acts of sabotage, and higher casualties for the Wehrmacht. Kluge threatened severe punishment not only for plunderers and criminals, but also for superior officers who tolerated such conduct.

A high point in the blurring of military tasks and security-police measures during Operation Barbarossa was reached on 10 October 1941. On that date the commander of Sixth Army, Field Marshal von Reichenau, issued an order covering the conduct of the troops 'towards the Bolshevik system'.¹¹⁰ A number of explanations can be given for this order, though none is sufficient in itself. They include the deterioration in the army's operational position since the start of the campaign, the increased activity of organized partisan groups, the lack of concern for civilians displayed by many soldiers, and friction between troops and security police in the rear army area. Yet the decisive factor was widespread acceptance within the army of the concept of 'Jewish Bolshevism'. This enabled the physical destruction of east European Jewry to be explained purely as an act of retribution. In this context, the supposed links between Jewry and the partisan movement appeared simply as an additional justification. Only days before, in his order of the day for Operation Typhoon, Hitler had again branded the Jews as the instigators of the Bolshevik and the capitalist systems.¹¹¹ Reichenau argued that the most important goal of the campaign against 'the Jewish-Bolshevik system'

¹⁰⁸ Along with a term of imprisonment, a loss of rank was imposed: Befh. rückw. H.Geb. Mitte, Br.B No. 322/41 geh., 5 Sept. 1941, special corps order of the day (No. 25), BA-MA RH 26-221/17.

¹⁰⁹ Commander of Fourth Army, Ia/III/Ic No. 2000/41 geh., 11 Sept. 1941, BA-MA RH 20-4/884. At the end of Sept. 1941 the C.-in-C. of the army charged three generals with the task of maintaining discipline in the army group sectors, especially in the rear army areas (OKH/GenStdH/Org.Abt. II/No. 8280/41 geh., 29 Sept. 1941, *ibid.* RH 22/255). See also the order of Army Group South, Ia/Ib No. 2987/41 geh., 27 Oct. 1941, on maintenance of discipline, *ibid.* RH 22/9.

¹¹¹ Domarus, *Hitler*, ii. 1757 (2 Oct. 1941).

was the 'complete destruction of the means of power, and the elimination of the Asiatic influence in the European sphere of culture'. This objective also led to

tasks for the troops which [went beyond] conventional one-sided soldiering. The soldier in the east is not just a fighter according to the rules of the art of war, but also the bearer of an implacable national idea, and the avenger of all the bestialities inflicted on the German and related peoples. For that reason, the soldier must have full understanding of the need for a harsh but just punishment of Jewish subhumanity.

Some of these arguments were based on the second part of the decree on martial jurisdiction; the last, however, clearly exceeded it, and offered a justification of the actions of Special Duty Squad C.¹¹² This 'punishment' had 'the further aim of stifling revolts to the rear of the Wehrmacht, which experience shows [are] always instigated by Jews'.

Reichenau also demanded Draconian measures against the 'enemy behind the front', which he considered was not taken seriously enough by the troops. The demand was based on an assessment of captured Soviet orders by the Department Foreign Armies East in the Army General Staff, and on the depositions of captured partisans. These indicated that German military quarters had consistently offered only reluctant support for anti-partisan activity.¹¹³ 'Caring for local inhabitants and prisoners of war at troop kitchens if they are not in the service of the Wehrmacht is misunderstood humanity just as much as the handing out of cigarettes and bread.' If the civilian population refused to take an active part in the struggle against Bolshevism, its members could not complain about 'being judged and treated as adherents of the Soviet system'. On the basis of the supplement to 'Directive No. 33' of 23 July 1941, but with a characteristic individual slant, the army order of 10 October 1941 stipulated:

Fear of German countermeasures must be greater than the threat posed by the Bolshevik remnants roaming about. Irrespective of any political considerations of the future, the German soldier must achieve two things:

- (1) the complete annihilation of the Bolshevik heresy, the Soviet state, and its armed forces;
- (2) the merciless elimination of alien perfidy and atrocity,

thereby securing the life of the German Wehrmacht in Russia. Only in this way can we fulfil our historic task of liberating the German people from the Asiatic-Jewish danger once and for all.

Reichenau's attitude was not unique. This is demonstrated by the fact that other senior officers in the east declared themselves 'completely in agreement' with his order, and distributed it in their own areas of authority. The com-

¹¹² The extent of the mass killings—about 80,000 people—is revealed by events report No. 128 of 4 Nov. 1941 g.Rs., fo. 341, BA R 58/218.

mander of Army Group South, Field Marshal von Rundstedt, did so on 12 October,¹¹⁴ and the Wehrmacht Commander Ukraine, Air Force General Karl Kitzinger, on 17 October 1941.¹¹⁵ The commander of Rear Army Area South described it as a 'binding principle'.¹¹⁶ Four weeks later, the commanding general of LI Army Corps, Infantry General Hans Wolfgang Reinhard, ordered that every soldier 'must be inoculated' with the ideas of the order of 10 October.¹¹⁷ Hitler described the initiative of Sixth Army HQ as 'excellent'. At the end of October 1941 Army High Command informed all army groups, armies, and commanders of Reichenau's order, and requested them 'to issue appropriate instructions along the same lines'.¹¹⁸

At the beginning of November 1941 Reichenau's visits to the troops convinced him that his order regarding 'the conduct of the troops in the east' had not yet been made sufficiently clear to the men. He instructed his officers to ensure 'that every last man knows what it is about, and why measures are being taken in the east that are not applicable in civilized countries'.¹¹⁹ Historians are thus entirely justified in drawing attention to the striking differences between the conduct of the war in the west and that of the war in the east.¹²⁰

However, OKW attempted to reduce this inequality of treatment from autumn 1941, following orders from Hitler. After the beginning of the war against the Soviet Union, there was a significant increase in acts of sabotage in the occupied countries of western, northern, and south-east Europe. Keitel instructed the various commanders that any case of opposition to the occupying power there—irrespective of the individual circumstances—should be attributed 'to Communist intrigues', since it was 'nothing but a mass movement led consistently by Moscow'.¹²¹ The commanders were to use harsh measures at the first provocation. Suitable deterrence could be achieved only by 'unusual harshness' (which, of course, was already the rule in the east). The execution

¹¹⁴ Ob.Kdo. H.Gr. Süd, Ia No. 2682/41 geh., 12 Oct. 1941, BA-MA, Alliierte Prozesse 9, NOKW-309. With regard to the imminent wintering, and the small number of forces in the rear areas, the carelessness and softness which were still frequently encountered were not tolerable after the fighting.

¹²⁰ Nolte, *Faschismus*, 463, contrasts the 'normal European war' in the west with the war against the Soviet Union, which he rightly refers to as the 'most monstrous war of conquest, enslavement, and annihilation' in modern times.

¹²¹ Der Chef OKW/WFSt/Abt. L (IV/Qu) No. 002060/41 g.Kdos., 16 Sept. 1941, *Ursachen und Folgen*, xvii, doc. 3163a. For France, see Umbreit, *Militärbefehlshaber*, 126 ff.; for Serbia, Browning, 'Wehrmacht Reprisal Policy'.

of 'from 50 to 100 Communists' should be regarded as 'appropriate punishment for a German soldier's life'. Action according to martial jurisdiction was to be the exception, though the most severe punishment was also demanded in these cases. This summary order for the imposition of collective punishments, and for the restriction of the operation of military courts, can be regarded as an attempt to apply the thinking behind the decrees of 13 May and 25 July 1941 to the other occupied territories. A more radical pacification policy was the result.

The commander-in-chief of Seventeenth Army (from 5 October 1941), Colonel-General Hoth, was convinced that the '*campaign in the east* . . . [must] be brought to an end in a different way from e.g. the war against the French'. In the east '*two inwardly unbridgeable outlooks are fighting each other* . . . German honourable and racial feeling, centuries of old German military tradition, against Asiatic ways of thinking with their primitive instincts, whipped up by a small number of mainly Jewish intellectuals'.¹²² His order for the 'conduct of the German soldiers in the east' was issued on 17 November 1941. Hoth was not content merely to follow the suggestions made by the commander-in-chief of the army. Nor was he motivated solely by a concern for the lack of a uniform view of the tasks of the German soldier in the Soviet Union. He also believed that he was passing on the unequivocal views of Hitler, which ought to be the sole guiding principle for the Wehrmacht.

Hoth's definition of the meaning of the war clearly reflected his own sense of mission:

More strongly than ever, we carry in us the belief that this is the turning-point of an era, in which the leadership of Europe is transferred to the German people by virtue of the superiority of its race and its achievements. We clearly recognize our mission to save European culture from the advance of Asiatic barbarism. We now know that we have to fight against an embittered and tenacious opponent. This struggle can only end with the annihilation of one or the other; there can be no settlement.

Hoth listed the following war aims:

- (a) to defeat the Red armed forces so that it is impossible for them to be re-created;
- (b) to instil in the Russian population an awareness of the impotence of its former masters, and of the implacable will of the Germans to exterminate these holders of power as bearers of Bolshevik thinking;
- (c) to exploit the conquered territory to the utmost in order to relieve the provisioning of the homeland.

He believed that the military objective of the campaign had been achieved. However, the war against Bolshevism was still unfinished. To win it, Hoth demanded a sense of unconditional superiority, a conscious hostility to the enemy world outlook, the strictest discipline, implacable resolution, and tireless watchfulness. '*We are the masters of this land which we have conquered.*'

¹²² AOK 17, Ia, No. 0973/41 geh., 17 Nov. 1941, BA-MA, 17. Armee, 14499/15.

Since Red Army men had 'bestially murdered' German soldiers, 'sympathy and leniency towards the population are completely misplaced'. Any trace of active or passive resistance, and 'any form of machination by Bolshevik-Jewish rabble-rousers, is to be wiped out'. The soldiers especially must understand the '*necessity of harsh measures against racially and nationally alien elements*'. More resolutely than Reichenau, Hoth justified the exterminations being carried out by Special Duty Squad C by directing his subordinates to look at German history, at the supposed guilt of the Jews for domestic political events after the First World War. The extermination of the 'same Jewish class of people', which Hoth described as the 'intellectual supports of Bolshevism, the exponents of its murder organization, the helpers of partisans', was a 'requirement of self-preservation'.

After commenting on the nature of the exploitation of the land, the commander of Seventeenth Army referred to the attitude of the officers and NCOs. This would determine the conduct of the troops. The simple soldier's healthy feeling of hatred should not be suppressed, but must be strengthened. Officers had never

occupied a heavier and more responsible post in history than in this war . . . Russia is not a European state, but an Asiatic state. Every step further into this bleak, enslaved land teaches us the difference. Europe, and especially Germany, must be freed from this pressure, and from the destructive forces of Bolshevism, for all time. It is for this we are fighting and working.

Since 'potentially successful' anti-partisan activity was not solely the concern of Ic, the Intelligence III troops, the SD, or the secret field police, Seventeenth Army HQ was establishing a bigger organization for the whole army sector to track down and combat partisans.¹²³

In November 1941 the commander of Eleventh Army, Infantry General von Manstein, also felt it necessary to explain the aim of the war against the Soviet Union, and to state his attitude towards the annihilation of east European Jewry. According to his army order of 20 November 1941,¹²⁴ the German people were engaged in a life-and-death struggle against the Bolshevik system. This struggle was not being waged against the Red Army by European rules of war; the fighting was also continuing behind the front line. Manstein depicted Jewry as the 'intermediary' between the two. 'More than in Europe, it holds all the key points of political leadership and administration, of trade and crafts, and also forms the cells of all unrest and possible revolts.' He described the aim of the war: 'The Jewish-Bolshevik system must be wiped out once and for all. Never again must it interfere in our European living-space.' Like Reichenau and Hoth before him, Manstein saw the task of the German soldier as twofold. First, the Red Army must be defeated. Second, however, each German soldier must conduct himself as the 'bearer of a national idea, and

¹²³ AOK 17, Ia/Ic/AO No. 4020/41 geh., 20 Nov. 1941, *ibid.* 14499/51.

¹²⁴ AOK 11, Abt. Ic/AO No. 2379/41 geh., 20 Nov. 1941, *IMT* xxxiv. 129 ff.

avenger of all the atrocities inflicted on him and the German people'. Once again, the relevant sections of the decree on martial jurisdiction appear to have provided the principles underlying this order. Manstein criticized the carelessness and thoughtlessness of the troops towards the 'Bolshevik struggle behind the front', and attacked the distribution of foodstuffs to Soviet citizens who were not serving the Wehrmacht. Like Reichenau and Hoth, Manstein urged the soldiers to understand 'the need for the harsh punishment of Jewry, the intellectual carrier of Bolshevik terror'. In the army area remarks of this kind could only be a reference to the activities of Special Duty Squad D. These were justified partly as reprisal for past atrocities against the German people and German soldiers, but also as a preventive measure 'to stifle all revolts, which [were] mostly instigated by Jews'. In conclusion, Manstein appealed to the traditional soldier's ethos to demand proper treatment of the population, but only the non-Bolshevik parts. Where these did not decide voluntarily in favour of 'active co-operation against Bolshevism', appropriate means must be used to compel them.

However, other voices were also heard. The commanding general of III (Motorized) Army Corps, Cavalry General von Mackensen, issued an order regarding 'conduct towards the population' on 24 November 1941. This was significantly different from those issued by Reichenau, Hoth, and Manstein.¹²⁵ Of course, Mackensen also demanded 'ruthless action against and extermination of enemy elements'. Nevertheless, he indicated that not everyone who looked 'Bolshevistic'—ragged, uncared for, unhygienic—was to be regarded as an enemy. The decision was to be made quickly and correctly, if possible by an officer, who was to be suitably cautious in dealing with denunciations. This was only one point among ten; the others were marked by the traditional view of proper conduct in occupied territories. In addition to the unavoidable consequences of war, Mackensen thought that unjust or psychologically mistaken behaviour by the troops and agencies in the rear area had contributed to the perceptible decline in positive pro-German feeling among the population after a few weeks of occupation. Hatred of Bolshevism must not be transferred to the population. Both they and the prisoners of war should be treated justly and dispassionately. This principle was not undermined by 'the harshness appropriate to eastern people'. Though extensive supplies from the land for the Wehrmacht, the Reich, and Europe would be crucial over the following years, the population must not be regarded as an 'object of exploitation'. Instead it was a 'necessary member of the European economy'. German soldiers should behave as they themselves would wish to be treated in an emergency. A thoroughly good attitude would best convince 'a population that is accustomed to the bad attitude of the Red Army of the strength of the army and of our people... It is up to every soldier!'

The crucial question is how far this order was representative of the conduct

¹²⁵ Gen.Kdo. (mot.) III. AK, Abt. Ic No. 531/41 geh., 24 Nov. 1941, BA-MA RH 24-3/136.

of the German army in the Soviet Union. Since no quantitative investigation has yet been made, it can only be answered indirectly. In the reports of the fighting formations and security forces there are frequent references to the selection of specific population groups as 'hostages', and to summary executions after unsolved acts of sabotage ('drastic collective measures'). These measures were based on the decree on martial jurisdiction of 13 May and the Army High Command decree of 25 July 1941. The reports reveal a vast discrepancy between the number of 'guerrillas', 'partisans', and 'Red Army men' killed and the number of German casualties. Equally, they show only minimal differences between the number of people arrested and the number shot. The statistics tell their own story. They cannot be justified solely by the regular references to the security requirements of the troops. In fact, the ideological background is absolutely unmistakable.¹²⁶ To all intents and purposes, mere suspicion of actual or potential anti-German activities was sufficient to cause the shooting of civilians and Red Army stragglers who were found moving about the countryside. The fatal legal basis for such conduct had been created by the decrees of the Wehrmacht and army leaderships, and by their oral interpretation by the various commanders, commandants, officers, and soldiers, each acting according to his own cast of mind and under the impact of military developments and the Soviet response. In May 1941 the theory was that only military measures were to be taken, and that there was to be no punishment of local inhabitants. Eight months later these restraints had disappeared. Measures taken by officers in retribution for punishable acts by the Russian population were now regarded purely as administrative decrees, and were to be presented as such.

When the shooting of civilians is to be carried out, it is to be assumed that these cover administrative decisions which have been transferred to the officers by virtue of martial jurisdiction for the safety of the troops. . . . These decisions may not be clothed in legal form. The content of the decisions is rather to be subject to summary assessment according to the security need of the troops.¹²⁷

Security was to be provided by the ruthless pursuit and annihilation of the partisans and their 'accomplices'. It was accepted that 'innocent people [would] also be affected on occasion'.¹²⁸ Only a few days after the start of operations, an individual officer proposed that the orders regarding the treatment of Russian guerrillas should be altered because innocent civilians had

Timothy P. Mulligan has attempted a first quantitative analysis of the partisan struggle, 'Reckoning'; see Schulte, *German Army*, 117 ff.; Bartov, *Eastern Front*, 119 ff.; Bonwetsch, 'Sowjetische Partisanen'; and Wilenchik, 'Partisanenbewegung in Weißrußland'.

been shot; the 3rd staff officer in III (Motorized) Army Corps HQ refused to support him on the grounds that the Soviet population ought to stay indoors at night and 'above all, not wear items of Russian army clothing'.¹²⁹ However, security needs were not met if punishment measures led 'to a general massacre and burning of villages by individual soldiers'.¹³⁰ Such conduct endangered the discipline of the troops. Drastic measures of this kind were associated with decisions by a commander. A few examples can be cited to demonstrate the situation. As successes in anti-partisan activity, Second Army thus reported that, in the period between August and October 1941, 1,836 persons had been arrested, of whom 1,179 were shot.¹³¹ After a 'cleaning-up operation' in Rear Army Area South, 62nd Infantry Division shot 45 partisans, plus the 'entire Jewish population in Mirgorod (168 persons) because of links with partisans'.¹³² In its provisional final report on anti-partisan activities in the forest region of Novomoskovsk (Army Area South), 444th Security Division reported that it had shot 305 bandits, 6 gunwomen, 39 prisoners of war, and 136 Jews.¹³³ According to 285th Infantry Division, between 22 June and 31 December 1941 almost 1,500 'partisans, civilians, Red Army men' had been either killed in battle or subsequently shot. Its own casualties were 7 dead and 11 wounded.¹³⁴ 707th Infantry Division, under the command of Wehrmacht Commander Ostland, shot 10,431 out of 10,940 'prisoners' in a single month while carrying out security duties in Belorussia. In fighting with partisans it had sustained only 7 casualties: 2 dead and 5 wounded.¹³⁵ The head of the secret field police attached to the Commander of Rear Army Area South, Stephainski, reported the results of three months of anti-partisan activity: just under 2,400 'guerrillas, saboteurs, parachutists treated according to the law of war', compared to its own casualties of 7 dead and 5 wounded.¹³⁶ The commandant of Local Headquarters II/930, Major Graf Yrsch, reported that between 18 July and 31 December 1941 627 partisans had been shot at a cost

of only 2 casualties sustained by the Russian Public Order Service. In the view of Graf Yrsch, this success was due to the 'enlistment of decent Russian informers, the most decent treatment of the decent part of the Russian population, and the systematic establishment of a civilian administration urged to do clean work'.¹³⁷ He also claimed that it was virtually impossible 'to behave more cleanly and worthily as soldiers during the executions [of partisans] than was insisted upon by Local Headquarters II/930'.¹³⁸

Two examples will serve to reveal the role played by the outlook of individual officers in the fighting against partisans. The head of the advance party of 350th Infantry Regiment criticized the 'softness' of his soldiers on the grounds that it was unacceptable for officers to have to do the shooting while their men looked on.¹³⁹ On the other hand, a platoon leader in 3 Company, 50th Cycle Guard Battalion, complained that the adjutant of the above-mentioned Local Headquarters II/930 had personally shot three partisans.¹⁴⁰ The commandant of Rear Army Area 582, Lieutenant-General Oskar Schellbach, defended the conduct of the adjutant in a report to Ninth Army HQ, but instructed him 'that the active participation of an officer in the shooting of partisans [was] inappropriate and unworthy of an officer'.¹⁴¹ Membership of the CPSU was certainly a cause for suspicion of anti-German conduct in every case, but it should not automatically lead to the shooting of suspects. The order of 25 July 1941 from the commander-in-chief of the army was thus interpreted in at least two different ways. For example, Field Headquarters (V) 376 informed the commander of Rear Army Area South that two Romanian officer patrols, reinforced by two German field gendarmes, had cautioned 55 'former Communists'.¹⁴² Secret Field Police Group 721 (Army Area South) reported that it had handed over 28 Jews and 20 Communists to the SD.¹⁴³

Autumn 1941 was a turning-point in the German military administration—not only with regard to pacification policy, but also for practical military reasons. Owing to a lack of manpower for security tasks, armed units composed of members of the varied ethnic groups of the Soviet Union were established in the army area of operations. On the assumption that the campaign would be won within a few weeks, the armies and commanders of the rear army areas had been provided with very few public-order and security forces. These found themselves in a precarious situation when the expected rapid victory over the Red Army did not materialize, and when their strength

was further reduced to support military operations. All this occurred at a time when partisan activities, and the size of the army areas (*Heeresgebiete*) and *Armeegebiete* to be patrolled, were on the increase. There were not enough security forces available to enforce law and order in the occupied territories, particularly in areas which had not been 'combed through' beforehand by fighting units. Moreover, the divisions had begun to complain about their inadequate levels of equipment and manpower. At the beginning of November 1941, in answer to a query from the quartermaster-general and the commander of Army Area Centre,¹⁴⁴ the commander of 221st Security Division, Lieutenant-General Johann Pflugbeil, reported that the division in its 'current composition' was inadequate. It was unable to fulfil the demands made upon it by the Army High Command. The premisses of the 'principles laid down in the order of 21 March 1941' had 'not proved accurate'.¹⁴⁵ In order to achieve the objectives he had been set, the commander of 339th Infantry Division in Army Area Centre, Lieutenant-General Hewelcke, demanded the assigning of secret field police, the creation of a military administration section in the divisional staff, and the employment of the SD in his sector.¹⁴⁶

At that time, the rear army area covered approximately 145,000 sq. km.,¹⁴⁷ or roughly the area of the current German states of Bavaria, Baden-Württemberg, Rhineland Palatinate, and Hesse combined. The security area of 221st Security Division at the end of July 1941 covered 35,000 sq. km., almost the size of Baden-Württemberg.¹⁴⁸ At the end of September 1941 the rear area of Ninth Army extended over 17,600 sq. km., a larger area than Schleswig-Holstein.¹⁴⁹ The area covered by Field Headquarters (*Feldkommandantur*) 198 (Army Area South) was 9,600 sq. km.¹⁵⁰ From the outset, there were not enough public-order forces to provide an individual police service in the municipalities, towns, and districts. By the end of July 1941 the commanders of the rear army areas were already being permitted, in co-operation with the appropriate higher SS and police leader, to set up a 'native auxiliary police' made up of released prisoners of war.¹⁵¹ At the start

of operations, these units were composed mainly of Lithuanians, Latvians, Estonians, Belorussians, and Ukrainians. The German military command authorities were helped in their recruitment efforts by the deep anti-Communist sentiments of the population in the areas which Moscow had annexed in 1939-40 following the Hitler-Stalin pact. In the middle of August 1941, for example, the Latvian 'police escort' in Riga comprised almost 3,000 men.¹⁵² At the same time, it was ordered that the security forces could be further reinforced by 'auxiliary guards' recruited from freed prisoners of war of non-Russian nationality.¹⁵³

In the unfavourable conditions of the autumn of 1941, Army High Command also agreed to a proposal from Eighteenth Army HQ for the establishment of a Cossack 'special troop to subdue Soviet partisans'. On 6 October 1941 the quartermaster-general gave permission for the commanders of Rear Army Areas North, Centre, and South to create initially one experimental 'Cossack squadron' each, comprised of prisoners of war 'in agreement' with the higher SS and police leaders, and to employ them against partisans.¹⁵⁴ This was the first time that permission had been given for the establishment of auxiliary formations consisting of members of the *Russian* people, as the Cossacks had to be regarded as Russians. Infantry General von Schenckendorff wanted to go even further. He hoped to allow the security divisions to set up cavalry squadrons from released prisoners of war of Ukrainian and Belorussian nationality.¹⁵⁵ According to the commander of Rear Army Area Centre, the anti-partisan course of 24-6 September 1941 had proved that the cavalry platoons in the infantry regiments of the security divisions must be reinforced to enable them to fulfil their reconnaissance and operational tasks. Army High Command agreed to this proposal in the middle of November 1941.¹⁵⁶ A month before, the quartermaster-general had also empowered the army groups to set up 'auxiliary guards' for security tasks and surveillance purposes; these were to be made up of freely recruited native inhabitants.¹⁵⁷ The SD was to be involved in the security screening.

Both the circle of those eligible for recruitment and the tasks given to the auxiliary formations were quickly extended. In order to free the troops from

guard duties of all kinds, the security formations increasingly drew even on the Russian population as 'public-order police'.¹⁵⁸ In the middle of November 1941 the commander of Rear Army Area South was authorized to set up two separate squadrons of released prisoners of war of 'Turkestani and Caucasian nationality'.¹⁵⁹ The reservoir of native manpower was used for military and political reasons: to top up the security divisions and fighting formations, for guard and security duties, and for anti-partisan work. At the end of November 221st Security Division applied for the establishment of sapper companies for each infantry regiment, to be made up of trained 'Russian pioneers—Ukrainians, Volga Germans' released from captivity. It had already formed sapper platoons with the local defence battalions by enlisting released prisoners of war.¹⁶⁰ The commander of Rear Army Area South recognized the significance of the proposal. However, there were objections 'at higher level' to 'establishing and arming new formations made up of Russian prisoners'. The division was allowed to set up a sapper company, but the prisoners of war were 'neither to be dressed in field grey nor to be armed in any way'.¹⁶¹ At the same time, the commander of Ninth Army, Colonel-General Strauss, asked for 'the labour potential of the great mass of prisoners to be placed at the service of the Wehrmacht even more than had apparently been envisaged'.¹⁶² Combat strengths had been so reduced that it was essential to 'fill them up'. For that reason much of the 'fetching and carrying behind the front' should be done by released prisoners of war under German leadership and supervision. Soldiers would then be released for service at the front. Strauss thought that the prisoners, who were 'completely worn out and near starvation', would think themselves fortunate if they were allocated two-thirds of the rations available to German soldiers. Of course, it was understood 'that the Asiatic subhumanity would have to remain in the prison camps'. Ninth Army also tried to dispel any fear on the part of higher authorities 'that the German soldier might be unfavourably influenced by living alongside Russians, which could not be avoided entirely'. The 'inherent feeling of superiority' among the Germans would rule this out. Moreover, Ninth Army considered that this enlistment of Soviet prisoners of war would provide benefits for the Germans 'after the war', because 'the Russian' would have learnt discipline and the rudiments of the German language and methods.

Army Group Centre passed on the request from Ninth Army to all the armies and armoured groups under its command, as well as to the commanders of the rear areas, and asked for their views.¹⁶³ Based on personal

experience, the commandant of Army Rear Area (Korück) 582 (Ninth Army) opposed the deployment of released prisoners on labour service or with the baggage train, and advocated using them as auxiliary guards and in the fight against partisans.¹⁶⁴ The numbers involved should reach perhaps 30 per cent of the strength of the German squadrons, but certainly not more at the outset. Korück 582 also argued that it was unwise to place too much emphasis on the nationality of the prisoners of war. Discontent with Bolshevism was just as widespread among the Russians as among the Ukrainians, but so was unreliability. 'No prisoners at all would make their way to service in the German Wehrmacht for intellectual reasons.' The reason why they will be ready is terror of the prison camps, and the prospect of a better life with the German troops.'

In contrast to Korück 582, 221st Security Division made a positive assessment of the work of freed prisoners of war,¹⁶⁵ which had released German units for the struggle against the partisans. It considered that prisoners of war could be permitted to make up 25 per cent at most of the authorized strength of the supply services. Though reorganization would be necessary, its disadvantages would 'be of considerably less weight than the advantage of obtaining detachments for the front'.

Military utilitarianism and positive experiences in the army areas also lay behind an Army High Command order at the beginning of January 1942, authorizing each army to establish a squad of reliable released prisoners of war and local inhabitants for deployment in the security service and in the struggle against the partisans.¹⁶⁶ The shortage of security forces compelled the army 'to exploit for security purposes all the native elements of the occupied territories who are hostile to the Soviet system'. Those local inhabitants who were to be armed for the 'struggle against Bolshevism' would be placed under German military jurisdiction. As a result, they would not be affected by the decree on martial jurisdiction.¹⁶⁷

At the end of December 1941 Hitler authorized Army Group South to create four legions: Turkestani, Georgian, Caucasian-Muslim, and Armenian.¹⁶⁸ A few days later he also permitted the recruitment and engagement of volunteer Tartars as 'fighters in the German troops'.¹⁶⁹ Approximately 3,000 Tartars came forward in the Crimea within four weeks. The liaison officer of the War Economy and Armaments Department with Second Army HQ reported at the end of January 1942: 'Since outwardly they are not

distinguishable in any way from German soldiers, one may sometimes speak to a soldier on the street who does not understand a word of German.¹⁷⁰ It is therefore inaccurate to claim that there was 'no social or political basis for collaboration' in the Soviet territories lying further east, on the grounds that—in contrast to Lithuania, Latvia, Estonia, western Belorussia, and the Ukraine—socialist organization and socialist education had strengthened 'the political and moral unity of the Soviet people' there. The Soviet state was by no means as monolithic as Marxist historiography has described it.¹⁷¹ There were many Soviet citizens—prisoners of war and civilians—who preferred the swastika to the Soviet star. In addition to rejection of the Soviet system, of course, the sheer desire to survive played a vital part in persuading them.

The Soviet counter-offensive round Moscow had considerable repercussions on German pacification policy. Army and Waffen-SS units as well as police battalions had to be withdrawn from Rear Army Area Centre and employed at the front. In consequence, Soviet partisans controlled large parts of the region; Infantry General von Schenckendorff judged that he was 'no longer master of the situation' in spring 1942. Though assessments of the situation in the other two army areas were much more positive,¹⁷² the 'commanding general of the security troops and commander in Army Area Centre' reported at the end of May 1942 that 'the great reconstruction work of the last months' had been undone.¹⁷³ Some 25 local defence battalions remained to him, of which more than 50 per cent were inadequately trained, badly armed, and generally led by over-age officers. In the opinion of Schenckendorff, these were insufficient for active anti-partisan work. Though he managed to keep open the railway line for troops and supply transports through his area of command, the intervening territory had been 'completely removed from his influence'. There the partisans were in almost total control. The units at his disposal were totally incapable of offensive operations against the 'greatly increased, well-trained, and well-equipped enemy groups amalgamated under military leadership'. Consequently, the commander demanded the return of the strike forces which—though theoretically assigned to him—had been seconded to various armies.

Schenckendorff did not suggest any increase in the recruitment of Soviet citizens for fighting and security tasks in the rear army area, because Hitler had forbidden new formations in the area of operations at the end of March

1942.¹⁷⁴ This decision had been obtained by the organization department in the Army General Staff after some of the armies had exceeded the order of 9 January and either established, or planned to establish, several 'foreign squads'. Hitler was prepared to accept only what seemed absolutely essential, 'otherwise he fears [it would cause] political effects which would pre-empt a subsequent decision on the question of the treatment of the occupied eastern territories'.¹⁷⁵ The SS alone was now permitted to establish units made up of minority peoples in the Reich commissariats, 'in the form of local police organizations'.¹⁷⁶ At this stage there were already more than twice as many 'auxiliary police' units, made up of politically reliable local inhabitants, as there were German regular police units deployed in the east (60,421 to 29,230).¹⁷⁷ Once before, in the autumn of 1941, Hitler had accepted the pragmatic arguments of the field commanders and allowed military co-operation between the Wehrmacht and local people, thus departing from an earlier dogma.¹⁷⁸ Subsequently, in February 1942, in an attempt to deal with the changed military situation, he was also prepared to change his guidelines for the treatment of the political leaders in the Red Army, which had been based on ideological assumptions.

2. IMPLEMENTATION OF THE 'COMMISSAR ORDER'

In postwar discussion of the two unlawful decrees—the restriction of martial jurisdiction and the treatment of the commissars—more attention has been devoted to the 'commissar order' of 6 June 1941 than to the 'Führer decree' of 13 May. More people were actually killed as a result of the 'special measures' taken by the troops against the civilian population under the decree on martial jurisdiction. However, the violation of international law was more blatant in the case of the shooting of commissars. In the case of the commissar order, the shooting of a specific group in the Red Army was no longer justified even by the mere suspicion of resistance to the Wehrmacht, but simply by their position and function within the enemy system. After the war, all the field commanders at the OKW trials vigorously denied that Soviet commissars had been shot in their areas of command. This assertion has been maintained by senior officers in their own memoirs and books on the campaign in the east.¹⁷⁹ They have argued that it would have violated all soldierly sentiment

¹⁷⁸ On 16 July 1941 Hitler had declared that west of the Urals no one but a German could ever be allowed to bear arms, 'not the Slav, not the Czech, not the Cossack, nor the Ukrainian!': *IMT* xxxviii. 88.

¹⁷⁹ See Manstein, *Lost Victories*, 179–80, and Helmdach, *Überfall2*, 72–3. In 1941 Helmdach was a major on the general staff, and 3rd general staff officer in Fourth Army Command.

simply to have shot the commissars after they were taken prisoner; German soldiers had never demonstrated an unsoldierly attitude, and had not abandoned decent conduct even in the face of repeated Soviet breaches of international law.

In the absence of any quantitative assessment, it is difficult 'to obtain an accurate overall view of the practical implementation of the "commissar order" by the troops'.¹⁸⁰ However, the numerous official reports of executions tell their own story. It would be profoundly mistaken to underestimate the significance of the commissar order, or to believe that only a few units had carried it out while the rest had sabotaged it.¹⁸¹ After the war, doubts were expressed about the factual accuracy of the surviving reports. Even so, these cannot disguise the fact that it was carried out. The argument that many commissars were actually shot in the prisoner-of-war camps, and that this proves that the soldiers did not carry out the order, is also invalid.¹⁸² Until the beginning of October 1941, when Army High Command entrusted the task of picking out and executing the commissars in the POW camps in the army's area of operations to the security police and SD, the camp commandants followed the Army High Command's 'special instructions'—by obeying the spirit of the commissar order and the decree on martial jurisdiction.

There was no uniform method of reporting on the subject of political commissars in the army. Some divisions and corps included the shootings of commissars in their routine reports on the situation of the enemy,¹⁸³ covering them in the returns submitted by the 3rd staff officer,¹⁸⁴ or noted them in the listing of prisoners.¹⁸⁵ Other commands demanded fortnightly overall reports.¹⁸⁶ This did not mean that false reports were sent in; often they were covered by 'reporting error'.¹⁸⁷ The phrasing of the reports also varied. References were made to shooting, disposing of, dealing with, collecting, deporting. To date, the *non-implementation* of the order has been recorded only in the case of 17th Armoured Division under Lieutenant-General von Arnim.¹⁸⁸ The

¹⁸⁷ L. AK, Ic, evening report of 23 July 1941, and XXVIII. AK, Ic, morning report of 30 Aug. 1941, BA-MA, 16. Armee, 22745/38. By 23 July 1941 the last-named corps had reported 14 commissars as having been shot.

¹⁸⁸ Halder, *Diaries*, 1248 (21 Sept. 1941). However, the division's reports on commissars shot in Aug.-Sept. 1941 tell a different story.

3rd staff officer of Armoured Group 3 noted, in his progress report in mid-August 1941, that the 'implementation of the special treatment of the political commissars' had not been a problem for the troops.¹⁸⁹ Even before the commissar guidelines were issued, the commander of Armoured Group 4, Colonel-General Hoepner, had demanded: 'In particular, no mercy must be shown to the exponents of the present Russian-Bolshevik system'.¹⁹⁰ In the German view this included the commissars, who were seen as the executors of the will of the Communist Party in the Red Army, and as 'exponents of the Jewish-Bolshevik world outlook'.¹⁹¹ The 3rd staff officer with the commander of Rear Army Area South summarized his views in mid-July 1941: 'In the type of the political commissar, we are confronted by the Asiatic grimace of the entire Red system. He has ensured that this conflict is no longer a struggle between soldiers of two states. The Red political commissar gives the Red Army its character, his destruction is the precondition for our victory'.¹⁹² In fact, this conviction must be regarded as a self-fulfilling prophecy. The officer had been informed of the instructions of Army High Command before the start of operations, referring to the German concept of a war of annihilation. He also cited Hitler in support of his view: 'The Führer was well aware of these matters when he coined the phrase in an order: "These Asiatic methods cannot be countered with west European means."' The officer concluded his situation report as follows:

We have all come to know these Asiatic methods, every town, every village in the Ukraine harbours its unfortunate victims.¹⁹³ We must have the gravest fears for the fate of all our comrades, including those of the allied nations, who have the misfortune to fall alive into the hands of these Red devils. Our duty and our right to free the world from the Red plague are all the greater. Yet haughty England, in association with America, took it upon herself to fight in loyal brotherhood-in-arms with Moscow for the victory of world revolution.

It is not surprising that large numbers of commissars were reported shot at the beginning of operations. At this stage they were still recognizable by special badges on their uniforms. For example, Amoured Group A reported '172 disposed of' by 19 July 1941,¹⁹⁴ Second Army '177' by 24 July,¹⁹⁵ Armoured

Group 3 'about 170 got rid of separately',¹⁹⁶ and 44th Infantry Division '122 commissars disposed of' by the beginning of October.¹⁹⁷ On 17 July Armoured Group 3 reported that 'two commissars in civilian clothing' had been captured and shot by the *staff*.¹⁹⁸ After hearing about the measures against them, the commissars and political leaders of the Red Army disguised themselves as officers or ordinary soldiers and removed their insignia.¹⁹⁹ Thereafter, the German offices were instructed to rely on interrogations and denunciations by fellow prisoners. The army leadership urged the troops to keep combing the prison camps for commissars.²⁰⁰ The commander of Rear Army Area Centre, Infantry General von Schenckendorff, also emphasized the importance of discovering commissars both in the camps and in 'search operations'.²⁰¹ He publicly offered a reward of 100 roubles to every captured Red Army man or civilian whose information led to the discovery of a commissar.²⁰² 52nd Infantry Division praised the special leader seconded to it, Vlasov, for removing 'commissars or Communist functionaries' from the camps on several occasions.²⁰³ As regards the treatment of prisoners, 1st Cavalry Division ordered that only officers and commissars from divisional formations upwards were to be handed over to it for interrogation; civilians who were described as 'Communists or commissars' by other local inhabitants were 'to be dealt with according to the prescribed regulations after detailed investigation of the situation by an officer'.²⁰⁴ On 24 July 1941 the quartermaster-general ordered that 'politically intolerable and suspicious elements, commissars, and agitators' were to be picked out 'immediately' in POW camps in the area of operations.²⁰⁵ The camp commandants were to deal with them according to

²⁰⁵ OKH/GenStdH/Gen. z.b.V.b. ObdH/GenQu/Abt. K. Verw. No. II/4590/41 geh., 24 July 1941, BA-MA, Alliierte Prozesse 9, NOKW-2423. See Streit, *Keine Kameraden*, 85, 99-100, 109. That the quartermaster-general was also thinking of leaving to the SD the separation of suspected or actual opponents in the transit camps of the area of operations is proved by an enquiry from the chief of the War Administration Dept., Maj. (Gen. Staff) Schmidt von Altenstadt, of the chief

the 'special directives' laid down—that is, have them shot by guards on the basis either of the decree on martial jurisdiction or of the commissar order. The deployment of special-duty squads of the security police and SD was 'not appropriate here'. 'Asiatics (by race), Jews, German-speaking Russians' were also to be segregated, but were to be kept away from Germany rather than being executed. This order from the quartermaster-general restricted the applicability, in territory and content, of the 'Guidelines for the segregation of civilians and suspicious prisoners of war in prisoner-of-war camps in the occupied territory, in the area of operations, in the Government-General, and in the camps of the Reich'.²⁰⁶ These guidelines, agreed a few days previously between Wehrmacht and SS, had authorized the commandos of the security police and SD to pick out 'politically intolerable elements' among the civilian prisoners and prisoners of war, and to shoot them. However, these 'elements' included not only the Soviet political cadres inside and outside the Red Army, but also all Jews. The state police office in Tilsit thus shot at least 700 commissars in July and August 1941.²⁰⁷

The commanders in charge of the prisoners of war in Military District I (East Prussia) and in occupied Poland, as well as the camp commandants, were informed that the 'intention' underlying these guidelines was for the Wehrmacht to 'free itself from all those elements among the POWs' who were regarded as 'Bolshevik driving forces'. 'The special situation of the campaign in the east thus requires *special measures*, which must be implemented in a responsible manner free from bureaucratic and administrative influences.' Previous orders for the treatment of prisoners of war had been based on 'exclusively *military* considerations', but now the 'political aim must be achieved of protecting the German people from Bolshevik agitators, and of taking firm charge of the occupied territory'.

The limiting order of 24 July 1941 from the quartermaster-general does not appear always to have been strictly applied.²⁰⁸ Nevertheless, the main aim of the selection procedures in prison camps in the area of operations was to hunt out commissars. The commandant of Transit Camp 155 in Lida, Major von Treuenfels, reported that by 21 August his men had successfully 'seized at least 125 commissars and dealt with them appropriately'.²⁰⁹ The informer

of staff of the commander of Rear Army Area South, Col. (Gen. Staff) von Krosigk, at the beginning of Aug. 1941 (handwritten note on the conference of 5-6 Aug. 1941, BA-MA RH 22/5).

system had 'proved useful'. However, the 'Prisoner of War District Commandant J' with the commander of Rear Army Area Centre, Colonel Marschall, did not receive unanimous reports of 'intelligence' successes during his inspection of the camps. The commandant of Transit Camp 126 in Minsk was reprimanded on 25 August 1941 because intelligence had 'utterly failed': 'very few' commissars had been discovered.²¹⁰ In his progress report for the month of August the responsible chief of staff in Rear Army Area Centre claimed that the capture of commissars had sometimes proved very difficult. It was certain that they had not been 'completely rounded up'. Nevertheless, the use of informers (Tsarist officers, Ukrainians, Latvians, Lithuanians) had been successful.²¹¹ A month later he merely noted: 'Commissars detected by informers were dealt with according to the regulations.'²¹² However, this did not happen in every camp. For example, the commandant of Transit Camp 100 in Porchov (Army Area North) reported the transfer of 898 officers, 16,394 NCOs and men, and 2 commissars to organizations at home, or to other camps.²¹³

On 7 October 1941 Army High Command allowed the security police and SD squads access to the transit camps in the rear army areas. In so doing, they extended to the army area of operations those practices which had been ordered in the OKW sector since the middle of July, and renewed there at the beginning of September.²¹⁴ The 'separation of intolerable elements' and their execution was now undertaken by special units of the special-duty squads 'on their own responsibility'. These had a duty to co-operate closely with the camp commandants and intelligence officers. The handing over of selected Soviet prisoners to the special units was officially regarded as a release from prisoner-of-war captivity.²¹⁵ When the commander in chief of Army Group Centre, Field Marshal von Bock, was informed, he raised objections with Brauchitsch, and referred to the indivisible responsibility of the army for the 'life and safety of its prisoners of war'. However, Bock continued that if the 'separation of specific persons [was] necessary... for political reasons, outside the army area they [can] be treated as the political needs and security of the Reich demand'.²¹⁶

The quartermaster-general's order of October 1941 naturally brought consequences in its wake. For example, the intelligence officer of Transit Camp 230 in Vyazma, Captain Bernstein, reported that '200 Jews and 50-60 *politruks* had been handed over to the SD' during the lifetime of the camp. His own activity had accounted for approximately 40 Jews and 6-8 *politruks*.²¹⁷ In

contrast, the commandant of Transit Camp 185 in Mogilev, Major Wittmer, is on record as having refused to hand over a number of Jewish prisoners 'for special treatment', since he had received no order from the responsible Wehrmacht authority, which alone he recognized.²¹⁸ As a result of the systematic conduct of the security police and SD special commandos, it is probable 'that most of the Soviet commissars, functionaries, holders of power etc. were not [shot] at the front, but in the various prison camps'²¹⁹ in the army area of operations, in the Reich commissariats, in occupied Poland, in the Reich, or in concentration camps. It has been calculated that by May 1944 at least 580,000–600,000 Soviet prisoners of war must have been handed over to the security police and SD and shot.²²⁰

After the start of operations, direct and indirect proposals for an extension of the commissar guidelines were also made by the troops. For example, at the end of July Second Army criticized the German propaganda being carried out in the Red Army. Second Army considered it 'particularly important' to present the commissars as 'the representatives of the system which is to blame for this war', and as the originators of the terror practised by the Red Army.²²¹ The Soviet soldiers should be urged not to believe the lies of the commissars, and to eliminate them. There were also proposals from the troops for a wider definition of the term 'commissar'. Even in July 1941 the commander of Rear Army Area Centre had asked Army Group Command to clarify 'whether the Russian army officers [were] political commissars at the same time'.²²² In response to a query from an unnamed army group, the legal affairs group with the 'General for Special Duty' Centre applied to the national defence department in the Wehrmacht operations staff to clarify 'whether political helpers with the companies (*politruks*) are to be regarded as political commissars in the sense of the "Guidelines for the treatment of political commissars", and treated accordingly'.²²³ On the basis of information received from the Foreign Armies East Department in the Army General Staff, OKW answered in the affirmative.²²⁴ An order to that effect was sent out to the troops from Army

²¹⁸ See Streit, *Keine Kameraden*, 102–3; Streim, *Die Behandlung sowjetischer Kriegsgefangener*, 295.

²¹⁹ Krausnick, 'Kommissarbefehl', 736.

²²⁰ Thus Streit, *Keine Kameraden*, 105. By contrast, Streim, *Die Behandlung sowjetischer Kriegsgefangener*, 244, gives only a figure of at least 140,000. The actual number of Soviet prisoners of war executed may, however, be 'considerably higher' in Streim's view also, since no exact figures are available for the sectors of Wehrmacht Commanders Ukraine and Ostland (p. 235). What is certain is that the handing over of Soviet prisoners of war to the SD did not invariably mean they were shot. Many of them were also enlisted for police service.

High Command at the end of August 1941.²²⁵ Even before this, some divisions had already treated *politruks* as 'representatives of the political system', and had liquidated them.²²⁶ 221st Infantry Division had attempted to counteract the shortage of knowledge about political workers in the Red Army. It informed officers that *politruks* and commissars often tried to disguise their political activity by arguing that they had been responsible only 'for the morale' or 'for the attitude' of the troops. This claim could easily be refuted, because 'those affected [could] demonstrate none of the knowledge appropriate to their military rank'. They were *politruks* and commissars, and were 'to be treated as such'.²²⁷

From the middle of August, as knowledge of the implementation of the commissar guidelines spread, there were increased claims from the troops that the 'harsh orders on the treatment of the commissars and *politruks* [were] one of the causes of the tough enemy resistance'.²²⁸ The political cadres of the Red Army would continue to fight, and exert 'terror' over their troops, because they were convinced that they would be shot after being taken prisoner. In the middle of September 1941 the commanding general of XXXIX (Motorized) Army Corps, Armoured Troop General Schmidt, therefore produced a 'memorandum on the possibility of shattering Bolshevik resistance from within'. In it he demanded as an 'immediate measure' that the 'shooting decree for political commissars' should be rescinded, and 'the Russian people shown a positive future... in the long term'.²²⁹ Army High Command was sufficiently sympathetic to the initiatives of the field commanders to pass a corresponding request to OKW. Lieutenant-General Müller did not support the request with humanitarian arguments, but by referring to military necessities:

In the current battle situation, where the heavy casualties, the decrease in the supply of men and materials, the mixing up of formations, and the uncertainty of leadership are causing signs of slackening to appear here and there on the Russian side, a paralysis of the general will to fight by breaking the resistance of the commissars could produce not inconsiderable successes and save much blood.²³⁰

Jodl submitted the request of Army High Command to Hitler, who refused to make any alteration to the orders that had been issued. The army groups were informed of this decision at the beginning of October.²³¹ Not until spring 1942 did the appeals of the field commanders bear fruit. The commissar decree was then abandoned in the area of operations,²³² with the aim of encouraging Soviet soldiers to desert, and entire units to surrender. The 'special treatment' of the commissars and *politruks* in the prison camps was also stopped.²³³ The HQs were to determine whether they were dealing with commissars and *politruks* who had deserted, or whether they had been taken prisoner in battle. While the latter were to be executed immediately, deserters were to be sent to Mauthausen concentration camp. For 'Jews, criminals, etc.', the prevailing treatment remained in force—they were shot.

The commissar decree was implemented by the army to a greater extent than field commanders were prepared to admit after the war.²³⁴ Yet it was not only the army leadership which, profoundly affected by the image of 'Jewish Bolshevism', accepted Hitler's view that the commissars were not genuine soldiers. The orders, directives, and reports cited here lead to the conclusion that a large part of the line officer corps also accepted this view; many either conducted themselves according to it, or at the very least were unwilling to risk trouble by opposing it. An order by the commanding general of XXXXVII (Motorized) Army Corps on 30 June 1941 can be regarded as typical: 'The decree of the Führer orders a ruthless action against Bolshevism (pol. commissars) and any kind of guerrilla activity! Persons irrefutably shown to be among them are to be taken away and shot, exclusively on the order of an officer.' However, Armoured Troop General Lemelsen also felt compelled to oppose the numerous shootings by members of his army corps of prisoners, defectors, and deserters from the Red Army. These he described as murder: 'The Russian soldier who has been encountered on the battlefield and has fought courageously is no guerrilla, but has the right to honourable, good treatment and care as a wounded man... It is this lie about the shooting of prisoners, however, that the enemy is using to keep his soldiers in line... The German army would be saved much blood by harsh measures against guerrillas and fighting civilians, and equally so by the good treatment of prisoners and deserters in accordance with orders.'²³⁵ Lemelsen thus made a clear distinction between the treatment of

²³¹ OKH/Gen. z.b.V.b. ObdH/Az. 500 Gr. R.Wes. No. 527/41 g.Kdos., 2 Oct. 1941, BA-MA RH 19 II/123. This decision was to be transmitted further by word of mouth alone.

²³⁵ Quoted from Buchbender, *Das tönende Erz*, 104–5.

commissars and guerrillas on one hand, and the soldiers of the Red Army on the other.

Significantly, protests from the field commanders against the commissar order increased when the impetus of the German operations had already weakened and the resistance of the Red Army had stiffened. For example, the 3rd staff officer in Army Group Centre, Major Rudolf-Christoph Baron von Gersdorff, visited the front in Fourth Army area of operations at the beginning of December 1941. Subsequently he reported:

During every extended conversation with officers, without having referred to it myself, I was asked about the shootings of Jews. I gained the impression that the shooting of the Jews, the prisoners, and the commissars was almost universally rejected in the officer corps, especially the shooting of commissars, because it served to strengthen enemy resistance. The shootings are regarded as a violation of the honour of the German army, specifically the German officer corps. The question of the responsibility for this was raised in more or less sharp form, according to the temperament and disposition of those concerned.²³⁶

This report was not accepted in Army Group Centre, as the wavy lines in the margin reveal. Significantly, though, such criticism was being expressed in the sector of an army whose command had passed on the commissar decree, and had noted that it was being carried out.²³⁷

In July 1941 the 3rd staff officer of Fourth Army, Major Helmdach, had already pointed out to the commander-in-chief of the army, Field Marshal von Kluge, how important it was to solve 'the military-political problem of the east'. He had produced a memorandum, which Kluge signed and submitted both to the commander-in-chief of the army and to Hitler's adjutant.²³⁸ In mid-September the commanding general of XXXIX (Motorized) Army Corps, Armoured Troop General Schmidt, had demanded that 'the Russian people be shown a positive future'; in the long term, he regarded this as much more important than dropping the 'shooting decree for political commissars'.²³⁹ Though accepting that it was undesirable to give the Russians 'an ideal, to say nothing of National Socialism', he thought it was vital 'to draw up clear rules, at least in everyday things'. Schmidt wanted to encourage the Soviet population to turn away from Bolshevism and put its hopes in Germany. 'Such measures', including the regulation of private property, would also have an effect 'in as yet unconquered Russia, and thus weaken the strength of resistance there'. However, apart from his murderous programme of annihilating 'Jewish Bolshevism', Hitler could not come to a decision about

the future development of the occupied Soviet territories during Operation Barbarossa.

3. THE ORGANIZATION OF 'LIVING-SPACE'

For Hitler, the conquest of the European part of the Soviet Union would ensure the existence of the German people in the long term. At the same time, it was the essential foundation which would allow the Third Reich to achieve undisputed world-power status (or world supremacy): 'The struggle for hegemony in the world will be decided in favour of Europe by the possession of the Russian space: it will make Europe into an impregnable fortress, the most blockade-proof place on earth.'²⁴⁰ America could then 'get lost, as far as we are concerned'.²⁴¹ However, Hitler had devoted less thought to the question of how to organize the 'living-space' thus gained. For him, the overriding requirement was to defeat the Soviet Union in a rapid campaign. Everything was concentrated on achieving the rapid collapse of the Red Army and the Stalinist system. Four 'representatives' were envisaged for this task: 'Wehrmacht: defeat of the enemy; Reich Leader SS: political-police activity against the enemy; Reich Marshal: economy; Rosenberg: political reconstruction.'²⁴² In terms of content and organization, the first three of these aims had been integrated even before the start of operations; co-operation between the last two 'representatives', however, was given concrete form only after 22 June 1941. But what notions did the Germans have regarding the organization of 'living-space' in the summer and autumn of 1941? When, how, and where were the military authorities replaced by civilian authorities? What parts of the occupied Soviet territories were assigned to the German Reich or to the Government-General?²⁴³

The 'representative for the central shaping of the east European space', Alfred Rosenberg, had been working on proposals for the future of the Russian territories for some time. However, before 22 June 1941 his ideas received Hitler's approval only to the extent that the occupied territories were to be divided into four Reich commissariats: Baltland, Ukraine, Russia, and Caucasia.²⁴⁴ In the middle of July 1941, when the German leaders thought

²⁴⁰ Hitler, *Monologe*, 62 (17-18 Sept. 1941); cf. pp. 69-70 (25 Sept. 1941) and 110 (26-7 Oct. 1941).

²⁴¹ Thus Hitler to Ambassador Abetz on 16 Sept. 1941, *DGFP* D xiii, No. 372. Similar words were used by the quartermaster-general in a letter to his wife on 20 Sept. 1941: 'A space, which cannot be ruled with men, the idea of a German India comes to mind, I believe: Europe autarkic, so that America can get lost for all we care' (Wagner, *Generalquartiermeister*, 202). See *Das Deutsche Reich und der Zweite Weltkrieg*, v/1, 133-4.

²⁴² Thus Maj. (Gen. Staff) Schmidt von Altenstadt on 6 June 1941, BA-MA RH 19 III/722. See sect. I.vii.2 (a) at n. 44.

²⁴³ See the Annexe Volume, No. 27. The economic exploitation has been described in another chapter, and a systematic analysis of the civilian administration in the Reich Commissariats Ostland and Ukraine will be undertaken elsewhere in this series.

²⁴⁴ See sect. I.vii.1 at n. 23.

victory over the Red Army had already been won, Hitler reduced his programme in the east to the bare formula: 'First dominate, second administer, third exploit'.²⁴⁵ The fundamental need was 'to cut the giant cake into manageable pieces'. Germany was to be the sole beneficiary of this process, with only a couple of pieces on the periphery conceded to his main allies, Finland and Romania. A 'Garden of Eden' was to be created for the Germans in the east, 'our India'.²⁴⁶ Hitler intended to annex only the Crimea, the Baltic States, and former Austrian Galicia. The rest of the space he regarded as 'colonial land', which was to be ruled, administered, and exploited by a handful of men, supposed members of the master race, under four 'viceroys',²⁴⁷ the Reich commissioners. The Slavs were by nature a 'slave mass crying out for a master'.²⁴⁸ Hitler thought it important to keep his objectives hidden from world opinion. 'We will simply act as though we wanted to exert a mandate. But it must be clear to us that we are never leaving these territories again.' All the measures necessary for a 'final settlement... shooting, resettlement, etc.—we can and will carry out nevertheless'.²⁴⁹

The boundary of the 'Greater Germanic empire' was to be the Urals. To the west of them, only Germans would be able to carry weapons, 'not the Slav, not the Czech, not the Cossack, nor the Ukrainian!'.²⁵⁰ In Hitler's view, an 'east wall' of living people of Germanic race offered the best protection against the 'mass of nations of Asia' behind the Urals. Constant border fighting would prevent them becoming slack, and racial selection would 'preserve the species'.²⁵¹ Peace, on the other hand, would only result in *playing* at soldiers. After the conclusion of Operation Barbarossa, it was envisaged that the following troops would be required to provide security for the eastern territories, including the Government-General, and for planned operations in the Middle East: 37 infantry divisions, including 10 for tasks of economic security, 3 mountain, 6 motorized infantry, and 12 armoured divisions.²⁵² The occupied territories were to be Europeanized, or rather Germanized. On the best soil, Danes, Dutchmen, Norwegians, and Swedes would be settled as peasant farmers alongside long-serving German NCOs, while the Slav population would be 'sifted' and the 'destructive Jew' completely 'kicked out'.²⁵³ Trans-

²⁵³ Hitler, *Monologe*, 90 (17 Oct. 1941). A few days later he explained: 'When we eliminate this

port routes, motorways, and railway lines would run across the 'cleansed' land on which German towns and settlements would be built 'as on a string of beads'.²⁵⁴ In this land 'the lowliest stable lad must rank higher than one of the natives'.²⁵⁵ Hitler reminded his listeners at the end of July 1941 that he had 'always thought that the soil in the east was necessary'; he saw no reason to change his mind now.²⁵⁶

In outlining this programme, Hitler regarded himself as the architect and executor of a historical will, with the task of making Germany into an undisputed world power.²⁵⁷ He wanted to rewrite history on a racial basis: Hitler was convinced that genuine world domination could be founded only on German blood. This blood had therefore to be protected from possible 'corruption'. 'Jewish Bolshevism' must be wiped out for that reason. Significantly, it was at precisely this time that anti-Semitic measures were intensified. On 31 July 1941, on Hitler's instructions, Göring ordered Heydrich to 'make all necessary preparations in organizational, technical, and material matters for an overall solution of the Jewish question in the German sphere of influence in Europe'.²⁵⁸ The annihilation of European Jewry was to be followed by that of the Jews of northern, central, south-eastern, and western Europe. Closely linked with this objective, both chronologically and in terms of its subject, was SS Major Alfred Meyer's submission of the first 'General Plan East' on the orders of Himmler.²⁵⁹ After mass deportations and measures of destruction on a large scale, this envisaged the settlement of Germans in eastern Europe over a period of thirty years.

With victory over the Red Army apparently won, Hitler and other leading figures of the Third Reich went beyond this consideration of racial criteria for the organization of the conquered 'living-space'. Hitler was also contemplating the strategic possibilities which would be opened up by the defeat of the Soviet Union: a global war by Germany and Japan against the Anglo-Saxon naval powers.²⁶⁰ This was to be preceded by joint military action by Berlin and Tokyo against the Red Army, in order to ensure the rapid collapse of the Stalinist system. Hitler was realistic enough to recognize 'that one cannot

pestilence we shall perform a deed for humanity whose significance our men out there cannot even imagine' (ibid. 99).

²⁵⁹ As photocopy in *Deutschland im zweiten Weltkrieg*, II. 119. See Eisenblätter, *Grundlinien*, 206-7, 213 ff.

²⁶⁰ See sect. II.r.v.2(b) at n. 150. On 17 July 1941 Ribbentrop continued in the same vein to the German mission chiefs in Königsberg: 'If after the defeat of Russia the USA continues to provoke us, it shall have its war. We do not fear a British-US front. We shall attack with submarines and aircraft and defend ourselves with gigantic anti-aircraft fire such as the world has never seen. However, we shall not escape unscathed' (PA, Handakten Etzdorf, Vertrauliche Aufzeichnungen, Frame No. 337690).

conquer Russia'.²⁶¹ Against the background of Germany's strategic situation *vis-à-vis* the United States, he asked himself 'with alarm: How much time do I still have to overcome Russia, and how much time do I still need?'²⁶² A rapid intervention by the Japanese in Siberia would thus be very useful to him as a means of accelerating the collapse of the Bolshevik regime.

In discussions at his headquarters, Hitler took concrete decisions as well as day-dreaming about the future. For example, he appointed Alfred Rosenberg as 'Reich minister for the occupied eastern territories'.²⁶³ In theory, the prospective Reich commissioners would be subordinate to him. In practice, however, Rosenberg's responsibility for the civilian administration in the east was limited by the authority vested by Hitler in Göring (29 July 1941) for the economic exploitation of the occupied territories, and in Himmler (17 July 1941) for political security measures there. As regards the future co-operation between the Four-year Plan Authority, the SS, and the Ministry for the East, Hitler thought that 'practice would decide'.²⁶⁴ Believing that an official announcement of his appointment was imminent, the leader of the 'chaos ministry' [*Chaostministerium*: a pun on 'east'] wrote an address for the German newsreel. In it he referred to the historic mission of the German people, and to the beginning of the 'final struggle' against its 'deadly enemy'—'Marxism as a whole, especially in its extreme Jewish-Bolshevik manifestation'. Rosenberg described this struggle, and the establishment of 'welfare and public order for the peoples of the east coming under German administration', as a 'gigantic task'.²⁶⁵ In fact, his appointment was not made public until 18 November 1941.

The Gauleiter of Schleswig-Holstein, Hinrich Lohse, was appointed as Reich commissioner for 'Ostland' on 17 July 1941. His territory was to consist of the former Baltic States—Lithuania, Latvia, and Estonia—and Belorussia.²⁶⁶ The timing of his assumption of office, of course, would depend on the progress of operations. Because the army found it convenient 'to get out of' the rear area 'as quickly as possible',²⁶⁷ Lohse was able to take control over Lithuania on 25 July 1941. In mid-July it was also decreed that the civilian administration in Białystok district would be taken over by the president of the province of East Prussia, Gauleiter Erich Koch,²⁶⁸ and the civilian administration in former Austrian 'then until 1939 Polish' Galicia by the governor-

²⁶¹ Thus Keitel on 25 July 1941 passed on Hitler's opinion (Bock, *Tagebuch*, vol. ii, MGFA P-210). 'Russia' is used here as a synonym for 'Soviet Union'.

general in Cracow, Hans Frank. Both decrees came into effect on 1 August 1941. On the same day, the Reich commissioner for Ostland took over the civilian administration of the district around Vilna (Vilnius).²⁶⁹ The separation of Galicia from the Ukraine severely damaged not only the Ukrainian endeavour to achieve autonomy,²⁷⁰ but also Rosenberg's ideas for the future development of the Ukraine. More regions were removed from the army's area of operations on 1 September. Reich Commissariat Ostland was enlarged by adding Latvia and the area round Minsk, and Reich Commissariat Ukraine was established.²⁷¹ The new Reich commissioner, Erich Koch, was 'very reluctant' about his new task. He was prepared to do the job 'only for as long' as was helpful to the Four-year Plan Authority, because 'he was interested only in East Prussia'.²⁷² However, since the autumn of 1939 East Prussia had been extended by the addition of large areas taken from Poland, to which Białystok and the Grodno region were added in the middle of September 1941.²⁷³ This region was regarded as possessing military significance as a bridgehead on the far bank of the Memel (Niemen).

Even when his Reich commissariat was extended to the Dnieper line on 20 October 1941,²⁷⁴ Koch showed no great interest in the tasks entrusted to him. He wanted 'to leave his territory under military administration until spring, as there was not much to be done in winter anyway'.²⁷⁵ For that reason, there could be no ceremonial transfer of executive power from the military to the civilian administration, as had been the case when Galicia was transferred to Frank and Belorussia to Commissioner-General Wilhelm Kube. Koch failed to put in an appearance, and the new territories were handed over informally to his plenipotentiary, District Administrator Wuttke.²⁷⁶ When Koch's area of authority was extended yet again in November 1941, the commander of Rear Army Area South was forced to hand over military jurisdiction for the Bug-Dnieper area to the Wehrmacht Commander Ukraine,²⁷⁷ since Koch had neither appeared himself nor sent a representative. Nevertheless, the com-

To fulfil the tasks assigned him, the Wehrmacht Commander Ukraine, Air Force Gen. Kitzinger, had at his disposal some 22,500 men, in addition to the Slovak Security Div., the Hungarian occupation troops, and the Romanian VI Army Corps (report of 4 Dec. 1941, ibid. RW 41/31).

mandar of Rear Army Area South refused to accept any further responsibility for administrative matters in the Bug-Dnieper area.²⁷⁶

Reich Commissariat Ostland was not extended to the Nevel-Vitebsk-Mogilev line, as had originally been planned.²⁷⁷ A new attempt to include Estonia in the civilian administration also ended in failure. The commander of Rear Army Area North had already refused to accept this development previously, in mid-October.²⁷⁸ Infantry General Franz von Roques had justified his attitude by arguing that the supply of the troops in winter would be threatened, and the civilian administration in Estonia could not 'work through' as intensively as the military agencies. His protests met with some response: when Estonia finally became part of Reich Commissariat Ostland on 5 December 1941, with Commissioner-General Karl-Sigmund Litzmann taking control of the administration, Estonia nevertheless remained part of the army's area of operations.²⁷⁹ Furthermore, the commander of Rear Army Area North was also responsible for ensuring military security of Estonia within and without, and for the supply of the troops off the land.

Up to the autumn of 1941, the organization of 'living-space' had taken more or less the form described by State Secretary in the Reich Ministry of the Interior Wilhelm Stuckart in mid-September. In his memorandum on 'the German eastern border' he had argued that it was an important war aim 'to reduce the great Slav state structure in the east to the narrower Great Russian people, to remove from Russian influence all territories lying westward of it containing non-Great Russian population, and to link them organically to the central European space'.²⁸⁰ Stuckart had suggested moving 'the borders of the narrower German space, including the Government-General' to the east. East Prussia should acquire 10,000 sq. km. of Lithuanian and 25,000 sq. km. of Belorussian territory, as well as receiving 1,200 sq. km. from the Government-General. The Government-General should be enlarged by the addition of eastern Galicia, the bridgehead of Brest, and small parts of the area round Białystok. Stuckart's thinking had been motivated not only by racial, economic, and military considerations, but also by political ones. He regarded it as highly desirable to insert a German barrier separating Hungary from the Ukraine, while obtaining a common border and direct transport links between Germany and Romania. Such thinking had tallied with Romanian ideas.²⁸¹

Though Hitler wanted to keep his plans regarding the conquered 'living-space' secret from those affected and from world opinion, the military expected a clear political programme for the reorganization of the occupied territories. In their view, this should offer a positive future to the Soviet population after its 'liberation from Bolshevism'. For example, 444th Security

Division regretted the fact that the 'German Wehrmacht comes, conquers, and stays silent'.²⁸⁴ The rural population expected the breaking up of the collective economy, the restoration of personal property, and a uniform price policy. It was quite unsatisfactory for military and economic authorities in Rear Army Area South to fix very different maximum prices. 213th Security Division made the same point.²⁸⁵ Though the population remained favourably disposed to the Germans, and was unwilling to support the partisans, this could change in a moment, 'as soon as the peasant realizes that the new situation is no better for him, and that there might be some truth in the assertion that the Germans have come as exploiters'. In any case, the problem of agricultural prices had a military aspect. It offered the perfect seedbed for every kind of anti-German propaganda. The commander, Lieutenant-General René de l'Homme de Courbière, informed the commander of Rear Army Area South that the sector could be pacified 'with the completely inadequate forces available' only if the partisans received no support from the population.

However, the supreme leadership was still thinking in the global categories of German territorial, racial, and food-supply policy. In Hitler's opinion, the collectivization so brutally introduced by Stalin, especially the big state farms, offered the 'best, probably the only, possibility of intensive cultivation' of the conquered territory. This was particularly the case 'since the actual Russian intelligentsia [should] be regarded as annihilated, and the people were mostly accustomed to living and being treated like animals. In any case, there was a mile-wide difference between the Russian peoples of today and the German people as regards intellectual maturity'.²⁸⁶ It was this approach which determined the treatment of the population in the east. Its consequences soon came to be felt by the troops. However, their own conduct also helped to ensure that the original sympathy of the Soviet population was lost. The intelligence officer in Seventeenth Army, First Lieutenant Theodor Oberländer, made this complaint at the end of October 1941: 'Not merely out of bitterness at the fighting methods of the Bolsheviks, we show an inner aversion towards, indeed a hatred of, this country, and an arrogance towards this people, which exclude any positive co-operation'.²⁸⁷ He demanded an element of self-criticism from

²⁸⁷ Memorandum by Oberländer on 'Preconditions for the security of supplies and the gaining of the greatest food surpluses in the Ukraine' of 28 Nov. 1941 geheim, BA R 6/69. In autumn 1941 Oberländer became leader of a formation of Caucasian volunteers (Hoffmann, *Ostlegionen*, 28 ff., 66-7). On similar memoranda see Buchbender, *Das tönende Erz*, 129 ff., and Dallin, *German Rule in Russia*, 511 ff. Others considered the question 'How can and how will Russia wage war in 1942?' See the work of the 3rd general staff officer of 44th Inf. Div., 18 Nov. 1941 (BA-MA RH 26-44/32), and the identically entitled memorandum by Gustav Hilger of 8 Dec. 1941 (PA, Handakten Ritter, Rußland, No. 29). A further 'memorandum battle' set in during autumn 1942.

the troops, and investigation of the measures which had been taken. Moreover, Oberländer also indicated that passive and active resistance could pose a serious danger to the security of German supplies, if the population continued to be treated as an 'object of exploitation'. He considered passive resistance to be much more dangerous than partisan activity in this respect. As a necessary measure, he urged that every German in the occupied territories should be instructed that the population did not consist solely of Bolsheviks. As a result of Bolshevism they were poor and therefore badly dressed; they did not work as well as the Germans because they had always worked for others; they were not independent or active, because they had always been suppressed. Since the 'three most certain factors of order—work, bread, and consumer goods—would not be sufficiently available in the immediate future', small measures of assistance should be offered to ease the burdens facing the population. Oberländer made a series of suggestions covering propaganda as well as economic and security issues. He concluded by arguing that the honour and decency of the German people demanded 'that a people which is in no way hostile towards us is treated in a manner that enables it to work with us out of conviction, and inwardly to overcome the past'.

However, the guidelines issued by Rosenberg in mid-November to the Reich commissioner for the Ukraine, the 'old National Socialist fighter' Erich Koch, pointed in a different direction.²⁸⁸ These described the vital aim of 'eastern work' as 'to create new land for Germany, to reduce Muscovy (Russia) to its own living-space'. This was 'a struggle to secure life for the German people as well as for the whole of the new Europe, a struggle of an ideological nature, a political war which involves a new conception of our continent and advances Europe decisively to the east'. Rosenberg distanced himself from his original concept of treating the various peoples of the USSR differently. He was thereby adopting Hitler's maxim that the administration of the Ukraine should be 'purely colonial'. Its exploitation to meet German war requirements was to take first place.²⁸⁹ On 19 November Rosenberg stated his views: 'The extent of the shedding of German blood, the need to expand the space of central Europe, and the will to ward off the consequences of a British continental blockade for all time force the adoption of a self-contained major plan. This can only be ensured by an *authoritarian German administration*.' The idea mooted *before* the war, of building up 'Ukrainedom' as a political power against Moscow, had therefore been abandoned. 'In the *current* situation the German Reich can no longer assume an increased solicitude for an alien nationality which has not reached the difficult situation it faces today through any fault of Germany.'

For these political and economic reasons, the supreme German leadership

²⁸⁹ KTB WiRuAm/Stab (15 Oct. 1941), g.Kdos., BA-MA RW 19/165.

was not prepared to change occupation policy in the east, despite the fact that such a step was increasingly being advocated on practical military grounds. Thus the commander-in-chief of the army urged that the Soviet population should be better fed, at the expense of transports to Germany, 'in the interests of maintaining law and order'.²⁹⁰ Previous priorities—troops, homeland, local population—remained intact. Hitler claimed in mid-October 1941 that he could not assume responsibility for feeding the Soviet population at the expense of the German homeland. 'The chaos in Russia will get even greater, our administration and exploitation of the occupied eastern territories even easier, the more the population of the Soviet Russian cities flees to the interior of Russia.'²⁹¹ Hitler's wishes, OKW informed Army High Command, must be brought to the attention of all commanders. When the Red Army offensive forced the German army to evacuate Soviet cities, Hitler considered forcing the Soviet population through their own lines to the east so that neither the troops nor Germany would be deprived of foodstuffs. In the case of Kharkov, the commander of Army Group South, Field Marshal von Rundstedt, advocated on military grounds that the population should be evacuated to the west into territories 'in which the stocks available cannot be collected in any case due to the lack of means of recovering them'.²⁹² In the view of the responsible military quarters, Soviet powers of resistance would best be 'undermined' by ensuring an improved food supply, the solution of the land question, and the exploitation of the suppressed national strivings of the non-Russian peoples, leading to the establishment of 'sham governments'. In addition, greater use of indigenous formations would be particularly helpful. The 'final struggle against Bolshevism in the depths of Asiatic space' should be fought out by Russian forces.²⁹³ To some degree, the failure of Operation Barbarossa had made Hitler ready to take account of pragmatic arguments from the military and economic experts, e.g. on the question of Soviet workers, the commissars, native formations, and the abolition of the collective economy.²⁹⁴ He was not prepared, however, to give a whole new meaning to the war against the Soviet Union. Nevertheless, the new political and military situation facing the

²⁹¹ H.Gr. Nord, Ia, KTB, 12 Oct. 1941, BA-MA RH 19 III/168. This directive, relating to Leningrad, was also to be applied 'analogously' to Kharkov (KTB H.Gr. Süd, BA-MA RH 19 I/74, entry of 20 Oct. 1941).

²⁹² H.Gr. Süd, KTB, 18 Dec. 1941, BA-MA RH 19 I/88. See conversation between Hitler and Budak on 14 Feb. 1942, *Staatsmänner*, II, doc. 4, p. 62.

²⁹³ Proposals from Maj. (Gen. Staff) Schmidt von Altenstadt and Capt. Bleicken, 24 Feb. 1942, PA, Handakten Eitzdorf, Vertrauliche Aufzeichnungen, Frame No. 337851. See H.Gr. Süd, KTB, 17 Jan. 1942, BA-MA RH 19/89.

²⁹⁴ See sect. II.vi.4 at n. 389 (Müller), and Buchbender, *Das tönende Erz*, 133 ff. As early as 3 Nov. 1941, the Chief Group Agriculture in the Economic Staff East had laid down 'the reasons for the proclamation of a new agrarian order'. But this should be proclaimed only for the time being; during 1942 it would 'only be introduced to a very modest extent of about 10% in North and Centre and 1% in South'; PA, Pol. XIII (6). For the propaganda treatment of the issue see OKW/WFSu/WPr No. 1140/42, 18 Feb. 1942: Propaganda directive for the reorganization of the agrarian order in the eastern territories, BA-MA RH 19 III/483.

German Reich forced him to emphasize the 'defensive' character of his war aim: the establishment of a Germanic empire from the Atlantic to the Urals. He told the chief of the operations department in the Naval War Staff, Captain Gerhard Wagner, that 'German living-space' must be secured by a strong west wall 'in France, a strong north wall in Norway, and an equivalent east wall stretching roughly from Lake Ladoga or east of it to the Don or Volga bend. 'Then Germany would be *unassailable*. What relations we wanted to have with the rest of the world from this space could be considered later.'²⁹⁵ However, the German troops in the Soviet Union were still west of the line envisaged by Hitler.

Operation Barbarossa in Historical Perspective

JÜRGEN FÖRSTER

THE various contributions to this volume do not present a 'uniform' picture of the war against Russia. Consequently, though it is based on their work, the following summary will make no attempt to disguise the fact that these authors have offered opinions which are sometimes very divergent. Nevertheless, an attempt will be made here to place the German-Soviet war in 'historical perspective', even though some of the contributors do not share the present author's conclusions.

Operation Barbarossa was not a campaign like those that preceded it, but a carefully prepared war of annihilation. Of course, National Socialist propaganda attempted to depict the war as a necessary operation to ward off an imminent Soviet attack; on the basis of the participation of some European states and volunteer formations, it was also described as a 'crusade of Europe against Bolshevism', and the beginning of the new 'European solidarity'. The unique character of the German-Soviet war was partly a result of the close connection between the 'conquest of new living-space in the east' and the 'final solution of the Jewish question'. German public opinion, however, tends to concentrate on the 'German catastrophe' at the expense of the 'Jewish' and the 'Russian'.

Academic controversy over the problems of the German-Soviet war has also endured. However, all historians agree that the consequences of that war are still perceptible in political affairs today. One result of the massive efforts forced upon it by Hitler between 1941 and 1945 was the rise of the Soviet Union to the status of a world power equal to the United States. The defeat of the Third Reich simultaneously marked the beginning of the long East-West conflict, which had as its direct consequence the creation of two German states. Yet this is only one important aspect arising from the discussion of Hitler's war in the east. Another approach regards it as an integral part of German war policy. This perspective permits the historian to assess continuity and discontinuity in German great-power politics since 1871, culminating in Hitler's bid for world-power status—or world supremacy—for the Third Reich.

The starting-point for an analysis of the causes of the attack on the Soviet Union must be the world-view and political goals of the man who dominated German politics between 1933 and 1945. Hitler took the decision to wage war as a consequence of his 'living-space' programme, in which expansion in the east, the destruction of Bolshevism, and the extermination of the Jews were

inextricably intertwined. Each goal, indeed, was the precondition for achieving the others. This does not mean that the 'programme' was pursued without regard for the course of events. Nevertheless, Hitler's doctrinaire concepts of war, living-space, race, economic autarky, and world-power status must be regarded as forming the basis of his political conduct, despite all the tactical improvisations he made. It is therefore pointless to impose a sequence of priorities, choosing between ideological fixations and political or economic motives, to explain the turn to the east. Hitler's core goal in foreign policy, the great war for living-space at the expense of the Soviet Union, was a symbiosis of dogma and calculation, ideology and the will to power, racial policy and world politics. His vision of a continental empire of the 'Nordic race' stretching to the Urals went beyond the traditional goals of German great-power and world-power politics. Nevertheless, his 'living-space' programme had some affinity with ideas common to the traditional leadership élites in the armed forces, industry, and the diplomatic service; these had found expression in the war-aims discussions of the First World War, especially in the supplementary treaties of Brest-Litovsk. Hitler's programme achieved its catastrophic effects precisely because the 'constants of his world view', including the radical foe images of Jewry and Bolshevism, did not run totally counter to prevailing opinion. The extent to which military men, economists, and diplomats agreed with Hitler's views on the winning of the 'Russian space', its exploitation, and the treatment of the Slav population varied considerably. The spectrum of agreement ranged from a partial identity of interests to a genuine fusion of traditional and National Socialist ideas. In this ideological climate, fundamental military values such as loyalty, obedience, and fulfilment of duty were exploited and deliberately abused. The effects of this process on society as a whole can scarcely be exaggerated.

A further starting-point for the analysis of the attack on the Soviet Union must be the rapid victory over France, which had a profound psychological, political, military, and strategic significance for Hitler and the Germans. The conclusive defeat of the 'traditional enemy' was seen to expunge the 'humiliation of November 1918'. Overwhelming victory in the west not only undermined the opposition to Hitler's war policy, but achieved a high degree of unanimity between regime and population. Hitler's unlimited authority in political and military questions was assured. In the ensuing triumphalist atmosphere, work was begun on the establishment of a political 'New Order' in western Europe, and plans for a continental European greater economic area were outlined; in this the Soviet Union was initially envisaged as playing a supplementary role.

Notwithstanding the triumphalism which accompanied victory over Germany's two enemies from the First World War, German hegemony in Europe was by no means secure. It remained dependent on the willingness of the two flanking powers, Britain and the Soviet Union, to come to an agreement with Germany. This open strategic situation virtually forced actions and decisions:

'Wait and see' was not an appropriate slogan for the political and military leadership of the Third Reich if it intended to retain the initiative. Hitler considered that he had now freed his rear for an attack to the east—and overcome the 'reversed' front position of 1939–40. For a short time it seemed certain that London would 'climb down'. As in the 1930s, wishful thinking and ideological assumptions prevented a more realistic assessment of fundamental British interests, and led to renewed hopes of a global agreement with Britain.

By July 1940 this hope, based on Hitler's dogmatic image of Britain, had disappeared. Only when his plans for a 'division of the world' with Britain had proved to be an illusion did Hitler order the commander-in-chief of the army to plan for an attack on the Soviet Union. The discussions of the army leadership regarding a 'military strike against Russia', which had begun much earlier, thus came to the fore. This fact should not mislead us into regarding Hitler as only one of several factors of equal significance in the process. He was the dominating figure in the German leadership in the summer of 1940. It was his decision of 31 July 1940 to plan for a war against the Soviet Union in the spring of 1941 that set in motion the subsequent political, military, and armaments measures to that end. Equally, it was his directives of March 1941 that turned Operation Barbarossa into a war of annihilation against Bolshevism and Jewry. Investigation of the military leadership's role in preparing and implementing this war made it possible to give a more comprehensive answer to the question of who were the pillars of German war policy in 1940–1. The military leadership produced operational plans on its own initiative, at first for a limited offensive war against the Soviet Union, and worked to turn ideological intentions into functioning decrees. This cannot be regarded as purely technical or specialist military conduct. It was at the same time a form of co-operation and collaboration marked by political agreement on fundamental issues.

Hitler's turn to the east at the end of July 1940 can justly be interpreted as a sign that, in his view, living-space policy was linked with the strategic need to safeguard the areas under German control against the threat of intervention by the Anglo-Saxon naval powers. However, it is also necessary to evaluate the individual elements in his motivation. Hitler thought that it was both necessary and possible to conclude Operation Barbarossa before an intervention by the United States. It can therefore be said that the operation was planned and carried out *despite*, not *because of*, Britain's decision to continue the war. Against the background of his political alternatives of 'all or nothing', Hitler put his trust in the 'advantage of the moment' against the emerging alliance against him. He did not wish to leave the responsibility for 'securing living-space', for the 'existence or non-existence' of the German people, to a later generation. In his view, Germany's flanks and rear were still clear for the conquest of the 'Russian space' in 1941. Only the acquisition of that territory would enable the Reich to pursue world policy, and 'even to wage the struggle against continents in future'.

Hitler's decision of 31 July 1940 changed the previous thrust of operational discussions by the army leadership, led the naval leadership to make its 'observations on Russia', and required a reorientation in the armaments industry. At the same time, it also produced a re-evaluation of the states and peoples of south-east and northern Europe. From the summer of 1940, Hitler was determined to exploit Germany's political weight in order to secure strategic, operational, and economic objectives in Romania and Finland. He thereby reclaimed from the Soviet Union an influence on states in which, only a year before, the Third Reich had declared no interest. The *rapprochement* of Romania and Finland with Germany led these countries to participate in Hitler's war on the Soviet Union. However, it was due less to German pressure than to a combination and interaction of historical, political, ideological, and economic factors, which were given added significance by Soviet policy and military interventions after autumn 1939. While Hitler believed that he could dispense with Italy and Japan, Romania and Finland were welcome co-belligerents. They became his main allies.

Hitler left the military planning of the war against the Soviet Union largely to the general staffs. Not until the end of 1940 did he have the operational intentions of Army High Command submitted to him. These plans received his overall consent, even though they deviated from his directives on significant points. It was characteristic of the relationship between Hitler and Halder that their obvious differences of opinion concerning the start of the second phase of operations were not clarified. While Hitler assumed that his directive would be followed, Halder believed that Hitler would yield to his judgement if operational developments proved it to be correct. For Hitler, the capture of important economic bases in the north and south was always a major priority, first to make it easier for the Germans to live off the land, and second to prevent the enemy from recovering his strength in men and materials. In contrast, Halder hoped to win the war by making a concentrated attack on Moscow. Conflict over the priority of Moscow as an operational objective—as against Leningrad and the possession of the economic potential of the Ukraine and the Caucasus—was thus inevitable from the outset. Halder decided to follow *his* plan of operations. As he had during his autonomous planning in the summer of 1940, he considered that the far-reaching tasks of the Army General Staff gave him the position of supreme military strategist.

After counter-proposals, and in the expectation of a short war, the Luftwaffe leadership also accepted Hitler's plans for attack in the east. Following the disappointments of the strategic air war against Britain, the chief of the general staff was eager for another opportunity to achieve military success in a 'regular war', this time by mounting a co-operative air campaign in support of the army. In addition, the Luftwaffe leadership considered that Communism must be kept away from Europe. Soon after the start of the war, it was clear that the Luftwaffe was not strong enough to contain the enemy air forces and

support German troops at the same time as attacking transport routes and industrial sites.

The military image of the Soviet enemy was linked to the Germans' expectation of a rapid collapse of the Stalinist system. In the judgement of the German general staff, the Red Army in 1940 was a 'giant instrument of war' which was on the point of developing into a modern army but would as yet pose no acute danger in 1941. If quality were ever added to quantity, however, Germany would have to deal with a Red Army that was capable of an offensive war. Despite the political agreement between Hitler and Stalin, the latent threat to German hegemony over Europe would then be manifest. It was essential to eliminate it while the Wehrmacht was still superior and able to move east with all its forces. Hitler and the military leadership judged Soviet intentions to be defensive, describing a Red Army attack as 'not likely'. In fact, Hitler's greatest fear was that Stalin might make a gesture of concession at the eleventh hour, thereby ruining his plans.

In March 1941 Hitler rejected draft guidelines from OKW for a military administration of the eastern territories. He did not regard Operation Barbarossa as a simple 'conflict of arms', but as the decisive struggle between two opposing world-views. For Hitler, military operations to conquer 'living-space', its ruthless exploitation for the war economy, and political-policing measures to eliminate 'Jewish Bolshevism' were only different aspects of a single great war in which the SS as well as the Wehrmacht would play a significant role. The special-duty squads of the security police and SD were to hunt down 'enemies of the state and Reich' even in the army's area of operations; the troops—not the courts—were to deal brutally with actual and supposed 'bearers of the Jewish-Bolshevik world-view', the Red Army commissars. During Operation Barbarossa, Hitler was able to amalgamate SS actions and military operations into a whole which it was almost impossible to disentangle. This could be achieved because officers and legal experts in the high commands of the Wehrmacht, army, and Luftwaffe were also convinced that there was a racial and ideological gulf between National Socialist Germany and the Bolshevik Soviet Union. They were therefore willing to suspend international law, and to restrict martial jurisdiction, for the duration of what was expected to be a short campaign. Conduct of this kind also had a practical aspect. Hitler and his military and legal advisers saw the cadres of the Communist Party and the political functionaries of the Red Army, the commissars, as the germ-cells of an organized resistance against German occupation. The rapid elimination of actual and potential opponents in the area of operations, whether by the special-duty squads or by the troops, would help to 'save German blood'. Attempts to 'enlighten' German soldiers on the eastern front about the meaning of the war were begun on the first day of the invasion. This trend towards a war of annihilation was reflected in an appeal by Hitler, in OKW guidelines for German conduct, and in army leaflets about the 'treacherous' war being waged by the Red Army.

Economic factors played an important role in Hitler's concept of living-space. In 1940-1, however, this long-term motive for expansion in the east was inextricably interwoven with the needs of the moment. Soviet supplies of raw materials, previously guaranteed by German-Soviet commercial agreements, were vitally important for the German war economy. However, the ensuing German dependence on Soviet sources, and the Soviet demands for armaments-related return payments, were increasingly perceived as incompatible with ideological and economic objectives which were fundamentally hostile to Russia. The solution of the 'Russian problem' by force, which Hitler had planned from the summer of 1940, thus appeared to offer an acceptable way out of the situation in economic terms. Hitler also provided the impetus for the formulation of principles covering the economic exploitation of the territories to be occupied. This move was greeted with enthusiasm rather than objections from the functionaries, who were content to produce plans without scruple, and allowed themselves to be guided by ideological assumptions. Their aim was to relieve the German war economy by seizing raw-material and food supplies, and to feed the 'whole Wehrmacht from Russia in the third year of the war'. The resulting starvation of 'umpteenth million people' was consciously accepted. These economic war aims were laid down independently by the military and the economic bureaucrats in agreement with leading representatives of the economy, and ran counter to Rosenberg's idea of the primacy of eastern *politics*. Hitler's decision to create an economic apparatus independent of the civil and military administration, and under the auspices of Göring, led to chaos in occupation policy.

In 1929 the Soviet Union had launched an immense rearmament process which inevitably developed its own dynamic. The Soviet planned economy was transformed into an armaments economy in which all the important economic measures were placed either directly or indirectly at the service of rearmament. By 1941 the Soviet fighting forces had acquired a multiple superiority over the German army in the east in tanks, ordnance, and aircraft. Just as Stalin's foreign policy was built on the ideological axiom that the Soviet Union was surrounded by a ring of fundamentally hostile states, and that a military conflict was unavoidable in the long term, so Soviet military teaching emphasized offensive theory and neglected the art of defensive warfare. Both the leadership and the morale of the fighting forces were massively weakened by the 'purges' set in motion by Stalin. Yet by making an alliance of self-interest with its ideological enemy in August 1939, the Soviet Union was able to push its strategic glacis far to the west and south. Following setbacks in its campaigns against Poland and Finland, and in the light of German military successes, the Soviet leadership made energetic attempts after May 1940 to turn the Red Army into a serviceable instrument of war. From the spring of 1941 its formations moved closer to the border, creating 'operational configurations' in the areas around Białystok and Lvov. Nevertheless, the Soviet armed forces were not ready for war. Moscow did not nurse any

offensive designs in 1941, and made every effort to avoid giving Berlin a reason to attack, though Stalin did not rule out the possibility of a war with Germany in 1942.

On 22 June 1941 Hitler launched his war between two opposing world-views. Stalin responded to the onslaught in a way which added lurid touches to German propaganda claims of 'Asiatic' conduct. The excesses against German prisoners of war, and the mass shooting of political prisoners by NKVD special troops, demonstrate that the Soviet side too resorted to methods that violated international law. These methods also enabled the Germans to present the murderous activities of the security police and the SD as a form of reprisal. Of course, these facts cannot be used to justify, or to diminish the horror of, what occurred. This is true of the excesses of both sides. Historical investigation has also proved that German conduct cannot be explained simply as a reaction to Soviet atrocities, though it was certainly exacerbated by them. In this context, it is a caricature of the truth to claim that the SS was solely responsible for attacking the phantom of 'Jewish Bolshevism', while the Wehrmacht restricted itself to conducting military operations. The army leadership must share the responsibility for blurring the differences between military tasks and security policing measures. The effects of this process can be seen in the shooting of troop commissars, and in the summary executions of Jews, Communists, and Russians by army units in punishment for unsolved acts of resistance. As in Poland, the real nature of the occupying power was revealed by the minimal value it accorded to human life. Stalin accommodated Hitler's concept of a war of annihilation between two world-views by appealing for a merciless patriotic war against 'German Fascism'. The call for partisan warfare behind the front gave Hitler the opportunity to portray his programme of annihilation as an act of war; it also encouraged the 'special measures' of the German troops, ordered before the war began, against the vaguest threat to its security. Such conduct, in violation of international law, gave free rein to irrational emotions and the thirst for revenge on both sides, despite the attempts of military leaders in the Wehrmacht and the Red Army to forbid arbitrary action by their soldiers and to maintain discipline. Unrestrained conduct was *one* characteristic aspect of the German-Soviet war in 1941.

On 22 June 1941 neither Hitler nor his military leaders doubted that they had enough time and means to destroy the Soviet forces, thereby also striking a decisive blow against Britain. The huge successes of the early days confirmed these expectations. German military confidence and self-esteem rose to unprecedented heights. After only two weeks, Halder and Hitler regarded the campaign as won. Yet only a few days later it became apparent that the first operational objectives had been achieved only geographically, not militarily: the 'mass of the Russian army' west of the Dnieper-Dvina line had not been destroyed. The situation reports had to be amended to conform with realities.

Within the German leadership in July and August 1941, Hitler and Halder advocated different objectives for the second stage of operations, and supported different methods of achieving them. The main debate was whether the two armoured groups of Army Group Centre should wheel round towards one of the two flanks (Leningrad or the Sea of Asov), or whether Army Groups North and South could fulfil their objectives without such reinforcement, leaving all the forces in the centre to be concentrated for the defeat of the Soviet forces massing before Moscow. This debate in the summer of 1941 also reflects the growing awareness of the German leadership that Operation Barbarossa had failed; 'the Russian colossus' had been underestimated in terms of its military and economic strength and its ability to organize. Insufficient time and men were available to defeat the Soviet Union in a 'mobile campaign' before the onset of winter. The Soviet regime had been able to organize an effective defence, and to withdraw combat-ready units of the Red Army over the 'magic' Dnieper-Dvina line to the east. German encirclement operations designed to prevent this had not been fully successful because of the different rates of advance of the armoured and infantry forces. The 'vastness of the Russian space' provided the Wehrmacht with problems which became ever more difficult to solve as German attacking strength declined.

It seems that Hitler was a more realistic judge of the situation than Halder in the summer of 1941. The chief of the Army General Staff still believed he could achieve victory by launching a wide-ranging operation against Moscow. By the end of August 1941, on the other hand, Hitler considered that the war against the Soviet Union could no longer be completed in that year. He therefore hoped to destroy the fighting force of the Red Army in narrow encirclements, to capture the sources of Soviet power, and to establish good starting-positions for 1942. At the same time, the army groups and armies were making assessments of their own and the enemy's combat efficiency; these were increasingly at odds with those of Army High Command. Nevertheless, in November 1941 Halder and the command of Army Group Centre decided on a new—frontal—attack on Moscow. This 'final effort' would enable the Germans to occupy the Soviet capital and thereby bring about the end of the war. The superior leadership skills, 'harder will', and proven resilience of the German soldiers, it was considered, were more important than the other vital factors in a situation report: German personnel and material situation, enemy, terrain, and climate.

The unexpected counter-attack of the Red Army before Moscow struck hard at the German formations, which had reached a low point physically and psychologically. Equally severe were its effects on the German leadership, which was divided about the causes of the 'current crisis' and the measures necessary to overcome it, because at first it refused to accept that the initiative had passed to the enemy. With the co-operation of the Army High Command, and against the views of the army commands, Hitler ordered that the front should be held at all costs. The aim was to eliminate the risk of the collapse of

Army Group Centre by offering 'fanatical resistance', assisted by the immediate dispatch of 'gun-carriers' to the burnt-out divisions and the preparation of defensible positions. The operational crisis developed into a leadership crisis between Hitler, the Army High Command, and the commanders at the front. On 19 December 1941 Brauchitsch was replaced. Hitler placed himself in supreme command of the army. In agreement with the army groups, he responded to contraventions of his form of operational leadership by reshuffling senior positions. No account of previous achievements was taken during this process, even in the case of Guderian. Halder was proud that the 'Führer' was now the head of the army, and expected the army groups and armies to carry out his will.

The big Red Army offensive of 5 December 1941 inflicted heavy casualties on the Wehrmacht. Nevertheless, it did not achieve its strategic objectives of encircling and destroying Army Groups North and Centre and recovering the Crimea. This was due both to an over-assessment of the attacking capability and leadership of the Soviet forces and to the stubborn German resistance encountered. Nevertheless, the perceptible successes of the Soviet forces raised the military and political prestige of the Soviet Union. Stalin was able to bring this factor into play in dealing with his British ally.

On the German side, the winter crisis had apparently been overcome by the middle of February 1942. Operational prospects were assessed more realistically after the immense losses in men and material during Operation Barbarossa. In autumn 1941 the leadership was already aware that it would no longer be able to field an army such as had existed before the attack. In 1942 the entire attacking force of the army in the east was therefore to be concentrated on the southern flank of the front, in order to attack the Caucasus and Stalingrad. The objective was to gain control of the oilfields, to eliminate the munitions centre on the Volga, and to cut Moscow off from one of its two supply-lines to the British and Americans.

Both German and Soviet historians have referred to these developments as the great 'turning-point before Moscow'. If the campaign plans of the Army General Staff are taken as the basis for assessment, Operation Barbarossa had failed even before the attacks on Moscow, Leningrad, and Rostov were called off. This turning-point in the war against the Soviet Union produced many repercussions: political, strategic, economic, and ideological. They affected the Third Reich and its allies as well as the states occupied by it. In autumn 1941 Hitler recognized that his strategy had failed: the Soviet Union had not been defeated; British will to resist had been strengthened; and direct American intervention in the war was to be expected in 1942. Hitler's realization that the alliances of the First World War were re-forming did not persuade him to try for a negotiated peace. This was not the result of a realistic judgement that the enemy coalition would refuse to negotiate with him, but of Hitler's abiding commitment to the social-Darwinist alternatives of 'all or nothing'. If the German people proved insufficiently strong to come through its life-and-death

struggle, it deserved to go under. At the same time, however, the course of the 'life-and-death struggle' against the racial enemy, Jewry, was finally determined at the Wannsee Conference in January 1942. It had already been decided at the end of July 1941 that this struggle was to be extended to the entire German sphere of influence in Europe. The war against the Soviet Union offered Hitler the ideal medium for 'charging' (M. Broszat's term) his paranoid, aggressive anti-Semitism, and thus realizing the threat he had made on 30 January 1939. On that occasion he had publicly proclaimed that in the event of another world war the result would be the destruction of the 'Jewish race' in Europe. Victories and defeats alike caused the radicalization of the dogmatic racial policy of National Socialism in 1941-2. Yet this radical decision for the future conduct of the war has often obscured the fact that, after the failure to achieve quick victory, Hitler was also ready to deviate from his axioms where this would bring military or economic advantages, weaken Soviet powers of resistance, and thus advance his strategy. He therefore accepted the recruitment of Russian civilians and prisoners of war in response to an acute shortage of workers in the Reich and of security forces in the occupied Soviet territories. Hitler also agreed to a revision of the guidelines covering the treatment of commissars and the future of the Soviet collective economy.

Overall, the economic objectives associated with Barbarossa were not achieved. Lost Soviet supplies could not be replaced. The priorities fixed for the distribution of agricultural produce, laid down under the trauma of the First World War, could not even satisfy the needs of the army in the east. However, the inadequacy of the economic organization did improve the prospects for survival of the population in the occupied territories. While the Soviet Union was waging a 'total war' from the summer of 1941, the Third Reich did not dare to impose similar burdens on the Germans.

It was typical of the 'Hitler coalition' against the Soviet Union that there was no formal alliance with jointly formulated political objectives. Of course, Germany, Italy, Finland, Romania, Hungary, and Slovakia were allied with each other through the anti-Comintern pact and the Tripartite Pact (except Finland). Yet despite their near identical declarations regarding the war against Bolshevism, they pursued separate interests based on a variety of motives; in the case of Hungary and Romania, these were directed more against each other than against the Soviet Union. The British declaration of war on Finland, Hungary, and Romania, forced on it by Moscow, demonstrated to these German allies that their participation in Hitler's war in the east had dragged them into a world war. The anti-Soviet partners of the Third Reich differed not only in their assessment of German military defeats, but also in their view of American entry into the war. Romania and Hungary acceded to German demands by declaring war on the United States and providing significant forces for the German summer offensive against the Red Army. In contrast, Finland announced that its support for German operations

in 1942 was dependent on the fall of Leningrad. It would not allow itself to be drawn into the world war, and took account of Washington's wishes in its conduct of the war itself.

Against the background of the 'blank cheque' given to Japan in April 1941, and confirmed in December of that year to cover the eventuality of war against the United States, the German declaration of war on the United States appears more as a calculated decision than as a forced reaction or 'flight forwards'. Yet Hitler did not know how the United States could be defeated. The declaration of war was intended as a demonstration of strength to disguise the fact that, with the failure of Barbarossa and the extension of the European war into a world war, Germany's bid for world-power status, or world supremacy, had failed. Though the defeat of the Third Reich was to be expected, it could hold out longer in alliance with Japan, so long as the United States was compelled to divide its forces between Europe and East Asia. Hitler was therefore anxious to eliminate the possibility of a separate peace between the United States, Britain, and Japan. But it was Germany which was the first to lay down arms, thereby allowing the victors to assume 'supreme authority' with regard to Germany.

The volume has provided a survey of the development of Operation Barbarossa from the victory over France in June 1940 until the Soviet counter-attack in December 1941 and its aftermath. It has revealed that here, as in no other operation, ideological and political objectives were directly associated with the social-Darwinist values of the Third Reich. These produced a self-destructive tendency which found expression in victory and defeat, in the alternation of far-sighted clarity and crass opportunism, and in the futility of all the sacrifices made. Above all, this impulse led from European to world war, thereby sealing the fate of the Reich as well as the regime. Its death-agony, however, was to last for several destructive years.

Bibliography

Only sources quoted have been included. The major part of the documentary material of military origin originates from the files deposited in the Bundesarchiv-Militärarchiv (Federal Archives/Military Archives) in Freiburg. The researchers, however, were unable to use a complete collection of documents of the three Wehrmacht services. The papers of the senior command authorities of the Luftwaffe, for instance, were almost completely destroyed at the end of the war. Moreover, as the former Wehrmacht documents are not yet available in the Military Archives in their totality, it was necessary in some instances to resort to copies appended to the largely unpublished studies compiled after the war, on instruction by the US Army's Historical Division, under the direction of Colonel-General (retd.) Franz Halder within the 'Military Studies' research programme. Processing of the documents which have meanwhile come into the Military Archives is not yet complete, and as a result old labels (e.g. those of the Army Archives in Potsdam) or provisional auxiliary labels had to be used. In other archives too occasional relabelling has taken place. The newest labels have only partly been substituted. To facilitate location of individual documents, a systematic arrangement of the groups of documents and of document titles from all archives has been effected, though this does not invariably represent an accurate organization chart of the civilian authorities, ministries, or military command authorities. Reasons of space have also necessitated the amalgamation of certain groups and titles of documents.
